The Boston-based company Arthur D. Little was commissioned to conduct a study on the industrial possibilities of Ciudad Juarez. The company's report was published in about 1963.

However, after Antonio J. Bermudez left the border program, government interest in it began to wane, according to the mayor.

"So the same group of businessmen tried to get people to invest. It was hard. I had a supermarket chain, which I sold to concentrate on getting investors to come to Ciudad Juarez and to set up in-bond plants."

Elamex, subsequently sold, was one of them.

RCA was the first big company to support the program. It opened a plant in Ciudad Juarez, employing several hundred, in 1968. Between 1969 and 1986, the average annual output growth of the Mexican in-bond industry was 29 percent, according to the Bermudez group's research manager, Lucinda Vargas. In the same period the overall Mexican manufacturing sector's output grew 5.8 percent on average annually.

The Bermudez group said that the in-bond industry's exports have increased at an average annual rate of 37 percent in the last 20 years.

Sergio Bermudez said, "In this group, we get an average of about 15 companies a week inquiring about investment possibilities. Most are from the United States, but we are beginning to see interest from Europe and Japan."

The Bermudez group, he said, works closely with technical schools and universities both in Mexico and the United States to try to ensure a supply of trained personnel.

"The (main) problem in Mexico is (a lack of) education," he said.

McClintock of Mexico Communications agreed: "They are not able to produce enough technicians in Mexico at this point. That's one of the reasons for the high turnover within the industry."

He said that the plants' turnover is about 8 percent a month. "This is why companies are going into the interior, following the source of labor."

However, 90 percent of Mexico's maquiladoras are still close to the border, although in the Antonio J. Bermudez industrial park in Ciudad Juarez, a number of plants had "vacancy" signs outside their doors.

Another of Sergio Bermudez's concerns is the small Mexican contribution toward the input used by the maquiladoras. He said that the input is currently worth $7 billion a year, of which Mexico contributes less than 2 percent.

The problem is an old one, he said. "For many years there was no competition because Mexico was a protected market. People charged whatever they wanted, with the quality and delivery times they wanted. That's changing now."

The main reason for the change is the Mexican government's decision to take the country into the General Agreement on Tariffs and Trade in 1986 after years of procrastination.

Said Mayor Bermudez Cuaron, "Mexico could overtake Taiwan, Korea and Singapore (as an in-bond plant base). They are ahead of us. They have higher technology than we do. But we have a lot of possibilities."

Alarcon said, "I feel very optimistic about the maquiladora program, provided the Mexican government improves the infrastructure. By this I mean housing, communications, city transportation. They are deficient.

"There is a great lack of housing (in Ciudad Juarez). Telephones, telefax and microwaves are inefficient. It takes too long to contract these services. In some cases, it takes up to a year to get a telephone. It appears that the authorities were not prepared for this rapid growth and, given the present economic conditions, it is hard to find the money to meet the great demand."

Mayor Bermudez Cuaron said, "We are very much aware of the need to improve our infrastructure. We need to improve our street system and transportation. We need a tremendous amount of housing. We are trying very hard."

He added, "I have always been a firm believer in the in-bond industry and more so right now. We have a number of people who have worked in this industry for years and they have learned a lot."

According to Michie, who has studied the in-bond industry for 10 years, the in-bond program has become "critical to the United States."

He added, "It is a strategy that enables American industry to achieve price competitiveness in the U.S. economy.

"Without the in-bond program, American industry would have found it difficult to offer products at a price comparable to those offered by foreign competitors selling in the United States.

"It is not a short-term business strategy on the part of American industry. I think you will see it continue to expand at a fast rate. Companies will expand and new companies will come in. They will be from the United States and other countries. Finland is here, so are the Scandinavian countries. All the EEC countries are likely to find this industry attractive."

Michie said in an interview on the university campus that U.S. companies lost market share because their prices were higher than those of their competitors.

"Both management and labor have to assume the blame for the higher cost structure," he said, "and what we have seen in the last few years is several trends: Where labor costs for various production processes are not competitive with the rest of the world, these have been shipped offshore.

"On the management side, we have seen tremendous cutbacks in administrative costs. So one of the strengths of American industry today, relative to a few years ago, is that American industries are much leaner and aner and have become very competitive in the global market."

But he said that American labor, rather than understanding the economic process, has sought to insulate itself from the realities of what is going on in the world labor market.

"We see American labor not presenting objective information concerning its situation but primarily emotional claims and appeals in response to the situation," he said.

"Rather than recognize that certain jobs and job categories are declining, due to economic circumstance, American labor has attempted to retain certain positions, resulting in that work being shifted elsewhere.

"It is hard to justify a situation where labor costs are one-sixth of what they are in the United States and expect industry not to seek that cheaper rate, when wages represent a significant portion of the product's price."

MEXICO

FROM PAGE 24

He said that labor has an obligation to retrain in areas where employment is available.

"A few years ago, in looking for a secretary, I would have sought a competent typist," he said. "Today, that skill is way down the list."

Michie said that the number of jobs created in the United States in industries that supply the maquiladoras is on the increase.

"Last year, the border economy in Texas showed growth while the rest of the Texas economy has been in recession," he added.

"This (in-bond) industry has been a primary stimulus for economic development in El Paso, but we have not integrated this industry into our community's economic development to the degree that we should have."

He explained, "What we have not seen is the development of more basic infrastructure within our economy, such as tool and die facilities, metal stamping, plastic injection molding, the kinds of basic infrastructure that would support the diversification of our economy.

"The demand for these services has existed in this area since the mid-1970s but El Paso has not recognized that the demand is there and has not responded to building" (what is needed).

Michie said that the only explanation he can provide is that the businesses on the El Paso side of the border are small. "They don't have the technical expertise or the capital to get involved in this. They don't understand tool and die."

STEPHEN DOWNER

Bermudez Cuaron — considered by many to be the "godfather" of the Mexican in-bond industry: "The average maquiladora worker's income is almost twice the minimum wage in Mexico."

As a result, he said, El Paso's business people are restricting themselves to a service role: "trucking, for example, industrial warehouse space.

"We have 27 million square feet of industrial warehouse space in El Paso, most of which is leased or owned by the maquiladora industries," he said. "Transportation charges made by El Paso companies to the maquiladoras totaled $70 million last year. In less than five years, we have gone from four airfreight carriers to 12.

"We have one transportation company that last year bought 65 tractors, at a cost of more than $60,000 each. We now have sprint trains from here to Kansas City."

The in-bond industry, he said, is uniting U.S. border communities. "Trade was always north-south or south-north," he said. "Now there is east-west trade. In a study conducted last year, 30 percent of the maquiladora shipments were found to travel east-west or west-east along the border. This is stimulating the border regional economy. The boom is on now."

Said the Bermudez group's Vargas, "El Paso, which traditionally has been a very economically depressed border city, like most of them, is now a bright spot in the Texas economy."

According to studies, she said, 35,766 jobs were created in El Paso between 1977 and 1985 and approximately one job in five was a result of the in-bond industry in Ciudad Juarez.

Mitchell of the Bermudez group said, "The auto industry in the United States is restructuring to meet the competition. The Japanese auto industry is restructuring to meet the competition. The German auto industry is doing the same. All over the world they are doing it.

"Basically what they are doing is sharing production and reducing the cost by going to countries where labor costs less. They are bringing in more and more products (to Mexico).

"They started out with wire harnesses. Now you are into electrical parts, windshields, anti-pollution devices, radiators, air conditioners.

"The Mexican in-bond industry is going to grow as a result. More and more the Japanese are going to be shifting a lot of their production sharing to Mexico because of its proximity to the United States."

Automotive News Staff Reporter Louise Kertesz in Detroit contributed to this story.

LEGAL BRIEFS

Annual emissions tests expected in Twin Cities area

MINNEAPOLIS — A bill requiring annual emission testing of most motor vehicles registered in the seven-county Twin Cities area was awaiting the signature of Gov. Rudy Perpich last week.

State Rep. Darby Nelson, sponsor of the bill, said the goal of the new measure is to reduce carbon monoxide levels about 25 percent. It has been estimated that 85 percent of the carbon monoxide in the Twin Cities area comes from motor vehicles.

Beginning in 1991, owners of most cars, pickup trucks and vans in the metro area — some 1.5 million of them — will be required to have their vehicles tested annually. A fee of no more than $10 can be charged and will be used to finance the inspection program.

The testing will be done at public inspection stations operated by a private company or businesses under contract with the state.

If the vehicle fails the emissions test, the owner will have to correct the problem or he may be eligible for a one-year waiver. If the repair exceeds $75 for pre-1981 models or $200 for later models, the owner can request the one-year waiver.

All buses, trucks (other than pickups and vans), motorcycles and mopeds will be exempt from the annual inspection. The bill also exempts pre-1976 cars, pickups and vans.

Volvo drops lawsuit on non-OEM crash parts

WASHINGTON — Volvo North America Corp. has dropped a lawsuit over the sale of generic parts by Keystone Automotive Industries Inc. The move could spell trouble for automakers' efforts to limit the use of non-original-equipment crash parts.

Volvo brought the suit against California-based Keystone 16 months ago, alleging patent infringement. The suit sought to end the sale of replacement Volvo fenders to independent garages and body shops. It was brought in the U.S. District Court for the Central District of California.

Charles Hogarty, president of Keystone, called Volvo's action "a stunning victory for aftermarket competition."

"Keystone and its distributors are free to continue to sell competitive fenders made by other firms for installation on Volvo automobiles," Hogarty said.

However, the terms of the dismissal require Keystone to explain in its commercial literature that its parts may not meet Volvo standards.

A spokesman for Volvo Cars of North America said, "Volvo believes that consumers have the right to know whether genuine or non-genuine parts are being used in the repair of their cars.

"With genuine Volvo parts, we are sure consumers will enjoy the same fit, finish, strength and corrosion resistance as when their car was purchased. Other fenders may not be made to these standards, although they may appear similar in shape."

He added, "Volvo made the decision to discontinue litigation in this case for good business reasons. This particular patent for the design of front fenders on the Volvo 240 was mature and had only about two years left to run. The expense of further litigation could not be justified by the money damages we could win in court."

Foreign and domestic vehicle manufacturers have been attacking the use of non-OEM body parts for years, most recently in a series of print advertisements.

The insurance industry apparently was pleased by Volvo's decision to drop the case. Insurers had raised money to help with Keystone's legal defense.

California suit says Toyota had secret Camry warranty

A class-action lawsuit has been filed in California targeting Toyota's alleged secret warranty to eliminate brake pulsation in 1983-1986 Camry models.

The suit, filed in Los Angeles Superior Court by the Center for Law in the Public Interest, cites warranty service bulletins that have been sent to Toyota dealers.

The Washington-based Center for Auto Safety, which has received 1,000 consumer complaints, has asked the Federal Trade Commission to cite Toyota for an unfair trade practice. The practice allows the auto company to fix the brakes for those persons complaining but fails to inform all 400,000 owners, whose cars may or may not have the problem, the center said.

Brake pulsation, according to the suit, occurs while braking at moderate speed, and it causes steering-wheel vibration and threatens loss of control. Associated damage is "grossly uneven deterioration of tires and weakening of the automobile's lower control arms," the suit says.

The center cited repair costs ranging from $790 to $1,380 per vehicle excluding tire replacement and weakening of lower control arms.

The suit charges breach of expressed and implied warranties, unlawful competition, false and misleading advertising, fraud, deceit and breach of the obligation of good faith and fair dealing, all in violation of California law.

The effect of Toyota's failure to inform all owners potentially affected, the suit says, is that present and future owners of 1983-86 Camrys have or will suffer unnecessary repair costs, excess tire wear and depreciated resale value.

In addition to asking for recall and correction of the problem, the suit seeks compensatory, consequential and exemplary damages in unspecified amounts.

A Toyota spokeswoman said the company does not have secret warranties on any of its vehicles or parts. While acknowledging the pulsating action, she said it is not safety-related and not exclusive to Toyota models. Toyota had no comment on the pending litigation.

Named plaintiff is Kathleen Fjermedal, owner of a 1985 Camry and a resident of Santa Monica, Calif., on her own behalf and all other similarly situated Camry owners.

Minn. pollution agency drops plans to prosecute 4 dealers

DULUTH, Minn. — Four auto dealers here will not be prosecuted by the Minnesota Pollution Control Agency for selling used cars on which the anti-pollution equipment had been tampered or removed. The action is a result of a change in the state's law.

The former law had stipulated that "no person shall rent, lease, offer for sale, or in any other manner transfer ownership of a motor vehicle unless all air pollution control systems are in place and in operating condition."

Auto dealer interests had proposed that the phrase "offer for sale" be removed from the restriction clause. An earlier statement in the law also requires that "no person shall remove, alter, or otherwise render nonoperative any air pollution control system." That requirement remains.

In April 1986, operating under the "not offer for sale" requirement, the state pollution control agency had checked 84 used cars offered for sale at four Duluth dealerships — Skyline Motors Inc., Metro-Chrysler-Plymouth Inc., Plaza Dodge Inc. and Odberg & Ryan Lincoln-Mercury.

Of the 84 used cars checked on those lots, the agency said it found 25 percent of them had been tampered with. Violations of the state provision are punishable by a minimum fine of $700 per car.

Although the alleged tampering had probably been done by previous owners, the agency held that the dealers were responsible for the cars they buy or take in trade.

Negotiations were conducted in an attempt to set an appropriate penalty for the violations. When those meetings broke down, the pollution control agency announced in late January 1988 that it would bring the dealers into court for refusing to pay penalties.

But before that process could begin, the legislative change was introduced at the state capitol, and the state agency decided to hold off to see the outcome of it.

At least one of the dealers had said that his organization would lose business if the state enforced the existing law. James Manderfeld, president of Metro-Chrysler-Plymouth said, "If we offer an individual less for his car, because of tampering, he'll just sell it through the newspaper or in (nearby) Wisconsin where the laws are different. This enforcement penalty needs to be extended to also cover private owners."

The state agency does not have the staff or authority to prosecute private parties, according to Robert Beresford of the agency's regional office in Duluth.

The most common violation was said to be enlarged filler inlets added to gas tanks, which allow leaded gasoline to be pumped into vehicles designed for unleaded gas. That can damage the catalytic converter.

Statewide, some 1,200 vehicles had been similarly inspected at 55 car dealerships and 308 of them had been found to have been tampered with.

When both houses of the state legislature made the change in the law and it was sent to the governor for signing, the state pollution control agency pondered whether to ask him to exercise his veto on it.

However, according to Beresford, it was decided that since the measure had passed both houses with a substantial majority, it might be inappropriate to press for a veto.

Beresford said the state agency will still monitor used cars for sale by dealers "but now it will take two inspections instead of one. Now, we will identify cars for sale that have been tampered with and, later, we will check to see if they have been sold and then check them at their new location for the final evidence of the tampering."

But, he added, "Since the law has now been changed, we will not proceed with our earlier plan of prosecution in these cases."

INTERVIEW

Nissan's goal: No. 1 import

John Borgen, Nissan fleet director, wants top fleet import spot

By Francis J. Gawronski

After being dormant in the fleet business for several years, Nissan Motor Corp. in U.S.A. is cranking up for an aggressive campaign.

The comeback by the Carson, Calif.-based importer will commence in the 1989 model year.

The ambitious goal: to make Nissan the No. 1 import nameplate in the fleet business.

Nissan virtually abandoned the leasing market as a result of Japan's voluntary restraint agreement (VRA) which, beginning in 1981, established quotas on numbers of cars Japanese automakers could export to the U.S.

With annual sales limited by the VRA, at a time when American motorists hungered for Japanese vehicles, Nissan decided to concentrate on the retail market and let the commercial chips fall where they may.

Unfortunately for Nissan, it didn't rake in too many of those chips.

Observes John B. Borgen, Nissan's director of fleet and leasing operations: "We were in that kind of position for several years. You could argue whether it was the wise direction to go, but it's the direction we took."

Now times have changed, and so have Nissan's feelings about fleet sales. The low-growth U.S. retail market has become hotly competitive with the arrival of low-cost entries from Korea and Eastern Europe, while the leasing and rental business has boomed.

And Nissan wants its share. The company is setting its sights on 50,000 fleet sales in the 1989 model year, a number Borgen calls "a base minimum."

He explains: "The market out there is huge. If the industry has a 10-million car year, probably 2.5 million will be fleet sales. Nissan gets about 5 percent penetration of the retail market. If we were to penetrate the fleet market to the same degree, we'd be talking 125,000 fleet sales. Our target of 50,000 is far below that. But we have to start somewhere."

Nissan's top fleet model is the compact Sentra, followed by the more luxurious Stanza.

Although the company will introduce a completely new Maxima in 1989, Borgen says he is still uncertain of the upscale model's role in the fleet market: "It probably has some application in daily rental, but it's in a market segment that isn't too heavily populated in the leasing business. However, it will be a popular car for individual leases."

According to Borgen, Nissan expects to attract fleet business because of its nationwide distribution system: "We're unique among Japanese automakers in that we have a nationwide distribution system with no distributors. It's totally factory. We've already established a nationwide courtesy delivery system, which is very important to leasing companies. They have to have the ability to sell a vehicle anywhere in the United States and get the unit delivered anywhere in the United States. We have established that system."

Nissan has 11 regional offices in the U.S. and more than 1,100 dealers nationwide.

Toyota, Honda and Nissan are the three top-selling Japanese nameplates in the United States. Among them, Toyota is tops in fleet sales.

In sizing up the trio's future in commercial markets, Borgen says, "Honda seems to show no particular interest in the fleet business *per se*. So it's between Toyota and Nissan. Toyota has been a leader in the industry in both retail and fleet for a long time, and it's our objective to become the leader."

He adds: "To be No. 1 is our stated objective in the retail market, and it's our objective in the fleet market, as well. We're not there by a long shot now, but we're going to get there. We're sort of starting from scratch — putting our organization together, trying to reestablish old contacts, trying to get current in today's fleet market and build up a new head of steam."

As part of its strategy, Nissan has developed a basic leasing program for fleet administrators, and plans to reveal it at this week's annual NAFA Conference. Borgen describes the program as "very competitive."

While Nissan's big move into the fleet market gets rolling in '89, the company has not been standing by idly in 1988. It has a small daily-rental program under way.

"We got active on our major program about nine months ago, but it was kind of late for the 1988 model year," Borgen says. "So we zeroed in on daily rental sales for this year, just trying to get as many sales as we could. We're really putting our full thrust on 1989. We'll have a comprehensive and competitive program. We'll be strong in daily rentals and will introduce a vehicle repurchase program for the first time."

Explaining the importance of a rebuy plan, Borgen points out: "In the past, the absence of a repurchase program wasn't much of an obstacle in doing fleet business. But that's changed. If you're going to sell daily rental units in quantity today, you need a repurchase program.

"A minimum of 600,000 to 700,000 units will be sold on repurchase programs in 1988, primarily by the domestic (Big Three) automakers, and the number is increasing all the time. Isuzu, Subaru and Volkswagen have had small (repurchase) programs, but we feel we'll be the first of the major imports to have a really extensive program. Up to now we've tried to sell cars to the daily rentals on an outright sale basis."

Nissan has had a limited buy-back plan in its daily-rental program this year, sort of a test run before its big push in 1989. The company also intends to have a strong program for major leasing companies, is now establishing relationships with leasing operators and is investigating the possibility of developing a special relationship with a major leasing company.

Notes Borgen: "Two large leasing firms have come to us, saying they're interested in establishing a working relationship with a manufacturer. They indicated that, rather than having to take a neutral position on all auto manufacturers when talking to lessees, they'd prefer to be in a posture of heavily marketing a particular maker's product line. Obviously, we want to be in that equation. We want to become one of those special-relationship companies."

Meantime, Borgen is taking note of the increasingly competitive environment in the leasing business, and the rapid growth of companies such as GE Capital through acquisition of major leasing firms and auto auctions.

He observes: "GE Capital has now become a huge, huge company. No-

Owning a car Hertz real bad

Operating expenses rise for the 14th year out of the past 15

With all major vehicle outlays rising, 1987 car ownership and operating expenses climbed for the 14th year out of the past 15. Typical compact models hit a record 51.14 cents a mile, up 5.5 percent or 2.7 cents from 1986's 48.48 cents, according Hertz Corp. annual estimates.

Since 1972, the last year before the first Arab oil embargo, outlays to own and run typical U.S. cars soared 220 percent, dropping 5.2 percent only in 1983. By contrast the nation's overall living costs climbed 171 percent in the 15-year period.

Hertz lists 1987 increases in all auto expense categories: insurance, licenses, taxes, fees, interest, maintenance, repairs, fuel and depreciation (the difference between car purchase price and resale value). Parking and tolls are excluded.

Typical 1987 compact car purchase prices shot up nearly 6.9 percent to $11,155 from 1986's $10,439. Since 1972 typical auto purchase prices have jumped 305 percent.

Purchase price increases can boost depreciation, loan, tax and insurance outlays, the study points out. Sticker price rises are more than operating increases because people are driving smaller cars fewer miles and are keeping them longer.

The 51.14 cents a mile 1987 figure is for a normally equipped compact make, purchased new and to be driven 10,000 miles annually for five years — typical U.S. new car driving.

Table 1 is a breakout of cost elements for compact cars purchased new and driven 10,000 miles a year for five years in 1987 and in 1986.

Auto expenses differ sharply by vehicle size, equipment, annual mileage, ownership duration and where autos are driven, the survey notes.

Subcompact models showed the sharpest 1987 advance, rising 17.7 percent to 47.57 cents a mile from 40.42 cents in 1986. Standard-size cars were up 5.4 percent to 66.37 cents a mile, nearly 40 percent above the subcompact's estimated 47.57 cents cost last year.

Table 2 shows Hertz's recent per-mile cost estimates for different sized cars bought new and driven 10,000 miles annually for five years, and use figures for individual U.S. motorists.

Study figures also demonstrate that keeping cars longer can save motorists money. New 1987 compacts driven 10,000 miles a year but traded annually cost 62.5 cents a mile, while those running 10,000 miles annually for 10 years averaged 39.8 cents a mile, some 22.72 cents under costs for annual trading, saving $22,720 over the car's life-span, Hertz's study shows. Also, used cars cost some 40 percent less than units bought new.

Hertz figures indicate some three-fourths of all auto outlays for typical driving are in so-called "fixed" or "standing" expenses, such as depreciation, interest, insurance, licenses, taxes and fees. These are largely influenced by the car's purchase price and how long the car is driven.

"Variable" or "running" costs — such as gasoline, oil, maintenance, repairs, parts and accessories — comprise the remaining 25 percent of expenses.

Trading or selling a car sooner raises the "fixed" to "variable" cost ratio to about four-fifths of total charges, while keeping a car longer usually lowers it to roughly two-thirds.

The report stresses that variations in annual driving distances also have a material effect on cents-per-mile costs because annual fixed dollar outlays are divided by more, or fewer, miles.

For the five-year driver, a new 1987 compact's costs ranged from 89.43 cents a mile at 5,000 miles a year to 28.08 cents at an annual 20,000 miles of driving — 61.35 cents a mile less.

However, on an annual dollar basis, 5,000 miles a year totals $4,-

INTERVIEW

Currently, Nissan's top fleet model is the compact Sentra (above), followed by the more luxurious Stanza (right). Nissan's ambitious goal is to overtake Toyota as the No. 1 import nameplate in the U.S. fleet business.

you're going to see a lot of activity in that area."

He believes buy-backs could be "the next logical step" in auto manufacturers' dealings with lessors: "Ford Motor Co. is doing something with Hewlett-Packard, probably involving buy-backs and guaranteed values of fleets, to take the risk out of the business. Minimizing risk is inevitably where things are heading.

"As long as there is overcapacity and extreme competition among manufacturers to make sure their capacity is used and the excess belongs to somebody else, it's going to be a very hard marketplace. Everyone's going to want to one-up the next guy in terms of benefits they offer fleet customers. Leasing is the next obvious area where manufacturers will put their efforts in minimizing the risk of the customer." ■

body knows exactly how extensive their operation will get. But when they combine leasing companies, financial services and the ability to dispose of units thrcugh their auctions, they potentially become a cradle-to-grave operation. GE Capital will continue to make waves in the leasing industry."

Another thing the Nissan official recognizes is the trend toward excess production capacity throughout the auto industry, and its impact on fleet business.

Says Borgen: "It's a buyer's market in dealing with auto manufacturers, and that fact isn't being lost on the leasing companies. They're aware of what's happening with all the special deals going on in daily rentals. The leasing companies have decided that to be profitable they're going to have to be more aggressive with the manufacturers in getting better deals and a greater variety of deals.

"Generally, leasing companies haven't been getting the kinds of deals offered to rental firms. In my opinion, over the next couple years,

471, while 20,000 miles a year comes to $5,616 — $1,145 a year more. Average driving distance for U.S. cars in their first five years of service was 11,005 miles in 1986, latest year for which there are mileage figures. (Cars are driven more miles in early years, fewer later.)

Data show that from the early '70s to early '80s motorists drove less, kept cars longer and bought smaller cars in an attempt to keep driving outlays in line with family incomes.

From 1972 to 1983 average yearly passenger car mileage dropped 22 percent from 10,362 to 8,037 miles before turning back upward to 8,317 in 1984, 8,586 miles in 1985, 8,894 in 1986 and 9,304 last year.

Compact cars, rather than intermediates, are now the most typical new models purchased, and most vehicles are about a foot shorter than their 1972 counterparts.

New cars are now kept an average of 5.4 years against 3.6 in 1972. Average age of all cars on the road is now 7.6 years versus 5.7 15 years ago.

Driving expenses can vary dramatically under a wide array of circumstances. For example, parking and tolls in major cities can add 10-40 cents a mile to the 51.14 cents compact average for 10,000 annual miles for five years.

If driving patterns differ, costs also can vary substantially, even for similar cars in the same locale if driven equal mileage and use periods. ■

1988 Buick Regal.
Automotive Fleet
"...Buick performance, ride, and handling have been accomplished through fully-tuned MacPherson struts, strut rod/wishbone, coil springs, a three independent link suspension, and power-assisted four-wheel disc brakes."
Motor Trend
"...View one parked next to last year's car — or drive them back-to-back — and you will realize how far the division really has come."
Car and Driver
"The interior design has a fresh, modern look... but the instrument cluster is clean and functional."
The New York Times
"...a strong front end, and... more than that, it can be said of the new Regal it could use a little more."
Car and Driver
"In the real world, a Buick is supposed to offer some split and some old-fashioned value — and that the Regal does."
"Contact your Buick dealer or your Buick fleet/lease representative today and learn more about Regal. There's nothing like it for your fleet.
BUICK
The Great American Road Belongs to Buick.

FEATURE

Taking it personally

Personal use of fleet vehicles is down, NAFA's annual survey reveals

NAFA received 463 responses from fleet managers in the U.S. and Canada to its 1988 Personal Use Survey.

The largest number of responses came from government fleets (70), industrial manufacturing fleets (61), insurance fleets (55), and drug and cosmetic company fleets (51).

In total, responding fleets are responsible for 518,401 vehicles — 480,126 in the United States and 38,275 in Canada. Of the U.S. total, 257,330 vehicles were company-owned and 222,796 were leased. In Canada, 26,187 were company-owned and 12,088 were leased.

Among the survey highlights:

- Fleet drivers' spouses, licensed children and others are less likely to be able to drive a company vehicle for personal use than last year, while employees themselves have decreased the amount of monthly personal-use mileage.
- Nearly 90 percent of responding fleets allow drivers personal use of a company vehicle while more than 80 percent charge drivers for such use.
- Drivers using a personal vehicle for business purposes, either because they have no assigned fleet vehicle or their assigned fleet vehicle is inoperable, will in four out of five cases be reimbursed at a cents-per-mile rate.

Survey results show 87 percent of U.S. fleet managers and 88 percent of Canadian fleet managers allow drivers to use company-provided vehicles for personal use. In Canada, 84 percent allow an employee's spouse to use the company vehicle for personal use as well, while in the U.S. the figure is 62 percent.

Another difference exists in the area of allowing licensed children to drive a company vehicle. In Canada, 57 percent permit it compared to 28 percent in the U.S. In accordance with this, 40.6 percent of Canadian fleets have set an average minimum age limit of 20 years for persons other than the employee eligible to drive a company vehicle. In the U.S., 24.1 percent of fleets have set an average minimum age requirement of 21 years.

Responding U.S. fleets claim drivers put an average of 1,975 miles on a company vehicle each month; in Canada the number is 2,661 kilometers (1,650 miles). Respectively, these groups said 408 miles and 548 kilometers of their monthly totals were for personal use by drivers.

In percentages, therefore, U.S. fleets drive 20.7 percent of their total monthly mileage for personal use, while Canadian fleets drive 20.6 percent of their total kilometers for personal use. Only 15 percent of U.S. fleets and 13 percent of Canadian fleets have set a maximum allowable number of monthly personal miles.

On that note, 75.6 percent of U.S. fleets and 83.6 percent of Canadian fleets allowing personal use of a company vehicle say employees can use the company vehicle for personal use whenever necessary.

More than 13 percent (13.2) of U.S. fleets and 3.3 percent of Canadian fleets allow personal use only to and from work; 4.7 percent of U.S. and 1.6 percent of Canadian fleets allow personal use only while working; 1.5 percent of U.S. and 3.3 percent of Canadian fleets allow personal use only while on vacation; 1.2 percent of U.S. and 3.3 percent of Canadian fleets allow personal use only on weekends and holidays; 3.8 percent of U.S. and 4.9 percent of Canadian fleets allow personal use at other times.

To cover some of the expenses of allowing drivers to use a company vehicle for personal use, 83.3 percent of U.S. fleets and 68.9 percent of Canadian fleets say they charge drivers for personal use of a company vehicle.

In the U.S., 32.5 percent of respondents charge on a cents-per-mile and flat rate per week or month; 1.2 percent on a graduated scale of cents-per-mile for the first set of miles; then a different, usually lower, amount for any miles over that limit. More than one-fourth (25.8 percent) of U.S. fleets use methods other than those to charge their drivers for personal use of a company vehicle.

In Canada the most often cited method of charging drivers for personal use of a company vehicle is by flat weekly charges (44.2 percent), while 27.9 percent use a cents-per-kilometer method and 4.7 percent use a combination of both cents-per-kilometer and flat weekly or monthly rates.

No Canadian fleets claim to use the graduated scale method of chargeback, and 23.2 percent say they use methods other than those listed on the survey form to charge their drivers for personal use of a company vehicle.

In the U.S., fleets using the cents-per-mile method when charging drivers for personal use of a company vehicle charge their drivers an average of 17.5 cents per mile. In Canada the rate is 9.3 cents per kilometer.

Those in the U.S. charging drivers each week or month do so at the average rates of $23 each week or $58 each month; for Canada, the rates are $13 and $41, respectively.

U.S. fleets using a combination of cents-per-mile and a flat weekly or monthly charge claim an average of 11.5 cents per mile, while $40 each month is charged to drivers. In Canada the amounts are 9.0 cents per kilometer and $63 each month. No one in Canada uses the graduated scale, but U.S. fleets using this method charge an average of 19.3 cents for the first 7,650 personal miles in a calendar year and 14.3 cents each mile over that.

When collecting these charges, 42 percent of U.S. fleets and 57.5 percent of Canadian fleets use salary deductions. More than one-third (38.2 percent) of U.S. and 31.9 percent of Canadian fleets have drivers fill out expense reports, while 19.8 percent of U.S. and 10.6 percent of Canadian fleets use other methods.

When an employee uses a personally owned vehicle for business purposes because his/her assigned fleet vehicle is inoperable, 87.2 percent of U.S. fleets and 71.4 percent of Canadian fleets reimburse the driver on a cents-per-mile basis. Average amount reimbursed in the U.S. is 21.4 cents per mile; in Canada it is 22.9 cents per kilometer.

When reimbursing drivers for business use of a personal vehicle with no assigned fleet vehicle, the cents-per-mile method is again most used in both countries: 81.6 percent of U.S. fleets and 78.9 percent of Canadian fleets. U.S. fleets pay an average of 21.5 cents per mile, while Canadian fleets pay an average of 23.5 cents per kilometer.

Finally, 94.2 percent of U.S. fleets and 84.1 percent of Canadian fleets say they have not had their personal use policies audited by the Internal Revenue Service, or equivalent governmental body, within the past two years. In real numbers that means 23 fleets in the U.S. and 11 in Canada were audited.

If U.S. drivers have an accident in a company-provided vehicle while they are driving the vehicle for personal use, 71.8 percent will not be charged any portion of the repair costs as a result of the accident. This is true for 47.8 percent of drivers in Canada.

Of the 28.2 percent of U.S. drivers charged a portion of accident repair costs incurred as a result of an accident during personal use of a company vehicle, 43.1 percent can expect to pay an average set dollar amount of $197, according to survey results. More than two out of five (41.3 percent) pay the insurance policy deductible amount; 12.6 percent pay the full amount of damages; 2.9 percent pay an average fixed share of 28 percent of the costs.

When Canada's 52.2 percent of drivers who have to pay a portion of accident costs from a personal-use accident are charged, 54.3 percent pay a set dollar amount averaging $184; 42.8 percent pay the insurance policy deductible amount; 2.9 percent pay the full amount of damages; none pays a fixed share percentage.

For 52.8 percent of U.S. fleets and 56.9 percent of Canadian fleets, drivers are assigned company vehicles as a fringe benefit. For 26.1 percent of U.S. fleets and 15.6 percent of Canadian fleets, a driver's yearly mileage warrants assignment of a company vehicle (annual averages — 12,843 miles, 15,594 kilometers).

For 11.7 percent of U.S. fleets and 20.2 percent of Canadian fleets, company vehicles are assigned because of the driver's job title. Only 9.4 of U.S. fleets and 7.3 percent of Canadian fleets use factors other than those listed to determine who is assigned a company vehicle.

For drivers with an assigned fleet vehicle not in operation, 33.6 percent of U.S. fleets and 27.3 percent of Canadian fleets allow the drivers to use their personal car for business.

Thirty-one percent of U.S. and 42 percent of Canadian fleets allow drivers to rent a vehicle in this situation; 27.7 percent of U.S. and 20.7 percent of Canadian fleets permit the driver to use a company pool vehicle; 5.5 percent of U.S. and 4.7 percent of Canadian fleets let drivers use the district manager's vehicle; 2.2 percent of U.S. and 5.3 percent of Canadian fleets authorize other means of transportation. ■

FEATURE

Standardizing electronics

Electronics boom means more standard equipment for fleets

Fleet operators and their drivers can expect a flow of new electronic features to be available in automobiles in the next few years — many of them as standard equipment.

Although the passenger car of the early 1990s will not be fully electronic, the trend continues to move ever onward in that direction, as electronics become a mainstay of the modern motor vehicle.

Electronic powertrain controls started coming on strong in the 1970s, spurred by government-mandated emissions standards and a need for fuel economy combined with sharpened vehicle performance.

Before long, electronics popped up in instrument panels — mainly in upscale cars — to provide driver information and such niceties as climate control. Also arriving were such safety/convenience features as anti-theft systems.

Then all of a sudden along came the luxurious 1987 Cadillac Allante two-seater with more than $2,000 worth of electronics as standard equipment.

The Allante example of automotive electronic grandeur is cited as an "extreme case" in a new Frost & Sullivan report: *The Non-Entertainment Automotive Electronics Market in the U.S.* But that may be only temporary, judging from the onrushing tide of technical advances detailed in the report.

In the powertrain category, although a great deal of development has already taken place, the report looks for continued advances toward greater sophistication overall and for an "inevitable blending eventually of engine and transmission electronic controls."

The report predicts that smart sensors, which provide the necessary signals representing engine data, will proliferate as advanced powertrain controls are developed to respond to varying amounts of engine-torque demands by integrating response with driver input.

Vehicle operations to which these more sophisticated controls will be applied include manifold boost pressure, fuel mixture, spark timing, valve timing and intake-manifold geometry.

Steering, braking and other vehicle-control advances also are in the offing. All-wheel steering, for example, has already appeared in Japanese cars and could show up by the early '90s in U.S. makes.

In driver information and safety/convenience categories, consumer and fleet preferences are expected to play a strong marketing role in the next few years, as drivers come to expect convenient, readable and useful displays such as electronic navigation systems (see related story on page E34).

Indeed, F&S sees electronic navigation systems going into 1989 cars as OEM products, after which the market will take off rapidly.

Another fast-growing electronics category, F&S forecasts, will be safety and convenience products ranging from collision-avoidance systems to sophisticated interval windshield wipers.

It is generally estimated that electronics account for approximately 10 percent of the total dollar value of today's new U.S.-built car.

Important to fleet operators are the kinds of cars in which new electronic features will be offered.

A report by the University of Michigan's Office for the Study of Automotive Transportation notes: "It is becoming increasingly clear that the U.S. passenger car market is being segmented into two categories — lower technology/high volume *(such as Chevrolet Cavalier, Ford Escort, Plymouth Reliant)* and high technology/lower volume *(such as Chevrolet Corvette, Lincoln Mark VII, Chrysler LeBaron GTS)*."

Based on that premise, a panel of more than 225 automotive executives was asked: What fraction of total vehicle cost will be represented by electronic componentry?

The panel forecast that by 1990 the amount of total vehicle cost represented by electronic componentry will be 8 percent for lower technology/high volume cars and 15 percent for high technology/lower volume cars.

They said that by 1995 the percentages are expected to increase to 10 and 20 percent, respectively. ■

Non-Entertainment Automotive Electronics Market Share in the U.S. — 1992

LANCE GRAVES

How many cars, trucks and busses do local governments actually buy?

City, state and county governments are the biggest buyers of motor vehicles in America! They own rolling stock worth $83 *billion** dollars.

It's imperative that your fleet advertising reach these mega-buyers. The question is: how?

Now there's one efficient way. City & State. We reach over 92,000 city, county and state executives who control their government's purse strings. Executives with the power to sign off on multi-million dollar orders!

Advertisers, take note

In January, City & State's frequency increased to biweekly. To celebrate, we're offering advertisers a super deal.

Establish a baseline ad schedule in City & State in 1988, increase it by 50% and we'll match the increase at no charge, doubling your frequency.

For details, call Sarah Strader, advertising sales director, at (212) 210-0111.

Northwood presents Crain awards

Three automotive students honored for 'outstanding' work

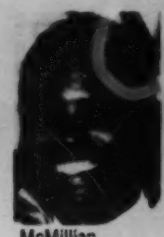
MIDLAND, Mich. — Northwood Institute has announced the winners of the 1988 G.D. Crain Award. The award is given annually to one outstanding automotive student from each of the three Northwood campuses. Each winner receives $600 and a plaque.

G.D. Crain, who died in 1973, was the founder and chairman of Crain Communications Inc., publisher of Automotive News.

Wesley E. Masure of Allenstown, N.H., is the winner from the Midland campus. He is working toward an associate's degree in automotive marketing and a bachelor's degree in business management and marketing.

Masure is president of the junior chapter of the Automotive Hall of Fame and will serve as domestic chairman of Northwood's 25th anniversary auto show. He plans to enter the retail auto business at his father's used-car dealership, Kars Etc., in Tilton, N.H.

Masure



McMillian

Talbot

Ronald McMillian is the winner from the Cedar Hill, Texas, campus. He is a Chrysler Corp. Minority Dealer Scholarship Award winner and maintains a 3.62 grade point average.

He is employed by Freedom Chrysler-Plymouth in DeSoto, Texas, where he is preparing a customer-satisfaction-index program for the dealership.

Stephen Talbot of Lewisburg, W.Va., is the winner from the West Palm Beach, Fla., campus. He is a sophomore working toward an associate's degree in automotive marketing and a bachelor's degree in marketing/management.

He has worked for the family-owned Greenbriar Motor Co. for the past three summers and plans to join the company upon graduation.

Control

Liquidate your fleet as skillfully as you managed it.

The need for superior handling of your fleet doesn't end when it's time to liquidate. In fact, there are more variables than ever to manage it effectively. That's why we developed our exclusive Auction Managed Fleet Plan.℠

Through our vast disposal network of subsidiary and affiliated auctions, we bring your vehicles to the largest possible number of buyers. (That assures you the best prices.) And because vehicle disposal is our profession, we have the experience to turn over your fleet quickly and efficiently. And in doing so, eliminate costly downtime by expediting everything from vehicle collection to getting the net check in your hand.

Plus, with Anglo American's Auction Managed Fleet Plan, you get the cost benefits of centralized recordkeeping, detailed inventory control, and a program specifically designed to meet the needs of your existing fleet. That means you can keep your staff to a minimum and also have the information necessary to support next year's purchase decisions.

Let us help you juggle all these liquidation responsibilities just as we do for so many major corporations. Anglo American's Auction Managed Fleet Plan is at your disposal. Just call Dennis Thee, Vice President of Sales, for more information.

Domestic sales advance 13.8% for mid-April

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Mid-April retail sales of new cars built in the United States climbed 13.85 percent, reversing a decline in the month's initial 10-day selling period.

Sales totaled 228,991 units for April 11-20, compared with 201,-141 a year earlier.

Particularly strong gains were reported for Honda, Chrysler Motors and Toyota.

Honda dealers' sales were up 65.51 percent from those of a year earlier. Chrysler Motors' dealers were up 36.52 percent, and Toyota dealers' were up 32.45 percent in the period.

Gains also were noted for Volkswagen, with a sales increase of 17.82 percent; Ford Motor Co., with a rise of 9.53 percent; and General Motors, with an upturn of 7.53 percent.

Nissan had the sole decline among the domestics as it reported a dip of 9.17 percent in mid-April sales.

Mazda, which began producing cars in this country in September, said its dealers delivered 720 cars in the 10-day period.

There were nine selling days in the mid-month period compared with eight last year.

The daily selling rate in the period was 25,443 units this year and 25,143 in 1987.

Sales fell 24.95 percent from the year-earlier level in the month's initial 10-day period.

1985	$5,904	$5,837	$5,731
1984	$4,438	$4,380	$4,363
1983	$3,792	$3,765	$3,689
1982	$2,398	$2,534	$2,454
1981	$1,937	$1,906	$1,817
Overall Average	$5,722	$5,589	$5,309

Manheim revenues jump 31%; 1987 total reaches $100 million

Manheim Auctions, a division of Atlanta-based Cox Enterprises, had revenues of roughly $100 million in 1987, up 31 percent over the previous year, based on handling $3.5 billion in gross vehicle transactions.

Cox Enterprises is mainly a communications company with newspapers, television and radio stations; cable television systems; and other investments including cattle ranches.

Because it is not publicly traded, and therefore not required to disclose its financial results, the company's 1987 annual report is more fluff than substance, but it does provide limited insight into the growth of the company's wholesale auto auction division.

All figures provided in the annual report are approximated and company officials said they are conservative.

Operating income for the division was up 31 percent over 1986, principally due to a 16 percent increase in the value of the vehicles sold. Total registrations exceeded one million vehicles, according to the annual report. Reconditioning services contributed $18 million to Manheim's total revenues.

Company officials told Automotive News the number of cars sold exceeded 600,000, which would give the company roughly a 60 percent sales rate on consignment vehicles. However, that percentage based on more precise figures provided to Automotive News indicate the sales rate was actually closer to 55 percent, and reflects the average for all 21 auctions that were in the chain last year.

Gross sales of vehicles sold at Manheim auctions rose 25 percent in 1987. The figure has risen steadily over the years — from $1.6 billion in 1983 to $1.9 billion in 1984; $2.0 billion in 1985; and $2.8 billion in 1986.

Acquisitions last year, including Bishop Brothers Auto Auction in Atlanta and Oshawa Auto Auction in suburban Toronto, were highlighted in the report. Manheim also opened Riverside Auto Auction in southern California. Other expansion projects in 1987 included an 11-bay reconditioning center for the Atlanta Auto Auction.

In 1988, new facilities will be

Ford studies Aston, AC role; Cosworth tie grows

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BRENTWOOD, England — Ford of Europe is considering various strategies for Aston Martin and AC Cars, including the production of a new small Aston and combining the two firms under one organizational roof. Ford acquired Aston Martin and AC Cars last fall.

Meanwhile, the company announced it will boost production of its new Cosworth Sierra, the high-performance model introduced in Europe last February.

Alex Trotman, Ford of Europe chairman, said there is no rush to determine precise plans for the company's two new prestige brands, Aston Martin and AC Cars.

"We're discussing alternative ways of evolving Aston Martin into perhaps a slightly larger company," he said. "For the moment our position is that Aston Martin do what it has been doing. There are a number of possibilities in the future, none of which is a concrete plan yet."

Under Ford, Aston is expected to reactivate a small-car project that had been shelved. Production of the so-called "DB4 for the 1990s" would probably be at a new factory in the United Kingdom.

Trotman said a small car "is obviously an option" and could necessitate a new plant.

"(A new factory) would depend on the volume of the car," he said.

When asked, Trotman said the new 90,000-square-foot AC Cars plant under construction in Brooklands, England, could serve as a site for Aston production.

"It gets back to volume and what kind of product you're going to put in," he said. "That would be a possibility, I suppose."

Another option is combining AC Cars and Aston Martin organizations.

"Yes, there could be some synergy between those two little companies," Trotman said, "but we clearly would keep the marques separate."

The automaker's new notchback Sierra Cosworth debuted early this year, and Trotman said the initial response has been strong.

A 150-mph Cosworth-powered version of the Sierra hatchback was introduced two years ago as a limited-production model. Output was capped at 5,000 units.

"We're rolling along, doing better than we expected frankly," he said. "It's a smash in Italy, for example."

Trotman said Ford has decided to adjust the build schedule upward by at least 20 percent in 1988 and further increases are possible.

"I think we'll be roughly to the 6,500-7,000 annual rate of production by the end of this year," he said. "We've confounded ourselves before with some of these top-of-the-line products; it's conceivable we could go higher than that. But we want to be somewhat cautious with this kind of product."

Ford and Cosworth are said to be near agreements for high-output versions of other Ford models in Europe, resulting, for example, in Cosworth Fiesta and Cosworth Escort models.

Trotman said Ford expects to continue to develop new products with Cosworth, but said there are no plans to use the Cosworth name elsewhere in the Ford range.

"That would be possible, but I think it would be extremely unlikely," he said.

Ford's profit bonanza continues

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co., bolstered by a strong performance overseas, continued its record-setting earnings pace with a 9 percent increase in profits, or $1.62 billion, for the first quarter of 1988.

The results were higher than many analysts had expected. Ford was able to post a 76 percent increase from automaking ventures outside the United States despite a two-week strike in Britain. Combined overseas automotive operations netted Ford a quarterly record $580 million.

In the United States, though, earnings fell 10 percent to just over $1 billion. The company attributed the decline to higher capital spending and marketing costs. The marketing programs helped Ford boost its share of the U.S. car market from 20 percent at the start of the year to 21.8 percent. Ford's truck share for the first quarter was up a fraction to 29.7 percent.

Altogether, Ford's quarterly profit was the highest ever recorded by an automaker. The previous high was $1.6 billion by General Motors in the first quarter of 1984.

Ford's worldwide sales for the quarter also climbed by about 9 percent, to $20.7 billion.

"What's important is how well balanced the company is," said Charles Brady, an analyst with Oppenheimer & Co. Ford is continuing to show that it doesn't have to rely on the United States alone for a strong balance sheet, Brady said.

Ford's financial picture has been helped considerably by the fact that its plants in Europe and the United States are producing at full capacity, said David N. McCammon, Ford's vice president — finance and treasurer.

Shifting exchange rates added $60 million to Ford's profits in Europe, but that gain was more than offset by $100 million in lost profits from the Ford of Britain strike, which disrupted production in that country and on the European continent. Overall European sales rose for the quarter and operating margins improved.

Autolatina, Ford's joint venture with Volkswagen AG in Brazil, earned a profit in the first quarter, McCammon said. The venture, which lost an estimated $300 million during its launch last year, is now benefiting from reduced operating costs, lower interest expenses and an improved economic picture in Brazil.

McCammon declined to reveal the size of the gain because Ford holds a minority stake — 49 percent — in Autolatina. VW will announce its financial results for 1987 this Wednesday in West Germany.

Income from Ford's financial services group was essentially unchanged in the first quarter. Its First Nationwide Bank saw earnings drop by $26 million from year-ago levels. Ford Credit's earnings climbed by $3.3 million, and newly acquired U.S. Leasing Corp. contributed $7 million to the bottom line in its first full quarter as a Ford subsidiary.

In a press conference, McCammon also announced:

- Ford's capital spending amounted to $875 million in the first quarter, up slightly from year-ago levels. The expenses are part of Ford's previously announced plan to significantly increase capital outlays in coming years.
- The U.S. industry's strong start in 1988 has Ford reconsidering earlier predictions for 15 million car and truck sales. McCammon said sales could come in as high as 15.3 million.
- An economic downturn, which once seemed possible in early 1989, now appears unlikely in the United States before mid-1989.
- The new Ford Probe, which officially goes on sale May 12, is getting off to a strong start. Dealers have already placed 75,000 orders.
- Despite Ford's reluctance to add new capacity, it may bend in order to meet the continuing demand for trucks. Among its options are converting an existing car plant or building a new assembly plant.

CHRYSLER

FROM PAGE 1

production in 1989 following an estimated six-week move to Chrysler's Jefferson Avenue assembly plant in Detroit.

Chrysler officials acknowledged earlier this year that profits could be affected by a new corporate strategy stressing gains in market share and increases in spending for engineering and future product development.

"We had to chose between shrinking margins or market share," Iacocca said. "We've got to continue to look long-term."

Chrysler Corp. Treasurer Frederick Zuckerman said that Chrysler's profit margin dropped to about 2.5 percent in the first quarter of 1988 compared to about 4 percent in the comparable period of 1987.

Although the company declined to specify its marketing costs in the first quarter, a letter sent by Chrysler to all members of the U.S. Congress April 22 said the company spent more than $400 per unit on incentives in 1987.

According to Iacocca, Chrysler's long-term focus included increasing in March its engineering research and development budget by $150 million. Chrysler spent $800 million on engineering research and development in 1987.

"We have taken a look at some of the 1991 and 1992 (vehicle) programs and we have to do more than we've been doing because we need to do it to be competitive," Iacocca said.

Iacocca said the increased production in the last half of 1988 is being prompted by a stronger-than-expected market as well as pressure exerted in the wake of the company's announcement that the Kenosha plant would be closed.

Chrysler will produce 983,000 units in the second half of the year, up from a projected build of 873,000.

The increased output includes 12,000 more Omni/Horizon America subcompacts, 57,000 more A[illegible]ica K-cars and 23,000 more M-body Fifth Avenues, Diplomats and Gran Furys.

The decision also means that Chrysler no longer has plans this year to make Mexico its sole source of the Dodge Aries and Plymouth Reliant for the U.S. market.

Iacocca said the company has a contingency plan to produce 20,000 to 40,000 K-car units in Mexico from January to May 1989 if sales are sufficiently strong. A phaseout of the model is then expected.

Chrysler posted the drop in earnings on net sales of $7.71 billion in the first quarter of 1988 up from $6.03 billion a year earlier, before it acquired American Motors.

Chrysler said it earned $183.7 million in the first quarter of 1988 and reported a one-time charge of $93.1 million due to plant closing costs in its Acustar parts-making subsidiary. Chrysler earned $269.4 million in the first quarter of 1987.

Worldwide factory sales for the quarter were 634,292, compared to 570,002 Chrysler units and 82,939 AMC units in the year-earlier period.

Chrysler Financial said its 1988 first-quarter net earnings were $65 million, 7 percent higher than the previous record of $61 million, earned in the first quarter of 1987. Its pretax earnings of $101 million in the 1988 first quarter were the second best in history.

Four-door GM10 due

POPULAR MECHANICS/JIM DUNNE PHOTO

Oldsmobile will introduce a four-door sedan version of its Cutlass Supreme (GM10) in the fall of 1989 for the 1990 model year, according to sources. The Cutlass sedan will be introduced along with four-door versions of the Pontiac Grand Prix, Buick Regal and a Chevrolet GM10 model.

FORD

FROM PAGE 1

"It's not so much what you say to a customer, but how long it takes you to get a result," said Larry Hernandez, general manager at Capitol Ford in San Jose. "We'll cut through a lot of the red tape."

According to a spokesman for the National Automobile Dealers Association, Ford's program reflects "a maturing of the relationship" between automakers and their dealers. "I think the trend is toward relaxing warranty decision-making," the spokesman said. "But I'm not aware of any programs that go as far as the Ford program goes."

Under Ford's old system, the company served as the auditor. It took days, if not weeks, to get a zone manager to approve a claim. Meanwhile, customers didn't know if they'd be out $20 or $200.

The program is aimed at providing payments for problems that aren't caused by neglect or abuse. It's not, a Ford spokesman stressed, a license to give away money.

Dealers will be able to use a lot of discretion. They will also take into account the time and mileage since the warranty expired.

Although each case is different, Ford expects dealers to chip in an average of about $20 for every $80 provided by the company. Customers may be asked to cover some of the costs, too. A dealer is more likely to ask the customer to share some of the cost when a part breaks at 30,000 miles than at 15,000.

Hill, for example, was told that a design flaw made the decklid rust common on 1983 Mark VIs. He was also a long-time Lincoln owner and a known customer at the dealership — two other factors a dealer may take into account.

Ford tested the program in five of its parts and service regions last year. Twelve more have been added this year, including the four last week. By October, it is expected to be in place in a dozen more regions and cover every Ford and Lincoln-Mercury dealership nationwide.

"From our perspective, anything that simplifies the process for obtaining reimbursement is probably a good idea," said Robert Dewey, a member of the vehicle safety staff at the Center for Auto Safety, a consumer group.

The center in the past has taken issue with the industry for its so-called secret warranties, a practice of paying for common defects only when customers raise a fuss.

Dewey said that Ford's program appears worthwhile as long as it's not kept secret and as long as it doesn't preclude an owner from pursuing a defect claim through other channels.

Dealers said it's the type of program they will use daily and would have no reason to hide it.

Ford isn't disclosing how much it expects the program to cost. And while there is risk any time the company loosens its grip on the purse strings, dealers suggest that the benefits will far outweigh the potential for abuse.

"It's super-helpful to extend a little goodwill on things where the burden shouldn't be laid totally on the customer," said Mike Jones, service manager at Tom Curo Lincoln-Mercury, Laurel, Md.

Only the first owner of the car is eligible for the program.

Ford's basic warranty currently extends for one-year/12,000 miles, with additional powertrain protection for six years/60,000 miles. Corrosion coverage is effective for six years/100,000 miles.

Porsche signs lease for new U.S. quarters in Reno

RENO, Nev. — Porsche Cars North America is sending signals it is in the United States for the long haul.

Company officials have signed a 10-year lease for 47,000 square feet of space in a new building here. The company's headquarters is already in this city.

Porsche will move to the 12-story building — to be called Porsche Plaza — when its present lease expires in about 15 months.

Security concerns for company cars was cited as a consideration in the relocation plan.

Mexico grows as source of cars for U.S. market

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp.'s on-again, off-again shuffle of K-car production in Mexico focused attention on North America's most geographically convenient source of low-cost cars.

South-of-the-border production is not new. The twist comes as some U.S. manufacturers shut down assembly plants at home while Mexican sourcing increases.

In 1986, Chrysler, Ford Motor Co. and General Motors combined to make 76,882 cars in Mexico. In 1987, that figure more than doubled, to 164,028.

Exports also climbed — and at a feverish rate. In 1986, the Big 3 exported 20,502 cars to the United States. A year later, that number shot up to 113,531.

Of Detroit's automakers, Ford Motor Co. led the way in both Mexican production and export totals. In its Hermosillo plant, Ford built 51,773 Mercury Tracers that were exported to the United States. Total production in Mexico was 67,578 cars including Thunderbird, Topaz and Cougar models for the home market.

If current production rates hold, Hermosillo is expected to produce some 65,000 Tracers this year — up 14,000 from 1987. By adding a second shift, the plant could build as many as 130,000 annually.

Ford plant officials also picked Hermosillo as one of the two sites where it will build the CT20, the planned successor to the Tracer and Ford Escort. The Mercury version is expected to be built in Hermosillo, beginning in mid-1990, while Ford's assembly plant in Wayne, Mich., will produce Ford versions.

In the first three months of 1988, Ford built 5,593 cars, up slightly from last year.

Chrysler's production in Mexico has grown steadily from 42,606 units in 1986 to 64,208 in 1987. Last year it built 5,017 cars in the first quarter; this year's pace more than doubled, to 10,247.

Chrysler has been building for export to the United States the Chrysler LeBaron coupe, Plymouth Reliant and Dodge Aries. On Feb. 8, it began production at its Toluca, Mexico, plant of Plymouth Sundance and Dodge Shadow units for the U.S. market. Approximately 7,900 are expected to be built for the United States this year..

"Mexico can impact North America maybe 3 percent — the whole continent — as far as shipping anything out," Chrysler Chairman Lee Iacocca said last week. "They are not a player."

GM will continue to manufacture and export its mid-sized A-body cars from its engine and vehicle assembly complex in Ramos Arizpe in northeastern Mexico.

In 1987, GM Mexico built and exported 20,724 Celebrity A-cars to the U.S. market and built another 11,518 A-cars for the Mexican market. GM exported no cars from Mexico in 1986, though it did build and export the now-discontinued GMC Caballero and Chevrolet El Camino trucks that year.

Production capacity for the A-car at Ramos Arizpe has been put at 120,000.

For the first quarter this year, GM's Mexican car production was 3,321, up by more than half from 1987's first quarter. And GM's car production for all of 1987 was more than double that of 1986 — 32,242 versus 14,260.

Automotive News Staff Reporters Mary Connelly and David Versical contributed to this report.

LABOR

FROM PAGE 1

American jobs would have been lost through increased Mexican production of K-cars during the period they were being phased out of the U.S. market. But to mention outsourcing — particularly to Mexico — during negotiations was like waving a red flag in front of a bull.

By contrast, a revelation last month that Chrysler also planned to build its P-car subcompact in Mexico went almost completely unnoticed, and the international UAW has not publicly protested the move.

Chrysler plans to build 7,900 Plymouth Sundance and Dodge Shadow P-cars in Mexico for the U.S. market during the 1988 model year. Production began in Toluca, Mexico, Feb. 8 (Automotive News, March 7).

Bill Parker, president of UAW Local 1700 at the Sterling Heights, Mich., plant, which also produces P-cars, said in March that he was very upset about the Mexican sourcing because more units could be built at Sterling Heights.

Since the P-car and K-car revelations of Mexican outsourcing got such different reactions, observers felt last week's turmoil was laced with traditional contract bargaining hype.

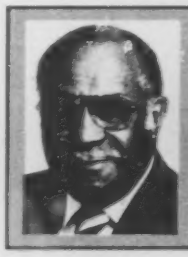
But an unlikely team of heroes — Iacocca and the union's chief Chrysler negotiator, Marc Stepp — emerged as saviors of the faltering negotiating process last week by flushing the villains: the managers Iacocca blamed, during a top-level meeting last week, for poor labor relations at Chrysler.

Stepp later fired his own volleys, citing "managerial stupidity" for "stupid announcements" and "idiocy" that "poison the waters" of labor-management relations.

The fallout on day-to-day relations may prove considerable and further polarize the parties at a time when Chrysler says it needs worker cooperation more than ever.

In blasting Chrysler managers, Stepp did not mention St. John, the company's top negotiator, by name. But it was St. John who, to deal with a news leak, called a press conference during the volatile first-week talks and thereby trumpeted a plan — which Iacocca later said was only under review — to shift all production of K-bodied cars to Mexico.

Stepp praised Iacocca for chastising the insensitivity of Chrysler management. He called Iacocca a man of his word who saw eye-to-eye with him on the labor-management relationship problem.



Stepp: Iacocca should stay in close touch with Chrysler managers during negotiations to make sure they don't commit "more tomfoolery."

Meanwhile, though Iacocca said that K-car sourcing was determined by necessary production increases, Chrysler local officials credited Stepp with making the company scrap its plan to source all K-bodies in Mexico in the 1989 model year.

St. John and the labor relations staff are taking the flak at the local level, yet will be expected to right the ship during negotiations.

"Lee Iacocca made the best statement," said Aaron Taylor, president of UAW 7, which represents the Jefferson Avenue (Detroit) plant. "He said Chrysler has come a long way in productivity and quality, but the labor relations department still has a long way to go."

Stepp called upon Iacocca to stay in close touch with Chrysler management during negotiations, to make sure they don't commit "more tomfoolery."

The recent turmoil may exact a price from Chrysler. Stepp and local union officials believe Chrysler workers — who gave up concessions and suffered anxiety over the proposed sale of Acustar and, on top of that, the moving of the K-car to Mexico — are entitled to more than workers received from Ford Motor Co. and General Motors.

"We need pattern-plus," Taylor said. "We've seen Chrysler's callous attitude. The workers want a sign that the trend will change."

Pattern-plus, Taylor said, means "no concessions whatsoever and a monetary consideration," possibly a signing bonus. "Let's see something from Iacocca in the contract — a monetary reward for the worker," he said.

UAW President Owen Bieber said that it is traditional for the latest company getting a pattern agreement to get a "sweetener," but Bieber said it would not be "too caloric."

Automotive News Staff Reporter Mary Connelly contributed to this report.

Car production in Mexico rises 31% for 1st quarter

By Kathy Barbaglia and Stephen Downer
AUTOMOTIVE NEWS STAFF

Mexican car assembly for the first three months of this year totaled 47,506, an increase of 31.77 percent over the year-ago quarter's 36,052.

Each of the five automakers in Mexico posted increases over the 1987 period.

General Motors built 3,321 cars in the first quarter, 55.11 percent more than the 2,141 assembled in the first quarter of 1987.

GM produces Chevrolet Celebrity, Buick Century and Oldsmobile Cutlass Ciera in Mexico. Only the Celebrity is exported to the United States.

Ford Motor Co.'s three-month build totaled 5,593, a slight increase (0.65 percent) over the 5,557 completed in the year-ago period.

Ford assembles Topaz, Ford Thunderbird and Mercury Cougar and Tracer models in Mexico. Tracer is the only car built for export.

In the first quarter, Chrysler assembled 10,247 cars, more than double the 5,017 built in the comparable period of 1987. Chrysler produces Aries, Reliant and LeBaron J models in Mexico; all are exported to the United States.

MEXICAN CAR PRODUCTION
First quarter 1988 vs. 1987

	1988	1987
Chrysler	10,247	5,017
Ford	5,593	5,557
GM	3,321	2,141
Nissan	14,883	13,478
Volkswagen	13,462	9,859
Total Cars, Mexico	47,506	36,052

Nissan built the most cars of the five companies in the first quarter with 14,883, up 10.42 percent over 13,478 in 1987. Nissan builds the Sentra for the Mexican market.

Volkswagen reported production of 13,462 cars in the first quarter, 36.55 percent more than the 9,859 built in the same period last year.

VW assembles the Golf, Jetta, Beetle and Corsar (Quantum) in Mexico.

Combined car production in Mexico, Canada and the United States in the first quarter totaled 2,036,395, down 13.15 percent from 2,344,766 last year.

Firebird, Camaro top theft list

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors' F-body cars — Pontiac Firebird and Chevrolet Camaro — topped NHTSA's list of final 1985 theft data with 19 and 16 thefts per thousand, respectively.

In fact, eight of the 10 cars with the highest theft rates were GM models. The other two were imports, Mazda's RX-7 in third place and Toyota's Supra, which finished 10th. The other GM models, ranking from fourth to ninth, were the Chevrolet Corvette, Buick Riviera, Chevrolet Monte Carlo, Buick Regal, Pontiac Grand Prix and Cadillac Eldorado. All cars in the top 10 had theft rates of more than 10 cars per thousand produced.

Ironically, the car with the lowest theft rate for 1985 is also sold by GM, the Chevrolet Nova, which is produced by New United Motor Manufacturing Inc. Sixteen of the 27,943 produced in 1985 were stolen for a theft rate of 0.5726 per thousand.

American Isuzu has disputed NHTSA's finding that the theft rate for the I-Mark nearly doubled in 1985 compared to 1983 and 1984 figures. The I-Mark is ranked 40th on the list with 89 thefts out of a sales total of 8,244 for a theft rate of 4.37 per thousand.

According to Isuzu, most of the reported thefts occurred in Puerto Rico, where the I-Mark theft rate was seven times that in the continental United States. Isuzu felt it was unfair to rank a car as a top risk when its theft rate was disproportionately high in only one area of the country. Isuzu asked that the thefts from Puerto Rico be excluded. NHTSA responded that by law, the definition of U.S. thefts includes that territory.

UAW review board upholds election rule

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The UAW's public review board, an independent panel including law professors, upheld the union's requirement that a staff member who runs for election against an incumbent regional director take a 90-day unpaid leave.

In a related action, the U.S. Department of Labor last week established the rules and schedule for the rerun election for UAW Region 5 director, which was ordered by a U.S. district judge.

Election of delegates under the Labor Department's supervision will begin at locals in mid-June. A special convention, where delegates will vote for regional director, is expected to take place Aug. 11 in Tulsa, Okla., but could be scheduled earlier.

The Labor Department and Jerry Tucker, former assistant director of Region 5, challenged the candidacy rule and the election of Kenneth Worley, who defeated Tucker for Region 5 director by a slim margin. Should Tucker win the new election, it would put a dissident in a powerful position.

In a suit against UAW President Owen Bieber, Tucker charged that he was illegally fired for not abiding by the candidacy rule. A decision on that suit awaits U.S. District Judge Richard Suhrheinrich's consideration of the review board's decision.

The review board dismissed charges that the candidacy rule was not properly adopted:

"We cannot ignore the fact that the UAW is now, and has been for over 20 years, a one-party institution not in all respects unlike that found in many national governments in which a single political party controls the government, and the officials who formally make and administer the laws . . . are selected wholly by that party," the review board said.

"For this board to rule that the union can act only through formal action of the International Executive Board, recorded in verbatim minutes, would be to ignore the realities of how this union has long governed itself and would call into question a wide range and untold number of (executive board) actions over the years."

The UAW said the decision showed the 90-day rule is a "logical and democratic requirement" in light of its evolution.

'87 Maserati cars fail to meet passive-restraint rule

WASHINGTON — NHTSA's Office of Chief Counsel said it is considering legal proceedings against Maserati Automobiles because none of its 1987-model cars had either air bags or automatic belts.

Standard 208 requires a 10 percent phase-in for 1987.

Maserati was given 20 days from receipt of the NHTSA letter to respond.

The company sold 932 cars during the 1987 calendar year.

PRODUCTION

Car output holds steady at 165,706

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production totaled 165,706, slightly above (0.11 percent) the prior week's 165,519 and a bit higher (0.61 percent) than the year-ago week's 164,702.

So far this year, 2,341,932 cars have been assembled, 12.29 percent below the 2,669,975 completed last year at this point.

Companies split last week's scheduled production as follows: General Motors, 50.75 percent; Ford Motor Co., 24.98 percent; Chrysler Motors, 14.82 percent; Honda of America Manufacturing Inc., 4.53 percent; New United Motor Manufacturing Inc., 1.96 percent; Nissan Motor Manufacturing Co. U.S.A., 1.58 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.38 percent.

Volkswagen of America's plant in Westmoreland, Pa., remains idle until May 9 for model changeover.

Truck output of 86,676 last week dipped 1.98 percent from the prior week's 88,425 but was 9.57 percent more than last year's 79,107.

Year-to-date, 1,424,128 trucks have been built, 11.31 percent more than the 1,279,452 assembled last year at this time.

GM slated overtime last Saturday at the following car plants: Detroit-Hamtramck; Lansing, Mich.; Wentzville, Mo.; and Willow Run, Mich.

Four GM truck plants worked overtime last Saturday. They were: Lordstown van plant in Lordstown, Ohio; Baltimore; Flint, Mich.; and Pontiac, Mich.

Saturday overtime was slated at Ford's Wixom, Mich.; Kansas City, Mo.; and Norfolk, Va., plants.

Daily overtime is slated at all Ford car and truck plants this week except Edison, N.J.

Chrysler scheduled Saturday overtime at its Kenosha, Wis.; Toledo, Ohio; and St. Louis (No. 2) plants. Daily overtime is slated this week for Chrysler's Kenosha; Belvidere, Ill.; and St. Louis (No. 2) plants.

Canada again slates record auto production

For the second week in a row, Canadian auto makers scheduled the highest production in history — 27,010 cars, surpassing the current record of 26,733 set the week ended Dec. 14, 1985. The previous week's build fell 68 cars short of the record.

Last week's estimated car output was 1.29 percent more than the previous week's 26,665, and 52.75 percent more than the year-ago week's 17,683.

So far this year, 392,015 cars have been assembled, 35.83 percent more than the 288,611 built last year at this point.

Truck output of 20,030 last week was slightly below (0.83 percent) the prior week's 20,197 but 9.90 percent above the year-ago week's 18,226.

Year-to-date, 325,750 trucks have been completed, 17.49 percent more than the 277,268 built last year at this time.

Iacocca returns as saviour

Host of problems needed his touch

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Lee A. Iacocca, the hero who saved Chrysler Corp. from itself once, is trying to do it again.

After months of distraction, Iacocca is back at the helm — in part to steady a foundering ship — and with him comes a new car-dominated vigor that got sidetracked in the fast-paced days of 1987.

And in just 120 days, the legend in his own lifetime has recharted the New Chrysler Corp. from a financially driven company faltering in the car market and favoring trucks and airplanes to a New New Chrysler Corp. — an automotive, technology, manufacturing force willing to fight and sacrifice to win an even bigger U.S. market share.

The contrasts are startling.

What was going on at Chrysler toward the end of last year was the stuff of which novels are written. There were tales of infighting among top executives and a host of squabbles over turf and priorities.

The one thing most agreed on was that their leader, Lee Iacocca — the man who rebuilt Chrysler and became an international hero in the process — was away too much.

Preoccupied with the acquisition of American Motors, a divorce and heavy travel, Iacocca had stepped

Smiles for a new pact
UAW President Owen Bieber, right, Vice President Marc Stepp and members of the union's bargaining team announce a tentative agreement at Chrysler Motors. The pact was reached after bumpy negotiations in which the UAW painted a dismal picture of labor relations at Chrysler. Workers will vote on the contract this week. **Story on Page 6.**

FORD HIRES: *New workers added, 1st time in a decade*

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

In what is believed to be the first "off the street" hiring by the Big 3 in more than a decade, Ford Motor Co. is taking on new workers at its Twin Cities truck plant in St. Paul, Minn., and at several other locations.

And for this first infusion of fresh blood in years, Ford is being almost as choosy as the Japanese transplant automakers.

Since the recession, when thousands of laid-off autoworkers swelled preferential recall lists, the Big 3 have not been able to hire new workers. But those lists are thinning out at Ford, which has only about 2,000 workers on indefinite layoff. General Motors, by contrast, has about 60,000 idled workers.

Though a Ford spokesman said the new hiring at several plants does not mean "an increase in production or an expansion," it is another sign of how far Ford has come since it laid off 100,000 workers in the early 1980s.

And it represents "a totally new way of hiring," said William Novotny, time standards representative at UAW Local 879 at the Twin Cities plant.

Novotny said that about 50 workers will be chosen from a list of about 2,000 recent applicants at Twin Cities, and that the hiring process takes about a month.

Before the example of the transplant automakers — who screen extensively from lists of up to 100,000 applicants to select 2,000 workers — American automakers typically hired on a Friday and put a new worker on the line the next Monday.

Stempel says product blitz on tap for GM

By Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTER

The devalued dollar has killed General Motors' plan to export its large European Opels to the United States, and emissions and fuel-economy rules have shelved the V-12 project, but President Robert Stempel sees a GM with "more new cars, more new trucks, more new powertrains than in 80 years."

The demise of the Fiero should not be taken as an indication that the auto giant is unable to meet today's consumer-driven trend to niche vehicles. To the contrary, Stempel pointed to GM's commitment to niche markets in trucks and with the Buick Reatta.

He affirmed that GM will be able to profitably produce more such vehicles. And he forecast that GM will soon be able to bring its product cycles down to three years — besting today's leader, Honda, with its current four-year cycle.

Both niche marketing and the shortened product lives are proof that GM is becoming a customer-driven company, Stempel emphasized in a wide-ranging interview.

He disagreed with the widely published interpretation of GM statements on its market-share goals, made recently in a closed-door session with Wall Street analysts, and he stressed that GM is aggressively pursuing increased market share.

The production startup curves of the new mid-sized coupes and the second shift being added for full-sized pickups in Pontiac, Mich., give the company hope that it will indeed increase its slice of the pie, he said. But he declined to forecast whether the company's penetration will increase from its present 37 percent car share and 31 percent truck share, citing intense competition from a growing number of automakers.

Stempel also said the company's white-collar layoffs are just about complete, although cost-cutting continues to be the company's top priority.

GM is striving to once again become the country's lowest-cost auto producer despite cost penalties it is willing to accept to produce the cleanest engines, he

GM10 sales mixed

Buick, Pontiac top '87; Olds off

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — It has been a little more than six months since the first of General Motors' GM10 intermediates hit the street, enough time to gauge their market strengths and weaknesses. To hear GM and most of its dealers tell the story, the launch has been a success of the first order.

But even as the corporate flag waves high, a gentle wind suggests all may not be as it seems.

Right now, union leaders, plant officials and GM employees are holding talks in Pontiac's Grand Prix-dedicated Fairfax assembly plant in Kansas City, Kan. Those talks focus on some layoffs the company is expected to make once the line rate of 800 cars a day is met, later this month. The plant currently is producing 700 cars per day.

In addition to the possibility of layoffs, GM last week recalled 25,900 Buick Regal and Pontiac Grand Prix models for safety-related items.

The sales numbers have been mixed for the GM10s — Pontiac's Grand Prix, Buick's Regal and Oldsmobile's Cutlass Supreme — since their introduction.

Buick was first with its Regal GM10 derivative. The car went on sale last October. For the calendar year through April 30,

GM intends to capture a bigger market share with its GM10 fleet

'Executive car' tag on rentals attacked

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

You can call them "brass hat," "factory official," or "executive vehicles," but if they really come from daily rental fleets you're likely to get in trouble — especially in Ohio, Arkansas and Arizona.

Dealers who advertise manufacturer program vehicles as "factory official" cars or represent them to customers as "executive vehicles" rather than daily rentals are coming under fire in those states — and probably more.

In the wake of the controversies, General Motors said it is studying ways to change the terms so the words "factory official" are removed from auction ads and brochures because it confuses dealers and customers.

"There have been some people who believe 'factory official auction' is the same as 'factory official car' so we will take steps to make sure the terminology is not used," a GM spokesman said.

GM says it realizes there is some confusion on the part of its dealers on the issue and will alert them to it.

"These vehicles (program cars) are clearly identified

Smith clarifies analysts' meeting — Page 3
GM revamps incentives; some rebates dip — Page 4

Smith says GM won't settle for 37% of market

Quarrels with reports of analysts' session

DETROIT — In an unusual letter, Chairman Roger B. Smith has publicly revealed for the first time what General Motors executives told stock analysts at a closed-door New York meeting April 22.

While some analysts' accounts of the meeting said GM would modify its production capacity to reflect its present 37 percent U.S. market share even if it meant closing more plants, Smith said it was not true that GM was planning to settle for such a reduced share of the U.S. market.

In a letter responding to a May 2 Automotive News editorial, Smith said of the conclusion that GM had "resigned itself" to live with a market share in the high 30s that, "Nothing could be further from the truth."

Smith went on to describe what happened — from his perspective — at the meeting with analysts. Such clarifications are rare, especially from an executive at Smith's high level.

"What we said at the meeting and what the analysts understood and appreciated was our outlining our future plans in relation to the market and capacity," Smith wrote.

"We pointed out that with our major plant expenditures behind us (except for Saturn), we are now able to devote more resources to our products. Moreover, with the flexibility obtained from our new and modernized plants, together with forthcoming rationalization of product platforms, new engine and transmission programs and improvements in productivity, scheduling and buildable combinations, we would be able to achieve 100 percent capacity utilization at a lower passenger car market share.

"We did not at any time indicate that we were 'targeting' a lower market share and, in fact, indicated we could accomplish all of this while still retaining the ability to reach a 45 percent share if our new products coming on stream were as successful as we hoped they would be. To many of the analysts this was the best news to come out of the meeting.

"At the meeting, all of us enunciated that GM's principal challenge was to build increasing profitability in our North American automotive business while raising market share.

"In order to do that, we must be cost competitive in everything we do. Effective utilization of our new and modernized manufacturing and assembly capacity is an important part of being cost competitive."

HIDDEN IMAGE

1989 Pontiac spied

For 1989, the Pontiac 6000 LE gets a sleeker more aerodynamic look, reflecting a trend that sources say will be seen throughout the General Motors A-body intermediate line. The 6000 will have a more rounded rear window and roofline, although front and rear styling appears unchanged. GM's other intermediates, sources indicate, will receive greater sheet-metal changes than the Pontiac 6000, emphasizing the rounded look.

Chrysler's AMC unit to pay $11.5 million in Jeep rollover

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp.'s American Motors Corp. subsidiary has agreed to pay $11.5 million to a Florida woman paralyzed in a Jeep rollover accident in 1984.

Although AMC no longer designs or manufactures cars, the company is still in existence as a Chrysler subsidiary and the rollover judgment was against AMC, a Chrysler spokesman said.

The driver of another vehicle involved in the accident agreed to pay the accident victim, Elizabeth Walker of Fort Pierce, Fla., $600,000, bringing the total settlement to $12.1 million.

The figure includes $2.6 million in interest and court costs accumulated since a $9.5 million jury award was made on April 1, 1986.

Last month, according to the Chrysler spokesman, the Fourth District Court of Appeals for Florida ruled that jurors were correct in awarding Walker compensatory damages, but $10 million in punitive damages should not have been awarded.

In the settlement, Chrysler agreed not to pursue an appeal of the compensatory damages and Walker agreed not to appeal for punitive damages, the Chrysler spokesman said.

The accident occurred on U.S. 1 in Fort Pierce when the 1978 Jeep CJ-5 in which Walker was a passenger rolled over after striking a vehicle that had turned in its path. Neither Walker nor the driver was wearing seat belts. Walker was left a quadriplegic.

The Chrysler spokesman said some of its settlement in the case would be paid by product liability insurance that AMC held at the time of the accident. Product liability insurance, however, is no longer available to auto manufacturers in significant amounts, the spokesman noted.

Chrysler's annual 10-K report filed in March with the U.S. Securities and Exchange Commission said damages specified in pending lawsuits on Jeep rollover accidents total a potential $385 million in compensatory damages and $703 million in punitive damages.

"These amounts are damages alleged by plaintiffs and do not necessarily represent a reasonable measure of AMC's exposure in such matters," Chrysler said in its report to the government.

The 10-K also noted that AMC has received a number of claims that have yet to result in lawsuits.

Financial reserves have been established, the company said, although reserves for extensive punitive damages have been deemed by the company to be unwarranted and have not been made.

New-type Hondas in works for U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Industry sources say Honda is preparing a spate of imaginative new vehicles for the U.S. market in the early 1990s, including a minicar, a minivan, a sports car and a Cadillac-sized performance-luxury sedan.

By the 1991 model year, there will be at least five Honda-branded lines and at least four Acura-branded upscale cars, according to automotive analysts who specialize in future products and other sources familiar with Honda.

But as early as the 1990 model year, there could be a U.S. version of the Concerto, Honda's Civic-sized, "YY" car that is being developed jointly by Honda and Britain's Rover Group for the Japanese and European markets this year, although that is the area of the greatest disagreement on Honda's intentions.

Honda doesn't discuss future products.

Some sources, including George Peterson, president of The AutoPacific Group, Newport Beach, Calif., believe Concerto is likely to be sold as an entry-level Acura.

However, Christopher Cedergren, senior automotive analyst for J.D. Power and Associates, Agoura Hills, Calif., thinks Honda will scrub the U.S. program.

And Honda is experimenting with a variety of unconventional truck-like personal-use vehicles beyond the Accord-based van, analysts said. Among them are several that borrow elements from off-road, large pickup, sports-utility and passenger van vehicles without fitting directly into any particular segment.

In the 1992-1994 model years, those programs could result in a "hybrid halfway between a (Chevrolet) El Camino and a large pickup" or other new niche, said Cedergren.

Here's Honda's future lineup as outside experts see it:

- City — A new generation of the Japanese-market City, about the size of the original Civic, likely powered by a 1.3-liter four-cylinder engine and weighing about 1,800 pounds. It is due in spring 1990 in Europe, 1991 or perhaps as late as the 1992 model year here. It is a prime candidate for production outside Japan, perhaps in Canada or an Asian country. The likely U.S. target volume is 100,000 to 150,000 annually.
- Civic — All new for 1988, no major change until 1991.
- Prelude — On the same schedule as Civic.
- Accord — A new generation of Honda's mainstay due in 1989 as a 1990 model will be 6-7 inches longer, wider and more powerful with an optional new 3-liter V-6 engine.
- Van — The new Accord platform and V-6 will be the basis for Honda's first van. Honda's goal is a sleek people mover that is more car-like than Plymouth Voyager/Dodge Caravan, the leaders in that segment. Cedergren lists it as a fall 1990 arrival.

Here's the forecast for the 1991 Acura product range, not including Concerto:

- Integra — All-new for spring 1989 as an early 1990 model, Integra will be more powerful with a 1.8-liter four-banger. Regardless of whether Acura has a new entry-level car, Integra will move up a notch in price class to help close the gap between it and Legend, with a likely base price of $13,000.
- Legend — The 1990 Legend will get a modest facelift. The sedan is likely to have a new floorpan to allow it to use a Legend coupe-like front and rear double-wishbone suspension.
- Big sedan — Due in fall 1989, the Acura flagship with a multi-valve V-8 engine to power the Cadillac DeVille-sized car could debut a few months later.
- Sports car — It currently has parallel engine programs, either a 24-valve V-6 or a 32-valve, 3.6-liter V-8. But most insiders are betting that by the 1991 model year, Honda will choose the V-8 for this model, viewed as a Mercedes SL-killer.

Automotive News appoints DeLorenzo international chief

DETROIT — Matt DeLorenzo, a six-year Automotive News veteran and a specialist in the import sector of the industry, has been named international editor of the publication, effective today.

DeLorenzo, 34, will move to Detroit in his new position, after spending the last 18 months in the Automotive News Washington Bureau, where he reported on government-related aspects of the industry. Prior to that, DeLorenzo was based in Los Angeles for almost five years and mostly covered Asian automotive importers.

DeLorenzo succeeds Richard Feast, who moves from international editor of Automotive News to editor of AutoWeek, an Automotive News sister publication within Crain Communications Inc.

The international editor oversees staff reporters in Washington, Los Angeles, New York, Frankfurt and Tokyo as well as in a Nashville bureau that will be opened this summer.

DeLorenzo

"We are fortunate to have a first-rate professional like Matt DeLorenzo to follow in the traditions established by Richard Feast to make our national and international coverage even better," said Automotive News editor Andrew R. McGill. "Matt's import and Washington background and his keen knowledge and experience make him an ideal international editor."

Delorenzo joined Automotive News in 1982 after four years as executive editor of Automotive Fleet. He graduated from Bradley University in Peoria, Ill.

U.S. drains VW profit

Operations lost $316 million in 1987

Losses at Volkswagen AG's troubled operations in the United States climbed to $316 million last year, the biggest drain on the group's 1987 worldwide results.

The cost of closing the Westmoreland, Pa., assembly plant and Audi U.S. losses helped limit the West German group's growth in net earnings to 3 percent in a year when it finished first in European sales and saw results improve elsewhere.

However, VW Chairman Carl Hahn predicted that losses in the United States will be considerably lower in 1988.

Volkswagen AG's net profit rose to 598 million marks ($330 million) in 1987 from 580 million marks in 1986. But, VW said its U.S. losses were 572 million marks ($316 million), including a charge of 380 million marks ($210 million) for Westmoreland.

Volkswagen also said that it expects worldwide production to increase slightly in 1988 to 2.8 million units.

In 1986, Volkswagen AG earned 164 million marks in the United States.

Losses attributed last year to the closure of Westmoreland amount to about half the total charges for shutting down the plant. An equal amount will be borne in 1988 unless VW is able to sell the facility, which is scheduled to close in July.

VW did not break out Audi's results in the United States, but Audi Chairman Ferdinand Piech said recently that the 1987 loss was at least 200 million marks ($110 million).

Audi will detail its world results this week in Munich.

— Richard Johnson and David Versical

European sales top peak '87 rate

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — New-car sales in Western Europe ran nearly 10 percent ahead of their record 1987 pace during the first quarter of 1988.

Fiat Auto ranked No. 1 during the first three months with just under 16 percent of the European market, according to estimates compiled by Automotive News.

All of Europe's top 10 carmakers increased volume in the period, with France's Peugeot SA recording the sharpest gain.

Each of the five biggest national markets ran ahead of 1987. Spain's 20-month string of dizzying growth continued unabated. Even West Germany, Europe's largest market, was ahead of last year's record pace though it was generally expected to decline in 1988.

Japanese automakers kept up with overall European industry growth, while holding market share in check. Japanese makers claimed 10.6 percent of Western European sales in the first quarter, roughly where they have been for the past year.

Despite almost universal predictions of slower sales in Europe this year, industrywide volume rose 9.1 percent to 3,357,900 units through March. The uncertain impact of the Wall Street collapse last fall caused most companies and analysts to project at least a modest downturn from last year's 12.3 million sales.

"It's turning out to be much stronger than we thought," said Ford of Europe Chairman Alex Trotman. "We think it could be a 12 million industry again this year for cars. . . .We had planned on it being down 5 percent."

Trotman does not expect conditions to change soon. "It looks to us very bullish; at times, almost frighteningly so," he said. "We wonder how long this can go on. Frankly, I can't see any end to it."

Fiat Auto, including Alfa-Lancia, is benefiting from strong sales in its Italy as well as in other key national markets. Fiat clung to its nearly 60 percent share of the Italian market, which grew 13.4 percent in the first quarter. Group sales totaled 534,900 in the quarter, up 12.2 percent over last year. Fiat's Europe-leading market share in the first three months was 15.9 percent.

Alfa Romeo alone improved 16.8 percent in 1988 to 56,100 units. Its new 164 model is getting a strong reception in Italy, where 20,000 units are on order.

Volkswagen AG, Europe's sales leader for the past three years, improved 4.5 percent in the first quarter, the smallest gain among the six big manufacturers. Volume for the VW, Audi and Seat brands totaled 459,900, and market share was 13.7 percent.

The German market, where VW is No. 1, grew less sharply than the Italian market.

Peugeot SA, bulwarked by the Peugeot 405 that is being introduced across Europe, hiked sales 15.9 percent in the first quarter. It edged past Ford into third place last year and is now widening the gap. The French maker's share was 12.7 in the first quarter, compared with Ford's 11.4 percent.

Peugeot SA sales, including the Peugeot and Citroen divisions, totaled 427,100. Its first-quarter sales were up nearly 12 percent in France; 32 percent, United Kingdom; 26 percent, Italy; and almost 28 percent in Spain.

Hampered by a 12-day strike in the United Kingdom earlier this year, Ford saw its market-leading share in that country fall almost two percentage points — to just under 26 percent — compared with the first quarter of 1987.

However, Trotman said the company's recovery from the strike has been better than expected. Overall, Ford's first-quarter sales in Europe were estimated at 383,400, a gain of 7.3 percent.

General Motors ranked fifth through March with sales of 362,700 cars, an improvement of 6.7 percent and good for a 10.8 percent share. Renault was sixth with 352,300 units, a gain of 7.3 percent and a share of 10.5 percent.

Japanese makers combined for sales of 356,600 cars in the first quarter, an increase of 12.4 percent over the same period last year.

Nissan continued to lead Japanese makers in Europe with a share of 2.8 percent on sales of 93,000, a 19.7 percent gain in volume over the same quarter last year.

West Germany remained Europe's biggest car market, growing 2.9 percent to 647,000 in the quarter following last year's record 12-month sales of more than 2.9 million units.

Italy was second at 616,400, a 13.4 percent improvement, while the United Kingdom (584,800) and France (538,100) were up 10.9 and 8.6 percent, respectively. Spain may be in line for its first million-car year. Sales were estimated at 260,600 for the first quarter.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	3 mos. 1988	Percent gain/loss
West Germany	647,000	+ 2.9
Italy	616,400	+13.4

Domestic slide pares April sales

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The Attack of the Incredible Incentives played through April across the country but, even so, box office results in the form of deliveries of U.S.-built cars lagged behind those of a year earlier.

Sales dipped 5.82 percent to 651,560 units for the month, down from 691,803 in April 1987. Sales of imported cars inched up 2.80 percent to 247,020 units from 240,294 last year.

The industry's total sales, domestics and imports, dipped 3.60 percent to 898,580 units from 932,097 units a year earlier.

Where the U.S. market was, April 1988

	Total Sales	Pct. of Total
SUBCOMPACT	79,339	8.83
COMPACT	182,544	20.35
INTERMEDIATE	265,789	29.57
STANDARD	118,422	13.18
SPECIALITY	5,186	0.58
IMPORT	247,020	27.49
TOTAL	898,580	100.00

For the calendar year, domestic sales were 8.78 percent ahead of last year's with 2,565,582 vs. 2,358,551 in 1987. Imports were up 8.83 percent with 981,126 vs. 901,525.

The industry total was 3,546,708 units, up 8.79 percent over the 3,260,076 sold a year ago.

Sales of domestic cars in April's final 10-day selling period dipped 6.69 percent to 277,615 units compared with 297,523 a year earlier.

Sales incentives for retail customers and dealers through the month continued to run from cash refunds and cut-rate financing to instant credit and free airline tickets to Germany and back.

Honda, Chrysler Motors and Toyota reported gains in retail sales for the month.

Honda tallied a 22.83 percent increase compared with the year-earlier month.

Chrysler was up 8.78 percent for the month, and Toyota rose 4.47 percent.

General Motors led those automakers with sales declines. GM reported a 14.15 percent drop compared with April 1987.

Nissan declined 13.07 percent, and Volkswagen slipped 11.02 percent.

Ford Motor Co. was down 1.40 percent.

Mazda, which began making cars here in September, sold 1,345 cars in the month.

For the last 10-day sales period, Chrysler led the field with a 10.27 percent gain in retail deliveries of U.S.-built cars compared with the similar period in 1987.

Honda had an increase of 7.53 percent, and Ford was up 8.65 percent. Nissan reported a rise of 2.83 percent, and Toyota was up 0.59 percent.

GM had a sales decline of 19.74 percent in the period, while VW reported a drop of 7.47 percent.

Mazda dealers sold 1,345 cars in the sales period. It was not building cars in the United States in April 1987.

PRODUCTION

April output of cars dips

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Production of domestic cars during April totaled 610,206, 7.52 percent below the March output of 659,793 and 6.96 percent below the year-ago month's 655,867.

Last week's targeted car production of 159,806 dipped 1.90 percent from the previous week's 162,905 and fell 1.60 percent from the year-ago week's 162,404.

So far this year, 2,498,937 cars have been assembled, 11.80 percent below the 2,833,422 completed last year at this point.

Companies shared last week's scheduled production as follows: General Motors, 48.26 percent; Ford Motor Co., 26.38 percent; Chrysler Motors, 15.58 percent; Honda of America Manufacturing Inc., 4.69 percent; New United Motor Manufacturing Inc., 2.03 percent; Nissan Motor Manufacturing Co. U.S.A., 1.63 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 1.43 percent.

Volkswagen of America's plant in Westmoreland, Pa., resumes output today. The plant had been idle since April 4 for model changeover.

Truck output for April of 340,385 dropped 14.26 percent from the March total of 396,997 but rose 1.27 percent above the year-ago month's 336,101.

Truckmakers estimated production at 91,318 units last week, 3.66 percent above the prior week's 88,094 and 14.82 percent more than the year-ago week's 79,531.

Year-to-date, 1,516,864 trucks have been built, 11.95 percent more than the 1,354,958 assembled last year at this time.

GM reopened its Framingham, Mass., car plant today, recalling about 2,000 hourly workers on one shift. The plant had been idle since November due to slow sales of the Chevrolet Celebrity and Oldsmobile Cutlass Ciera models.

GM slated overtime last Saturday at its Detroit-Hamtramck; Willow Run, Mich.; Baltimore; Flint, Mich.; Pontiac, Mich.; and Moraine, Ohio, plants.

All Ford car and truck plants except Edison, N.J., are slated for daily overtime this week.

Car production in Canada tops year-ago total

Canadian automakers built 103,209 cars in April, 6.30 percent below the March total of 110,143 but 49.47 percent above the year-ago month's 69,050, when several plants were idle for model changeover.

Last week's scheduled car output of 26,891 was slightly above (0.72 percent) the prior week's 26,700 and 124.39 percent more than the year-ago week's 11,984. The year-ago week's output also reflected downtime for model changeover.

Truck production during April totaled 80,437, 12.20 percent below the March output of 91,612 but 15.03 percent more than the year-ago month's 69,925.

Targeted truck production of 20,510 units last week was 1.40 percent more than the previous week's 20,226 and 15.65 percent more than the year-ago week's 17,735.

New 'Fiero' may emerge from GM ax

Suitors line up for plant, tooling

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' plan to cease Pontiac Fiero output and mothball its plant at the end of the summer has stirred up a number of parties interested in acquiring the operations to produce some type of successor vehicle.

The interested parties include kit-car manufacturers that use the Fiero chassis, giant Canadian supplier Magna International Inc., car dealers in league with the state of Mississippi, and even some former GM executives.

Virtually all of the interested parties seem to envision a spinoff vehicle using the Fiero chassis with a new skin — and perhaps powertrain, suspension and interior refinements — that could sell as a low-volume, niche-market vehicle in the United States for $20,000 to $30,000.

The Fiero "space frame" concept that uses a steel chassis cage and frame with hang-on plastic skin makes the vehicle ideally suited for fast, low-cost facelifts.

More should be known about the fate of the Fiero operations after this week, with one group of suitors promising an announcement.

However, GM officials have not confirmed that they would sell the plant if an offer were made.

Since GM's March 1 announcement that Fiero would be discontinued, the automaker's chary plans for the facility have caused speculation among niche marketers that the Fiero operations might be for sale.

"The fate of the Pontiac facility hasn't been decided," GM President Robert Stempel said in Los

Bidwell: Chrysler is interested in entering the minicar segment

AUTOMOTIVE NEWS/JOE WILSSENS

BIDWELL: *Eyes 3% price hike on '89s, greater voice at Mitsubishi*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors, which currently markets its Mitsubishi imports by stressing their Japanese heritage, will begin de-emphasizing that lineage as it integrates the models into its domestic lineup and seeks a greater voice in Mitsubishi's future products.

Chrysler's move contrasts with its current strategy and with Chevrolet's plans to market its imports through a separate franchise called Geo.

Chrysler Motors' president of product and marketing, Bennett E. Bidwell, in a wide-ranging interview, also said that Chrysler will not seek low-volume market niches. Instead, it will cut the number of nameplates and rely on fewer models to generate increased volume.

Bidwell said Chrysler, which in 1988 has touted its pricing restraint during the last three years, may increase prices up to 3 percent in the 1989 model year as wholesale costs mount and consumer rebates continue.

"I don't know that we would go a lot beyond 3 percent," Bidwell said. "You've got to have something in your pocket to give back. To not price and then to have to put out rebates is a double whammy that is pretty difficult to absorb."

Bidwell also said he favors raising the price of Chrysler's entry-level Dodge Omni and Plymouth Horizon America subcompacts saying, "They would be as good a buy at $6,295 as they are at $5,995."

About specific models in the Chrysler Motors lineup, Bidwell said:

- The aging L-body Omni/Horizon America models may not be replaced by an all-new model in the 1990s. Instead, Chrysler is considering retaining and refining the platform and restyling the subcompact. Such a move would avoid the political and currency risks associated with Third World sourcing.
- The A-body Dodge Spirit and Plymouth Acclaim sedans, which are K-car replacements that will be launched in January, will not be offered as a full line of models as the K-cars are. Bidwell said there are no current plans to produce a two-door version.
- The new Chrysler Fifth Avenue luxury sedan, a front-wheel-drive Y-body based on the C-body Chrysler New Yorker, will bow "fairly well into 1989" and will be followed by a Chrysler Imperial sedan.
- Chrysler will develop a sport-utility vehicle for the Dodge network, and that vehi-

Mystery fills Big 3's first joint venture

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

General Motors, Ford Motor Co. and Chrysler Motors are forming their first joint venture.

It will be in a technical area, lawyers are polishing it up, and specifics will be disclosed in about three weeks. However, it is surrounded by an aura of mystery.

General Motors President Robert C. Stempel, said in Los Angeles last week, "It will be in the fundamental sciences. There are a lot of areas where something can be done better in a cooperative effort, where allowed under antitrust laws."

A federal law that went on the books four years ago allows competitors to work together on research under some circumstances.

Stempel declined to be specific about the current joint effort but there have been indications the venture will be in the development of composite materials.

Composites are mixtures of dissimilar materials and range from the familiar fiberglass-reinforced plastic to such exotic mixes as magnesium and ceramics and graphite fiber and steel.

Composites differ from alloys in that the materials are not chemically joined.

Robert J. Eaton, GM vice president and group executive — technical staffs group, told Automotive News the project is the first joint venture among the auto companies in the United States. He, too, declined to discuss it further.

An engineer familiar with the venture said, "It's too early to tell where this is going to go and what it is going to be. But it is in materials research."

Congress passed the National Cooperative Research Act of 1984 to encourage American companies to do more research and development together.

Cooperation among competing firms like the Big 3 is limited by the 1984 law to what is called "precompetitive research and development," or research done well before any product is ready for the marketplace.

The law was written partially to counteract Japanese cooperative efforts so huge they brought on common usage around the world of the expression, "Japan Inc."

Such cooperation in Japan helped push it to its strong automotive position. It also assisted in leading to market dominance by that country's makers of household electronic equipment, cameras and several other product lines based on technology.

Auto All-Star Team will be readers' choice

There will be a new twist to the Automotive News 1988 Automotive All-Star Team.

In previous years, votes were cast only by members of the Automotive News editorial staff.

But, by popular demand, this year's balloting will be open to all Automotive News readers.

You'll be able to vote for your favorite auto company chief executive, operating officer, general manager — in fact, every industry position right down the line, from manufacturing and marketing to purchasing and public affairs.

So dust off your scouting reports. Get ready to choose the best and brightest performers in the auto game for the 1988 model year.

An official ballot will appear in the May 30 issue of Automotive News.

The official Dream Team will be announced in

Austin Rover buys Sterling import firm

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

Britain's Austin Rover Group has acquired total control of its U.S. importer of Sterling automobiles, Austin Rover Cars of North America (ARCONA), from multimillionaire dealer-entrepreneur Norman Braman.

Officials denied that Sterling's sales — half what Braman was forecasting up until a year ago — played any role in his selling. They indicated, instead, that the change in ownership was a positive step, could provide for additional capital and would allow the Rover Group to develop a global strategy and take advantage of potential in the U.S. market.

The buyout price for the 51 percent of ARCONA owned by Norman Braman Enterprises was not dis-

Tardy T-bird may bow on lucky date

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

The introduction of the all-new Ford Thunderbird and Mercury Cougar has been delayed until late this year — possibly Dec. 26.

Ford had hoped to bring out the cars along with most of its 1989 models in September. But, according to one company source, various development snags have pushed back the introduction.

In particular, Ford is running behind on the supercharged Thunderbird Super Coupe, the source said. The company plans to introduce all Thunderbird and Cougar models simultaneously.

Dealers in the Detroit area were told recently that Dec. 26 could be the official introduction date. That date is a favorite at Ford, as it was used for the successful kickoffs of Taurus and Sable in 1985 and Lincoln Continental last year.

The new models, which are being developed under the MN12 code name, will be rear-wheel-drive successors to the current Thunderbird and Cougar.

Job 1 at Ford's Lorain, Ohio, assembly plant is now scheduled for the second week of October. As with the Continental, some early models are expected to go into leasing fleets and possibly to rental-car agencies to give Ford a chance to monitor the cars.

Last week Ford officially launched the Probe, even though the car has been trickling into stores for more than a month.

Dealers have placed more than 77,000 orders so far, enough to satisfy production through October, said Ford Division General Manager Thomas Wagner. About 6,000 have been delivered so far.

"I like to refer to it as the most successful unintroduced car we've ever had," Wagner said.

The car is being produced on a single shift by Mazda in Flat Rock, Mich. The plant also builds the Mazda MX-6, which shares platforms and powertrains with the Probe.

A survey of 170 early Probe buyers supports Ford's contention that the car would attract import-oriented drivers. Fifty-three percent were non-Ford owners. Of that group, 21 percent had owned Japanese makes, and 5 percent had owned European imports.

Benton: GM's troubles in recent years have helped Ford prosper

Benton's quality view

Says dealer service trails vehicle gains

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. thinks it has passed some of its offshore rivals on the quality front but still has big strides to make in the dealer service end of its business.

In an interview, Philip E. Benton Jr., president of the Ford automotive group, also conceded that General Motors' troubles in recent years have helped Ford prosper. While he expects GM to rebound, Benton said Ford will aim to keep GM from regaining lost market share at Ford's expense.

Benton also said that Ford expects to add to its growing share of the U.S. vehicle market. On the car side alone, that share has grown by more than 3 percentage points in the last 18 months. But any further increases will be built from expected gains in quality and not as a goal in itself.

Ford's internal studies show a 60 percent improvement in quality between 1980 and 1987, Benton said. But he acknowledged that some Ford owners are still having more trouble than they should.

"The story is one of very significant improvement, but it is not one of perfection by any stretch of the imagination," he said.

He added, though, that Ford now ranks on the "first team" of world automakers when it comes to quality. "Are we better than all of the Japanese, are we better than all of the Germans and what have you? No. But we're better than some of them," he said.

Fords' performance in dealer service shops — which could be a battlefield for some future wars in the industry — is another story, Benton said. "We've got a lot farther to go in that arena than we do in vehicle quality."

Benton sees another challenge as the company channels its money for future product programs.

The company set aside $3.6 billion for capital spending last year and will increase the annual outlays substantially in years to come, Benton said. But as the market becomes divided into smaller product niches, it will be harder to put that money into the right places.

"The kind of the increases we are talking about and the complexity of the products — it's a huge challenge," he said.

Ford, however, will continue to shorten the time it takes to bring a car to the market. Benton said that figure is "close to" four years now. Honda, which has a four-year product cycle, is considered the industry leader.

As head of the Ford automotive group, Benton is in charge of implementing Ford's plans for global product development. Under the strategy, teams in designated centers will provide platforms to be used in vehicles built around the world. In the process, Ford expects to cut duplication in its engineering and product development teams.

Benton conceded that the program has taken longer to develop than he had hoped. It's been hard

GM, Ford space units figure in U.S. probe

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

A federal grand jury in Washington is reportedly investigating allegations of improper payments by Hughes Aircraft Co. and Ford Aerospace Corp. consultants to former officials of the Intelsat satellite consortium.

Ford Aerospace documents relating to consultants hired by the Ford Motor Co. subsidiary between 1973 and 1988 were subpoenaed by the U.S. attorney's office in Washington in April, a Ford Aerospace spokeswoman confirmed.

Spokesmen for Hughes Aircraft Co., the El Segundo, Calif.-based subsidiary of General Motors, declined comment.

Hughes Aircraft Chairman Albert D. Wheelon, 59, abruptly resigned May 5, citing unexplained "personal reasons." Malcolm R. Currie, previously president and chief executive at GM's Delco Electronics, was elected Hughes Aircraft chairman.

Wheelon's resignation followed by a day a hastily called, unscheduled special meeting of Hughes Aircraft's board. His departure after only a year as chief executive is unexplained to the public, as well as to Hughes Aircraft employees, who are described by insiders as "in a state of shock."

Internal investigations are under way at both Hughes and Ford Aerospace.

Ford Aerospace has not been advised by investigators of any improper activities by any of its employees so far, nor has its own investigation turned up "any improper payments or activities on the part of any Ford Aerospace employee," the spokeswoman said.

The investigation appears to center on whether Intelsat's former chief executive, Richard Colino, and some representatives of Intelsat member nations improperly received money from consultants, according to the Washington Post.

Intelsat, a Washington-based consortium, represents 114 nations channeling communications over 13 satellites.

Hughes, Ford Aerospace and a General Electric Co. subsidiary are the three U.S.-based producers of communications satellites.

Ohio charges dealers sold rentals as brass-hat cars

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The Ohio attorney general has sued two dealers for allegedly advertising and selling "factory official" cars that were daily rental vehicles bought by dealers at factory-sponsored auctions.

The state filed suits in Butler and Hamilton Courts of Common Pleas last week against Rose Chevrolet in Hamilton and Tri County AMC-Jeep in Cincinnati, charging them with three violations of the state's consumer laws.

"Consumers interviewed by my staff indicated that they were attracted to these dealerships and later purchased the cars because of advertisements and sales representations that the cars had been used by officials of General Motors or Chrysler," said Attorney General Anthony J. Celebrezze Jr.

"The lawsuits charge that these consumers were deliberately misled, since the vehicles were not driven by the company's executives but used as daily rentals," he added.

The suit asks the courts to grant refunds for the full purchase price of each vehicle to the 25 persons who purchased vehicles from Rose and the nine who bought cars from Tri County.

Celebrezze also is seeking a $75,000 civil penalty against each dealership.

Both firms are charged with misrepresenting the previous use of the vehicles and creating a false impression of the value, prior use, and former ownership of vehicles offered for sale; and knowingly misrepresenting the prior ownership of vehicles advertised for sale.

Dealers had told Automotive News that they interpreted the phrase to mean vehicles purchased at factory auction sales, and GM said it was studying ways to change the terms to avoid confusion (Automotive News, May 9).

4 more auto leaders on World Congress team

DETROIT — Two U.S. auto company presidents, two industry leaders from Italy and Germany, an entrepreneurial whiz and a professor of automotive design will keep the evenings lively during the 13th Annual Automotive News World Congress at the Westin Hotel, July 17-20.

Besides Sunday night keynote speakers Robert C. Stempel, General Motors president, and Deiter Spethmann, chairman of Germany's Thyssen AG, four other leading executives will appear at World Congress evening sessions.

The other U.S. president is Bennett E. Bidwell of Chrysler Motors. And the Italian leader is Vittorio Ghidella, chairman of Fiat Auto S.p.A.

The entrepreneur is Roger Penske — the dealer, manager, business executive. The design professor is Strother MacMinn of the Art Center — Pasadena.

Penske and Bidwell will speak Monday, July 18, at 7:30 p.m. and 8:15 p.m., respectively.

Ghidella and MacMinn will address the Tuesday Evening Gala, July 19, at 7:30 p.m. and 8:15 p.m., respectively.

Bidwell is responsible for Chrysler Motors' automotive sales, service and parts operations and marketing services and is a member of Chrysler Corp.'s executive committee.

Ghidella comes to this year's World Congress in the midst of what has been called "Europe's most important new-car launch of 1988."

The Italian firm recently introduced the subcompact Tipo that threatens to reshape the balance of power in the European industry.

Fiat is counting on the front-wheel-drive transverse-engine model, developed over five years at a cost of $1.6 billion, to help it vault ahead of Volkswagen Group in European car sales.

Tipo is the cornerstone of Fiat's plans to challenge such cars as the VW Golf, Opel Kadett and Ford Escort in all major markets — except the United States.

"The Tipo is not going to be sold in the U.S. for the time being," Ghidella said during the car's introduction in Europe. "Competition in that segment in the U.S. is very strong from the Japanese, the Koreans and others."

However, Tipo derivatives will form the basis of several new models to be introduced by Fiat through the mid-1990s.

Penske, who is currently preparing his Chevy-powered race cars for this year's Indianapolis 500, is a man of considerable ambition and business talent.

Penske Corp., a holding company, is the umbrella for three groups: transportation services, retail automotive and automotive performance.

Among the properties are auto dealerships in New York and California, Hertz-Penske Leasing and Detroit Diesel Corp., which was formed early this year following Penske's acquisition of General Motors' Detroit Diesel Allison Division.

MacMinn, in addition to teaching automotive design, is a talented writer. His profile on former GM design chief William Mitchell, called "A Shark Is Not a Grouper," appears in the current issue of Automobile Quarterly.

Import dive cuts April sales total

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The light-truck market took its first step backward this year with a 4.11 percent sales decline in April.

The decline was caused by a 30.84 percent plunge in sales of imported trucks. Detroit-based manufacturers had a 2.49 percent sales increase.

Overall, 406,633 light trucks were retailed in April, off from 424,084 in April 1987.

For the first four months of the calendar year, sales of 1,620,352 light trucks maintained a respectable 9.61 percent lead over the 1,478,278 retailed a year earlier.

Foreign manufacturers tallied 58,141 sales in April, down from 84,064 a year ago.

For four months of calendar 1988, foreign manufacturers' sales of 234,326 were off 18.76 percent from 288,425 in like 1987.

All the importers except Range Rover, which is still gearing up in the United States, had declines during April, and all except Mitsubishi and Range Rover were down for the first four months of this year.

On the domestic side, Ford and GMC posted small declines in April, while Chevrolet, Chrysler and Jeep continued to chalk up increases.

Minivan sales gains, particularly at Chrysler, continued to pace the industry.

The Dodge Caravan, for example, posted a 47.47 percent gain in April and a 79.83 percent gain for four months. Sales of other minivans also were strong.

Volvo puts profit first and has cash to grow

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — AB Volvo has no immediate interest in Mack Trucks, but further North American acquisitions are likely within a few years as Volvo strives to be the world's most profitable heavy-duty truckmaker.

The Swedish firm has to digest its Volvo GM Heavy Truck operation before it can make any further acquisitions in the North American market, said Gunnar L. Johansson, A B Volvo president, in an interview.

"Three to five years would be appropriate" for the assimilation, Johansson said, noting there were five years between the takeover of White Motors in 1981 and the joint venture with General Motors.

Heavy-duty trucks, buses and food products are the designated high-growth sectors for the Swedish-based multi-national company, which posted sales of $15.6 billion in 1987. The United States, Canada and Europe are the prime targets for expansion, Johansson added.

Mack Trucks has been mentioned as a company that might interest Volvo.

Volvo has the cash for several acquisitions: It had $3.7 billion in liquid assets at the end of 1987. Volvo tries to maintain a cash reserve of at least 10 percent of annual sales. Johansson said $1.7 billion is available for acquisitions.

Volvo's growth strategy is two-edged: It is targeting trucks and buses because the return on capital invested is high. For 1987, Volvo trucks earned 24 percent on investment, earning $273 million, while buses returned 23 percent, tallying $30 million in operating income.

Volvo's growing prepared-food operations typically produce a lower rate of return but are steadier. Volvo's interest is part of an effort to balance the pronounced boom-and-bust cycle of the automotive, aerospace and marine and industrial engines industries where the bulk of its business lies.

Johansson

Volvo now trails only Daimler-Benz in heavy-truck volume, but Johansson said the effort is not to overtake the West German company in unit or dollar sales.

"Our long-term objective should be being the most profitable truck maker," he said.

The acquisition of Britain's Leyland Bus in March makes Volvo the largest bus producer in Western Europe. Johansson expects that within three years Volvo's total bus sales will double to $680 million.

Most of the cash surplus comes from operating profits, which companywide last year amounted to $1.1 billion.

But some of Volvo's acquisition war chest came from selling off parts of the business that didn't pay off or didn't fit the company's investment strategy. In the past year, Volvo has sold an Italian steel mill, a mining equipment manufacturing company and, most significantly, its energy exploration and production operations.

Volvo's efforts to balance its vehicle operations, which together accounted for 63 percent of 1987 sales, center on food and trading.

Its acquisition strategy is what Johansson calls "organic" growth, i.e., picking up medium-sized companies with expansion potential in fields where Volvo already has experience. Food-related acquisitions have been slowed because the high interest in Western European food processors has driven up prices.

Navistar adds axles

Lightweight units designed for tandems

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

ANAHEIM, Calif. — Navistar International introduced two lightweight tandem rear axles for use in International trucks at the International Trucking Show here.

The new axles, called X400 and X340, are rated at 40,000 and 34,000 pounds, respectively.

According to Navistar, they will be available exclusively in International trucks, including the premium cab-over-engine 9600 and 9700 models and the conventional 8300 and 9300 models.

The X400 will be available in August, while the X340 is scheduled for early 1989.

The newly designed axles offer weight-saving advantages without sacrificing performance and durability, said Robert M. Shaughnessy, senior vice president, marketing and sales.

Through computer-aided design of major components such as the housing, carrier and forward/rear axle helical drop gears and the use of high-strength/low-alloy steel housings, the new axles weigh 230 pounds less than International's current tandems and as much as 180 pounds less than competitive models, Shaughnessy said.

He added that the X400 and X340 axles are designed specifically to match the specifications and driveline requirements of Navistar's new aerodynamic tractors for line-haul applications.

Those include low-rpm engines, low-profile tires, increased highway speeds and higher load limits. The result is better highway performance, Shaughnessy said.

Both new tandems have a gross combined weight rating of 110,000 pounds for highway applications. Available gear ratios range from 3.06 to 6.14.

Shaughnessy said an important feature of the new tandems is better oil flow to the inter-axle, which is achieved through a new design that provides a full chamber of lube at all times and circulates a constant oil supply even in cold start-up conditions. Navistar has applied for a patent on the design.

Called Consta-Lube, the design greatly decreases spin-out problems and provides longer life, he said. A newly designed optional bolt-on lube pump is also available on the X400 and X340 tandems.

The new tandem rear axles were designed and engineered in cooperation with Dana Corp.'s heavy axle division.

Hot-shotter develops specialty models
Nalley Motor Trucks, Atlanta, developed this Hot Shot with a 42-inch deck height and 10-foot-high loading capability. It is approved for 32,000 pounds GCW. A Super Shot model, below, is approved for 50,000 pounds GCW and a Sure Shot, above, for 65,000 pounds GCW, as is a Peterbilt Powerhouse line of models.

Kelsey chief expects boom in anti-locks

TROY, Mich. — The president of a major supplier firm said rear-wheel-drive anti-lock braking systems will become standard on virtually all North American-built light trucks by the end of the 1990 model year. Also, he said, General Motors will put 200,000 to 300,000 fully powered four-wheel-drive anti-lock-braking systems on its passenger-carrying vans by that time.

John Utley, president and chief operating officer of Kelsey-Hayes Co., said GM's contract for 4wd systems is the largest ever. His company will handle it.

In addition to supplying all the GM, Ford and Chrysler two-wheel-drive and the GM 4wd anti-lock systems, Kelsey-Hayes also will provide the products to Japanese truck manufacturers, both for the light trucks they build in Japan and sell in the United States and for those they produce here.

The company will put a smaller, lighter weight anti-lock system featuring aluminum valves into production in June at a new plant in Fenton, Mich. The company also will produce the units at its Trenton, Mich., facility.

securitag: keeping demo plates under lock and key

Each Securitag lockbox holds one demo tag behind a clear polycarbonate door. The lockbox retains the key until the demo tag is replaced.

One of the on-going concerns of automobile dealership owners and managers has been maintaining control over the use of dealership demonstration license plates or "demo tags."

Mast Corp., Gaithersburg, Md., has developed and is marketing a patented control system, trademarked Securitag, that is designed to solve the problem.

The system consists of a series of lockboxes with the same lock combinations, each with three keys. Each lockbox is designed to hold one demo tag behind a clear polycarbonate door, making the tag visible.

Each sales person is assigned his own numbered key; access to the dealer tag is by the numbered key which will open any one of the lockboxes.

Once the demo tag is removed, the numbered key is seized in the lockbox and cannot be retrieved until the tag is replaced allowing managers to immediately identify who is using a dealer demo tag which greatly reduces the possibility of vehicles being taken out of stock and used without permission.

According to Stuart Brooks, president of Mast Corp., use of Securitag reduces the number of demo tags required, since a small pool of tags is adequate for the shift operations dealerships use, and tags will always be available for vehicle demonstration purposes.

Brooks, noting that some dealerships attempt to control use of their demo tags by using a sign-out system, says, "At best, this is time-consuming and marginally effective."

He adds: "Securitag's loss control system simplifies demo tag control by making a tag readily available at all times for the sales person's use, but at the same time allows management continual monitoring ability, eliminating the need for constant tag checks."

Brooks also notes that, with dealers paying increased attention to insurance premiums and dealership liability, a significant feature of his system is that it provides 24-hour control over the use of demo tags, "thereby reducing the dealership's contingent liability," he says.

According to Brooks, since the system's introduction in December 1986, more than 250 dealerships nationwide have installed Securitag. ■

PERSONNEL

FROM PAGE 21

been named parts and service manager in the Southeast region. He formerly was that region's service training instructor.

Ken Holland will replace Voiles as service training instructor in the Southeast region. He formerly operated his own commercial truck repair service.

Peugeot

William Baxter has been named district parts manager in New England for Peugeot Motors of America.

Baxter formerly was a sales representative with Wurth USA.

Chevrolet

Chevrolet announced three appointments to its central office and branch office sales and marketing staffs.

Daniels

Roger G. Daniels has been named area marketing manager, West. He formerly was branch manager in New York. Daniels joined Chevrolet in 1963 as a district manager in the Southwest region.

Donald P. Oberg was named branch manager in New York, succeeding Daniels. Oberg formerly was branch manager in St. Louis. He joined Chevrolet in 1957 in the Detroit zone.

Oberg

Harris

Maynard M. Harris has been appointed St. Louis branch manager, succeeding Oberg. Harris formerly was marketing center manager in Washington. He joined Chevrolet in 1959 in the Richmond zone.

David B. Hederich has been named manager of technical and motorsports news for Chevrolet's public relations staff, and **Suzanne M. Kane** has been promoted to Central states news relations manager.

Hederich handled racing publicity for Goodyear for seven years before joining Cadillac in 1986. Kane has been with Chevrolet's PR staff since 1970, most recently as director of Team Chevrolet Today, a monthly television production. In her new post, she succeeds **Robert M. Whisner.**

Paccar Leasing

Paccar Leasing Corp. has appointed three regional managers.

Tim Stoner will oversee 10 PacLease franchises in the Central region. He will be based in Denver.

Greg Olsen, based in Minnesota, will supervise 14 franchises there. Osen formerly was with Leaseway.

Robert Cagle has been named regional manager in Eastern Canada. Cagle will also manage Paccar Leasing of Canada.

General Motors

Gerald E. Holmes has been named director of public affairs for the Saginaw and Central Foundry divisions of General Motors.

Holmes joined Oldsmobile in 1964 and has served in public relations posts at Saginaw and Detroit Diesel Allison divisions and with the GM truck and bus group.

Sheller-Globe

James W. McLernon has joined Sheller-Globe Corp. as business adviser — General Motors. He will serve on Sheller-Globe's new business development committee and will be primarily responsible for developing and maintaining its business with GM.

McLernon was Chevrolet general manufacturing manager from 1969 to 1976. He then joined Volkswagen of America and was president and chief executive from 1978 to 1983. Since 1983, he has been executive vice president in charge of operations for Creative Industries Group, an engineering services company serving the automotive and aerospace industries.

Budd Co.

William L. Kozyra has been promoted to chief engineer, product engineering of Budd Co.'s wheel and brake division.

Kozyra

He joined Budd in 1977 as an engineering co-op student. Most recently, he was manager, brake engineering.

Budd Co.'s products include steel stampings, frame components, heavy truck wheels and brake parts.

GE Capital Auto Auctions

Liese C. Spiegelberg has been promoted to vice president, market and product development of GE Capital Auto Auctions.

Domestic stocks dip; import supplies climb

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The industry's inventory of unsold domestic cars and imported vehicles on May 1 was slightly larger than it was a month earlier. It was greater in its absolute number of vehicles and in days' supply.

A rise in import inventories offset a slight decline in the supply of domestic autos.

The stockpile of domestic cars May 1 was 1,571,272 units, the equivalent of a 63-day supply at current rates of sales. A month before, there were 1,574,529 unsold units, equal to a 58-day supply at that time, when cars were selling faster, according to an Automotive News analysis.

The total number of domestic units was the lowest since last Nov. 1 when there were 1,558,931 cars, or an 80-day supply, on hand.

The May 1 figures for imports showed increases in both cars and trucks, compared with April 1.

There were 689,099 cars from abroad in the May 1 stockpile, a 73-day supply, compared with 670,608 cars, a 67-day inventory, a month before. The stock of imported trucks totaled 206,591 units, an 84-day supply, compared with 201,420 units, the equivalent of a 74-day supply at the selling rate of a month ago.

The total import inventory, cars and trucks, was 895,690, or a 75-day supply, vs. a total of 872,028 units, a 69-day supply, a month before.

The domestic makers have said they intend to try to keep stocks at lower levels by means of trimmed production scheduling and sales incentive drives.

On May 1, 1987, the domestic car total stood at 1,912,132 units, a 72-day supply. For imported cars, the total was 567,879, or a 61-day supply. For imported trucks the year-ago total was 238,832, a 67-day supply. The combined import car and truck figure for May 1 last year was 806,711, the equivalent of a 63-day inventory at then-current sales rates.

There is a rule of thumb in the domestic industry that says a 60-day supply is optimal. For imports, the rule of thumb says the ideal before-quotas inventory was a 65-day supply.

By size class, the May 1 domestic inventory shaped up this way: Intermediate, 42.54 percent; compact, 24.26 percent; standard, 18.66 percent; subcompact, 13.33 percent; and specialty, 1.21 percent.

Inventories of unsold domestic cars as of May 1 by company as a percent of the total shaped up this way: General Motors, 51.40 percent; Ford Motor Co., 29.10 percent; Chrysler Motors, 15.19 percent; Nissan, 1.34 percent; Volkswagen, 1.28 percent; Honda, 1.03 percent; Toyota, 0.43 percent and Mazda, 0.23 percent.

By nation of origin, import-car stocks stood this way as of May 1 this year: Japan, 61.82 percent; West Germany, 14.61 percent; and others, 23.57 percent.

Among standouts in the inventory picture was the Lincoln Continental with a scant 16-day stock, up from just 10 days on April 1.

On the other side of the coin were Dodge Lancer with 185 days, Cadillac Allante with 139 days and Eagle Premier with 134 days.

How Well Do Your Cars Handle on Water?

SCAT

SCAT Hovercraft is a publicly owned company whose securities are traded on the over-the-counter (OTC) market under the NASDAQ symbol SCAT.

We're talking *lots* of water, like lakes and rapids. We're even talking solid handling on sand, snow, and swamp. We're talking SCAT.

The SCAT Hovercraft was built for your customers who want to get more of a handle on fun. SCAT glides on a cushion of air over *any* surface, at up to 35 mph. Available in five colors, and newly designed with a sleeker body, SCAT will take two people anywhere they desire. Anywhere they can handle.

Consumer financing and insurance packages are available. Call us today for more information about carrying SCAT.

Anglo revenues, profits climb for 1987

Anglo American Auto Auctions, a division of British-owned ADT Security Systems, had revenues of $79.5 million for fiscal 1987, up 35 percent over the previous year's revenues of $58.7 million. The 1987 figure was based on value of vehicles sold of $2.56 billion.

Pretax profits for 1987 were $15.5 million, up 119 percent over 1986 earnings of about $7.1 million. Auto reconditioning fees accounted for about 24.5 percent of total revenues.

The company had a 27 percent increase in consignments to 680,014 from 535,609 in 1986. Vehicles sold in 1987 totaled 398,076 or 58.5 percent of vehicles consigned.

Much of Anglo's growth was due to the acquisition of eight auctions in 1987, bringing the number of U.S. outlets to 20.

AUCTION BRIEFS

CHARLES THOMAS

The company also purchased a 30-acre site in Tucson, Ariz., and 50 acres in Phoenix, Ariz., for construction of two "greenfield" auctions — one to open in October.

Anglo said it spent approximately $40 million on capital improvements in 1987 at 15 of its 20 auctions.

Vintage car auction

Officials at the Imperial Palace Hotel and Casino in Las Vegas said their second annual antique auto auction, held in late April, set a record with $22.7 million in sales. Sales totaled 544 cars.

The top draw was a 1932 Hispano-Suiza J-12 Phaeton that sold for $1 million, sale officials said. Kruse International hosted the auction.

Buyers from 17 foreign countries were represented at the event and over $12 million in sales was foreign money.

PRODUCTION

Truck output slips after record week

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers scheduled production of 86,460 units last week, 3.96 percent below the previous week's 90,021 but 5.51 percent more than the year-ago week's 81,941.

The prior week's truck production was the highest ever, surpassing the previous record of 88,469 set the week ended March 26, 1988.

Year-to-date, 1,602,027 trucks have been assembled, 11.25 percent more than the 1,440,075 built last year at this time.

Automakers scheduled output of 166,691 cars last week, 3.79 percent more than the prior week's 160,603 and 13.29 percent more than the year-ago week's 147,143.

So far this year, 2,666,425 cars have been assembled, 10.61 percent below the 2,982,988 completed last year at this point.

Companies split last week's targeted production as follows: General Motors, 47.96 percent; Ford Motor Co., 25.07 percent; Chrysler Motors, 15.78 percent; Honda of America Manufacturing Inc., 5.10 percent; New United Motor Manufacturing Inc., 1.95 percent; Nissan Motor Manufacturing Co. U.S.A., 1.57 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.37 percent; and Volkswagen of America, 1.20 percent.

VWoA's plant in Westmoreland, Pa., resumed output last week building only the Golf and GTI models. Jetta production has ended, and the plant is scheduled to close permanently in mid-July, affecting about 2,500 workers.

Overtime was scheduled last Friday at GM's plant in Janesville, Wis.

GM slated overtime last Saturday at its Lansing, Mich.; Arlington, Texas; Fort Wayne, Ind.; and Lordstown, Ohio, plants.

Ford scheduled Saturday overtime at five plants. They were: Wixom, Mich.; Edison, N.J.; Wayne, Mich.; Kansas City, Mo.; and Norfolk, Va.

Daily overtime is slated at all Ford plants this week.

Canada on roll in car assembly

Canadian automakers scheduled the highest production in history last week. Output was targeted at 27,276 cars, topping the previous record of 26,733 set the week ended Dec. 14, 1985.

Last week's estimated production was 2.05 percent more than the previous week's 26,727 and 67.97 percent more than the year-ago week's 16,239. The 26,727 for the week ended May 7 was six units short of the all-time high.

So far this year, 445,708 cars have been built, 40.58 percent more than the 317,052 built last year at this point.

Truck production was scheduled at 20,030 units last week, 1.62 percent below the preceding week's 20,359 but 21.23 percent more than the year-ago week's 16,522.

Year-to-date, 366,335 trucks have been assembled, 17.53 percent more than the 311,697 built last year at this time.

The hottest-selling U.S. dealers of 1987

SALES GIANTS 87

The dealerships that hold the auto industry's 350 top-volume franchises — 10 for each major make — rang up total sales of $17.74 billion in 1987.

They delivered 966,474 new cars and trucks for those franchises.

Those 350 franchises comprise the 1987 Automotive News Sales Giants.

The franchises consist of the 10 volume leaders for each of the 10 traditional domestic divisions and the 25 top imports.

The 966,474 new vehicles sold by the 10 largest franchises for each of the 35 makes represented 6.44 percent of total industry car and truck sales of 15,009,577 in 1987.

Fleet sales — overlooked by some — accounted for more than half of all new cars and trucks sold by the Automotive News Sales Giants last year. Fleet sales for the 350 franchises totaled 494,567 units — or 51.17 percent of their total sales — clearly a significant part of the business and an important part of the picture.

In all, 327 dealerships held the 350 top-volume franchises included in the Automotive News Sales Giants. Some of those franchises are dualed in the same dealership.

Those 327 dealerships sold $1.55 billion in parts and service, and retailed 185,153 used vehicles last year.

Although there were 327 dealerships involved, there were fewer individual dealers than that because of the increasing consolidation of franchises, particularly among the high-volume dealerships.

One of the biggest organizations in 1987 was the Arnold Palmer group, with $1 billion in sales and 51,556 new-car and truck sales spread among its various dealerships.

Arnold Palmer and partner James O'Neal Jr. had six of the Automotive News Sales Giants franchises in four dealerships, including the highest-volume Ford and highest-volume Lincoln-Mercury franchises. The Palmer group also ranked as a top fleet sales organization.

Norman Braman, the dealer-entrepreneur who recently sold his stake in Austin Rover Cars of North America to Britain's Austin Rover Group, also was dealer or partner in six of the franchises on the list — in five dealerships.

One potent store, with four high-volume

Dealers hear pitfalls of going public

Loss of control, costs, risks, noted

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — If car dealers are to take their businesses public, a megadealer such as Roger Penske or Virginia-based Bob Rosenthal will have to lead the charge.

Only organizations with the right combination of size and reputation will be able to convince Wall Street that auto dealerships in general have a bullish future in the financial markets, said Donald L. Keithley, partner in charge of dealer services at J.D. Power and Associates.

Ironically, it is organizations such as Penske's and Rosenthal's that have said they have little interest in going public. Those sales giants have little trouble financing acquisitions and, therefore, have no incentive to relinquish control to shareholders.

Among the businesses owned by Penske are Longo Toyota, El Monte, Calif., the country's largest Toyota dealership; Roger Penske Cadillac, Downey, Calif.; Penske Auto Center (formerly Potamkin Cadillac), New York; Penske Honda, Downey, Calif.; and about 60 percent of the $900 million Detroit Diesel Corp. All four dealerships are listed among the Automotive News Sales Giants.

Rosenthal operates Rosenthal Honda and Rosenthal Nissan, both located in Vienna, Va; Rosenthal Mazda in Arlington, Va.; and other dealerships. Rosenthal's Honda, Nissan and Mazda dealership's are listed among the Sales Giants.

Keithley was a member of a three-man panel on public ownership of car dealerships at the American International Automotive Congress. Also participating were John E Reilly, senior vice president and general manager of

Chrysler Motors Chairman Gerald Greenwald, left, and Iacocca at the annual stockholders' meeting

Cost-cuts and complaints

Chrysler chips away at AMC cost burden

AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Chrysler Corp. has substantially reduced the $1.4 billion in fixed costs it acquired with the purchase of American Motors in the eight months since the buyout.

Chrysler Corp. Chairman Lee Iacocca, speaking informally after the annual stockholders meeting, declined to specify the amount the company has whittled from the fixed costs of the former AMC except to say the reduction has been "a lot."

A $200 million savings was achieved when the white-collar workforce was reduced by 3,500 employees at the end of 1987, Ia-

GM retirees picket on health-care cuts

By Edward Lapham and Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Some 500 General Motors salaried retirees expressed their displeasure with cuts in health care benefits by picketing the company's 80th annual meeting here last Friday.

After two decades of facing picketing proponents of various social causes, GM executives last week were faced with disgruntled former colleagues. The protest moved inside the meeting, where several retirees confronted GM Chairman Roger B. Smith during shareholder question periods.

"You woke up a sleeping tiger in your salaried retirees by taking away our benefits,"

Naderites score double victory in CAFE ruling

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Consumer groups may continue to sue government agencies over their regulatory decisions as the result of a split vote by the U.S. Court of Appeals.

The 5-to-5 vote let stand a lower court ruling against the EPA for retroactive fuel-economy credits granted the auto industry in July 1985.

If the decision is not appealed to the Supreme Court or if the court upholds the decision, EPA will have to go back and refigure fuel-economy numbers for 1981-84 and assess potentially millions in penalties for noncompliance with corporate average fuel economy laws.

And even though both General Motors and Ford Motor Co. say they are clear from civil penalties, there are absolutely no guarantees after EPA finishes its reassessment.

The Center for Auto Safety and Ralph Nader's Public Citizen argued successfully that if EPA in making its retroactive adjustments used factors that improved the manufacturers' fuel economy, it must use in the calculation any negative factors that would lower those figures.

"Without further appeal, we've got to go through rulemaking now to deal with that mileage-accumulation issue, which is likely to end up with some negative adjustments for the 1981-84 model years," said Robert Maxwell, head of EPA's mobile source certification division. How much that will cost the industry isn't known.

Of greater importance to the groups that brought the suit, however, is the "standing to sue" issue,

INDY: *Chevrolet revs up ad splash if it captures checkered flag*

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

INDIANAPOLIS — When the green flag falls Sunday to mark the start of the 72nd running of the Indianapolis 500 race, Chevrolet will have something to celebrate: For the first time, the five leading cars to start the race will be powered by Chevy's Indy V-8 engine.

And should a Chevy engine be mounted in the winning entry, it will touch off an advertising and marketing sales effort trumpeting the division's dominance of the Greatest Spectacle in Racing.

The first blow on the promotional horn appeared last week with newspaper advertisements announcing Chevrolet's powering of the pole position car of Penske team driver Rick Mears. Mears set all-time qualifying records for the single fastest lap and a record four-lap average speed of 219.198 mph.

see INDY, page 80

Court trims big award in Toyota suit

Former Ford exec sued Mid-Atlantic

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

A Maryland court has reversed a $2.7 million award to a former Ford Motor Co. executive who said he was misled when lured to a job with the firm that operates Mid-Atlantic Toyota.

The decision by the Maryland Court of Appeals will likely mean a second jury trial in the case of Arthur Connors. The former vice president of marketing at Ford joined Frederick Weisman Co. in 1981. Two years later, he resigned in a contract dispute.

Among other things, Connors charged that he didn't receive some of the benefits and other compensation he was promised. He also resigned while performing the duties of general manager — a title he said he never wanted when he was hired away from Ford.

A Maryland circuit court awarded Connors $3 million in damages in 1985. That decision was upheld by a lower-level appeals court in 1987. Earlier this month, however, the state Court of Appeals reversed the $2.7 million awarded on a "negligent misrepresentation" charge. The court let stand a $222,000 breach of contract award.

According to court records, Connors first met with Weisman in 1981 in a meeting arranged through Korn/Ferry, an executive recruiting firm. At the time, Ford was losing billions of dollars annually. Weisman, meanwhile, was looking for someone to become executive vice president of his company.

Connors, who had spent 32 years at Ford, said the company's losses had nothing to do with his search, but he was frustrated by staff cuts and policy changes at Ford. Still, he had reservations about leaving, records show. In particular, he was skittish about losing the benefits that went along with his $140,000 salary — including bonuses, stock options, a pension plan, golf club membership and life insurance premiums.

Weisman and Connors were able to resolve those concerns, and Con-

UPSWING: *DRI predicts slight gain in world car sales; U.S. estimate trails '87*

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

A new study estimates that worldwide new-car sales will edge upward by 86,000 units or 0.26 percent in 1988 to 32.74 million units vs. 32.65 million in 1987.

The Automotive News-DRI World Outlook forecasts that global demand for cars will remain relatively flat until the end of the decade because of a slight weakening in Europe and the United States, but will begin to climb again in the first four years of the 1990s.

The World Outlook, a joint project of Data Resources Inc. and Automotive News, is compiled by Data Resources Inc.'s Boston and London operations.

The London-based DRI Europe is projecting slightly lower 1988 car sales for Western Europe, North America and Latin America, but its forecasts for Japan and the Asia-Pacific region are upbeat and include sales gains of 6 and 14 percent, respectively.

North America's 1988 car sales are predicted to be 11.28 million, a mere 5,000 units below 1987.

The U.S. new-car sales forecast has been revised upwards and is nearly back to the research group's estimate before the Oct. 19 stock market crash.

Before last October's collapse, DRI's 1988 U.S. car sales forecast was 10.50 million units. It was cut to 9.99 million, but now is 10.30 million.

"The economy has performed more strongly. People have jobs . . . and they are regaining confidence," said Bernard Campbell, DRI director of transportation services, about the revised number.

The outlook for North American car production remains gloomy with output falling in the next few years before picking up again as more transplants come on line, according to DRI's forecast. The prediction for the total North American car build has been revised downward to about 7.56 million units for 1988, a decline of 267,000 units from last year's 7.83 million. DRI projects that United States car production will drop 395,000 units to 6.63 million units in 1988.

Sales in Western Europe will slip less than one percent, or 88,000 units, from a record 12.37 million to 12.28 million in 1988, DRI predicted.

DRI expects a sharper downturn of 5.5 percent for 1989, to about 11.6 million units.

European production will decline by 20,000 units to 12.50 million in 1988, according to the forecast.

West German makers are expected to bear the brunt of slackening demand for new cars because of a weaker domestic market and a drop in exports to the United States and within Europe in 1988 and 1989. DRI also sees a slight sales decline in France and a slight increase in Italy in 1988.

Exports from Germany to the United States have been affected by the dollar exchange rate and several price increases. European sales in the United States fell by 90,000 units in 1987, and DRI Europe expects sales to fall again in 1988.

Japan's new-car registrations are forecast to rise 203,000 units, from about 3.28 million to about 3.48 million in 1988.

In the Asia-Pacific region, the group predicts continued growth of production and sales for South Korea. DRI expects South Korea to produce more than one million cars in 1988 and 1.5 million by 1992.

B-O-C may move engineers

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The only thing holding up a planned consolidation of Buick-Oldsmobile-Cadillac Group engineers at the idled Fisher 1 assembly plant in Flint, Mich., is a tax-abatement plan for the developer who will revamp the facility.

"The corporation is racing to get it done, because it's more urgent than ever to get new products to market," said Dave Yettaw, president of UAW Local 599 in Flint. "The UAW has got all its ducks in a row," he said.

A B-O-C spokeswoman said, however, that consolidating the engineers, who are in two locations — in Troy, Mich., and in Flint — at the renovated Flint site is just "one plan" and it "hinges on a lot of things."

Adding, "we want them in one spot," the spokeswoman declined to discuss other possibilities for the consolidation.

Yettaw said a new pact has been hammered out for the approximately 120 skilled tradesmen who will be moving from Factory 78 in Flint — a testing and engineering facility — to the Fisher 1 plant to support about 1,200 B-O-C engineers. The skilled tradesmen could move in 12 to 18 months, he said.

The engineers in the proposed consolidation, who are assigned to C- and H-body platforms, are responsible "for engineering the total car, including manufacturing engineering," the spokeswoman said.

GM is selling the plant to a developer, Yettaw said, with GM's Argonaut Realty as "middleman."

Yettaw said though he has been an opponent of tax abatement for corporations, Flint Mayor Matthew Collier "has come up with a solution that puts a new twist on tax abatement." Yettaw sees the solution as a breakthrough in the controversy over tax abatement.

A spokesman for Collier said, "We are withholding comment. We know of no definitive plans by GM relative to that complex."

Yettaw said the plan for the idled plant offers "tremendous potential" for the Flint area. He believes 3,000 engineers could eventually work at the modernized facility, "with a corresponding ratio of skilled tradesmen."

Japan plays World Congress role

DETROIT — Four high-ranking executives of Japanese automaking and import companies will be among the main speakers during the 13th annual Automotive News World Congress at the Westin Hotel, July 17-20.

They are: Norimasa Furuta, president, Mazda Motor Corp., Hiroshima, Japan; Kazutoshi Hagiwara, president, and Thomas D. Mignanelli, executive vice president of operations, Nissan Motor Corp. in U.S.A., Carson, Calif.; and Richard Recchia, executive vice president, Mitsubishi Motor Sales of America, Fountain Valley, Calif.

The World Congress will mark Furuta's first U.S. public appearance since becoming president of Mazda last December, succeeding Kenichi Yamamoto.

A one-time career bureaucrat in Japan's Ministry of International Trade and Industry, Furuta joined Mazda in 1985 as an adviser, later becoming a senior managing director. His surprise appointment as Mazda president marked the first time a Japanese automaker had turned over its top post to a non-company man.

Hagiwara became president of Nissan's U.S. import company in 1986, following tours of duty in several countries, including the United States from 1970 to 1978.

On May 1, Nissan reorganized its U.S. sales, service and parts functions. Three separate divisions were formed — Nissan, Infiniti and parts and service.

All three report to Mignanelli, who left Lincoln-Mercury in 1987 to join Nissan as vice president — sales and marketing.

Nissan's reorganization has been described as the last step in implementing a plan that Hagiwara began in mid-1986.

Recchia, who is chief operating officer of Mitsubishi Motor Sales, joined the import firm in 1981. Earlier, he was president of Fiat Motors of North America and spent 15 years in sales and management positions with Chrysler Corp.

Hagiwara will address the World Congress on Monday, July 18, at 9:45 a.m.; Furuta, on Tuesday, July 19, at 10:30 a.m.; and Recchia and Mignanelli, on Wednesday, July 20, at 9 a.m. and 10:30 a.m., respectively.

Election day near for All-Star team

The time is near for readers to choose the Automotive News 1988 All-Star Team.

But we're throwing you a curve. In previous years, votes were cast only by the Automotive News editorial staff.

By popular demand, this year all Automotive News readers are asked to cast ballots for our midsummer Dream Team.

You'll be able to vote for your favorite auto company chief executive, operating officer, general manager — every industry position right down the line.

So dust off your scouting reports. Decide who's on first and what's on second. Get ready to choose the best for the 1988 model year.

An official ballot will appear in the May 30 issue of Automotive News.

New GM mediums due to roll in August '89

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

ANAHEIM, Calif. — Production of General Motors' all-new GMT 530-series medium-duty truck to be introduced in the 1990 model year is scheduled to begin in August 1989.

John D. Rock, general manager of GMC Truck Division, said the new model will be produced at expanded facilities in the Buick-Oldsmobile-Cadillac Group's plant in Janesville, Wis.

Construction of a 160,000-square-foot addition to the plant for the 530 series is well under way, Rock told a press conference at the International Trucking Show here.

More than one million square feet will be utilized for medium-duty truck production.

Rock said the GMT 530 truck program is designed to ensure and intensify GM medium-duty truck leadership in the 1990s.

"We also believe it will be setting new standards for the industry into the 21st century," he said.

"It encompasses advancements in manufacturing technologies, in employee participation and in our relationships with suppliers and is a tangible definition of GM's commitment to the medium-duty business."

The prime functions at the new facility include a robotic body shop, paint, engine, trim and final assembly.

Rock said the program is on schedule in all aspects — facilities, prototype build and testing.

During production start-up in Janesville, there will be a transition period in which some carryover medium-duty production will continue at the truck and bus group's plant in Pontiac, Mich., Rock said.

"Our Pontiac production is planned to continue into the 1990 calendar year but, at this time, I cannot say how long," he added.

"It will be contingent on such factors as market conditions and Janesville production acceleration rates."

Rock called the upcoming GMC and Chevrolet medium-duty trucks all-new from the bottom up.

"They are designed for more trucking applications than our current lineup fills, and they will do so with an estimated 40 percent fewer parts," he said.

"The benefits are obvious: significantly reduced parts inventory requirements at the plant, at parts warehouses, at operator locations and at dealerships. All this translates into greater cost-effectiveness for all parties and less overtime in trucking operations."

About 65 percent of GM's medium-duty truck business is in the fleet segment where buyers are extremely sensitive to price and life-cycle cost, Rock said.

The new series meets those fleet requirements, he added.

"At the same time, we are responding to the vocational market with a full line of easily spec'ed options to satisfy vocational application requirements," he said.

Gasoline and diesel engines will power the new trucks. The powerplant lineup includes three electronically fuel-injected gasoline engines and Caterpillar's new in-line 3116 diesel.

The new Caterpillar engine will complement GM's 8.2-liter diesel in the new series of trucks. The Cat 3116 will be available in horsepower ratings of 165, 185, 215 and 250 with torque rise characteristics for a wide range of truck, tractor and school bus applications.

Rock predicted a tough era for manufacturers of medium-duty trucks, with unprecedented competition and cost pressures, but added that "with the GMT 530 program, we will enter the new era totally committed and confident — confident not smug and complacent. We respect our competitors and we can learn from them. But we don't fear them."

He sees trucks generally continuing to be the hottest segment of the motor-vehicle market.

Trucks of all types accounted for more than one-third of all motor-vehicle sales in the first half of the 1988 model year, their biggest share in history.

Paced by the unprecedented popularity of light trucks, U.S. truck sales reached 2.5 million units through March 31, the midpoint of the current model year, Rock said. That was a gain of 9.60 percent over a year earlier.

Rock predicted that, based on the outlook for the next five months, sales for the 1988 model year will top 1987's 4,963,000 to set a record for the fourth consecutive model year.

With strong levels of consumer confidence and a favorable economic climate, Rock said the industry could ring up more than 4.7 million light-duty sales, about 155,000 medium-duty sales and about 120,000 Class 8 heavy-duty sales for the 1988 model year.

That would be a remarkable performance by the truck industry, Rock said, adding that "even if last year's record is not broken, we'll come awfully close to it."

GMC Truck Division is shooting for record sales in the 1988 model year. It topped 183,000 deliveries for the 1988 model year through March 31, up 12 percent from that point in the 1986 model year when it posted its record of 353,000 retail deliveries.

NHTSA studies California request

WASHINGTON — In granting a request from the California Highway Patrol, NHTSA said it will study specialized standards for fuel-system integrity of heavy-duty trucks.

The standards would be designed to reduce the number of fuel spills caused when objects in the roadway strike fuel tanks or fuel lines on heavy trucks and truck tractors. Currently, Standard 301 on fuel-system integrity covers only cars, trucks and buses having GVW ratings of 10,000 pounds or less.

The California Highway Patrol submitted data on 142 diesel truck fuel spills that showed a third were caused by an object on the road being struck by the vehicle's front wheels and thrown against the tank or fuel lines.

NHTSA said "the granting of this petition does not necessarily mean that a rule will be issued," but that following the study, a rulemaking procedure may begin.

New fires assail Ford ambulances

By Jack Bernstein
SPECIAL CORRESPONDENT

JEFFERSON CITY, Mo. — Ford Motor Co. — nearing the end of a voluntary recall to correct fuel spurting that caused fires in ambulances built on its E-350 chassis and from its vans — confirmed reports of fires involving ambulance cooling systems.

Meanwhile, the Center for Auto Safety has asked NHTSA to force Ford to recall 16,000 1983-87 Ford E-350 ambulances because the vehicles are prone to engine compartment fires. The center cited ambulance fires in Missouri, Oregon, Virginia, Minnesota and Nevada, allegedly involving the failure of radiator coolant hoses, which caused antifreeze to leak and catch fire.

For several years, fires related to gasoline spurting from the fuel tank have dogged ambulances built by conversion companies using Ford's E-350 chassis and its vans.

Pressed by state attorneys general and NHTSA, Ford announced last July that it would voluntarily recall ambulances made between 1983 and 1987 to make modifications against potential fires caused by fuel pressurization.

But now the company is investigating a new problem that involves the cooling systems of ambulances that caught fire. Odors of antifreeze were noted by drivers in Missouri and Oregon prior to each of the blazes. The cooling systems had been modified by an ambulance conversion company.

A Ford spokesman said the ambulances in Missouri and Oregon had been modified by Ford against potential fires caused by fuel pressurization.

The Oregon fire started in the engine compartment and the operator doused it before the engine was damaged extensively. Ford determined the fire was caused by problems in the cooling system.

In Missouri, the fires damaged the ambulances so badly Ford engineers were unable to make an exact determination of the cause. The Missouri fires occurred April 7 and 9.

A spokesman for Ford parts and service division said the automaker is aware of the fires reported to NHTSA that may have been caused by leaking coolant. The company is collecting more information and will take appropriate action as soon as possible, he said.

The automaker also is looking at conversion companies and the use of non-Ford hoses, any incorrect connections and rerouting of hoses, as well as whether the coolant had been mixed with the recommended 50 percent to 60 percent water concentration.

Missouri Attorney General William L. Webster said the ambulances that caught fire in his state were built on the Ford E-350 chassis by Collins Ambulance Corp., Hutchinson, Kan. Webster has mailed warnings to the state's 245 emergency medical systems.

The April 7 fire occurred as the driver was en route to a hospital to attend a paramedic refresher course. The April 9 fire started when the ambulance was responding to an automobile accident. Both ambulances are less than two years old.

"The scenario in both these (Missouri) fires was the same," Webster said. "The drivers smelled antifreeze, noticed smoke pouring from the engines, and within 10 to 15 minutes, the engines were engulfed in flames."

Ford officials have suggested that operators check the cooling systems, particularly the radiator hoses, and that hoses be covered with a protective shield.

"In both of these recent fires, the aftermarket manufacturer had severed the hose running from the water pump to the core, inserted a Y- or T-joint and rerouted part of the coolant flow to a compartment in the back of the ambulance," Webster said.

Ford said it has voluntarily recalled 14,668 ambulances for safety modifications being done in two phases to correct gasoline pressurization problems.

The E-350 vans and chassis converted to ambulances have been involved in 34 fires nationwide, and customers have complained that gasoline spurts from the fuel tank.

Phase one modifications have been made to 12,050 ambulances, and 9,268 have been completely modified.

The modification kits include a fuel tank vent valve, a grommet for the valve, a fuel tank restrictor and a heat shield for the muffler.

Automotive News Staff Reporters Helen Kahn in Washington and Charles M. Thomas in Detroit contributed to this report.

Trucks are bright spot in Canadian sales

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — New-vehicle sales in Canada slipped in April from the year-earlier period, though a booming truck market and a rush of buyers avoiding a tax hike softened the blow and helped keep sales above 1987's January-April pace.

The industry reported 157,030 domestic and imported vehicle sales during the month, down 3.79 percent from the 163,211 sold in April 1987. On a year-to-date basis, 502,480 domestic and imported vehicles were sold, a 4.48 percent increase over 1987.

Domestic-car sales totaled 237,534 units for the January-April period, virtually identical to last year's 237,303. Import-car sales were 104,119 units, a 4.42 percent drop from the 108,932 units sold in the same 1987 period.

Domestic trucks posted a 19.52 percent sales increase over the first four months of last year, while imported trucks were up 18.34 percent.

Combined domestic- and imported-car sales totaled 107,778 units last month, a 9.54 percent decrease from the 119,138 sold in April 1987. Dealers sold 74,832 domestic cars during the month, compared with 82,322 in the year-earlier period. Import-car sales dipped to 32,946 units, compared with 36,816 in April 1987.

Sales of domestic and imported trucks continued at a rapid pace, increasing 11.75 percent over the year-earlier month. Dealers sold 49,252 domestic and imported trucks, compared with 44,073 in April 1987.

Suzuki led the way with a 95.99 percent year-to-year increase, while Chrysler Canada continued with strong import- and domestic-truck sales, up 39.75 percent over the previous April.

After strong March sales, the pace of cars moving out of showrooms slowed in the early part of April. Later in the month, however, the announcement that the provincial sales tax was being raised to 8 percent from 7 percent effective May 1 increased dealer activity.

In spite of that, only Volkswagen, Mazda, Suzuki, Subaru and Jaguar showed sales gains, with the most spectacular going to Suzuki, up 193.57 percent.

SALES GIANTS 87

continued from page 1

franchises under the same roof, was Prospect Motors, Jackson, Calif. Dealer Bill Halvorson sells all five General Motors passenger-car makes, and Prospect Motors was one of the top 10 for each of the divisions except Buick.

The Penske organization also had four of the top franchises — in four separate dealerships — including the Manhattan Cadillac store it bought from the Potamkin organization late last year and converted to the Penske Auto Center.

Other four-franchise dealers were Joseph DeMaria, whose Miami-based "Collection" dealerships made four separate lists from separate locations, and James W. Ellis Jr. with four top franchises in two stores in Atlanta.

In addition, there were four dealers with three high-volume franchises, and another 29 dealers with two franchises included among the Automotive News Sales Giants.

There also were six discernible instances where dealers had relatives who also operated franchises that made the list.

There were some extremes among the Automotive News Sales Giants.

The highest total dollar sales for a dealership was $312.5 million, reported by Polkowitz Motors, Perth Amboy, N.J. Polkowitz was the top-volume Cadillac franchise and handles other makes in the same location.

The franchise with the highest number of new-unit sales was Ed Morse Chevrolet, Lauderhill, Fla. with 25,063 deliveries.

Based on the performance of all the franchises in the Automotive News Sales Giants, the profile of the average franchise in 1987 was 2,761 new-unit sales, including 1,413 fleet units and 1,348 retail units. Those franchises were part of dealerships that averaged $54.28 million in total sales.

ACURA: The Acura dealer organization was still in the formative stages last year, but a number of dealers were able to quickly establish themselves as high-volume operators. Many of the largest-volume franchises in 1987 were in business for less than the entire year.

Last year's list of 10 largest-volume Acura dealers is as much a function of who got what planning volume when, since several high-potential dealers opened too late in the year to be among the 1987 volume leaders.

The top-volume dealer in 1987 was Tustin Acura, Tustin, Calif., where dealer Shau Wai Lam emphasized customer satisfaction, continuous training programs and "a fast response to a changing business climate" to narrowly outsell Acura 101 West, Calabasas, Calif., although Acura 101 West has taken a fast lead in 1988.

ALFA ROMEO: The list of the 10 best-selling Alfa Romeo franchises in 1987 is very familiar; eight of the 10 — including pack leader Suburban Auto Imports, Mayfield, Ill. — were repeaters from 1986.

Obviously, the Milano was an important product for the Alfa Romeo dealer group, with sales leader Suburban Auto Imports reporting the Milano Quad convertible as its best-selling model.

Dealers cited usual factors like attention to customer satisfaction and "hard work and commitment" as reasons for repeat successes.

However, William A. Wegge III, Wegge Motor Cars, Pasadena, Calif., said product exclusivity was the key.

Only four of the 10 biggest Alfa Romeo dealers had an exclusive

SALES GIANTS '87

continued from page 38

showroom. Only one was dualed with a domestic.

AUDI: Despite the spate of ill publicity surrounding the Audi 5000-S and the sudden-acceleration issue, most of the highest-volume Audi dealers reported that the car was their best-selling model last year.

The 5000 Quattro, reported by Prestige Imports, Lakewood, Colo., was the exception.

Most of the Audi franchises on the list were dualed with traditional German companion makes — Porsche and Volkswagen — or a non-traditional German make — Mercedes-Benz — although three were dualed with Sterling and two with Range Rover.

Keeme Annis, of the top-selling Annis Corp. dealership, Natick, Mass., said the operation was successful in 1987 because of "top people and top products, despite some pricing and public relations difficulties."

Six of the 10 high-volume Audi franchises were on the list for the second consecutive year, including Annis — high-volume franchise in both 1987 and 1986 — and two-time second-largest franchise, Lynch Imports, Chicago.

BMW: Ownership of the top-selling BMW outlet changed hands in 1987, but new dealer Hideaki Yasuki maintained the dominance of Weatherford BMW, Emeryville, Calif. The dealership reported 918 deliveries in 1987 — all retail — compared with 1,091 in 1986.

The list of the top 10 BMW franchises last year included seven that also were on the 1986 list.

BMW's biggest dealers still reported that the 3-series cars were their best selling model.

Only two of the top franchises reported that they were duals.

Steve Schaper, general manager at Stevens Creek BMW Motorsport, Santa Clara, Calif., defined that dealership's success as "maintaining a sense of urgency in all departments, always seeking new markets for our products and properly trained managers with specific goals for their departments."

BUICK: The top Buick dealers last year had a number of things in common, the most significant of which was heavy reliance on fleet sales.

Each of the top 10 Buick dealerships sold more fleet units than retail units.

Three, including top-seller Reef Buick, Fort Lauderdale, Fla., were new to the 1987 Automotive News Sales Giants list.

The reasons the dealers gave for success in 1987 were fairly typical of the comments of other successful dealers, although there were some variations.

Ralph C. Ghioto Jr., Royal Buick, Tampa, Fla., said success came from "keeping our eyes focused on the basics and placing emphasis on people development."

Bob Brest Buick said simply: "Big volume through multi-media advertising."

Irving N. Segal, Loren Buick, Glenview, Ill., was candid. "Cut overhead and hard work," he said. "But 1987 was still a down year from 1986."

CADILLAC: Only six of the top-volume Cadillac dealerships in this year's Automotive News Sales Giants ranking were repeaters from 1986.

One of the newcomers was Polkowitz Motors, Perth Amboy, N.J., which used its multi-line fleet business to post total new Cadillac sales of 13,592 units in 1987, making it the new sales leader.

Bayview Cadillac, the 1986 Cadillac leader and one of the Ed Morse dealerships in Florida, finished second in 1987.

The Penske organization placed two franchises in the top 10, although its Manhattan Penske Auto Center was acquired from the Potamkin organization in late 1987.

CHEVROLET: The highest-volume Chevrolet franchises rolled up some impressive numbers last year, including the three top — and five of the top 10 — places as highest-volume franchises among all the 1987 Automotive News Sales Giants.

Edward J. Morse Jr., of the dominant Morse family of dealers in Florida, relied on fleet business to make his Ed Morse Chevrolet rank as the top-selling franchise — of any make — in the United States last year.

The big Chevrolet dealers sold so many cars that 10th place for the franchise — held by Delorme Chevrolet, Inglewood, Calif. — reported total sales of 8,831 in 1987, more than the largest single franchises for 27 of the 35 makes included in the Automotive News Sales Giants.

The top 10 Chevrolet dealers averaged 14,824 new car and truck sales last year, more than the No. 1 franchises for each of 33 makes — all of the other makes in the Automotive News Sales Giants list except Ford Division.

Jim Johnson Chevrolet, Richardson, Texas, held the only one of the top 10 Chevy franchises that sold more Chevrolet cars and trucks at retail than to fleet customers.

Johnson's success factor: "People."

CHRYSLER-PLYMOUTH: The fleet business obviously improved a number of Chrysler-Plymouth dealers' performances in 1987.

All 10 of the highest-volume Chrysler-Plymouth dealers, like so many other high-volume domestic-

SALES GIANTS '87

continued from page 54

make dealers, sold more fleet units than retail units last year.

Six of those top 10 dealers were among the Automotive News Sales Giants for the second consecutive year, including a repeat by the one-two combination of Lake Forest Chrysler-Plymouth, Gaithersburg, Md., and South Bay Chrysler-Plymouth, Torrance, Calif.

Although many of the players were the same, unit volumes were higher last year than in 1986. Leader Lake Forest raised its annual new-unit total to 14,783 from 8,480 in 1986.

DODGE: In contrast to the top-volume Chrysler-Plymouth dealers, who improved their unit sales in 1987, the high-volume Dodge dealers last year recorded volumes almost identical to 1986.

Three of the top Dodge franchise holders also held top-10 Chrysler-Plymouth franchises. Seven of the top 10 Dodge dealers were also Automotive News Sales Giants in 1986, including repeat sales leader Luke Potter Dodge, Winter Park, Fla., which posted 9,339 new-unit sales in 1987 and 9,433 in 1986.

Three of the top 10 Dodge dealers actually sold more retail than fleet units, although Luther D. Potter, Luke Potter Dodge, attributed his dealership's success to "aggressive fleet programs."

Caravan was the overwhelming popularity winner among Dodge dealers.

FORD: The list of the highest-volume Ford dealers, like the other domestic-make lists, was dominated by fleet moguls, with two places including the top spot, held by Arnold Palmer dealerships.

Fairway Ford, Latrobe, Pa., took the make leadership and finished fourth among franchises of all makes with 19,452 new-car and truck deliveries.

Arnold Palmer Ford-Lincoln-Mercury finished seventh among the ranking Ford franchises as well as first among Lincoln-Mercury franchises.

The highest finish for a volume retail dealer with few fleet sales was eighth for Ricart Ford, Columbus, Ohio, the first-place Ford retail dealer last year. Ninth and 10th places also went to perennial retail leaders Galpin Ford, Sepulveda, Calif., and Dave Sinclair Ford, St. Louis.

HONDA: There were few surprises among all of the very successful Honda dealers: Accord was the most popular model; virtually all of the top 10 franchises were in exclusive dealerships; five were repeaters from the 1986 Sales Giants list; and half reported fleet sales.

Most of the top 10 Honda dealers mentioned that they were successful because of the Honda product and customer satisfaction, which was defined by Horst J. Guenter Korallus, Honda of Lisle, Lisle, Ill., as "being consistent."

HYUNDAI: The growth of the Hyundai dealer group has given rise to a number of new high-volume dealers for the Korean make. Only four of the top 10 dealers were on the list for the second time, although sales leader Charles Ellinwood, Hyundai of Escondido, Escondido, Calif., was one of them.

In addition to the changes in the list, volume increased for the biggest Hyundai dealers last year. Escondido Hyundai, for example, recorded sales of 3,546 compared with 2,398 in 1986.

ISUZU: Half of the Isuzu dealers listed among the Automotive News Sales Giants were new for 1987, although the best-selling franchise, King Motor Co. of Fort Lauderdale, Fort Lauderdale, Fla., was a repeater.

Two of the top 10 Isuzu dealers cited "merchandising techniques" as a key to success last year.

Terry Rupenthal, Fountain Motor Co., Orlando, Fla., simply said management made the difference, while W. Clay King, King Motor Co., Ford Lauderdale, Fla., cited "good leadership."

The highest-volume Isuzu dealers were in the East. Only three said they were exclusives; the others were dualed with a plethora of import and domestic makes.

JAGUAR: Volumes slipped a little last year for the leading Jaguar franchises.

Hempstead Auto Co., which headed the list of top-selling Jaguar franchises in 1986 and 1987, sold 904 new units last year compared with 1,032 the previous year.

In addition to Hempstead, six other dealerships were consecutive-year Automotive News Sales Giants, including Main Auto Sales, Madison, N.J., which finished 10th two years running. Main's Jaguar sales went from 423 in 1986 to 359 in 1987.

Only three of the franchises included in the listing were in exclusively Jaguar dealerships. Dualed makes included primarily other prestigious European makes, although Main Auto Sales dualed Jaguar with Chrysler and Plymouth.

JEEP-EAGLE: The shift in ownership of American Motors and the resulting change in dealership signage didn't seem to matter to most of the top AMC dealers. When Chrysler Corp. acquired AMC in August, the high-volume dealers went right on selling.

In all, six of the 10 largest AMC dealers in 1986 were on the list of the top 10 Jeep-Eagle dealers in 1987.

25	Central Florida Motors	Orlando, Fla.	131.5

California has 23% of biggest dealers

If all of the Automotive News Sales Giants in California were laid end to end, they would equal nearly 23 percent of the 350 franchises included in the 1987 list.

Although the 350 franchises are scattered across 31 states and Puerto Rico, the six leading states account for nearly two-thirds — 227 franchises or 64.86 percent — of the 350.

The clustering was most prevalent in big fleet market areas and in heavily populated, high-demographic areas.

Polarization was clearly toward the Eastern half of the United States: 231 of the franchises are in dealerships east of the Mississippi River, including Puerto Rico, while 119 of the 1987 Automotive News Sales Giants are in states west of the Mississippi River, including Hawaii and Alaska.

The geographical distribution was as follows: California, 80; Florida, 44; New Jersey, 36; New York and Illinois, 23 each; Texas, 21; Massachusetts and Georgia, 16 each; Maryland, 13; Virginia, 12; Pennsylvania, nine; Minnesota and Connecticut, eight each; Colorado, six; Michigan and Ohio, five each; Missouri, four; Arizona, Indiana, Louisiana, Rhode Island, South Carolina and Washington, 2 each; Alaska, Alabama, Hawaii, Idaho, Maine, North Carolina, Oregon, Tennessee and Puerto Rico, one each.

In addition to the state by state view, there also was a pronounced clustering around major metropolitan areas.

Los Angeles, New York City, Miami, Washington, Chicago, Atlanta, Boston and Dallas proved to be the major metropolitan markets for the high-volume franchises.

As might be expected, there was heavy concentration of imported makes in the West Coast, East Coast and Gulf Coast regions, while domestic makes were relatively stronger in the North and Midwest.

Wanna Know A Secret? . . .

ACS is the original author!

ADVANCED COMPUTER SYSTEMS wrote the majority of IBM System/36 packages for automotive dealers. But that was three years ago!

For years, ACS has been developing software on the IBM System/36 for other automotive computer vendors. ACS didn't actively sell to dealers due to marketing restrictions. These restrictions have expired.

In the meantime we've made lots of major enhancements, which are now available only from ACS.

That's right, we're selling our fully integrated system direct to dealerships!

ACS services hundreds of dealerships—worldwide!

So if you're considering an IBM System/36—or if you already have one—why not buy direct from the guys who wrote it? They know how to make it work!

The savings is no secret . . . except to your competition.

SALES GIANTS 87

continued from page 56

Leading the list for the second consecutive year was Jasper Jeep Sales, Jasper, Ga., which did not sell AMC or Renault automobiles and does not sell Eagle cars — it is exclusively Jeep.

Each of the top Jeep-Eagle dealers, including the ones that sell cars, reported that Cherokee was the most popular 1987 model.

LINCOLN-MERCURY: Last year was a big one for the leading Lincoln-Mercury dealers, particularly those who like to do fleet business.

Subtle changes in the fleet market — and Ford's newly acquired stake in the Hertz car-rental operation — opened new markets to enterprising dealers.

The L-M franchises included in the Automotive News Sales Giants in 1987 had average new-unit deliveries of 5,208 compared just 3,108 for the 1986 Sales Giants.

Only one of the top 10 franchises was dualed with anything other than Merkur, and that franchise was dualed with Ford. Many were exclusively L-M.

Fleet sales were not as important to the 10 largest L-M franchises as they were to the high-volume franchises of other makes. Only the four largest L-M dealers did more fleet than retail business.

MASERATI: The wonderful world of low-volume luxury automobiles was again very good to the top Maserati dealers.

Eight of the 10 Maserati franchises listed in the Automotive News Sales Giants for 1987 also were there for 1986, with 92 new units being the top volume in both 1986 and 1987.

The 1987 sales leader, Mark LaPrade Inc., St. Petersburg, Fla., was the second-place finisher in 1986, and the 1986 leader fell from the list in 1987.

The most-popular model designation was split between the Biturbo coupe and Spyder.

Only Grand Touring Motorcars was an exclusive dealership.

MAZDA: Sales leadership among the Mazda franchises shifted last year, as total car and truck new-unit volumes slipped.

Five of the 10 sales leaders from 1986 were back in the top 10 for 1987. However, the sales leader in 1986, Oak Tree Mazda, San Jose, Calif., slipped to third place. The 1987 sales leader, Ted Britt Mazda, Fairfax, Va., posted a car and truck new-unit sales total of 2,284.

Only two of the top Mazda franchises had any fleet sales last year.

David Allison, president and general manager of Oak Tree Mazda, cited the usual reasons for success but added candor. "Our goal for 1987 was survival," Allison said. "Strong back-end departments helped make that possible."

MERCEDES-BENZ: Most of the players among the top-selling Mercedes-Benz franchises were the same in 1987 as in 1986, but there were some changes. One of the 1986 leaders, in Dallas, was sold and became Park Place Motorcars, but it remained in the top 10. One dealership fell from the top 10 and was replaced by Prestige Motors, Paramus, N.J.

The new volume leader for 1987 was House of Imports, Buena Park, Calif.

There were other shifts in the ranks, although the company-owned store in Manhattan remained ensconced in the top 10 and the company-owned store in Hollywood, Calif., remained just below the top 10.

MITSUBISHI: The Mitsubishi dealer organization, recruited from the ranks of proven dealers, was still growing in 1987, but there were some clear volume leaders.

The sales leader in 1987 was Century Mitsubishi, Warwick, R.I., with 4,829 new-unit deliveries including 3,000 fleet units.

Half of the top 10 dealers reported fleet sales for 1987.

Century was one of seven Mitsubishi dealerships in the Eastern United States to capture spots in the top 10. Another was in Connecticut, with five others in New Jersey. The other three volume leaders were California franchises.

NISSAN: Like many import dealer groups, the top-volume Nissan franchises remained essentially intact from 1986 to 1987 — with seven repeaters among the top 10.

But Nissan's leading dealers this year averaged fewer new-unit sales. Despite the leaner times,

25	Toyota of Cerritos	Cerritos, Calif.	10.2

Service volume not full gauge of dealership's overall ranking

Sometimes it is possible to relate parts and service dollar volume to new-unit sales volume. It would stand to reason that if a dealership moves a lot of cars and trucks, there would be a pretty good owner base to boost the parts and service business.

Slemons

It's not necessarily true. The Automotive News Sales Giants dealership with the highest parts and service volume — nearly $21 million — was Jim Slemons Imports, a Newport Beach, Calif., Mercedes-Benz dealership with 216 employees that sold 1,261 new Mercedes-Benz units and 1,029 used units last year, ringing up total dealership sales of $96.7 million.

The store was only the fifth largest Mercedes-Benz franchise in unit sales, and was not among the Automotive News Sales Giants top 25 for total new-unit sales, retail new-unit sales or total dollar sales.

Slemons owns four other dealerships.

He reported that parts and service dollar sales amounted to 21.61 percent of his total sales for the Mercedes dealership in 1987.

That compares to an Automotive News Sales Giants average of 8.63 percent last year.

The 10th highest parts and service dollar volume — $12.9 million — was reported by Roger Penske Cadillac, Downey, Calif., which equaled 10.57 percent of that dealership's total sales.

Parts and service accounted for just 6.63 percent of total sales at Penske's Longo Toyota, the highest-volume retail unit franchise.

Of the top 25 parts and service dealerships, just 10 are primarily import stores.

SALES GIANTS 87

Used-vehicle sales important to pacesetters in new units

Many of the new-car dealers with franchises listed among the Automotive News Sales Giants augmented new-car profits with healthy used-unit business in 1987.

Not surprisingly, the franchises that emphasize high-volume retail new-car and truck sales, rather than fleet deliveries, tended to do the most retail used-car business, because of the stimulus and support that the used-car business provides.

Johnson

The top 10 used-unit retailers included five primarily domestic-make dealerships and five primarily import dealerships.

Jim Johnson Chevrolet, Richardson, Texas, topped the list of used-unit retailers by using two lots and selling 3,800 units in 1987. "You've got to keep them (used units) moving to make room and keep the new ones moving," he said.

His company's emphasis on used vehicles and trade-ins is almost a necessity — it supported 7,748 retail and 1,569 fleet sales last year. It tallied enough new-unit sales to rank his Chevy franchise No. 24 among the 350 Automotive News Sales Giants.

Johnson also has a used-car wholesale lot that holds its own auction, moving some 75 to 85 units weekly.

continued from page 57

none of the leading Nissan franchises dualed with another make in 1987.

Nissan's sales leader for both 1986 and 1987 was ABC Nissan, Phoenix, Ariz., although its car and truck new-unit sales declined from 5,742 in 1986 to 4,923 in 1987.

OLDSMOBILE: The most notable absence from the list of the top 10 volume Oldsmobile dealers in 1987 was Dale Oldsmobile, the Bronx (N.Y.) franchise that perpetually dominates the field with staggering fleet deliveries.

Dale led not only the Oldsmobile list in 1986, but also the entire Automotive News Sales Giants listing for all import and domestic franchises, with 26,565 new-unit sales.

Only one other 1986 high-volume Oldsmobile franchise slipped from the top 10 in 1987, leaving eight repeaters.

PEUGEOT: Only five of the 1986 Peugeot top-volume franchises made it back to the Automotive News Sales Giants for 1987.

In 1987, volumes for Peugeot's Sales Giants declined — from the 325 units sold by 1986 sales leader Maplewood Peugeot, Maplewood, N.J., to the 225 units sold by 1987 sales leader Exotic Motors, Bellevue, Wash.

In one of the major year-to-year shifts, Autos Vega, San Juan, Puerto Rico, jumped from ninth place with 139 deliveries in 1986 to third place with 178 new-unit sales in 1987.

PONTIAC: Some of the players were different for 1987, and some of the players who were included in the Automotive News Sales Giants for both 1986 and 1987 shifted rankings, but volume remained good for the top-selling Pontiac franchises last year.

Stephen World of Wheels, Bristol, Conn., was the new-unit sales leader in 1987 with 12,626 deliveries, virtually identical to the 12,669 units sold by 1986 sales leader JM Pontiac, Hollywood, Fla.

Grand Am took on new importance to Pontiac dealers last year as the unanimous best-selling model among franchises that emphasized fleet sales as well as those that emphasized retail sales.

One of the newcomers to the Automotive News Sales Giants, Jim Fresard, Jim Fresard Pontiac, Royal Oak, Mich., had a unique perspective on success: "The most important factor is community involvement, and most of our customers are loyal to us," Fresard said.

PORSCHE: Rising product prices, the falling U.S. dollar, radically higher entry-level models and some dealer group dissension did little to alter the composition of the top 10 volume Porsche dealers in 1987, although unit sales fell.

The sales leader in 1987 was once again Forest Lane Porsche-Audi-Alfa Romeo, Dallas, although that franchise's total dipped from 558 new-Porsche sales in 1986 to 365 in 1987.

In all, seven Porsche franchises repeated as top 10 performers.

RANGE ROVER: When Range Rover started building its dealer organization in early 1987, it followed a common import practice: It signed dealers who were proven winners with their existing franchises.

Therefore, it is not surprising that most of the Range Rover franchises in the 1987 Automotive News Sales Giants listing are held by dealers who have other franchises listed among the Sales Giants for various other makes.

It also is not surprising that all of the top 10 Ranger Rover franchises were dualed with other high-demographic makes.

The sales leader, with less than a full year of operation, was HBL Inc., Vienna, Va., with 118 Range Rover sales.

ROLLS-ROYCE: There was great stability among the high-volume Rolls-Royce franchises in the United States in 1987.

The sales leader, with two showrooms — one in New York and one in Greenwich, Conn. — was once again Carriage House Motor Car. That franchise is not only the largest one in the United States, it is the largest Rolls-Royce dealership in the world, with 186 new-unit sales last year.

Eight of the 1987 top 10 Rolls-Royce dealers also were among the leaders in 1986, giving that marque high-volume roster stability second only to Mercedes-Benz.

While Carriage House, by virtue of its volume, is easily able to stand alone as an exclusive in two high-rent showrooms, only one other Rolls-Royce franchise was in an exclusive dealership. The rest were dualed with premium European makes.

SAAB: Although the 1987 Saab sales leadership went to the 1986 leader — Ramsey Saab, Ramsey, N.J. — with an identical 752 new-unit sales in both years, there was more turnover among the top 10 than for most makes.

Only four of the 1986 Saab Automotive News Sales Giants were on the list for 1987. The three other returning veterans were second-place Zumbach Sports Cars, Ltd., New York; third-place Stohlman Saab, Alexandria, Va.; and sixth-place Mark Singleton Saab, Smyrna, Ga.

In one irony, Hanley Dawson Toyota-Saab, Chicago, operated by dealer Hanley Dawson Jr., replaced Patrick Saab, Schaumburg, Ill., operated by dealer Hanley Dawson III, in the top 10.

STERLING: The link between Sterling and Cadillac is tight, as evidenced by 1987's list of the marque's top dealers.

The dealer organization signed by Austin Rover Cars of North America relied heavily on the fellow Cadillac dealers of entrepreneur Norman Braman, who recently sold his interest in Austin Rover Cars of North America to Britain's Austin Rover Group.

In all, six of the top 10 Sterling franchises were dualed with Cadillac, and a seventh was owned by a Cadillac dealer who used a separate showroom at his Cadillac facility.

Half of the top 10 Sterling franchises are held by dealers with other franchises listed in the 1987 Automotive News Sales Giants, and two others were included in the 1986 listing.

SUBARU: The Subaru sales-leader group is another that underwent some changes last year, as half of the 1986 top 10 did not repeat their sales leadership performances in 1987.

Three of the franchises listed in 1986 changed hands and another was relinquished and the store converted to Jeep-Eagle.

SUZUKI: The controversy in Washington and at Customs checkpoints elsewhere about whether the Suzuki is a car or a truck apparently meant little or nothing to the Suzuki dealers included in the 1987 Automotive News Sales Giants listing.

Although six of the franchises are in exclusive facilities, they are owned by experienced dealers, many of whom have top-performing franchises from other makes included in the listing.

Many of the top-selling Suzuki dealers reported the most demand for the lower-priced, stripped models, which they said entry-level customers preferred but which also gave sales personnel the flexibility to create individualized option and accessory packages.

TOYOTA: Toyota sales leadership in 1987 once again belonged to the Penske organization's Longo Toyota, El Monte, Calif. Longo

You can train your salespeople with a set of these... or one of these:

Key Royal's "Keys to a Sale" Marketing Kit

For training, skill-sharpening, and showroom selling power, there's no product on the market like Key Royal's new **"Keys to a Sale."**

"Keys to a Sale" keeps all your sales people in constant, confident, touch with every important product feature and consumer benefit of the dealership's showroom cars. And since the communication of benefit and value is critical to sales, you'll **see bottom-line results** when you boost your staff's value selling skills with "Keys to a Sale."

This dramatically effective sales tool is really very simple. The kit contains 75 high-quality magnetic or standup product feature "Keys" for placement on showroom models. **Each attractive Key itemizes one automotive feature and lists its direct benefits to the buyer.**

Once in place, the Keys help build product knowledge, consumer benefit orientation, and poise in new sales people. As "cue cards," the Keys keep your people on track and talking about *value*. At the same time, the Keys keep experienced pros in touch with the details and features they sometimes take for granted. Consumers need, benefit and value education to make their buying decisions, because their new cars will be so much more advanced than their old ones.

Even without a sales person present, **the "Keyed" cars will sell themselves, moving customer attention away from sticker price, toward product value.** That's the kind of customer thinking that adds up to higher closing ratios, higher gross profits, and higher C&I ratings.

"Keys to a Sale" will turn your showroom from a room full of cars to a **sales-activating profitability tool.** The kit comes complete with a user's guide that explains how to use more than 100 consumer features and benefits to increase sales. Order today!.....**Only $395.00** (U.S. Dollars)

SALES GIANTS 87

continued from page 58

rang up 19,452 new-vehicle sales and the highest volume of retail deliveries — 12,744 cars and trucks — of any make.

Second-place Kendall Toyota, Miami, posted total car and truck new-unit sales of 12,511, and third-place Gateway Toyota, Toms River, N.J., recorded 12,099 deliveries.

The Toyota sales leadership was so stable that eight of the top 10 volume franchises in 1987 also were among the Automotive News Sales Giants for 1986.

All of the top 10 Toyota franchises were in single-make points.

VOLKSWAGEN: Every top-selling Volkswagen dealer in 1987 had the same success story: Jetta.

Four of the 1987 high-volume VW dealers were new, including sales leader Tynan Volkswagen, Aurora, Colo., which sold 1,647 new units last year. The 1986 sales leader, Jim Ellis Volkswagen, Atlanta, finished second last year even though its new-unit sales increased from 1,483 in 1986 to 1,523 in 1987.

One of the other new entries was sold near the end of the year, so Leon Felton Co., San Raphael, Calif., became Sonnen Motors in the 1987 listing, with 922 new-unit sales.

VOLVO: There were extensive changes in the Volvo sales leadership ranks in 1987.

The top spot in both 1986 and 1987 went to Dyer & Dyer, Chamblee, Ga. It was one of six repeaters from 1986 on the list of Automotive News Sales Giants.

However, volumes were down. Dyer & Dyer reported 2,694 new-Volvo sales in 1986 but 1,861 in 1987. Tenth place (968 units) in 1986 would have been good enough for sixth place last year. Meanwhile, the 10th place finisher last year registered 653 units.

In 1986, eight of the top Volvo franchises were in exclusive locations. In 1987, there were seven exclusives among the top 10.

YUGO: "A person spending $4,000 is just as important to us as the person spending $25,000," said Sidney Oko, Liberty Buick, Libertyville, Ill., a top 10 Yugo dealer and a top 10 Buick dealer.

"When you ask someone to spend more money than they carry in their wallet, then you are asking a lot," Oko said.

The top 10 Yugo dealers in 1987 included experienced dealers who carried a wide range of other makes, including domestics as well as European and Japanese imports.

Only two of the 10 Yugo sales leaders were in exclusive points, demonstrating the interdependence of multi-franchise operations.

Automotive News Sales Giants was coordinated and written by Edward Lapham with research by Automotive News Staff Reporters Kathy Barbaglia, Laura Clark, Mary Connelly, Matt DeLorenzo, Arthur Flax, Edmund Fitzgerald, Francis J. Gawronski, Louise Kertesz, Dutch Mandel, Roger Rowand, John Russell, Jesse Snyder, Geoff Sundstrom, Charles M. Thomas and David Versical. Additional research was performed by Special Correspondents Jeanette Marie Bryant, Natalie Lockett and Marianne McGuire. Graphics are by Lance Graves.

Big fleet stores dominate list of top sellers

New-car dealers who believe that automobiles are sold one at a time to retail customers hate to admit it, but fleet sales have become very important.

Despite the insistence of some non-fleet dealers that fleet dealers are given too many vehicle order-and-supply advantages, and that the thin margins and drop-ship delivery techniques mean that most fleet-order vehicles never come anywhere near the dealership, fleet sales count with factories.

Among the 350 separate franchises that comprise the Automotive News Sales Giants, fleet sales accounted for nearly half of all new-vehicle deliveries made by those franchises in 1987.

Fleet sales have become so important that only five of the 25 top-selling Automotive News Sales Giants were not also high-volume fleet dealers. And only one of the top 10 — high-volume retailer Longo Toyota — was not among the 10 largest fleet franchises.

The correlation between fleet sales leadership and leadership in total sales was obvious.

Ed Morse Chevrolet, Lauderhill, Fla., was the largest fleet franchise as well as the top-selling total-volume franchise among the Automotive News Sales Giants.

The fleet total for dealerships and dealer organizations with several top-selling franchises helps put the picture in sharper focus.

Prospect Motors of Jackson, Calif., for example, ranked as the 12th largest fleet-sales franchise with 10,480 Chevrolet units. However, the dealership sells all five General Motors car makes and also was one of the 10 top-volume franchises for Cadillac, Oldsmobile and Pontiac. Total fleet sales for all five of the GM passenger-car franchises was 20,590 — from one location.

Although organizations that are strong in fleet sales tend to remain strong year after year, there is an ebb and flow. When Ford Motor Co. acquired Hertz, there were some not-so-subtle shifts in the fleet market currents.

Dale Oldsmobile, Bronx, N.Y., is the perfect example. In 1986, the dealership was the highest-volume new-car dealership in the country with 26,565 new Oldsmobile sales, including 24,715 fleet sales.

In 1987, with the shift in fleet buying, Dale Oldsmobile fell from the ranks of the largest dealers.

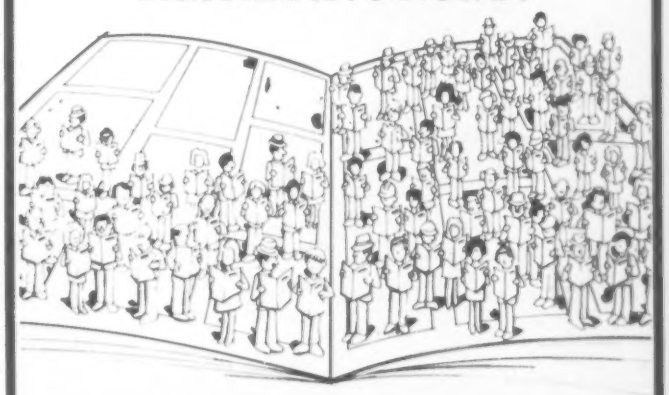
NOTICE

Because of the Memorial Day Holiday ... The deadline for our June 6 issue will be Thursday, May 26, No Later Than 5 P.M.

Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds strong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

Trade deficit in vehicles drops 10%

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks declined 10.4 percent in February, compared with a year ago. The improvement resulted from a a 27 percent increase in exports and a 4.7 percent dip in imports.

Trade numbers from the U.S. Commerce Department show a trade deficit for passenger cars and light trucks of $3.476 billion for February. Total car and truck exports were valued at $887.7 million during the month, and car and truck imports totaled $4.364 billion. The automotive trade deficit for February 1987 was $3.880 billion.

Exports of passenger cars were 68,812 units with an estimated value of $712.6 million in February, while light-truck exports for the month were 17,625 vehicles with an estimated value of $175.1 million. Passenger-car exports to Japan rose by 525 units, and exports to Canada increased by 4,730 units. Exports to other countries rose by 3,324 units.

On the import side, both the value and quantity of car and truck shipments from Japan and European countries declined compared with a year ago. South Korea, Mexico and Brazil continued to post big increases in car shipments, however. Yugoslavia also scored a sizable increase.

Japanese car imports dropped 16.7 percent for the month while truck imports were off 40.9 percent. Japan shipped 156,798 cars to the United States in February, down from 188,261 a year ago. Truck shipments were 46,084 units, down from 78,020 a year ago.

West Germany, the United Kingdom, Sweden, Italy and France all shipped fewer cars to the United States in February 1988 than in February 1987. German shipments were off 34.1 percent. British manufacturers exported 42.1 percent fewer vehicles for the month, and Sweden's shipments were down 66.6 percent.

Italian and French manufacturers sent 88.1 percent and 72.2 percent fewer vehicles, respectively, to the United States for the month.

Conversely, imports from South Korea increased 132 percent from a year ago. Mexico jumped to 12,931 units, up from 457 last year. Brazilian imports were 5,678 units for the month, up from 150 vehicles shipped in February 1987. Yugoslavian imports increased 43.9 percent.

The value of car and truck imports was $4.364 billion in February, down 4.7 percent from $4.579 billion in the year-earlier period. There were 442,370 finished vehicles imported to the United States in February, compared with 477,880 vehicles in February last year.

Imports of passenger cars totaled 369,230 for the month with a value of $3.780 billion.

Saab calls a halt to bus output in U.S., cites curbs on purchases

ORANGE, Conn. — Saab-Scania announced it will discontinue bus production in the United States. The company's plant here employs 120 persons and will close this summer.

Ingvar Erickson, managing director of the Scania Division in Sweden, said demand for city buses has fallen far below forecasts. Optimistic forecasts were the motivating factor in establishing the plant.

Since the federal government subsidizes most municipal bus purchases and requires communities to accept the lowest bid, Saab has not been able to sell its buses at a profit, Erickson said.

Robert J. Sinclair, president of Saab-Scania of America, which operates the plant, said the U.S. system of low bid, regardless of proven quality or economy of operation, has made it impossible for the present Saab customers to buy more buses.

The operation was established five years ago. A total of 220 Saab buses have been built in the United States. The first bus was produced in September 1984.

UAW claims victory at Mack

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The UAW last week claimed that a majority of the approximately 900 workers at Mack Trucks' new Winnsboro, S.C., plant want to join the union.

The UAW requested that Mack have its workers' union authorization cards checked, in accordance with an arbitrator's June 1987 decision.

A UAW spokesman said that the arbitrator's decision spelled out transfer rights to the new plant for Mack workers in Pennsylvania and Maryland and called for a "respected third party" to check whether a majority of Winnsboro workers signed authorization cards.

If the card check warrants, Mack is obligated to recognize the union at Winnsboro.

The union claims that Mack has fought union representation at Winnsboro since its 1985 decision to close its plant in Allentown, Pa., and build a new plant in South Carolina.

The spokesman said that about 370 workers transferred to Winnsboro from Mack plants in Pennsylvania and Maryland. The other workers were hired locally.

A Mack spokeswoman said last week, "We don't believe the UAW represents a valid majority at Winnsboro" and said Mack planned to respond to the union's request for a card check "by the end of business Friday."

PRODUCTION

Car output holds steady at 167,564

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto production of 167,564 was 105 units or 0.06 percent below the prior week's build of 167,669 but was 12.53 percent above the year-ago week's 148,911.

So far this year, 2,834,967 cars have been assembled by U.S. automakers, 9.41 percent less than the 3,129,530 completed last year at this point.

Companies split last week's scheduled output as follows: General Motors, 48.01 percent; Ford Motor Co., 26.24 percent; Chrysler Motors, 14.98 percent; Honda of America Manufacturing Inc., 4.48 percent; New United Motor Manufacturing Inc., 1.94 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.60 percent; Nissan Motor Manufacturing Co. U.S.A., 1.56 percent; and Volkswagen of America, 1.19 percent.

Truckmakers estimated output at 90,374 units last week. That was 5.46 percent more than the previous week's 85,696 and 13.83 percent more than the year-ago week's 79,397.

Year-to-date, 1,691,637 trucks have been assembled, 11.41 percent more than the 1,518,336 built last year at this time.

The Cadillac Allante line at GM's Detroit-Hamtramck plant was idle last week for inventory adjustment. Production is scheduled to resume today.

GM's medium and heavy truck lines at its Pontiac, Mich., plant also were down last week for inventory adjustment. Output is slated to resume today.

Overtime was slated last Saturday for the following GM plants: Detroit-Hamtramck; Lansing, Mich.; Lordstown, Ohio; Wentzville, Mo.; Willow Run, Mich.; Arlington, Texas; Lakewood, Ga.; Baltimore; Pontiac, Mich.; Fort Wayne, Ind.; Shreveport, La; and Morain, Ohio.

GM, Honda hike Canada's total

Year-to-date production of cars in Canada continues to increase over the year-ago period with help from General Motors and Honda of Canada Manufacturing Inc.

So far this year, 470,620 cars have been built, 42.23 percent more than the 330,876 completed last year at this time.

GM is 96,001 cars ahead of last year and 66,287 of them are the new front-wheel-drive Buick Regals.

Honda, which began building cars in Canada at the start of 1987, has built 13,419 cars so far this year compared with 3,766 during the same period a year-ago.

Last week's scheduled car output totaled 24,863, 9.01 percent below the previous week's 27,325 but 77.99 percent above the year-ago week's 13,969.

The year-ago week's total reflected downtime at several plants for model changeover.

Truck production was targeted at 18,485 units last week, 6.72 percent below the prior week's 19,817 but 24.77 percent more than the year-ago week's 14,815.

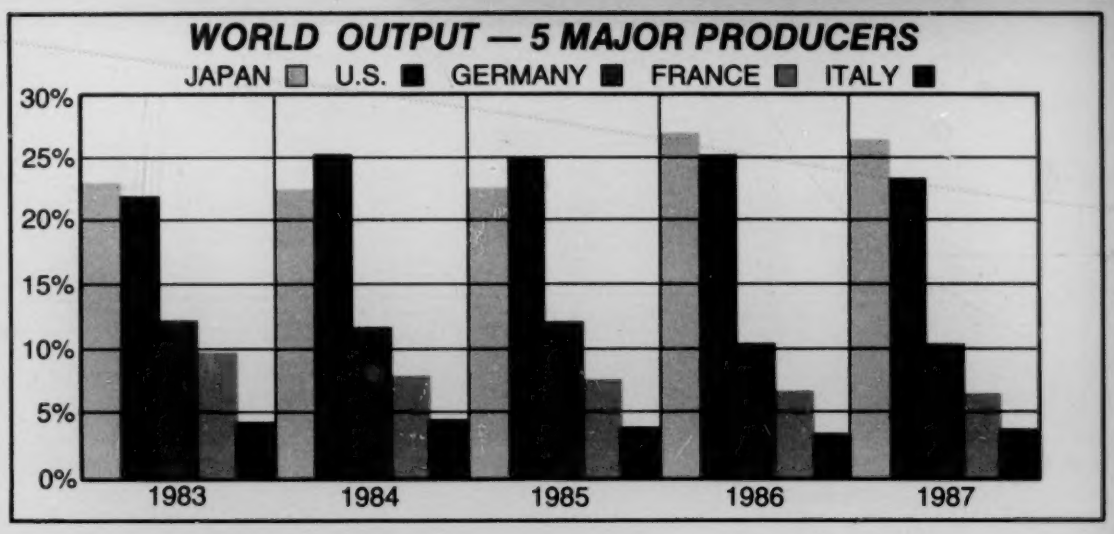
PRODUCTION

Global vehicle production and assemblies climbed to 45,684,610 units in calendar 1987 compared with 45,156,013 units in 1986.

By region, Western Europe vehicle production and assemblies last year were some 651,000 units ahead of 1986. Asia-Pacific showed an approximate 300,000-unit increase. Eastern Europe is believed to have climbed about 190,500 units. North America dropped 302,199 units or almost 4 percentage points from 1986.

Among nations, South Korea repeated its title as leading production gainer in 1987 with a 62.47-percent increase over 1986. Spain's total, which includes assemblies, rose 9.64 percent and France went up 9.35 percent.

In sheer volume, Japan (7,891,087 units) and the United States (7,094,992) were the world's top car producers in 1987. They were followed by West Germany, France, Italy, Spain and the United Kingdom, all of which produced over 1 million vehicles each. ■



Annual world vehicle production since World War II — 1987 output rises to 45.68 million

NOTE: *—Built for sale in Canada only. Percentage rounded.

Manufacturers based in the United States produced 9.38 percent fewer cars in calendar year 1987 than in 1986.

Production by the eight U.S.-based automakers in 1987 was 7,094,992 compared with 7,829,697 in 1986.

Three firms reported increases last year. Ford Motor Co. built 1,630,446 cars in 1987, 3.27 percent above 1986's volume of 1,764,316. American Honda Manufacturing Inc.'s output rose 30.58 percent in 1987. Nissan Motor Manufacturing Corp. U.S.A. last year built 80.11 percent cars than in 1986.

Reduced output in calendar 1987 was reported by: General Motors, down 16.23 percent; Chrysler Motors, 17.03 percent; Volkswagen of America Inc., 20.97 percent; and New United Motor Manufacturing Inc., 8.98 percent.

In the 1987 model year, car production in the United States declined 515,110 units or 6.53 percent from the 1986 model year total.

American Honda's 1987 model production climbed to 309,534, up nearly 71.0 percent. Nissan produced 137,427 in the '87 model year versus 50,763 in '86. NUMMI raised its output to 197,375 in the '87 model year.

Two of the domestic Big Three automakers reported leaner production volumes in the '87 model year.

GM output dropped to 3,710,954 from 4,350,916 in 1986, and Ford production fell to 1,601,288 from 1,809,604.

Chrysler Motors output advanced to 1,342,681 cars in the 1987 model year compared with 1,233,709 in the 1986 model year. ■

PRODUCTS/SPECIFICATIONS

Where 1988-model trucks are built

UNITED STATES

CHRYSLER MOTORS

Toledo, Ohio — Cherokee, Comanche, Grand Wagoneer, Wagoneer
Warren, Mich. — light-duty trucks, Dakota, standard and mid-size trucks
St. Louis (No. 2) — Mini Ram Van, Caravan, Voyager minivans

FORD MOTOR CO.

Kansas City, Mo. — light trucks
Kentucky Truck (Louisville) — medium, heavy and extra-heavy trucks
Lorain, Ohio — Econoline, Club Wagon
Louisville, Ky. — Ranger, Bronco II
Michigan Truck (Wayne) — Bronco, light trucks
Norfolk, Va. — light trucks
St. Louis — Aerostar minivans
St. Paul, Minn.(Twin Cities) — light trucks, Ranger

FREIGHTLINER CORP.

Mount Holly, N.C. — heavy trucks
Portland, Ore. — heavy trucks

GENERAL MOTORS

Baltimore — Chevrolet Astro, GMC Safari minivans
Detroit — commercial, recreational, specialty vehicle chassis
Flint, Mich. — Blazer, Jimmy, Suburban wagons
Janesville, Wis. — Chevrolet, GMC light trucks
Lordstown, Ohio — Chevrolet, GMC vans
Moraine, Ohio — Chevrolet S-10, GMC S-15 trucks
Pontiac, Mich. — Chevrolet, GMC light and medium-duty trucks, Chevrolet S-10 and GMC S-15 trucks
Shreveport, La. — Chevrolet S-10, GMC S-15 trucks, Blazer, Jimmy
Ft. Wayne, Ind. — Chevrolet, GMC light trucks

KENWORTH TRUCK CO.

Chillicothe, Ohio — heavy trucks
Seattle — heavy trucks

MACK TRUCKS, INC.

Allentown, Pa. — heavy trucks
Macungie, Pa — heavy trucks
Winnsboro, S.C. — heavy trucks

MERCEDES-BENZ TRUCK CO.

Hampton, Va. — medium trucks

NAVISTAR

Springfield, Ohio — medium and heavy trucks

NISSAN MOTOR MFG. CO.

Smyrna, Tenn. — pickup trucks

PETERBILT MOTORS CO.

Denton, Texas — heavy trucks
Nashville, Tenn. — heavy trucks

VOLVO GM HEAVY TRUCK CORP.

Dublin, Va. — heavy trucks
Ogden, Utah — heavy trucks
Pontiac, Mich. — heavy trucks

CANADA

CHRYSLER MOTORS

Brampton, Ontario — Jeep Wrangler
Windsor, Ontario — Caravan, Voyager minivans, Mini Ram Van
Pillete Road (Windsor) — Ram Van, Ram Wagon

FORD MOTOR CO.

Ontario Truck (Oakville) — light trucks

FREIGHTLINER OF CANADA LTD.

Burnaby, British Columbia — heavy trucks

GENERAL MOTORS

Oshawa, Ontario — Chevrolet, GMC pickups
Scarborough, Ontario — full-size Chevrolet and GMC vans

NAVISTAR

Chatham, Ontario — medium and heavy trucks

MACK TRUCKS INC.

Oakville, Ontario — heavy trucks

MEXICO

CHRYSLER

Lago Alberto — Ramcharger

FORD

Cuautitlan — light trucks

GENERAL MOTORS

Mexico City — Chevrolet light trucks

NISSAN

Cuernavaca — pickup trucks

U.S. van and light truck output rises 10.03%

SALES/REGISTRATIONS

Last year turned out to be the fourth best in the past decade for combined car and truck sales in the United States.

Although passenger-car sales in 1987 fell 10.80 percent to 10,225,289 from 11,463,092 in 1986, record truck sales of 4,962,938 in 1987 versus 4,875,708 in 1986 helped offset the car decline.

In spite of cross-currents from fluctuating currencies, including the weakening of the dollar against the Japanese yen, and more cautious consumer buying attitudes following the stock market tumble on Oct. 19, 1987, vehicle makers managed a fair recovery.

A spate of sales incentives throughout the year bolstered already healthy truck sales and sporadically boosted less sprightly car sales.

The continued popularity of vans and sport-utility vehicles helped the light-truck segment garner nearly a third of the total vehicle market last year. Light-truck sales reached 4,668,483 in 1987, up 1.38 percent from 4,606,837 in 1986.

The Big Three domestic producers shared light-truck sales increases, while sales of imported trucks declined in 1987.

Sales of 3,144,027 imported cars in 1987 lagged slightly behind the record total of 3,248,430 in 1986. However, imports still took nearly a third of total new-car sales in the United States.

There was some rearranging of positions in the U.S. automobile market last year. Ford Motor Co. car sales slipped to 2,019,783 from 2,066,507 in 1986, although its Ford Taurus and Escort were the top-selling models for the year.

General Motors and Chrysler Motors car sales declined by more than 20 percentage points in 1987. GM deliveries fell 977,260 units to 3,555,538 compared with 4,532,798 sold the previous year. Chrysler deliveries dropped to 962,057 from 1,246,316 in 1986.

Honda was the most prominent import/transplant performer in 1987. Although its total sales in the United States declined to 628,836 in 1987 versus 640,646 in 1986, American Honda Manufacturing Inc. delivered 316,618 domestically built cars in 1987. Honda Accord was the third-best selling model in the United States last year.

Other Japanese firms benefiting from U.S. production were Nissan Motor Manufacturing Corp. in U.S.A. with sales of 119,678 in 1987 versus 52,602 in 1986, and Toyota Motor Sales U.S.A. Inc. with U.S.-built (NUMMI) deliveries of 44,853 against 7,281 in 1986.

Worldwide auto capacity continued to grow in 1987. Western Europe held the lead in worldwide passenger-car registrations in 1987.

New-car registrations in Western Europe surged to 12,260,202 in 1987 compared with 11,536,583 in 1986. That was an increase of 6.27 percent over the previous year.

United States and Canada placed second worldwide with combined automobile registrations of 11,150,655 in 1987 compared to 12,611,890 in 1986, according to R.L. Polk & Co. data. ■

*Note: Class 1-3 sales based on manufacturer reports to Automotive News. Class 4-8 sales based on manufacturer reports to the Motor Vehicle Manufacturers Association.
0Ford and General Motors sell domestically built light trucks in Class 3, but do not break them out. They are included in the companies' Class 2 sales. Figures reported for Class 3 for these companies are imported vehicles, Isuzu-built units in the case of GMC and Chevrolet and Brazilian-built Cargo units in the case of Ford.

Compiled by Automotive News from various sources, including AID Ltd.
European numbers are registrations; all others are sales.

SALES/REGISTRATIONS

New-car registrations in the United States fell by 9.14 percent, or more than 1 million units in 1987. The total was 10,122,154 units compared with 11,139,842 in 1986.

Domestic-car registrations dropped 8.44 percent to 6,497,618, compared with 1986's total of 7,695,652 units.

Import-car registrations accounted for more than a third of the 1987 grand total. Import registrations climbed by 5.24 percent (180,346 units) to 3,624,536. In 1986 the import total was 3,444,190 units.

Registrations of domestic-sponsored import cars rose 22.33 percent to 375,832 from 307,212 in 1986, while registrations of all other import cars rose 3.56 percent to 3,248,704, compared with 3,136,978 in 1986.

The year's numbers are compiled from data collected by R.L. Polk & Co., which gathers registration numbers from states and manufacturers' records. ■

SALES/REGISTRATIONS

Recreational vehicle shipments tie 1986 for 10 year top total

1987
(Total Shipments—400,200)

Travel trailers	92,800
Folding camping trailers	41,600
Truck campers	10,100
Motor homes	73,800
Van conversions	181,900

1986**
(Total Shipments—379,500)

Travel trailers	86,000
Truck campers	7,400
Camping trailers	36,500
Motor homes	67,700
Van conversions	181,900

1985**
(Total Shipments—359,200)

Travel trailers	82,900
Truck campers	6,900
Camping trailers	35,900
Motor homes	68,700
Van conversions	164,800

1984**
(Total Shipments—398,200)

Travel trailers	92,400
Truck campers	7,600
Folding camper trailers	40,900
Motor homes	82,000
Van conversions	175,300

1983**
(Total Shipments—358,000)

Travel trailers	90,000
Truck campers	6,800
Folding campers	37,500
Motor homes	69,500
Van conversions	154,200

1982**
(Total Shipments—258,000)

Travel trailers	65,500
Truck campers	5,700
Folding camping trailers	34,300
Motor homes	41,200
Van conversions	111,300

1981**
(Total Shipments—239,100)

Travel trailers	63,800
Truck campers	5,100
Fold-down camping trailers	35,000
Motor homes	35,400
Van conversions	99,800

1980**
(Total Shipments—181,400)

Travel trailers	51,900
Truck campers	5,000
Fold-down camping trailers	24,500
Motor homes	28,600
Van conversions	71,400

1979**
(Total Shipments—303,300)

Travel trailers	90,200
Truck campers	13,800
Fold-down camping trailers	31,100
Motor homes	64,100
Van conversions	104,100

1978**
(Total Shipments—526,300)

Travel trailers	159,800
Truck campers	48,200
Fold-down camping trailers	48,200
Motor homes	157,200
Van conversions	136,400

1977
(Total Shipments—745,600)

Travel trailers	167,900
Truck campers	31,900
Fold-down camping trailers	53,900
Motor homes	280,200
Pickup covers	211,700

1976
(Total Shipments—656,300)

Travel trailers	189,700
Truck campers	42,000
Camping trailers	53,300
Motor homes	156,100
Pickup covers	215,200

1975
(Total Shipments—552,100)

Travel trailers	150,600
Truck campers	44,300
Camping trailers	48,100
Motor homes	96,600
Pickup covers	212,500

1974
(Total Shipments—529,200)

Travel trailers	126,300
Truck campers	45,400
Camping trailers	55,200
Motor homes*	68,900
Pickup covers	233,400

1973
(Total Shipments—752,500)

Travel trailers	212,300
Truck campers	89,800
Camping trailers	97,700
Motor homes*	129,000
Pickup covers	223,700

NOTES: **—Pickup covers no longer included in RVIA shipments.
*—Imports of Volkswagen Campmobile motor home included only in 1972-'74 totals.

SOURCE: Recreation Vehicle Industry Assn.

Domestic and import truck sales in U.S. edge up 1.40% in 1987

1988-model domestic car body family designations

There are significant additions and revisions to the body-family — or "platform" — designations of General Motors, Ford Motor Co. and Chrysler Motors Corp. passenger car lines in the 1988 model year (see charts).

GM added a new W-body designation which includes the corporation's new front-wheel-drive intermediate-size cars — Pontiac Grand Prix, Cutlass Supreme and Buick Regal.

The subcompact-sized Pontiac LeMans, built in South Korea by GM affiliate Daewoo Motor Co. Ltd., adopted the T-body designation that formerly was associated with the Chevrolet Chevette and Pontiac 1000, which have been discontinued.

Buick Motor Division's new sporty Buick Reatta two-seater coupe, which is built on the same platform as the Buick Riviera, joined the ranks of GM E-body cars, whose other members include the front-wheel-drive personal luxury Oldsmobile Toronado and Cadillac Eldorado.

Ford Motor Co. has been moving away from labeling its platforms, and is instead referring to its passenger-car programs by specific code designations.

For example: While they share the same platform, Lincoln Continental is known as the FN9 while Ford Taurus/Mercury Sable is codenamed the DN5.

Also, although the imported Mercury Tracer shares the same platform as the Mazda 323, produced by Ford's Japanese affiliate, Mazda Motor Corp., the Tracer has its own CT18 designation.

Another newcomer for the '88 model season is the BT17 designation of the Ford Festiva.

Chrysler Motors introduced a new C-body platform in the '88 model year, comprised of Dodge Dynasty, Chrysler New Yorker and Chrysler New Yorker Landau, and added the L58 Eagle Premier platform as a result of its acquisition of American Motors.

In all, the domestic Big Three automakers have a combined total of 42 platform designations in the '88 model year — 20 at General Motors, 12 at Chrysler Motors and 10 at Ford Motor Co. ■

PRICES

Retail prices, 1988 U.S. and import models

This table shows the prices of 1988 domestic and imported cars as of May 2, 1988. All prices are manufacturers' suggested retail prices. Import prices include ocean freight and U.S. import duty. None of the prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the buyer. In the equipment section, "std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

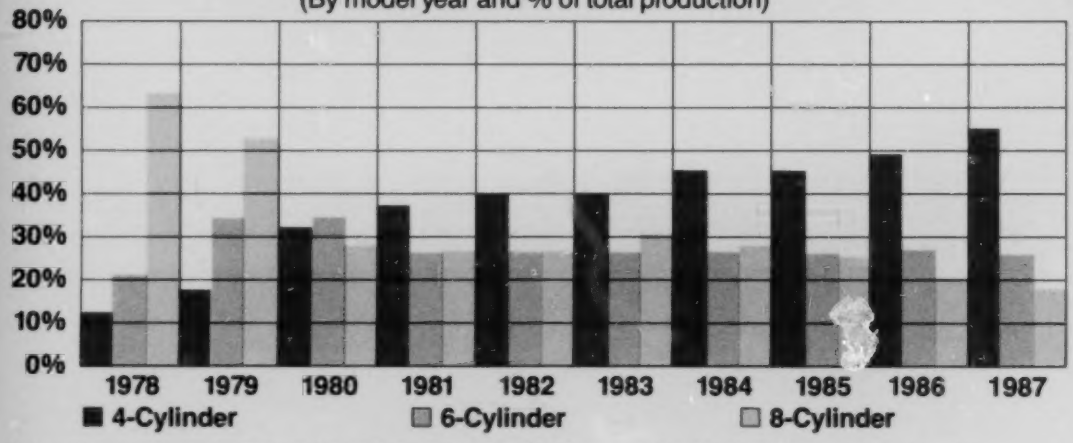
OPTIONS/EQUIPMENT

GASOLINE ENGINE INSTALLATIONS, 1978-1987

(By model year and % of total production)



Four-cylinder engines were still the dominant choice for nearly half of the cars produced in 1987. Sixes were down less than a percentage point from 1986 and V-8 installations fell about two points for nearly a fifth of total production. See table on page 67.

Factory-installed convenience and control options continued to be extremely popular in 1987. More than 94 percent of all cars produced in the United States last year were equipped with power brakes and tinted glass, and over 97 percent had power steering. Air conditioning maintained its popularity and was factory-installed in 87.02 percent of all cars produced in the United States and Canada.

Upholstered bucket seats made inroads in seating in model year '87. Nearly 88 percent of the cars produced had cloth seats, and buckets increased to 55.20 percent, up from 51.42 percent in 1986. Leather as a factory option increased to 8.50 percent in 1987 model cars, while vinyl waned.

In the drivetrain category, automatic transmissions were installed in 86.25 percent of all new cars, although five-speed manuals took a larger 12.09-percent share of total output. Four- and six-cylinder engines gained momentum and were installed in over 80 percent of all cars in the 1987 model year. Four-cylinder gasoline engines were installed in 55.03 percent of all cars, up from 49.52 in 1986.

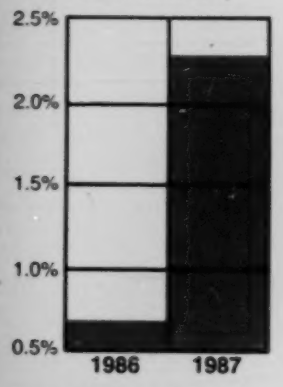
Not unexpectedly, fuel-injection continued to supplant carburetion. It went into 78.57 percent of all 1987 model U.S.-built cars, compared with 65.88 the previous year.

Options that continued to decline in 1987 were AM and AM/FM monaural radios, and diesel engines. Demand for stereo radio/cassette players grew, although interest in graphic equalizers was less substantial.

More interest in turbocharger installations, anti-lock brake system (ABS) installations and the addition of air bags added to the variety and sophistication of factory-installed options available in the 1987 model year. ■

ABS INSTALLATIONS

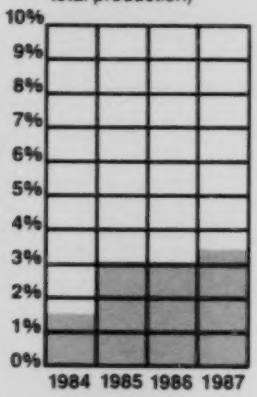
(By Model Year and % of Total Production)



Anti-lock braking system installations garnered a small but growing corner of total production in 1987. See table on page 78.

TURBOCHARGER INSTALLATIONS

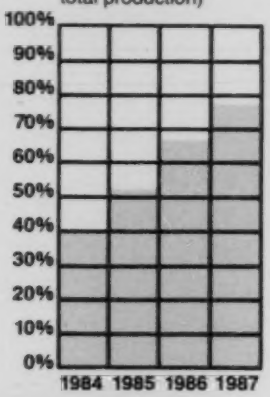
(By model year and % of total production)



Turbocharger installations reached 3.49 percent in 1987. See table on page 67.

FUEL-INJECTION INSTALLATIONS

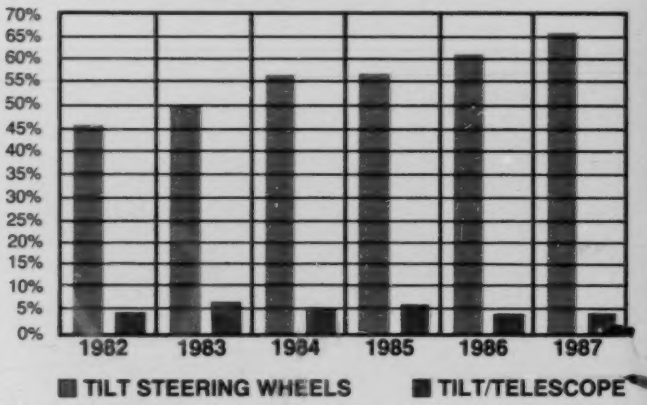
(By model year and % of total production)



Fuel-injection continued to supplant carburetion, taking nearly 79 percent of total production in 1987 for a 13.57 percent gain. See table on page 67.

TILT AND TILT/TELESCOPE STEERING WHEEL INSTALLATIONS

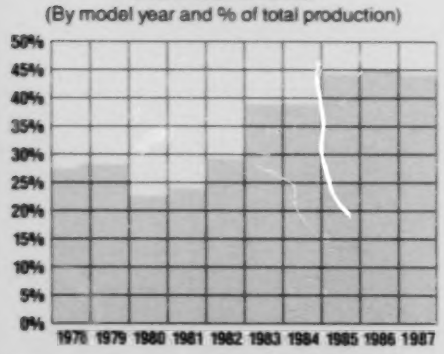
(By Model Year and % of Total Production)



Tilt and tilt/telescope steering wheel installations rose four points for a 66-percent share of total production. Combination tilt/telescope wheel installations stayed static, with a 3.89-percent output level in 1987. See table on page 73.

POWER SIDE WINDOW INSTALLATIONS

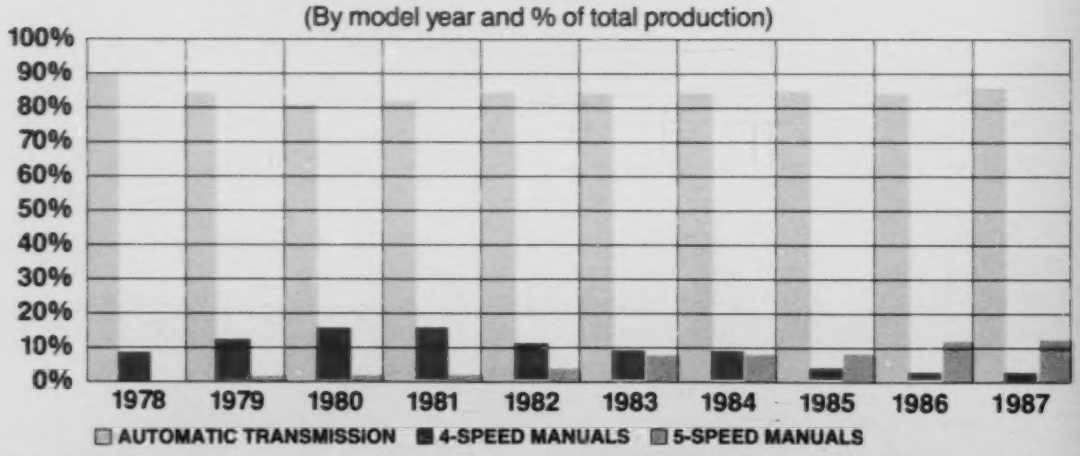
(By model year and % of total production)



Power side window installations fell slightly in 1987. Over 44 percent of new U.S.-built cars were equipped with power windows, however. See table on page 72.

TRANSMISSION INSTALLATIONS, 1978-1987

(By model year and % of total production)



Automatic transmissions were installed in the *majority of cars built in the U.S. in 1987. Four-speed manual installations* continued to drop, while the trend for "sporty" five-speeds was confirmed by a 12.09 percent share of total installations. See table on page 70.

DEALERS

The 1987 Automotive News Sales Giants — the top-producing dealerships ranked as high-volume sales machines for their franchises — invariably did something, or a variety of things, very well.

Some of the big shooters, such as the Penske organization's Longo Toyota store in El Monte, Calif., were just plain large-volume retailers selling a hot product.

That franchise, which the Penske organization has owned for two years, moved into a new location to accommodate the heavy volume. Last year the dealership sold 19,452 new Toyota cars and trucks, and 12,744 of them were retail sales.

Other operations, such as Stephen World of Wheels, Bristol, Conn., and Polkowitz Motors, Perth Amboy, N.J., were fleet-market behemoths that sold large blocks of cars and trucks to fleet purchasers.

The top three volume franchises last year were Chevrolet sellers.

The highest-volume franchise in the United States in 1987 was Ed Morse Chevrolet, Lauderhill, Fla. Dealer Edward J. Morse Jr. sold 25,063 new cars and trucks, ringing up total dollar sales of $256.1 million. The Ed Morse Chevrolet sales total included 22,837 fleet and 2,226 retail units.

The second-largest franchise was Friendly Chevrolet, Dallas, Texas, which sold 20,543 new Chevrolet cars and trucks, including 18,053 fleet and 2,490 retail units.

The nation's third-highest-volume franchise was The Chevrolet Collection, Miami, Fla., one of several of Joseph A. DeMaria's Collection dealerships that were among 1987's top performers. That dealership sold 19,825 new Chevrolet units in 1987.

In fourth place was Fairway Ford, Latrobe, Pa., one of several high-volume franchises operated by James O'Neal Jr. as part of the Arnold Palmer dealerships. The Fairway store sold 19,452 new Ford vehicles.

The Automotive News Sales Giant with the highest reported sales gross, including all departments in a single dealership, was Polkowitz Motors at $312.5 million.

No. 2 in sales gross was Fairway Ford at $260 million. No. 3 was Friendly Chevrolet, Dallas, at $258.3 million.

While the big-volume dealerships were scattered across the nation, there were highly concentrated pockets in big fleet markets such as Florida, California and the Northeast.

However, the geographical locations of 1987's top sellers for each of the 34 franchises show them positioned in a total of 17 states.

The states of California and Florida each boasted six of the best-of-franchise dealerships.

The state of Georgia had three top-sellers, while Texas, New York, New Jersey, Virginia and Maryland had two each.

Illinois, Massachusetts, Colorado, Connecticut, Rhode Island, Arizona, Washington, South Carolina and Pennsylvania each had one.

Sixteen of the 34 best-sellers were exclusive points; that is, they sold only a single brand of vehicle at their dealerships.

However, the heavy impact of multi-franchise and multi-point dealership organizations was made very clear last year, as the Automotive News Sales Giants included several operators with more than one franchise and more than one dealership.

However, only the powerful billion-dollar Arnold Palmer organization finished as top vehicle seller in two different franchises.

The organization's Fairway Ford dealership in Latrobe, Pa., was the largest-volume Ford franchise; the Arnold Palmer Ford-Lincoln-Mercury store in Hilton Head, S.C., was the largest-volume Lincoln-Mercury franchise.

The Arnold Palmer organization also earned the distinction of having two of the top-volume Ford franchises — again, Fairway Ford and Arnold Palmer Ford-Lincoln-Mercury.

On the following 10 pages are profiles of the Automotive News Sales Giants, the 10 highest-volume franchises for each of 34 domestic and import makes.

There are 340 winners, although some of the stores are multiple winners because they have more than one franchise. ■

The number of dealership points selling new automobiles in the United States dropped below the 25,000 level during 1987. Nonetheless, these fewer dealerships represented more new-car franchises per store than in preceding year 1986.

According to Automotive News' annual dealership census, there were 24,938 new-car outlets in the United States in 1987. This represented a decline of 818 from 25,156 dealerships counted in 1986.

There were 19,530 dealerships selling U.S.-built cars on Jan. 1, compared with 19,700 dealerships retailing domestic vehicles one year earlier.

On Jan. 1, a third more dealerships were selling import makes than a year previously. This year on Jan. 1 there were 23,436 import outlets or 5,883 more dealerships selling imported makes than last year when 17,553 stores sold imports.

There are fewer stores retailing domestic-only makes because all domestic divisions — except for General Motors' Buick, Oldsmobile and Cadillac divisions — sell captive imports. Many dealerships selling these three makes also sell imports or they are dualed with Chevrolet and/or Pontiac, which offer captive import makes.

Although there were fewer dealerships this year, according to the Automotive News census, these outlets averaged 2.89 franchises per store or nearly one more franchise per store than 10 years previously when there was an average of 2.07 franchises per outlet.

The 24,938 dealerships held 72,191 franchises from 12 domestic and 39 import makes. A decade earlier there were 28,656 dealerships holding 59,455 franchises. Last year there were 25,156 dealerships holding 61,216 franchises for an average of 2.43 franchises per outlet. ■

New-truck dealer total rises by 482

The number of new-truck dealer outlets in the U.S. increased by 482 in 1987, bringing the Jan. 1, 1988 truck dealer population to 26,337. Eighteen makers increased their dealer totals; seven showed declines; two remained unchanged.

Figures for 1988 were collected from manufacturers and the American Truck Dealers Division of the National Automobile Dealers Association.

Truck sales per outlet

Retail prices, 1988 light trucks, domestic and import

These tables show the prices of domestic and imported light trucks, sport-utility vehicles and vans as of May 2, 1988. Prices are manufacturers' suggested retail prices. Import prices include ocean freight and U.S. import duty. None of the vehicle prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the retail buyer. Vehicle prices are for the base vehicle with the base engine. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

Vector postpones stock sale

New Jersey blocks car firm's plans

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Vector Aeromotive Corp., a new California company with a decade-old dream of building a 200-mph sports car, has postponed a bid to raise $6 million through a public stock offering.

The initial registration statement ran aground in New Jersey when the New Jersey Bureau of Securities recommended denial of the company's application.

Vector had hoped to market 60 million common shares at 10 cents a share beginning May 12. However, the sale has now been delayed until at least late June, the underwriter said.

"The company has some issues to resolve with regulators in New Jersey," said securities analyst Cary Polevoy, with the company's underwriter, Blinder, Robinson & Co., Englewood, Colo. "The preliminary prospectus is being revised to satisfy them."

James Smith, New Jersey Bureau of Securities chief, said the state agency issued a summary order postponing the offering's effectiveness in the state. The agency rejected certain exemptions and recommended denying the application altogether.

"The basis was insolvency," he said. "Vector Aeromotive had a predecessor company called Vector Car, and the bureau alleges Vector Car is insolvent and, according to the documents, has 47 percent ownership of Vector Aeromotive."

He said the company asked for a

MORE CARS: *3rd-quarter output slated to climb 12%*

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production for the third quarter is scheduled to increase almost 12 percent from last year's total if car sales continue at their current strong pace.

Output for the three-month span is targeted at 1,496,636, 11.70 percent more than last year's 1,339,859. Most of the increase comes from General Motors, which had two plants down for extended changeover periods last year.

Increases also are slated at Ford Motor Co., Honda, Nissan and Mazda. Third-quarter schedules at Chrysler Motors, Volkswagen of America and New United Motor Manufacturing Inc. call for fewer cars than last year.

Currently, several GM and Ford plants are working daily and Saturday overtime and are expected to continue if sales hold up.

Through mid-May, sales for each of the Big 3 were ahead of last year, and the production schedule reflects that.

The Big 3 also have increased their overall share of the total U.S. market. It was 70.76 percent for the first four months of this year vs. 69.82 percent last year. The Japanese share is down slightly: 20.92 percent this year compared with 21.12 percent last year. This, too, portends continued strong production schedules.

Detroit analyst Arvid Jouppi thinks the economy is strong enough to top 1987's 15.3 million new-car and truck sales.

Ford analyst Ray Windecker pointed out

Chrysler TC may miss big ragtop time

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Chrysler's long-delayed, Maserati-built TC luxury two-seater that was due in California dealerships in mid-May will be at least two months late as Chrysler engineers complete last-minute quality fixes.

The late launch cuts into warm weather sales for the convertible, especially in northern locales that apparently won't get the car until late summer at the earliest.

A $30,000 price has been announced to dealers, significantly less than company insiders said was likely when the Chrysler-Maserati hybrid was shown to the press last winter, but on target with the company's original price forecasts.

The TC had been slated for a mid-May debut on the West Coast, with supplies moving gradually to other parts of the country.

West Coast shipments are now slated to arrive "at the end of July," said Anthony P.G. Richards, Chrysler's director of Lamborghini and Maserati programs.

The TC is already more than a year late in coming to U.S. showrooms. The car was originally slated for an early 1987 debut.

Low-volume production at Maserati's Innocenti plant in Milan began earlier this month. Richards said two production cars have been sent to Chrysler's Chelsea (Mich.) Proving Grounds for final pre-launch verification testing. Assuming no further problems emerge, production cars will be released for dealer shipments.

The latest delay is traced to the hardtop roof offered as a no-cost option.

"We experienced a bit of difficulty with the hardtop," said Richards. "We had to get the part right, the fit and finish."

A Chrysler spokesman last week cited "some minor refinements and changes," some of which grew out of suggestions made during press previews. For example, he said Chrysler decided to outfit the TC with a wooden steering wheel and gearshift lever.

After the initial launch, the cars will be introduced in East Coast locations, such as metropolitan New

AUTOMOTIVE NEWS/JOE WILSSENS

Mugg: (The auto industry) is no different than Procter & Gamble: We have got to earn shelf space; we've got to earn dealer share of mind every day."

Mugg — Audi healer

New U.S. chief charts slow, steady cure

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Dick Mugg poured himself a glass of wine, spotted an approaching reporter and promptly voiced a wish to spend the San Francisco late afternoon away from spotlights.

"Isn't there another story in town?" asked the newly appointed head of Audi of America.

Not in the Audi hospitality suite there wasn't. Hours earlier, he had been cast before dozens of impatient faces at the Audi dealer meeting during the National Automobile Dealers Association convention.

For two years the dealer body had watched the company fall to its knees because of charges of unintended acceleration in Audi cars. And now, on this February morning, they were aiming their pent-up wrath at a guy who had been on the job for two weeks.

Mugg listened, empathized, and won some allies. "I'd be asking tough questions, too," he said.

Mugg could afford to say that because he had been perched elsewhere in the Volkswagen of America organization during Audi's dramatic sales slide. For eight years, the former Marine had been working in VWoA's corporate sales and marketing office. There he focused

Jaguar eyes mechanical air bags

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Safety sources here say Jaguar Cars Ltd. plans to offer an all-mechanical air-bag system in its 1990 models.

A Jaguar spokesman confirmed the company is working on an all-mechanical air-bag system with Breed Automotive Corp. of Boonton, N.J., but said, "We have nothing further to announce at this time." Jaguar's use of the Breed system would mark the debut of all-mechanical air bags in production vehicles.

Breed has been touting the simplicity and low cost of its design for several years. Early estimates from the company put high-volume production costs at $40 per unit compared with $800 for competing systems.

Breed's system is a departure from rival designs in that it does not use electrical sensors. Instead, a single module is located in the steering wheel hub for the driver and another similar module is placed in the instrument panel for the front passenger.

In a crash, the displacement of a ball within each module releases a firing pin, which impacts a primer and ignites the gas-generating material needed to inflate the air bag. Wiring is not required and there is no electrical diagnostic equipment or backup electrical power.

Late last year, NHTSA completed an evaluation of the Breed system and said, "The air-bag system was demonstrated to be timely and effective in its protective function in frontal pole and angular barrier crashes and to protect the driver, who was otherwise unrestrained, in perpendicular barrier crashes up to 35 mph."

The report said Breed's mathematical predictions about the system's operation "compared favorably with results measured in tests. Sled test dummy injury measures indicate good protection for the range of driver sizes, both with and without supplementary belt restraints."

Breed has licensed the all-mechanical air-bag system and other Breed sensor technology to Tokai-Rika Co., a wholly owned subsidiary of Toyota Motor Corp.

More help for Allante

Top rebate for dealers rises to $9,000

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Determined to revive interest in its beleaguered $56,533 Allante model, Cadillac is offering dealers up to $9,000 on certain Allantes sold until the end of the model year and is increasing the amount of national advertising for the car.

Meanwhile, American Isuzu announced a $1,500 dealer incentive program, and Ford Motor Co. and Chrysler Motors are continuing programs on certain models.

Norman Jay, Cadillac assistant manager of sales promotion, said the division is extending both dealer cash incentives and consumer programs such as a special leasing program and a guaranteed resale offer in order to create awareness for the car.

"We're entering into a different arena — a competitive arena — with a $56,000 car and we need to keep the momentum going," Jay said.

Cadillac is offering its dealers $7,500 on new 1987 Allantes and $9,000 on 1987 models used as dealer demonstrators until the end of the model year. It previously offered $2,500 on 1987 Allantes and $4,000 on 1987 Allante demonstrators; those incentives were scheduled to expire May 31.

In addition, Cadillac is giving dealers $5,000 on new 1988 Allantes and $8,000 on 1988 Allantes used as demonstrators. In order for 1988 Allante demonstrators to be eligible, the dealer must classify the car as a demonstrator at least 90 days before it is sold.

Cadillac is hoping the dealers will use the money to advertise the Allante in their local area and support increased efforts to advertise the car nationally.

The division also extended its Ultra Lease program and guaranteed resale program for Allante buyers until the end of the model year.

The Ultra Lease program offers 6.5 annual-percentage-rate financing on 12- to 60-month loans for the 1987 Allante. The capitalized cost of the Allante (invoice price plus dealer profit) cannot exceed $43,505 to qualify for the low-interest loan.

The guaranteed resale program for the Allante, retroactive to the beginning of the model year, offers a guarantee that the resale price of the Allante as a percentage of the retail price will not fall below that of the Mercedes-Benz 560-SL.

The customer must trade the Allante for a current-model Cadil-

Riney agency wins Saturn ad account

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The advertising plum of the decade — Saturn Corp.'s estimated $100 million account — was awarded to Hal Riney & Partners last week after a search that started last October.

The announcement could sound the death knell for the most revered of the advertising world's sacred cows: the 15 percent agency commission. Riney will work under a "non-traditional" compensation package, which probably means cost plus performance bonuses.

Also, advertising for Saturn will break sooner than most realize. The biggest near-term project is positioning Saturn as a corporation separate from General Motors. The advertising could break nearly one year before the car is introduced in the fall of 1990.

At a press conference last week, Donald W. Hudler, Saturn vice president for sales, service and marketing, announced the appointment of San Francisco-based Riney as its "communications partner."

As for the compensation, Hudler said it "will not be the traditional arrangement."

Though neither party would reveal any details about the specific compensation the agency will receive, it was clear in talking with the agency's chairman, Hal Riney after the press conference, that the standard 15 percent agency fee, a tradition in the advertising business, is dead.

Riney called the 15 percent commission "a stupid system" that is not fair to the agency or the client.

Apparently the advertising world does not view this action as an immediate threat. Harry Paster, executive vice president of the American Association of Advertising Agencies, said in a prepared statement that this "isn't the first time for General Motors to break ranks with the 15 percent commission."

Paster added, "I don't think Saturn spells the end (of the 15 percent commission). It is still a well established arrangement."

Riney denied reports that the compensation would be tied to sales. However, the compensation package will be incentive-based. Riney said it would probably "be based on cost" with additional money to be paid out by Saturn "based on excellence."

What emerges, and Riney did not disagree, is a cost plus performance bonus system. He said details of the compensation package are being developed.

Saturn is only the second automotive account for Hal Riney & Partners. Only recently, it obtained its first auto client, Austin Rover Cars of North America (ARCONA).

ARCONA, which sells the Sterling automobile, terminated its relationship with Riney last week.

Riney was the smallest agency among the final three in the Saturn selection process. Other contenders were N W Ayer of New York, which billed approximately $1.18 billion in 1987; and Hill, Holliday, Connors, Cosmopulos of Boston, which billed bout $260 million. Riney had about $200 million in billings last year.

Saturn executives and Riney declined to reveal anything about the strategic plan that won the account.

One of the toughest challenges facing the agency will be to create an identity for Saturn separate from parent GM. When it formed the subsidiary, GM said it intended to build and market its car as an import killer. In effect, GM formed a new corporation, rather than a division, and that enabled it to negotiate new contracts with the UAW and develop new franchise agreements for dealers.

Jim Travis, president of Riney, said he viewed this as a challenge that would have to be met by working to position Saturn in the marketplace almost a year before the car is launched.

Riney's major coup was its work for Gallo Winery, including its famous ads for the Bartels & Jaymes wine coolers. Riney resigned the Gallo account last year.

Hal Riney said last week that "automotive advertising has a certain sameness." He also said there will "never be a picture of a car going down a wet, windy road with pylons" in an ad done by his company.

His work for ARCONA demonstrated that theory although those efforts met with mixed reviews.

3 GM executives join World Congress faculty

DETROIT — In addition to General Motors President Robert C. Stempel, who will be the keynoter, three other GM executives will address the 13th annual Automotive News World Congress, which will be held at the Westin Hotel, July 17-20.

They are: Robert J. Eaton, vice president and group executive, technical staffs group; Marina v.N. Whitman, vice president and group executive, public affairs staffs group; and Thomas J. Davis, chief engineer of the Buick-Oldsmobile-Cadillac Group's Lansing automotive division.

Eaton, who joined GM in 1963 as a college-graduate-in-training with Chevrolet, moved into his current post on May 1, 1986. Previously, he had served as vice president in charge of the advanced engineering staffs.

Eaton's technical staffs group includes the advanced engineering, current engineering and manufacturing services, design and research staffs and the patent section.

He is chairman of the Metropolitan Center for High Technology in Detroit and the advisory committee for the Stanford Institute for Manufacturing and Automation. He is active in the SAE and serves on several committees.

Before becoming head of the public affairs staffs group on April 1, 1985, Whitman was vice president and chief economist of GM.

Prior to joining GM, she achieved academic recognition for her expertise in international economics as a faculty member of the University of Pittsburgh.

She is a former member of the President's Council of Economic Advisors. Appointed in 1970, she advised members on a variety of international issues, such as trade agreements and foreign exchange rates.

The president subsequently appointed her to the Federal Price Commission, where she helped administer Phase II wage-price controls.

Whitman's public affairs staffs group is made up of GM's economics, environmental activities, industry-government relations and public relations staffs.

Davis was named chief engineer of B-O-C's Lansing product team (now the Lansing automotive division) on Aug. 5, 1986. Prior to that, he served as a product development program manager for GM's Chevrolet-Pontiac-Canada Group.

He began his GM career as an hourly rate employee at Pontiac in 1964. Following graduation from GM Institute, he was assigned to Pontiac's product engineering activities.

In 1982, Davis was named a Sloan Fellow at the Massachusetts Institute of Technology, receiving an MBA the following year. He then returned to Pontiac as manager of industrial engineering and manufacturing staff operations, and was appointed program manager for C-P-C in 1984.

Whitman and Davis will address the World Congress on Monday, July 18, at 9 a.m. and 3:45 p.m., respectively. Eaton will speak on Tuesday, July 19, at 9:45 a.m.

The World Congress will begin with Stempel's State of the Industry keynote address on Sunday, July 17, at 7:45 p.m.

Co-keynoter Dieter Spethmann, chairman of the executive board of Thyssen AG of West Germany, will deliver the State of the Supplier Industry address at 8:30 p.m.

For further information, write Automotive News World Congress, 1400 Woodbridge, Detroit, MI 48207 or telephone 313-446-6047. The cable address is TWX 810-221-5122 AUTNEW DET.

Wholesale shipments up for quarter

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale RV shipments in the first quarter of 1988 were at their highest quarterly level in nine years, and van conversion deliveries were slightly ahead of last year.

RV manufacturers wholesaled 105,000 units in the first three months of this year, up 2.74 percent from 102,200 a year earlier, according to the Recreation Vehicle Industry Association.

In March, the industry shipped 39,900 units, up 2.05 percent from 39,100 a year earlier, RVIA reported.

The initial decline in consumer sentiment following last October's stock market crisis has been offset by subsequent gains in overall consumer perceptions of future economic events. The Index of Consumer Sentiment was up to 94.6 in March, its highest level since 1986, the RVIA said.

Recreational Vehicle Wholesale Deliveries

Travel trailers	6,500	6,200	+ 4.8	15,800	16,600	– 4.8
Park Trailers	800	500	+20.0	1,900	1,700	+11.8
Travel trailers—fifth wheel	3,000	2,500	+20.0	7,900	6,400	+21.9
Folding camping trailers	4,900	4,400	+11.4	11,800	10,400	+13.5
Truck campers	1,200	1,200	+00.0	2,000	2,000	+ 4.8
Towable RV total	16,200	14,800	+ 9.5	39,900	37,200	+ 8.0
Conventional (type A)	3,700	3,500	+ 5.7	10,200	9,600	+ 6.3
Van Campers (type B)	500	600	–00.0	1,200	1,600	–25.0
Chopped vans (all)	2,500	2,600	+ 3.8	6,297	6,300	– 0.6
Motor home total	6,700	6,800	+ 1.5	17,600	18,000	– 2.2
Van conversions	17,000	17,700	– 4.0	47,900	46,400	+ 2.4
TOTAL ALL RVs	39,900	39,100	+ 2.0	105,000	102,200	+ 2.7

Source: Recreation Vehicle Industry Association

Consumers adopted a "wait-and-see" attitude in th final months of 1987, but they now appear to have adjusted their frame of reference as to how economic events might affect them personally and overall consumer confidence has overcome earlier losses, RVIA said.

This renewed confidence indicates consumer spending will remain favorable throughout the year ahead.

Deliveries of van conversions slowed a bit in March after a red-hot February.

Converters wholesaled 17,000 units, off 3.95 percent from 17,700 a year earlier. Three-month shipments of 47,500 van conversions were up 2.37 percent from last year's 46,400.

Shipments of vans with the seat-delete option by the four major domestic manufacturers to converters were up in March, however, signaling future increases in wholesale shipments by converters to dealers.

Detroit van manufacturers shipped 23,000 van chassis to converters in March, up 4.55 percent from 22,000 a year ago.

For three months of this year, manufacturers shipped 52,000 van chassis to converters, nearly equal to the 52,300 of a year ago.

Positioning boosts sales for converter

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RENO, Nev. — Proper positioning is a key to success in the van conversion business, even though many competitors pay scant attention to it, following whatever is currently hot.

U.S. Conversions Inc., Elkhart, Ind., with the aid of Hills, Hills & Associates, a San Francisco research firm, mapped out a positioning strategy that helped it boost sales 62 percent in the first half of the 1988 model year.

It positioned itself in the mid to upper end of the market, where higher-volume, more-profitable and stable converters are concentrated, according to Michael Hills, president of Hills & Hills.

That segment, the fastest-growing and least vulnerable to change, includes conversion packages wholesale priced at $4,500 and up.

Proper positioning dictates not only products and prices, but the entire wholesale/retail marketing strategy behind selling them.

For example, it means using "feature/benefit" oriented dealers, those used to selling mid to upscale automotive products, rather than "price/value" oriented dealers. It means using salesmen with high ego drives, good closing skills, reasonable product knowledge and good-to-high profit-per-sale averages.

"If you as a converter are selling upscale products in downscale dealerships, typically they won't have the types of salespeople who can sell your product effectively," Hills said.

By carefully watching the dealerships it uses and providing them with the right mix of products, U.S. Conversions managed to increase its average price-per-unit sale by $400, said G.R. Soos, U.S. Conversions vice president and general manager.

Many converters are wholesale oriented, stuffing dealers with inventory on the theory that, once loaded up, a dealer will find some way to move it. They also continually seek new dealers, rather than cultivating and honing the sales skills of those they already have, he said.

Proper retail training is all-important because Hills' study found, for example, that 87 percent of van conversion buyers have no preference for any particular brand and 75 percent have no loyalty to any manufacturer, whether Ford, Chevrolet or Dodge.

"That tells us that when working with our dealerships, we have to prepare them to sell — or train their salespeople to sell — against competitive dealerships across the street," Hills said.

"If a customer is shopping five or six dealers, it also shows he's seeking information." He said half of the buyers rely on dealers for their information and 87 percent buy units out of stock.

LOTTERY: *RVIA schedules space drawing; 2 safety seminars slated for July*

RESTON, Va. — The Recreation Vehicle Industry Association has been busy. It has announced a drawing date for exhibit space at its show in Louisville, Ky.; has teamed a set of July safety-standard seminars with regional midyear membership meetings; and has developed new advertising and promotional materials.

The drawing for exhibit space at the 1988 National RV Trade Show will be held June 15 at RVIA's headquarters here.

Manufacturer space will be assigned by lottery, starting at 9:30 a.m. The first draw will go to RVIA members with six or more years of consecutive exhibit participation in the show, the second draw to all other RVIA members and the third to non-member exhibitors.

The initial offering of space for manufacturers earlier this year brought requests from 100 exhibitors for 536,900 square feet of space. Currently, manufacturer space is sold out.

Due to heavy demand, space will be allocated. Each maker's allocation will be based on the amount of its contribution to the total revenue RVIA received in fiscal 1987 from membership dues and the purchase of seals and manufacturer certificates of origin.

Non-RVIA members and new members are limited to 1,000 net square feet of space.

Suppliers received initial space offerings in mid-May. Their space assignments will be made after all manufacturer space is assigned, using the seniority system combined with the lottery system.

To participate in the space drawing, manufacturer exhibitors must submit a deposit for 40 percent of their space request no later than June 10. Supplier exhibitors must submit a 50 percent deposit by then.

The National RV Trade Show, in its 26th year, is the largest trade-only show in the RV industry. It is expected to draw more than 10,000 RV dealers and industry officials to the Kentucky Fair and Exposition Center in Louisville, Nov. 29-Dec. 2.

Meanwhile, RVIA has teamed a set of July seminars on the federal motor vehicle safety standards with regional midyear membership meetings.

The seminars are aimed at production managers, engineers, purchasing agents, legal counsel, marketing directors and parts suppliers. Participation is one of several requirements for a new van converter to qualify for RVIA membership.

The first set of events, consisting of a daytime seminar and an evening membership meeting, is scheduled for July 19 at the Embassy Suites Hotel, Santa Ana, Calif.

A second seminar is planned for July 21 at the Bendix Theater-Century Center, South Bend, Ind., with a subsequent membership meeting in Elkhart, Ind.

On the promotion side, RVIA's agency, Burson-Marsteller, has developed lifestyle advertising and promotion materials, featuring spokespersons Pat and Shirley Boone, for use by RV manufacturers, dealers, show promoters and campground operators.

Colorful promotional posters and an ad kit including photos are available for distribution.

Aviator's new entry-level model
Aviator Van Conversions, Wakarusa, Ind., introduced this new entry-level Navigator model, designed to undercut competition by $1,000 to $2,000. To go with the standard exterior shown here, it also offers a color-coordinated TV, oak veneer table, sidewall console with chrome beverage holders, four reclining captain's chairs and matching sofa, oak-accented door panels, thicker automotive carpeting and other items.

Warmer weather means it's show time for RV industry

With the onset of warm weather, RV shows are flourishing.

The South Bend, Ind., show, traditionally among the three largest annual events, will be minus a few of its usual participants this year, however.

One division of Coachmen Industries, Coachmen RV, won't be there, according to Sue Bartee, show manager for the 34th annual Midwest Manufactured Housing and RV Show. She added that Coachmen's other four divisions will be in attendance.

Also absent from the event this year will be Travel Craft and Fleetwood, Bartee confirmed.

The South Bend show will run Aug. 9-14, with Aug. 9-11 being trade days and Aug. 12-14 public days.

The show is sponsored by the Indiana Manufactured Housing Association and the Recreation Vehicle Indiana Council.

One of the show's highlights this year will be an appearance by country and western singer Janie Fricke on Wednesday evening, Aug. 10. Admittance is free.

Meanwhile, the South Florida RV & Camping Show, a five-day event in Miami, ended May 1 with a a good attendance gain over last year.

The exposition spotlighted nearly 45 RV lines and camping products from 30 major suppliers, according to show coordinator Cliff Ray.

Sponsored by the South Florida Auto-Truck Dealers Association, the show featured a variety of RVs, such as van conversions, trailers, campers and motor homes.

RV TRENDS

JOSEPH BOHN

Participants are planning a similar event for next spring.

Meanwhile, the National Van Conversion Association, Greenfield, Ind., claimed a big success for its Supplier Showcase '88 show, based on reports from exhibitors who accounted for 75 percent of the spaces.

The trade show will expand in 1989 to the lower level of the South Bend, Ind., Century Center, which will accommodate 37 additional booths.

The 1988 trade show recorded a 22 percent increase, with van conversion companies from 33 states and Canada attending, according to the association.

Greenville, S.C., will host the National Van Conversion Association's Southern Supplier Showcase Aug. 24-25 at the Palmetto International Exposition Center.

The show will be a combined supplier and certified van manufacturers' show.

The association believes that relocating to Greenville will make the show more accessible for attendance by van manufacturers, dealers and RV centers.

The timing for the show, it added, will put suppliers and manufacturers together during late summer in anticipation of the new model year.

The Supplier Showcase will have space for 77 suppliers and 10 van manufacturers.

RV Expo '89, a yearly event in Harrisburg, Pa., will run as a trade event Sept. 12-14 and will be open to the public Sept. 14-18.

Theme of this year's show, which is going into its 20th year, is "Puttin' on the Ritz."

The show is sponsored by the Pennsylvania Recreational Vehicle and Camping Association.

AROUND THE WORLD

European sales falter; 1st drop in 15 months

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — New-car sales in Western Europe dipped in April, the first decline in 15 months for the booming European industry.

The April results — reflecting lower sales in four of Europe's six largest markets — may be the first evidence of a widely predicted downturn that failed to materialize in the first quarter of 1988. The last monthly decline was in January 1987.

April sales in Western Europe's 17 markets dropped 3.2 percent from April 1987. Volume totaled 1,183,700 last month, down from 1,222,400 a year ago, according to industry estimates compiled by Automotive News.

Fiat Group remained No. 1 in European year-to-date sales with 15.7 percent of the market. However, Volkswagen's successful launch of the Passat enabled it to outsell its Italian competitor in April.

Through the first four months, European sales were 6.2 percent ahead of the record 1987 pace, when sales topped 12.4 million. Most analysts had forecast at least a slight drop-off in 1988, though most expect another year well in excess of 12 million units.

West Germany, Europe's largest single market and the third biggest in the world, was down 7.4 percent in April and was virtually flat for the first four months. Sales through April totalled 951,900, compared to 947,400 during the same period last year.

Sales also declined in France, the Netherlands and Spain in April. It was the first hint of a slowdown in Spain, which has been by far Europe's most buoyant single market in the past 22 months.

Fiat Auto, which includes Alfa Romeo and Lancia, was 10.1 percent ahead of its 1987 rate. Fiat sales of 717,100 through April were boosted by a healthy Italian home market.

Alfa was up 15.8 percent in Italy due to strong early response to its new 164 model. There were more than 20,000 orders for the big Alfa sedan as of last month, delaying the planned introduction of the car elsewhere in Europe.

The Fiat market share could go even higher as its new Fiat Tipo subcompact and the 164 are introduced in more European markets this year. The new models could enable Fiat to end VW's three-year reign as Europe's sales leader. Still, VW narrowed the gap in April as its new Passat intermediate got off to a fast start.

VW ranked No. 2 through April, with sales of 652,300, an increase of 3.9 percent over 1987 and a 15.4 percent share. However, introduction of the Passat, for which September-October delivery times are now being promised in Germany, helped VW outsell Fiat in Europe last month.

Peugeot S.A. was third in the four-month standings with 12.8 percent of the market and posted the largest growth in 1988 among Europe's six full-range manufacturers.

The French maker, including the Peugeot and Citroen brands, sold 582,000 new cars through April, an increase of 14 percent. Peugeot SA was up 32 percent in the United Kingdom and increased sales 11.2 percent in France, compared with growth of 5.9 percent in the French market overall.

Ford was fourth through April with an 11.3 percent share and a sales increase of 3.4 percent to 515,400. General Motors followed at 10.6 percent on volume of 486,100, a 2.2 percent increase.

Renault ranked sixth with sales of 475,200, a 4.2 percent improvement over last year and a 10.4 percent share.

Among other manufacturers, BMW benefited from the launch of its new 5 series in Europe. Four-month sales were up 13.4 percent to 116,800, and European market share climbed to 2.6 percent from 1987's 2.4 percent.

Combined sales of Japanese manufacturers were up 7.3 percent for the year to 494,700, however, market share slipped to 10.8 percent from 11.3 percent for all of 1987 in Western Europe. Nissan remained the top Japanese brand in Europe with four-month sales of 126,600, an increase of 13.2 percent.

After West Germany, Italy was Europe's second-largest market through April. Italian sales totaled 832,800, up 11.4 percent over last year's figures. Sales in Italy rose 2 percent in April.

Volume in the United Kingdom improved 8 percent in April — the best performance among Europe's big national markets — and was up 10.3 percent for the year. The United Kingdom counted a record 2 million sales in 1987.

France slumped 1 percent in April, but sales for the first four months rose 5.9 percent to 728,300. New-car sales in the Netherlands plummeted 22.6 percent for the month and were down 11.2 percent for the year to 223,200.

Spain was off 5.1 percent in April, the first monthly decline since the summer of 1986. For four months, Spain was 16.6 percent ahead of last year's record pace, which brought sales of well over 900,000 units. Spanish sales through April totaled 348,100.

Sales also declined in Portugal, Norway, Ireland, Denmark, Belgium and Luxembourg during April.

Easter break cuts S. Africa sales

JOHANNESBURG, South Africa — Auto sales here maintained their momentum in April despite negative seasonal factors. However, recent government measures to cool the economy and accelerating vehicle prices indicate the market's current buoyancy may be short-lived.

April's sales of 18,822 passenger cars were down 14.57 percent from March's four-year high of 22,032. But the decline was not unexpected, due to the reduced number of selling days because of the Easter holiday.

April's total was still 15.81 percent above the year-ago month's count of 16,253. The same pattern held in sales of light, medium and heavy commercial vehicles.

With waiting lists of up to four months on some models, industry sources expect sales to hold up well in the short term. However, recent measures to limit the availability of credit and the closing of a loophole that allows long-term auto rental programs for private individuals are expected to deflate sales in the second half of the year.

Another factor is an upturn in the rate of vehicle price increases, fueled by sliding exchange rates. Most makers are due to hike prices about 4 percent in June.

Cut in Subaru shipments to U.S. reported in Japan

TOKYO — Nihon Keizai Shimbum reported that Fuji Heavy Industries plans a 20 percent reduction in the number of Subarus it ships to the United States between April and September of this year.

The newspaper said the company is cutting shipments in an effort to control inventory in the United States until it introduces new models toward the end of the year.

Fuji spokesmen said the news reports were simply speculation.

'89 Colt
An all-new shape for the 1989 Colt three-door hatchback gives new style and interior room to the four Colt models. The Colt GT, featured here, has a monochromatic "dipped-look" paint treatment and is distinguished by its body-color bumpers, color-keyed door handles and grille and wide body-color side moldings accented with a red stripe. The car is imported from Mitsubishi for Dodge and Plymouth.

Former leaders rap EPA test cuts

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — EPA's cutback in real-world testing of vehicle emissions has so disturbed two former top EPA officials that they have decided to speak out to lawmakers holding the pursestrings.

Eric Stork, a former head of EPA's motor-vehicle program, and Michael Walsh, who succeeded him, contend that EPA has failed to carry out basic testing of vehicle emissions — an essential part of dealing with the nation's severe ozone and carbon monoxide nonattainment areas.

Stork and Walsh, now private consultants who disagree often, are in agreement on that point.

In a letter to a House Appropriations Subcommittee considering money for EPA, they called for a "substantial expansion" of real-world vehicle testing, especially since automakers are using more diverse control technology than they have in the past. Instead, they noted, the volume of cars tested has "decreased dramatically."

Between fiscal 1976 and fiscal 1982, EPA tested an average of 1,670 vehicles per year. In fiscal 1983, the number dropped to 469, followed by 349 the next year. The numbers for 1986 and 1987 were 242 and 333, respectively. However, in 1988, EPA plans to test only 175 vehicles.

Unlike tests made by EPA in its field surveillance program to ensure compliance during the emissions warranty period, those vehicles are not checked for proper maintenance but rather are a sample of real-world cars and their impact on air quality in local areas.

Stork and Walsh noted that the first phase of data in 1978, designated Mobile 1, was based on tests of 5,300 individual vehicles. Mobile 2 in 1981 added the result of 3,400 individual vehicles; Mobile 3 in 1984 added 2,500 more vehicles. But Mobile 4 — due to be released soon to guide states and localities in their plans to reach attainment by the end of August 1988 — will use test results from only 700 more vehicles.

Stork and Walsh argued that the data is needed by all parties — EPA, local planners, the auto industry and environmentalists. But, they added, EPA's fiscal 1989 budget as it stands will not enable the agency to provide by the early 1990s more reliable estimates of vehicle emission rates for air quality than are possible now.

They figured that restoring the data program to its 1976-1982 level would cost about $4.6 million per year (1,670 vehicles per year, each at $2,750 to procure and test).

They added that $4.6 million is about 60 cents for each new car sold in the United States each year compared with a much higher cost that might be added to each new car by even the most minor new emission standard.

While Stork and Walsh have made some difference, they have not succeeded in restoring their "modest proposal." On May 12, the House Appropriations Subcommittee voted $2.4 million for EPA's Mobile 4 program. That is expected to be retained by the full House Appropriations Committee and probably be part of the House bill. Senate action awaits completion of the House measure.

Camaro heads '86 theft list; Firebird 2nd

WASHINGTON — NHTSA has released its 1986 data on vehicle theft rates and is seeking public comment on the figures. General Motors accounted for eight of the top 10 vehicles, with Toyota's MR2 two-seat sports car in fifth place and Dodge's imported Conquest sport coupe in eighth.

GM's F-body Chevrolet Camaro and Pontiac Firebird finished 1-2, swapping positions from the 1985 standings. Of the 178,870 1986 Camaros built, 5,275 were stolen for a theft rate of more than 29 per 1,000 vehicles. Of the 100,210 Firebirds built, 2,789 were stolen for a theft rate of 27.8 vehicles per thousand.

Chevrolet Monte Carlo and Buick Regal were third and fourth, respectively, followed by the Toyota MR2, which had 485 thefts for the 34,084 sold in the United States. That amounted to a theft rate of just over 14 per thousand.

Rounding out the top 10, in order, were Pontiac Grand Prix, Oldsmobile Cutlass Supreme, Dodge Conquest (a Mitsubishi-built captive import), Pontiac Fiero and Chevrolet Corvette.

The car with the lowest theft rate in 1986, excluding those models with no thefts, was Toyota's Tercel, which logged 74 thefts out of 83,749 sold in the United States for a rate of 0.88 per thousand units.

Comments on NHTSA's theft data will be accepted through June 16.

STARS WANTED!

Forget the twinkle, twinkle bit. I'm Jeff Dickson, President of Guardall Financial Services Corporation.

Right now, we have one of the most solidly developed F&I programs working in hundreds of dealerships. And yes, we can overcome the problem of dealer captives.

It's a big country out there and we need more buyers. General Agents with the moxie to sell our Guardall Credit Insurance and Guardall Extended Service Contract programs. Stars who want to shine. All the way to the bank. We can show you how.

General Agents! If you think that you belong in our part of the sky, do the following: Call me. Write me. Fax me. Today.

Mid-May auto sales dip 2% from year-ago

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Mid-May sales of cars built in the United States slipped 2.17 percent from the year-earlier period, although four of the eight domestic carmakers reported gains.

Car sales totaled 216,325 units during May 11-20, down 4,802 from the 221,127 that were sold in the same period a year earlier. The Big 3's cutback in incentives early in the month may have dampened mid-May sales.

Sales, however, were above the May 1-10 rate when 204,270 units were sold. During that period, all U.S. car manufacturers except Volkswagen of America reaped healthy gains.

During the May 11-20 sales period, Toyota sales increased 43.37 percent. The company delivered 1,805 cars in mid-May compared with 1,259 cars in the year-earlier period.

Honda delivered 8,046 cars, a 37.19 percent boost over last year's 5,865.

Ford Motor Co.'s deliveries edged up 2.63 percent to 66,691 compared with 64,984 last year.

Chrysler Motors' sales rose 3.08 percent to 30,348, compared with 29,440 units in the year-earlier period.

General Motors' sales dropped 6.45 percent to 104,330 from 111,519 cars in the mid-May period of 1987. GM sold more cars in the May 11-20 period than it did in the first 10 days of May when it delivered 102,152 units.

In spite of offering a spate of incentives, Nissan sold about half as many U.S.-built cars in the mid-May period as it did a year earlier. Nissan sold 2,829 units, compared with 5,946 in mid-May 1987.

Volkswagen of America's sales of U.S.-manufactured cars dropped 39.26 percent to 1,284, compared with 2,114 a year earlier.

Mazda, which began making cars here in September, sold 992 cars. That was almost double the number sold in the May 1-10 period.

DOMESTIC SALES

	May 11-20, 1988	May 11-20, 1987

FROM PAGE 3

lac at a Cadillac dealership in order to qualify. The Allante owner must own the car 24 to 60 months, and it must have less than 60,000 miles on it when it is turned in.

Cadillac's direct-mail program offering between $750 and $1,500 on all Cadillac models, except Allante, to selected Cadillac and Lincoln Town Car owners ends May 31. Jay said the division needs a "fresher approach" than direct-mail coupons to appeal to owners and competitive-make owners.

"We found that in some cases people threw the coupon out," Jay said.

The division will not extend the coupon offer past May 31 and will decide on a new owner/competitive owner program June 1, Jay said.

Pontiac also announced several new consumer incentive programs. The division is offering qualified college students a a no-down-payment deal on all new Pontiacs. Under the program, Pontiac will pay the student's down payment of 5 percent of the cash selling price and defer the first month's payment for 90 days. The deferred payment offer is not applicable in the District of Columbia, Michigan, New Jersey and Pennsylvania.

Pontiac already is offering rebates of $600 to first-time buyers under GMAC's First Time Buyer Finance Plan. Cars eligible under the rebate program include 1988 Grand Am, LeMans, Firebird, Sunbird and Fiero models. No dealer financial participation is required.

Pontiac also is a participant in a program with Cadillac and Buick in which GMAC is sending direct-mail coupons to 350,000 members of the National Association of Realtors. The coupons will enable members to lease a 1987 or 1988 Grand Am, 6000 or Bonneville at a special 7.9 percentage rate for up to 48 months. Demonstrator models with 7,500 miles or less also are eligible.

The same program is applicable to Cadillac DeVille and Buick Century, Electra Park Avenue and LeSabre Limited.

The program began May 15 and ends Sept. 30.

In addition, Pontiac has teamed up with Buick and Cadillac to offer GMAC mortgage retail customers a $500 rebate for the purchase of any new 1988 or prior-year vehicle financed or leased through GMAC. The certificate is given to customers obtaining mortgages between May 15 and Sept. 30; they must take delivery before Dec. 31.

The $500 certificates in the mortgage program are in addition to any other incentive programs currently in effect.

Chevrolet's College Graduate Finance Plan allows eligible buyers to defer their initial payment for 90 days and take advantage of a $400 discount coupon.

The Chevrolet coupon can be used toward the purchase price and GMAC financing or toward the first monthly lease payment. The deferred payment plan is not offered in Michigan or Pennsylvania.

Ford Motor Co. and Chrysler Motors are offering dealer incentive programs on selected 1987 and 1988 vehicles.

Lincoln-Mercury Division extended its $750 dealer incentive on 1988 Lincoln Town cars, its $2,000 dealer incentive on 1988 Merkur XR4Ti models and its $3,000 dealer incentive on 1986 and 1987 XR4Ti models.

Chrysler Motors is offering dealer incentives on a few 1987 cars and trucks. The program began May 11 and has no set expiration date.

Dealers can receive $1,000 on the 1987 LeBaron coupe, $750 on the LeBaron GTS, $500 on the 1987 Dodge Daytona; $750 on the 1987 Dodge Lancer and $500 on both the 1987 Dodge Dakota and 1987 Dodge full-sized pickup trucks.

The Isuzu program, which runs through Sept. 5, gives dealers $1,500 for every 1987 and 1988 I-Mark five-speed hatchback sold. On other I-Mark models, dealers receive $600 for each model sold up to 10 units, $800 each for 11-20 units and $1,000 each for the 21st car and beyond.

For each Turbo Impulse sold, the dealer receives a $1,000 rebate, while each non-turbo Impulse sale will earn the dealer $1,500.

In California, Isuzu is offering an additional $500 bonus on non-turbo Impulses in what it calls a consumer/dealer rebate program to bring the total payback per model to $2,000.

According to an Isuzu spokesperson, the $2,000 rebate will be paid to the consumer unless he or she signs it over to the dealer. The spokesperson said the dealer must present "absolute proof" of the sign-over to receive the rebate.

Nationally under the program, combined pickup and P'UP pickup sales will earn dealers $500 each for the first 12 units sold; $700 each for 13-26 units; $900 each for 27-52; and $1,100 each for 53 and above.

Also, the top 200 dealers in Trooper II sales earn a special shopping spree trip to Trump Tower in New York City.

Dealers are required to sell a minimum of 40 Troopers to qualify for the shopping bonus. Each Trooper II sold during the program earns the dealer $100 credit toward the shopping spree, retroactive to the first unit. Air and hotel arrangements are included.

Also, under the incentive program, each salesperson selling a minimum of 10 units qualifies for attendance at a cash-giveaway party to be held Oct. 15 at Bally's in Las Vegas, Nev. The salespersons must pay their own expenses to get to the party. However, salespersons selling 50 units earn a free trip to the party.

Sales managers who have three or more salespersons qualifying for the cash-giveaway party earn a free trip to the Las Vegas event. The managers also earn one pull at cash boards for every four units sold by the dealership during the program.

Sales managers from the top 10 volume dealerships for each model line as well as combined sales will be entered in five $10,000 drawings, Isuzu said.

Automotive News Staff Reporter Frank Gawronski in Los Angeles contributed to this report.

OUTPUT

FROM PAGE 1

that Ford recently raised its full-year sales estimate for the industry from 10 million cars and 5 million trucks to 10.2 million cars and 5.1 million trucks.

"This is an indication that the auto industry is and will be stronger than originally anticipated," Windecker said.

Among the Big 3, GM has scheduled a major production increase; Ford's boost is smaller, and Chrysler's forecast is down because of plant changes.

GM projects it will build 721,965 cars in the July-September period, 15.52 percent more than last year's 624,985. In 1987, there was extended downtime at two GM plants for changeover to the new GM10 cars.

GM closed plants for inventory adjustment several times during last year's third quarter and also reduced line rates.

This year, GM recently increased the line rates at its Orion Township, Mich., plant and at its Buick City plant in Flint, Mich. Some plants have been working overtime this year; overtime was almost unheard of at GM plants last year.

Jouppi said GM is fighting to recover lost share of the market, and he believes it will build just about what it is currently projecting for the third quarter.

However, Tom O'Grady, analyst at Integrated Automotive Resources, said he believes GM's schedule may be a bit high but he doesn't see it as a problem. O'Grady added that the domestic automakers' schedules often seem to be overly optimistic but the current schedules seem to be more reasonable.

Both GM and Ford will be eyeing the midsized-car segments where sales seem to be stronger than usual, O'Grady said.

Ford plans to build 362,000 cars in the third quarter, 4.55 percent more than the 346,252 built in 1987.

Ford is currently at "full workable capacity" and has not had any car or truck plants idle for inventory adjustment for several years, Windecker said.

"Dealers would like to have more cars," he said. "Dealer inventories on the Taurus, Sable, Mustang, Probe, Grand Marquis, Continental and Crown Victoria at mid-May were all below the industry norm of 60-65 days, some well below that."

Chrysler's schedule calls for production of 200,000 cars in the third quarter, 6.61 percent below the 214,164 built in the same three months of 1987.

O'Grady thinks Chrysler will increase its current schedule, which he called a bit conservative.

Production losses for Omni and Horizon are a factor in third-quarter numbers for both 1987 and 1988. Last year, those cars were out of production in July and August as production was moved from Belvidere, Ill., to Kenosha, Wis. This year, the cars will be moved from Kenosha to Detroit's Jefferson Avenue plant, again knocking out July-August production.

Also, Chrysler's Newark, Del., plant will close in July to prepare for production of the 1989 Plymouth Acclaim and Dodge Spirit. The plant currently builds Aries and Reliant.

Mazda Motor Manufacturing (U.S.A.) Corp. will add some 50,000 cars to 1988's third-quarter output. It plans to build 50,260 units this year. Last year Mazda was just getting started at its Flat Rock, Mich., plant and built only 400 cars in the quarter.

Honda of America Manufacturing has slated assembly of 89,640 cars, 23.10 percent more than the 72,816 built in the third quarter of 1987.

Nissan Motor Manufacturing Co. U.S.A. has scheduled 30,928 cars, 4.87 percent more than the 29,491 built during the third quarter last year.

New United Motor Manufacturing Inc. plans to complete 38,350 cars in the third quarter, 19.70 percent below the 47,759 built in the year-ago period.

VWoA, which will permanently close its Westmoreland, Pa., plant in mid-July, estimates it will build 3,493 cars, 12.50 percent below the 3,992 assembled last year when the plant was idle most of the third quarter for model changeover.

MITI denies reports that quotas may die

TOKYO — In what is viewed as a trial balloon, Kyodo, a Japanese news agency, reported last week that the Ministry of International Trade and Industry is considering ending government-imposed quotas on passenger-car exports to the United States.

However, MITI officials quickly denied the reports and said that no decision has been made on the future of the restraint program.

It is no secret that MITI would like to scrap the quotas by the end of the year and would do so if it could be done quietly, sources here say. In fact, MITI said as much when it announced the extension of the restraints into their eighth year last January. MITI said that if a downward trend in exports could be clearly shown, it might lift the restraints before the year is up.

However, the timing of this most recent report, coming just as President Reagan vetoed trade legislation in the United States, would ensure that the scrapping of quotas would be anything but quiet.

Katsuhiro Nakagawa, director of the Auto Division at MITI, told Automotive News that the report is "completely false." He confirmed that MITI did indicate in its January announcement that it might drop the voluntary export restraints within the year "if the right conditions were met." But he said the 1988 quota term began April 1 and "it is way too early" to make any further decisions.

Smaller U.S. importers, such as Mitsubishi Motor Sales, American Isuzu, Suzuki and Daihatsu, which have been hamstrung by the quotas, would welcome the end of the restraints, and many have contingency plans based on such an occurrence.

Meanwhile in Washington, Secretary of Commerce William Verity met with General Motors Chairman Roger Smith, Chrysler Motors President Bennett Bidwell and Ford Motor Co. Vice Chairman Harold Poling last week to discuss allegations that Japanese automakers are dumping compact pickup trucks in the United States.

Thomas H. Hanna, president of the Motor Vehicle Manufacturers Association, also attended the meeting.

Spokesmen for the Big 3 described the meeting as useful. Verity had no comment following the meeting.

On March 29, MVMA submitted a study charging Japanese manufacturers with selling light trucks at prices as low as 46 percent below their home market price.

Hanna said last week, "Japanese manufacturers engaged in dumping for one reason — to maintain as large a share of the U.S. market as possible. With the steep rise in the value of the yen, Japanese truck manufacturers found they could no longer compete legitimately in the U.S. market. Faced with the choice of surrendering U.S. sales gains or dumping, they dumped."

Hanna said dumping has reduced profits on U.S.-produced compact trucks to less than 1 percent.

Isuzu spoofs Toyota

Smilin' Joe eyes 'Oh, what a feeling' ad

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — American Isuzu Motors' advertising alter ego Joe Isuzu is on trial in the latest round of television commercials using the shameless liar.

The new test for Joe Isuzu, whom actor David Leisure has turned into a cult figure, is whether the character can *sell* as well as he has raised Isuzu's brand name awareness.

If the hard-sell commercial spoofing Toyota Corolla's higher price works well, Joe Isuzu concepts for the 1989 model year are being considered.

The campaign created by agency Della Femina, Travisano and Partners, Los Angeles, has concentrated on boosting Isuzu's abysmally low name recognition and brand awareness. Isuzu's internal research shows unaided recall of Isuzu as an auto company has soared from 3 to 4 percent to 62 percent in the last two years, according to Leon Rosen, national marketing services manager.

Rosen said ad industry critics of the Joe Isuzu campaign — and there have been many of them — miss the point when they say it doesn't translate into sales. As the market gets more competitive, Isuzu can't get onto many buyers' shopping lists if no one remembers it, Rosen said.

But now that Isuzu is much more of a household word, American Isuzu must heed its dealers' call for more retail-oriented advertising.

In the latest commercial, Joe pulls into a Toyota dealership in an I-Mark, tests his hidden recording equipment and gets out. He is greeted by a salesman who recognizes him, "Hey guys, it's Joe Isuzu," and a crowd of Toyota salesmen gathers.

"So what's the real difference between your Corolla and our I-Mark?" asks Joe innocently. "About a thousand dollars," answers a salesmen and the rest chorus "Oh, what a feeling," and jump into the air in a parody of the long-running Toyota commercials.

Finally one salesman asks suspiciously, "Say, you're not going to turn this into a commercial, are you?" Joe flashes his best "liar" smile of reassurance and the screen cuts to a price comparison of similarly equipped Corollas and I-Marks.

"It's real down-and-dirty retail advertising," said Rosen.

OBITUARIES

James E. Butke

WARREN, Mich. — James E. Butke, 37, supervisor of the management information systems office for Chrysler Corp., died May 21.

James F. Miller

PINE BROOK, N.J. — James F. Miller, 48, information systems manager for Peugeot Motors of America, died May 17. He had been with the company since 1975.

PRODUCTION

Output tops 3 million but trails 1987

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers built their three-millionth car of the year last Friday, nine days behind 1987.

So far this year, 3,000,491 cars have been produced, 8.09 percent below the 3,264,474 completed last year at this point.

Scheduled production of 161,595 cars last week was 5.77 percent below the previous week's 171,493 but 21.87 percent more than the year-ago week's 132,594, which was affected by Memorial Day.

Last week's targeted production was shared as follows: General Motors, 47.33 percent; Ford Motor Co., 25.54 percent; Chrysler Motors, 16.21 percent; Honda of America Manufacturing Inc., 4.64 percent; New United Motor Manufacturing Inc., 2.01 percent; Nissan Motor Manufacturing Co. U.S.A., 1.62 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.41 percent; and Volkswagen of America, 1.24 percent.

Truck output was estimated at 84,891 units last week, 7.98 percent below the prior week's 92,256 but 29.38 percent more than the year-ago week's 65,616.

Year-to-date, 1,778,410 trucks have been assembled, 12.11 percent more than the 1,586,337 built last year at this time.

Daily overtime is slated at all Ford plants this week except the St. Louis plant.

Ford has scheduled overtime next Saturday at its Wixom, Mich.; Edison, N.J.; and Wayne, Mich., plants.

Chrysler has scheduled daily overtime this week at its Belvidere, Ill.; Kenosha, Wis.; Toledo, Ohio; Sterling Heights, Mich.; and St. Louis plants.

All car and truck plants are closed today in observance of Memorial Day.

Canada trucks pass 400,000

Canadian truck production passed 400,000 last Friday, 15 days ahead of 1987.

So far this year, 400,095 trucks have been built, 16.18 percent more than the 344,369 completed last year at this time.

Both car and truck production in Canada was slated to dip last week from the prior week's output as plants were idle last Monday for Victoria Day.

Truck output was scheduled at 16,745 units last week, 2.80 percent below the previous week's 17,228 and 6.59 percent below the year-ago week's 17,926.

Car output was scheduled at 22,134, 9.70 percent below the previous week's 24,511 but 29.17 percent more than the year-ago week's 17,135, which was also affected by the holiday.

So far this year, 492,402 cars have been assembled, 41.41 percent more than the 348,217 completed last year at this point.

Honda of Canada Manufacturing Inc. last week began breaking out production totals on the Civic and Accord models built at its Alliston, Ontario, plant. Until April, the Accord was the only model produced at Alliston.

Chrysler chairman says he considered plan to take over GM with Allied-Signal

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. Chairman Lee Iacocca last week disclosed that in 1987 he considered a hostile takeover of General Motors with Allied-Signal Chairman Edward Hennessy Jr. and that he overruled Chrysler's top management by ordering the acquisition of American Motors.

In "Talking Straight," a sequel to his autobiography, Iacocca said he abandoned a possible GM takeover because of antitrust and financing considerations for the $40 billion venture.

In the book, published last week, Iacocca also said that a majority of Chrysler's top management opposed the 1987 acquisition of AMC but were overruled by the chairman.

"I made a speech in which I said, 'You guys are getting too old to be in this business. You're getting soft and maybe a little fat in the head too,'" Iacocca wrote. "I heard everybody out and then I overruled them and told them that we were going ahead."

However, Iacocca also writes that his vision of creating a worldwide empire to rival GM has diminished.

"My latest vision of Global Motors is smaller than it was a few years ago. I no longer have this burning desire to put together a company that would be bigger than General Motors," Iacocca said.

Nonetheless, he details a series of meetings last year during which he explored a possible hostile bid for GM.

Iacocca said a takeover was first raised in a meeting with megadealer Victor Potamkin, who holds both GM and Chrysler franchises.

"When I met with him, he told me that the GM dealers were on the war path and didn't think that the company had a game plan,

Presidents bullish for rest of '88

15 million sales expected for year

Confident that the ill effects of last October's stock market collapse have faded, officials of the U.S. Big 3 auto companies look for continued strong car and truck sales in 1988.

Their estimates of industry new-vehicle deliveries for the calendar year range from 15.0 million units to 15.5 million. That compares with 15.2 million sales in 1987.

The sales outlooks and other observations on their companies and the industry are highlighted in this week's Presidents Extra, a special Automotive News section featuring Robert C. Stempel, president, General Motors; Philip E. Benton Jr., president, Ford automotive group; Bennett E. Bidwell, president — product and marketing, Chrysler Motors; and Richard G. LeFauve, president, Saturn Corp.

Benton estimated new-car and truck sales in the United States this year will range between 15 million and 15.5 million units. He said, "I think 15.3 is the most popular figure now."

In assessing the continued strength of the market, particularly in light of last October's Wall Street collapse, Benton said, "We never did back off our 15 million forecast. ... We adopted a philosophy that Oct. 19 didn't necessarily change the psychology of the automotive marketplace.

"It changed wealth. But in terms of income, people hadn't baked that additional wealth — which had been accumulating in the very strong stock market for a couple of years — into their thinking."

Bidwell, noting that Chrysler has revised its industry sales forecast upward for the year, said, "Internally, we're looking today at a 10.1 million industry car level and fractionally over 5.0 million trucks. That would contrast with about 9.5 million and 4.5 million that we were looking at as we exited calendar 1987.

"That's a fairly healthy up. Included in that 10.1 million car level is a slight downward stair-step in the last half of the year toward rates of 9.8-9.6 million — but still a pretty healthy calendar year.

Stempel, who became president of GM a month before the stock market crash last fall, said, "I think we'll hold with our forecast (of 15.0 million units). It's about right when you look at the increase in domestics and the decline in imports; we think that's about a trade as far as the industry figure goes."

The GM president said, "The stock market had an impact on the people who deal in it and the peo-

Transplant wages, benefits are similar

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

With Mazda Manufacturing (USA) workers voting in March to join the UAW, the score stands even. Of the four Japanese transplant auto facilities building production vehicles in the United States, two are unionized and two are not.

How does the lot of auto workers in the unionized transplants — Mazda and New United Motor Manufacturing Inc. — compare to that of workers at Honda of America and Nissan Motor Manufacturing, which the UAW has failed to organize?

The answers to that question are tentative, largely because local unions that represent workers at Japanese transplant operations are unlike the unions in traditional plants.

It is not clear in what direction the fledgling transplant locals will evolve — toward more cooperation, or toward increasing resistance to the rigorous demands made by Japanese management on the auto worker.

Job security — the all-important concern for today's American auto worker — is basically the same at all the transplants, whose managements have committed themselves to a no-layoff policy. The difference is, NUMMI and Mazda workers have it in writing.

Though job security provisions aren't ironclad, so far, despite production cuts at NUMMI, no one has been laid off. There have been no layoffs at the other three transplants either.

Honda and Nissan have raised wages regularly, and workers there can reasonably expect that their wages will continue to increase. But again, workers at NUMMI and Mazda have guarantees of wage increases in writing.

The jury is still out, however, on whether work rules and working conditions are better in unionized transplants than at Honda and Nissan.

Reports indicate that local unions at NUMMI and Mazda, by focusing on non-adversarial relations, are not programmed to dig in and resist the ever-increasing demands made of transplant workers in the name of kaizen, or con-

Car-loan program for high-risk buyers draws dealer fire

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

A new car-loan scheme for high-risk buyers seems to be making money for the California lenders who conceived it, but some dealers using one of these companies, International Dealer Financial Corp., claim they have not been paid for sold cars on approved contracts.

This latest retail financing system involves the purchase of marginally risky retail paper by investors who then charge the highest allowable annual percentage rates — frequently more than 21 percent — add unneeded, high-profit items to base vehicles and take the cash profit up front as a buffer against eventual defaults and delinquencies.

This packaging seems to have originated in California, where as many as a half dozen finance companies are now offering retail finance programs that purport to finance the otherwise unfinanecable car buyer.

Dealers are being enticed to pay as much as $9,800 up front to enroll in these programs by the promise of quick up-front profits on vehicles sold or leased to

Chrysler's new Y-body will go on sale late in the 1989 model year LANCE

CHRYSLER '89: *New engines, Y-body flagship*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors will introduce several upgraded engines in the 1989 model year, including a more powerful V-6 imported from Mitsubishi that will be mounted in the Chrysler TC by Maserati and the new Y-body luxury sedans debuting late in the model year.

A Chrysler Motors engineering report previewing the 1989 passenger-car lineup indicates that the upgraded Mitsubishi V-6 will be available with Chrysler's first electronic four-speed automatic transaxle in several models.

They include the TC coupe, the Y-body Chrysler Fifth Avenue and Imperial, the Chrysler New Yorker and New Yorker Landau, Dodge Dynasty, Dodge Spirit, Ply-

8 EDS executives quit GM to join Perot in new firm

By Charles M. Thomas and Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTERS

Eight high-ranking executives with General Motors' Electronic Data Systems Corp. resigned last week to join their former leader, H. Ross Perot, in launching a computer software and service company whose first customer is the U.S. Postal Service.

Stephen McClellan, analyst with Merrill Lynch, said the impact on EDS and GM should be minimal unless more executives leave the company to join Perot.

"It does heighten the uncertainty if more people leave, and that could lead to management questions about the company," he said.

Six of the eight executives are from EDS' Government Systems Group in Bethesda, Md., where much of EDS' most recent non-automotive "megacontracts" have originated, he said.

Loss of strategic employees from non-automotive areas could pose a problem for EDS, which has said it wants to rely less on GM. Its automaker parent now accounts for 60 percent of EDS revenue. EDS hopes to reduce its GM business to less than 50 percent.

McLellan described the executives as "some very solid, impressive upper management."

"These are eight of the top 30 management people in the company," he said, adding that they were the company's "producers who are out on the firing line running the divisions."

He said the departures of John King, vice president and general manager of all EDS federal business, and Pat Horner, president of EDS's government marketing division, are the two biggest losses because of the megacontracts they brought to EDS.

"The potential threat now is that Perot is up and running," McClellan said.

Others leaving EDS are Don Drobny, president of EDS Communications Corp.; Bruce Heath, corporate vice president responsible for GM truck and bus group; Desoto Jordan, vice president — government affairs group; Ross Reeves, corporate vice president — information processing services division; Meryl Smith, vice president, administration and finance, government systems group; and Gary Wright, president — government technology division.

Perot: "Up and running" WILLIAM COUPON

GM's Class E stock took a drubbing in the market after the announcement Thursday, closing at $39.88 — $2.75 lower than on Wednesday.

However, Tim Traff, investment analyst with Milwaukee-based Sit Investment Associates, said the stock's weakness would be short-term.

Perot, who sold EDS to GM in 1984, became a member of the automaker's board of directors only to be ousted in a buyout two years later. He was restricted from forming a new company until Jan. 1 under terms of the buyout agreement with GM.

The agreement also forbade the Texas entrepreneur, who started EDS in the early 1960s, from recruiting EDS employees until June 1.

Perot sidestepped questions at a press conference on whether there would be an executive exodus from EDS, saying, "When people call, we don't hang up on them — we are very polite."

Perot said the departure of the eight executives will not cripple EDS's operations.

"EDS has not been beheaded," he said. "They don't even have a cut on their finger. EDS is so big and we are so small that I can't begin to tell the depth of talent they have in that company."

The new company, called Perot Systems Corp., will not compete with EDS, Perot said. It will be a nonprofit corporation because of restrictions in the buyout agreement. But in January 1989, he can form a profit-making company to compete with EDS.

EDS has $4.4 billion in revenues annually. By comparison, Perot said that he wants to have $100 million in net income for his company within 10 years.

When asked to explain why he felt he could make a difference at the Postal Service when he was unable to change the corporate culture at GM, he said: "You can't help people that don't want help. The Postal Service wants help."

Mazda to combine U.S. sales networks

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

IRVINE, Calif. — Mazda will reorganize its North American operations, perhaps as early as this month, to combine its U.S. sales arms, reduce duplicated effort and coordinate marketing activities.

The major part of the move will be the consolidation of the two sales networks, Mazda Motors of America (Central) and Mazda Motors of America (East), Jacksonville, Fla., into a single unit, expected to be based here, where Mazda Central and Mazda (North America) Inc. are already headquartered.

U.S. Mazda officials have been tight-lipped about reorganization for months, including those who have in the past openly advocated combining the sales arms, such as Rod Hayden, senior vice president and general manager of Mazda Central (Automotive News, July 27, 1987).

Both Hayden and James Trado, his counterpart at Mazda East, were traveling last week and were unavailable for comment.

But Kenichi Yamamoto, chairman of Mazda Motor Corp., the Japanese parent company, confirmed that a reorganization is under review during an informal conversation at the recent dedication of Mazda's new U.S. research and development center in Irvine.

"The issue of consolidation is a study item, but we have not reached a conclusion yet," Yamamoto said.

However, Yamamoto said Mazda is not considering combining U.S. manufacturing, sales and research and development functions under a single organization.

So far among Japanese automakers, only Honda has placed a single executive in charge of all U.S. operations. Other Japanese companies keep manufacturing, sales and r&d separate, and they usually report to different managers in Japan.

Insiders originally expected the sales consolidation to take place as early as April, but it has been held up by several factors. They include negotiations with the Japanese trading companies that are minority partners in the sales arms, selecting executives and the reluctance of personnel based in northern Florida to relocate to Orange County, Calif., where the median price of a single-family home exceeds $200,000.

One key position for a centralized Mazda sales organization was filled last week after a six-month search. Janet Thompson left Toyota Motor Sales, where she had been vice president of advertising for Lexus Division and considered a rising star, to join Mazda Central as vice president — advertising, a new post.

Combining the sales operations would ease the task of national advertising agency Foote Cone & Belding, Santa Ana, Calif., which has had to serve two masters.

Pending consolidation, key marketing decisions have been deferred, including the media plan for 1989-model-year advertising, which most other automakers completed by mid-April.

Consolidation also will help Mazda deal with increasing production at the Flat Rock, Mich., assembly plant, which produces cars for both Mazda and Ford Motor Co. With the increase in product availability, the number of Mazda dealers has risen to 812 from 703 earlier this year.

Mazda Central, which covers 31 Western and Central states, currently has 545 dealers. Mazda East, which includes 19 Eastern states (Hawaii is handled by independent distributor Shelly Motors), has 267 dealers.

The separate sales arms are a holdover from Mazda's financial difficulties in the mid-1970s, when reliance on the then-thirsty rotary engine and the first Arab oil embargo pushed Mazda to the edge of insolvency.

Two separate Japanese Shoji (trading companies) took minority equity positions in Mazda's U.S. sales firms. C. Itoh & Co. Ltd. is affiliated with Mazda Central, while Sumitomo Corp. owns part of Mazda East.

Mazda has been rapidly increasing its U.S. presence, which is reflected in improving sales and deepening ties to Ford Motor Co. Ford owns 25 percent of Mazda.

In addition to the Flat Rock assembly plant, Mazda also has opened a r&d center in Southern California and a separate r&d subsidiary in Ann Arbor, Mich.

MacGuidwin named Crain vice president

MacGuidwin

DETROIT — M. Reid MacGuidwin, Automotive News director of marketing, has been named a vice president of Crain Communications Inc., which publishes Automotive News and 25 other business and special-interest newspapers and magazines.

MacGuidwin, 62, joined Automotive News on Jan. 1, 1972, as an advertising sales representative for Michigan. Later that year, he was promoted to marketing manager and then to director of marketing with responsibility for advertising sales.

Before joining Crain, he was Detroit regional sales manager for Chilton's Automotive Industries magazine; a sales engineer and district manager for Cahners Publishing Co.'s Design News magazine and McGraw Hill's Chemical Week magazine.

Also promoted last week to Crain Communications vice president were Robert S. Simmons, publisher of Rubber and Plastics News, and William T. Bisson Jr., publisher of Pensions and Investment Age.

3 Ford executives to address World Congress

DETROIT — Three Ford Motor Co. executives have joined the faculty of the 13th annual Automotive News World Congress, which will be held at the Westin Hotel, July 17-20.

They are: Joseph A. Kordick, vice president and general manager of Ford parts and service division, North American automotive operations; Michael Kranefuss, director of special vehicle operations; and Stephen R. Roberts, director of supply policy and planning.

Kordick joined the company in 1954 with the finance staff's general accounting department. After a number of managerial positions with Ford Division's parts and service office, and later with the executive office of the car and truck group, he was appointed supply and distribution manager for the former Ford parts division in 1971.

In 1973, Kordick was named service programs manager for the former Ford customer service division, and was promoted to parts and service programs manager of the newly combined Ford parts and service division in 1974.

In 1977, Kordick was named general manager of Ford glass division, and in 1981 became executive director of NAAO marketing.

From September 1983 to October 1984, he was chairman of Ford Direct Markets Inc., Ford international automotive operations. He became general manager of the Ford parts and service division in 1985 and was elected a corporate vice president in 1987.

Kranefuss, head of Ford special vehicle operations since 1980, broke into motorsports in 1966 as manager of the planned Sauerland Ring racing circuit project in the eastern part of North Rhine-Westphalia, Germany.

He drove professionally for six years in international road racing events.

In 1968, he joined Ford of Germany as assistant manager of a newly formed competitions department. In 1972, he was appointed the department's motorsport manager.

He was Ford of Europe's motorsport director from 1976 until assuming his present post.

As director of supply and policy planning for Ford Motor Co., Roberts is responsible for coordinating the policies and practices for worldwide purchasing and supply operations.

He also oversees Ford's relationship with supplier firms around the world.

Roberts joined Ford in 1964 as a purchasing coordinator in the purchasing management training program.

In 1984, following a number of purchasing supervisory and managerial assignments in North America and Europe, he was named procurement manager for NAAO, heading the buying of all chassis and electronic parts for Ford's North American vehicles.

He was named to his present post in 1985.

Roberts will address the World Congress on Monday, July 18, at 11:15 a.m. Kordick and Kranefuss will speak on Tuesday, July 19, at 9 a.m. and 2:50 p.m., respectively.

General Motors President Robert C. Stempel will open the World Congress with a State of the Industry keynote address on Sunday, July 17, at 7:45 p.m.

Co-keynoter Dieter Spethmann, chairman of the executive board of Thyssen AG of West Germany, will deliver the State of the Supplier Industry address at 8:30 p.m.

For further information, write Automotive News World Congress, 1400 Woodbridge, Detroit, MI 48207 or telephone 313-446-6047. The cable address is TWX 810-221-5122 AUTNEW DET.

Aftermarket first as solar cells seek auto role

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The aftermarket is providing one of the first opportunities for the auto industry to experiment with solar technology.

Solar cells may provide an opportunity for auto manufacturers to deal with the loads modern automotive electronics place on vehicle electrical systems. They may also provide an answer to the high interior heat generated under the ever-larger glass area in modern automobiles.

Although solar cells typically do not provide high power output, they can be used to slowly charge or maintain a battery in an idle car. They may also provide enough power to operate interior cooling fans in automobiles.

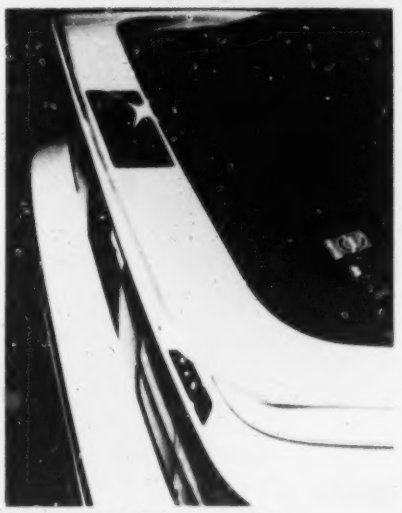
Daryl Sitar, a project engineer for Delco Remy Division of General Motors, said, "In my opinion, there is a good potential for automotive solar cells.

"The problem right now is the initial cost. But in the next year or so, you should see some type of applications for battery maintenance or trickle charging. If not for the primary battery, then for a secondary unit like a flashlight. . . . We at GM, as well as people at other companies, are looking at this technology, if not for original equipment, then for the aftermarket."

ARCO Solar, a manufacturer of solar cells, hopes to influence the automotive aftermarket and then original-equipment manufacturers to use its products. The firm, which is a subsidiary of Atlantic Richfield Co., has established an office in the Detroit area to work with auto companies and develop automotive products for its solar technology.

ARCO's photovoltaic products include a coating that generates electricity from sunlight and can be applied in a thin film to glass. Although not as efficient as certain other photovoltaic materials, it is less expensive.

Peter A. DeNapoli, ARCO Solar sales manager, specialty engineered products, said, "Our biggest projects are in the aftermarket. We want to get that in place so we can demonstrate to the original-equipment manufacturer that the technology is viable and salable. They know that the stuff works. Now they want to see if we can sell it. Is it priced right?"



Solar panel installed in rear spoiler

Solar cells are now being sold as aftermarket battery chargers or maintaining devices, DeNapoli said. Also in the prototype stage are applications that would use the sun's energy to cool the interior of a parked car.

"The car companies are looking at ways to increase the capacity of the battery so they can have on-line computer memories and electrical loads (when the engine is not running). They also want to downsize the battery to reduce weight," DeNapoli said.

Clocks, anti-theft devices and computer memories place electrical loads on car batteries that can deplete their power in as little as two weeks when a car sits idle, Sitar said.

Solar cells offer a solution to the problem of "parasitic" electrical loads, but the cost, efficiency and packaging of the panels must be improved somewhat to be viable in a production application, he indicated.

Solar panels that rest on the instrument panel of a car and are used to maintain the battery are available from ARCO and other companies. They generally range in price from $15 to $50.

Mini Tune in Petaluma, Calif., is another company that is developing an aftermarket application for solar cells. The company is developing a mobile battery cart that is recharged by a solar panel. The solar panel is said to allow more jump starts before the cart batteries must be recharged and also is said to extend the life of the batteries.

ARCO also has plans, working with outside companies, to design solar cell systems that fit into the design of an automobile.

"One of the problems with photovoltaics is determining where to put them. How do you integrate them into the car so that it looks nice?" DeNapoli said.

One solution, he said, has been to install a solar panel in a rear spoiler. He said that Pacific Auto Accessories of Huntington Beach, Calif., a large installer of aftermarket sunroofs and automotive appearance items, recently delivered more than 200 Oldsmobile Cutlass Calais models equipped with spoilers/ARCO solar panels to dealers in Oregon and Washington.

The Calais spoiler keeps the car battery charged when the car is parked and also charges a flashlight and portable radio. The package, which included other aerodynamic styling aids, was sponsored by the dealer advertising associations in Portland, Ore.; Eugene, Ore.; and Seattle dealer advertising associations, according to Pacific.

ARCO has also designed a prototype sunroof that is tinted with its photovoltaic material. The prototype sunroof is designed to operate a car's blower and cool the interior of the vehicle, especially when the car is parked on a warm, sunny day.

"Our goal is to have it ready for February 1989 with a limited production run for a vehicle with Pacific," DeNapoli said.

"We're developing a package that will tap into the existing blower in the car," he said.

The target price of the system is $500 installed, compared with about $200 for a standard tinted sunroof.

"Today's cars and tomorrow's cars have so much more glazing area that there is an incredible greenhouse effect," DeNapoli said.

"There is so much overheating in the vehicle that the material on the dash and the fabrics in the cars degrade more quickly because of the high temperatures when the car is parked. . . . Also, when the customer gets into a car with a solar sunroof, he won't be assaulted with a furnace."

However, an engineer at a Big 3 auto company was less enthusiastic about the use of photovoltaics to cool car interiors. The standard car blower fan typically requires 50 watts of power to operate on a low setting, while a four-square-foot photovoltaic sunroof will produce only about half that power, he noted.

The engineer said, "The auto companies are interested in photovoltaics, but the solar panel manufacturers have to be more flexible. They have to be more willing to work with the styling personnel from the start of a new project.

"If they could develop, for example, a $5 to $10 trickle charger that would be contoured to fit where no one sees it, it would be a much easier sell than a $500 item with limited use that would sell to the consumer for $1,000."

If the solar cell manufacturers were able to get a product into a mass-produced automobile, they might be able to reduce production costs, the engineer said. He estimated that most photovoltaic devices now sell for $4 to $5 per watt. If the price could be reduced to $1 per watt, the spin-off applications, both in automotive and other industries, would be tremendous, he said.

Shop business climbs 7% for first quarter

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts volume at new-car dealerships rose substantially during the first quarter of 1988.

Volume was 107.2 percent of service business in the year-earlier period, according to the Automotive News Service Index.

In February 1988, shop volume at new-car dealerships was 9.6 percent above the year-ago month.

Shop business during March was up 7.4 percent last year's.

March was the fifth straight month in which service business exceeded the year-earlier volume.

A Rocky Mountain state Chevrolet dealer said, "We had a good February, which can be attributed to weather conditions. We also placed more emphasis on increased sales per repair order."

In March, he said, sales climbed above the March 1987 level, while repair orders remained even.

An Eastern Chevrolet dealer said new-car financing and rebate programs have increased his customer base. As a result, service business rose in February and March.

A Midwestern Ford dealer attributed his store's strong February and March showing to increased advertising and staffing.

An Eastern Ford dealer said additional repair orders and increased productivity paid off.

SERVICE INDEX 109.6*

Shop Parts Sales (Customer & Warranty)	+9.9%	+7.8%
Sales of All P&A	+9.0%	+7.3%

* Survey by Automotive News shows that dealers' service and parts business in February 1988 was 109.6 percent of business in February 1987. Service business in the first 2 months of 1988 was 107.8 percent of business in the corresponding period in 1987.

SERVICE INDEX 107.4*

	March, '88 vs. March, '87	3 mos., '88 vs. 3 mos., '87
Gross Profit on All Labor and P&A Sales	+8.7%	+8.4%
Repair Orders Written	+4.1%	+3.3%
Total Labor Sales (Customer & Warranty)	+13.0%	+9.2%
Shop Parts Sales (Customer & Warranty)	+11.3%	+9.2%
Sales of All P&A	+11.8%	+8.8%

* Survey by Automotive News shows that dealers' service and parts business in March 1988 was 107.4 percent of business in March 1987. Service business in the first 3 months of 1988 was 107.2 percent of business in the corresponding period in 1987.

A West Coast Cadillac dealer said his body shop business improved in February, while parts volume was up in March.

All service volume indicators during February and March were positive.

Total labor sales (customer-paid and warranty) led the list in February, up 13.2 percent over February 1987. In March, sales of all parts and accessories were the top indicator, with a gain of 11.8 percent.

Shop parts sales (customer-paid and warranty) climbed 9.9 percent above the year-earlier-month in February and were up 11.3 percent in March; gross profit on all labor, parts and accessories rose 9.4 percent in February and 6.7 percent in March; parts and accessories sales increased 9.0 percent in February and 11.8 percent in March; total labor sales climbed improved 13.2 percent in February and 3 percent in March; and; repair orders written were up 6.6 percent in February and 4.1 percent in March.

Parts and accessories sales to off-premises customers were up 8.4 percent in February, compared with the year-earlier month. In March, those sales climbed 12.1 percent.

Shop parts sales led service volume indicators during the first quarter of 1988, up 9.2 percent over the year-earlier period.

Parts and accessories sales climbed 8.8 percent in the first quarter; gross profit on all labor, parts and accessories rose 8.4 percent; total labor sales were up 6.2 percent; and repair orders written increased 3.3 percent.

Parts and accessories sales to off-premises customers climbed 8.7 percent in the first quarter of 1988.

Don't let Rolls sit idle

Seldom-driven cars may need service

By Julie Whitmore
SPECIAL CORRESPONDENT

NORTHBROOK, Ill. — When Rolls-Royce and Bentley automobiles break, it is often because they are not driven enough.

Routine service needs are often overlooked because the ultra-expensive luxury cars are generally driven very little, Finlay Macdonald, Midwest zone service manager for Rolls-Royce, said at a service clinic at Steve Foley Cadillac/Rolls-Royce here.

About 40 of the 600 Rolls and Bentley owners in the Chicago area took advantage of Rolls-Royce Motor Cars' offer to have a technician from U.S. headquarters in Lyndhurst, N.J., evaluate the condition of their cars.

Rolls-Royce conducts the clinics every year or two at various dealerships around the country.

It's not unusual to find a 1980 model with less than 2,000 miles on the odometer, Macdonald said. In fact, one of the cars brought to the clinic was a 1963 Rolls with only 30,000 miles.

"Some malfunctions are due to maintenance neglect and others to real wear. There are no generalizations," Macdonald said.

The cars are durable. Eighty-five percent of all the Rolls-Royce and Bentley cars manufactured since the company started production in 1904 are still on the road, according to W.G. McClendon, Midwest zone sales and service manager.

"On these cars, unlike Cadillacs, there is no such thing as an acceptable tolerance. Everything fits perfectly," said Tom Nutting, one of Steve Foley's certified Rolls mechanics.

Nutting worked on Cadillacs for 17 years at Foley before being selected for special Rolls training. The minimum training period is four days each year, with special updates for new models.

While wages are set by individual dealers, Rolls mechanics are always provided some differential so they can spend more time on each car, Macdonald said.

"We like our mechanics to take their time," he said.

Dealers also try to have the same mechanic work on a car each time it is serviced.

Quality control is what Nutting appreciates most about working on the luxury cars, which start at $99,500. For that amount, Rolls and Bentley customers expect, and receive, high levels of personal service.

For example, while every dealer is required to carry a full parts inventory, the company has a special arrangement with Federal Express in the event that a needed part is not available.

Overnight service from the main warehouse in Lyndhurst, N.J., is provided at no extra cost as is second-day air service from the manufacturer in Crewe, Chesire, England.

Large Territories/Large Profits

We are the WORLD's leading manufacturer of SUPER STRETCHED Limousines. But if you're in the states of Washington, D.C., Maryland, Virginia, Ohio, Michigan or Florida you'd never know it!

Why? Simple. We have yet to appoint DEALERS in these STATES. Unlike our competitors, we allow only ONE DEALER per state. We offer LARGE Territories and LARGE Profits. We're looking for a few individuals to join our network of EXCLUSIVE dealers. If you enjoy LARGE, pick up your phone and call Dick Januzzi today.

AROUND THE WORLD

'88 output up 41% in S. Korea

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Strong export demand helped boost Korea's vehicle production 41.8 percent during the first quarter.

The industry produced 276,478 units, compared with 195,032 in the year-earlier period. Passenger cars accounted for the bulk of production.

In volume terms, Hyundai Motor Co. led with 153,649 units; Daewoo Motor Co. Ltd. had 32,934; and Kia Motors Corp. trailed with 31,525.

However, in terms of sheer growth, Kia's figures showed the greatest year-to-year improvement, as the company nearly tripled its output compared with the same period last year.

Kia produces the Festiva for Ford dealers in the United States, while Daewoo builds LeMans models for Pontiac.

Bus production reached 18,296 units, almost 40 percent better than the comparable period last year. Kia Motors and its fully owned subsidiary Asia Motors accounted for about two-thirds of total bus production with Kia building 9,376 units and Asia rolling out 2,700 units. Hyundai Motor production reached 5,145 units.

Truck production increased 18.5 percent, reaching 36,716 units in the first quarter.

During the period, 152,143 vehicles were exported including 148,164 cars, 578 buses, 3,204 trucks and 197 utility vehicles.

The quarterly performance reveals that the Korean car industry has not yet reached full manufacturing capacity. Korea's four auto manufacturers have a rated manufacturing capacity of 1.4 million units annually. At the current pace, the industry will turn out about 1.1 million vehicles.

Soon-to-be-released new models are expected to further boost domestic and overseas sales. Hyundai Motor's much-awaited Y2, a 2-liter front-wheel-drive compact, is due for launch this month.

Ssangyong Motor's X-car, an upscale four-wheel-drive station wagon, is scheduled to debut in the fall.

U.S. parts show in Korea praised

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Although smaller than the inaugural show, the second annual U.S. Auto Parts, Components and Equipment Exhibition held here last month was by virtually all accounts a better event.

Only 22 firms participated, compared with 60 last year. The event is promoted as helping to reduce the U.S.-Korea trade imbalance.

According to Wanda Ale, acting director of the U.S. Trade Center in Seoul, this year's show drew about 1,500 visitors, about half as many as last year's.

Despite that decline, participants expressed pleasure with the level of organization and preparation and with the importance of the people visiting the booths. Many of the casual visitors who flocked to last year's show stayed away this time, which explains the lower attendance.

"I could meet two dozen key people in two days that normally would have taken three months to pin down," said Suk Yung Yoon, an exporter representing U.S. oil seal maker CR Industries of Elgin, Ill. "Whether I made a sale here or not, for me, the show was a money saver and a time saver."

"I've accomplished more than last year. Being new last year, (CR Industries) didn't know what to do, but this year we've targeted our objectives. . . . I met the right people on the first day and I've got a clear picture of the Korean market now," said Yoon.

For others, the show was an excellent opportunity to tap the brains of customers, gossip and get a better fix on the competition.

Prominent names new to the show were Sheller-Globe Corp., Kelsey-Hayes Co., GTE Products Control Devices, Delco Remy, Dow Chemical Co. and FMC Corp.

Among the companies participating in the show for the second time were Borg-Warner Automotive, Masco Industries, Motorola automotive and industrial electronics group, Gates Rubber Co. and Wolverine Gasket Co.

Waiting for the payoff in the Korean market takes patience, according to Robert Chiu, Asia/Pacific marketing manager for Motorola automotive and industrial electronics group, and Sidney Jeffe, a vice president of Sheller-Globe.

The show was co-sponsored by the U.S. Embassy in Seoul, the U.S. Department of Commerce and several Korean agencies including the Korea Auto Industries Co-op Association and the Federation of Korean Industries.

New Ford Escort ready for Argentina

By Cristina Bonasegna
SPECIAL CORRESPONDENT

BUENOS AIRES, Argentina — Ford Motor Argentina will introduce the 1.5-liter Escort here in early June.

The company is part of Autolatina, the Ford-Volkswagen combine in Argentina and Brazil. It expects to produce 12,000 units a year.

Ford's passenger-car production in 1987 was 19,243 units while Argentina's overall car output for the year was 158,743.

A Ford spokesman said the Escort launch involves a $7.2 million investment at its General Pacheco plant here. He said 140 local suppliers for the Escort have invested another $3 million.

The four-cylinder engine used in the new Escort is imported from Brazil. The spokesman declined to estimate how much of the new car is imported, but said the percentage was "not above limits imposed by current laws." Observers said the government has lifted many of its restrictions on auto imports in the last two years as part of a program to open up the economy.

Ford engineers, however, later told Automotive News that the original plans for the car called for foreign content of 78 percent. They said the percentage would be even higher initially, because some of the locally manufactured parts failed to pass company quality tests.

The four-door Escort GL was shown to car dealers early in May. Although the public had not seen it at that time, 5,200 units had been ordered since last October.

Subaru of America picks Anglo to sell 5,000 rentals

Anglo American Auto Auctions has been awarded a contract by Subaru of America to sell 5,000 daily rental vehicles through its 20 Anglo auctions and selected allied auctions.

The vehicles, which have begun appearing at Anglo American locations in Dallas; Kansas City, Mo.; Omaha, Neb.; Amarillo, Texas; and Albuquerque, N.M., are on a repurchase program from major daily rental car companies.

The cars are concentrated in Florida, California and Texas. Subaru will transport the cars via Automotive Transport Inc., an Anglo subsidiary, to the auctions.

Subaru tested 600 vehicles in Anglo's Auction Managed Fleet Plan, which offers management for disposal of vehicles.

Auction adds rigs

The Indianapolis Auto Auction has added 10 new rigs and five extra trailers at its sister company, Indianapolis Auto Carrier Inc., located in Indianapolis.

This brings to 15 the number of carriers in the fleet since the company started seven months ago.

According to John Vance, general manager of Indianapolis Auto Carrier, the new rigs have the capability of hauling up to 12 units each and cost roughly $1.2 million.

Transportation of factory executive vehicles and program cars has become a thriving part of the auction business.

Auctions also deliver the vehicles bought by dealers to their dealerships.

TRANSPLANT

FROM PAGE 1

stant improvement.

Comparing the compensation of unionized vs. non-UAW workers at the transplants is relatively easy. At a glance, one can see that the hourly wage (including cost-of-living payment) for NUMMI assemblers is higher than at the other three transplants.

Of course, other forms of compensation have to be factored in. For instance, Honda and Nissan have profit-sharing plans (called "bonus sharing" and a variable "base bonus," respectively), while Mazda and NUMMI do not.

In addition, union dues, which are two hours' pay per month, have to be considered. A NUMMI assembler's annual union dues amount to about $340.

When a Honda production worker's 1987 bonus sharing and perfect attendance payments are added to wages (without overtime), the annual total is slightly less than a NUMMI production worker's annual pay, including a lump-sum payment, attendance award and paid lunch: about $30,350 for the Honda worker, and about $30,850 for the NUMMI worker.

A Nissan production worker's annual pay, without overtime but including the base bonus, is just under $28,000, but the bonus can increase based on quality and performance to budget.

A Mazda production worker's straight-time annual wage this year, including a signing bonus and a perfect attendance award and minus union dues, will be $26,271. But negotiated increases through 1990 include lump-sum payments totaling $2,520 and wage parity with Ford Motor Co. workers by 1991.

But the going gets really slippery when comparing work rules and working conditions.

In the case of Honda and Nissan, company descriptions of work rules conflict with those provided by some workers. But — though not necessarily a disqualifier — workers and others who have given negative reports about the transplants are already won over to the UAW.

And comparing the situation of workers at the four transplants gets more complicated: Some critics within the union say that the UAW-negotiated work rules at the NUMMI and Mazda plants are either too weak or are not what they seem on paper. In addition, they say, the provisions are sometimes not enforced.

As a result, they say, working conditions are basically the same at all Japanese transplant facilities, whether unionized or not.

But as the honeymoon at new transplants ends, it may be politically necessary for local unions to toughen up in response to worker disaffection with Japanese management methods.

Observers predict that Honda and Nissan workers will eventually want a union because as they get older, workers will find it harder to do the jobs at transplant facilities. By the same token, an aging workforce at unionized transplants may demand that their local unions become more aggressive.

Critics of the transplants' UAW contracts don't dispute that some provisions — such as negotiated wage increases and pension benefits — are enforced and that it is an advantage to unionized workers to have them in writing, though Honda and Nissan workers have also received regular wage increases.

Also an advantage — though less binding than a negotiated wage increase — is management's written commitment at Mazda and NUMMI that no worker will be laid off before executives take a cut in pay.

But critics say the NUMMI and Mazda contracts do not protect rights that workers enjoy in traditional UAW-represented plants and that local union officers at the transplants often function as an extension of management.

There indeed have been reports of unusually fast line speeds and difficult working conditions at NUMMI, as at Nissan and Honda. Workers say that the lack of a pool of relief workers at transplant facilities places a heavy burden on team members when people are absent.

The Big 3 are also moving toward building cars with fewer workers, especially in plants operating with team production. But, as at GM's oldest team-concept plant in Shreveport, La., replacement workers are integral to most Big 3 plants.

The reports about NUMMI's difficult pace surfaced before the line speed was cut in early 1987 because of slow sales.

The Mazda plant is not yet up to speed, but similar complaints may not surface there because it has a pool of temporary, part-time replacement workers, which is unique among the transplants.

Workers at a Japanese plant are theoretically able to pull a cord to stop the assembly line if there is a problem or if they are having difficulty keeping the pace. But some workers said they have been harassed by management for doing so.

Workers said they stock up on needed parts during their break times and lunch periods, just so they can keep up their work pace on the line. That is especially true when learning a new job, which happens often in a Japanese plant, where flexibility is encouraged and team members rotate jobs.

"They want you to learn a new job two or three times a year," said a Honda worker who signed a UAW card. "But when you're learning a job, you drown, for over a month.

"I was working during breaks. They didn't mind that. I had to get way, way ahead of myself just to get a drink or go to the bathroom."

Managers at transplant operations have said that workers know they can pull the cord to stop the line when necessary. They admit that some workers are dissatisfied, but ascribe it to individual personality and to the fact that "you will always have workers who complain."

A UAW spokesman in Nashville, Tenn., said that Nissan workers have told him they were told to regulate their intake of liquids so that they would not have to use the bathroom while at work. He said workers have told him they have seen other workers lose bladder control on the line.

Former Nissan President Marvin Runyon said similar reports published in a pro-labor magazine in 1987 were "slanted and inaccurate." Nissan denied similar reports in a recent article in another pro-labor publication.

In rebutting claims made in the 1987 article in "The Progressive," Runyon cited scores of an employee attitude survey at Nissan that "remain extremely high and positive."

"By and large, our employees are enjoying making our company a success and proving that American workers can manufacture vehicles with high levels of quality and productivity," Runyon said.

The UAW has maintained that negotiated procedures for "standardized work" at NUMMI and Mazda protect workers from arbitrary increases in work pace.

But critics within the union say that the procedures, which specify the amount of time needed for each job operation, in fact help speed up the pace.

They say overloaded jobs are inherent in the Japanese system and in the team method of production. That is because Japanese automakers emphasize kaizen, or constant improving of a work process. The idea is for workers to work smarter — not harder — by eliminating wasteful movements.

Honda has maintained that kaizen leads to the introduction of new technology to make jobs easier. But some Honda workers who signed UAW cards said that the company has cranked up the line even when processes were not improved.

One 27-year-old worker at Honda, who complained about exhausting work, said he can't imagine doing his job when he is 35.

Workers at Nissan and Honda have also complained of favoritism — "polish the apple and you get to be a team leader," said a Honda worker, "complain and you get a worse job."

But critics within the union say that seniority rights — which protect workers at traditional plants against favoritism and other arbitrary treatment — are watered

FROM PAGE 84

down at NUMMI and Mazda.

Another subtle way union representation is watered down at NUMMI and Mazda, critics say, is that when workers have a complaint, they must first take it up with their union representative during non-working hours, such as at break time or after work.

At Big 3 plants, a worker with a problem can call a union steward for assistance during working hours.

The problem resolution procedure is similar at all four transplants, but NUMMI and Mazda workers have the advantage — over non-union workers — of being able to get impartial arbitration as a last resort to solving problems.

But critics point out that though some unresolved problems at Big 3 plants are subject to arbitration, workers there have the right to strike over issues such as work standards.

The NUMMI and Mazda contracts forbid strikes for any reason.

Resolving disputes

The NUMMI and Mazda problem resolution/complaint procedure emphasizes resolving matters at earliest stages, within the team. If the problem is not resolved, the worker must first discuss it with the unit leader and the union coordinator during non-work hours.

The unit leader and the worker may then request a meeting with a labor relations representative and a union representative.

If not resolved, the problem may be referred to a four-step procedure, with time limits on responses by the company. There is an expedited procedure in case of discharge.

The final step is impartial arbitration.

In cases of alleged misconduct, any witnesses must be interviewed jointly by the company and the union, and records of written reprimands or attendance infractions on file for one year will not be considered, providing there are no intervening incidents.

At NUMMI, in the case of suspension or discharge, a joint labor-management committee will review the decision before it is finalized.

UAW critics at NUMMI say that because of the emphasis on cooperation in the plant, workers are reluctant to pursue their rights under the procedures and that local union officers don't encourage them to do so.

At Nissan, the company said, "Problems of any nature can be worked out by employees through their area managers. Human resources representatives are available . . . to assist . . . in resolving issues. . . .

"Several programs facilitate issue resolution, including the company's open-door policy, safety committee, focus groups, involvement circles and a confidential telephone line to the vice president of human resources.

"Discipline is handled through a corrective action system, with appeal to a peer review panel or to management available.

"Nissan has no suspension policy and employees are infrequently terminated" but in such cases, workers may request peer or management review — up to and including the president.

Peer review is by a five-person panel, with a human resources representative selected by the employee to help prepare his/her "case." A secret ballot vote of the panel is binding, Nissan said.

But a UAW organizer working with Nissan employees said management selects the peer review panel, which includes management and hourly employees. "I've never known a decision to be turned around by a peer review committee. They can't be right all the time," he said.

The organizer, who said he has "personally talked to 750-800 Nissan workers," said that "most people will not even use the peer review committee because they say it's a joke."

A Honda spokesman said the company has no formalized grievance procedure. "Associates are free to take up problems with anyone in management, even the president," he said.

Workers with performance problems at Honda are first counseled on the floor, then formally with the production coordinator, then with associate relations, and finally with the department manager.

If terminated, a worker has the right to challenge the decision before an associate review panel composed of one senior manager and six associates drawn at random from all the workers in the plant. The panel votes by secret ballot and the decision is final.

About 80 percent of the company's decisions have been upheld, and 20 percent of the worker challenges have been validated, the Honda spokesman said.

But a Honda worker who signed a UAW authorization card said, "Sometimes if you complain to a coordinator, you get off worse. He's like a foreman. They say you have a bad attitude and you'll get the stinkiest job in the plant."

Another Honda worker who is for the union said, "If you get on somebody's list, you might not get transferred into an easier job."

Another worker who favors the union called the review panel a "kangaroo court."

Absenteeism procedures

Company statements on absenteeism procedures at Nissan and Honda conflict with those of workers who favor the UAW.

Nissan said workers receive four hours of paid time off per month that can be used for illness. These can be accumulated or sold back to the company annually.

But the UAW organizer working with Nissan workers said that workers are told not to simply call in when they plan to be absent, but to make arrangements with their supervisor ahead of time. He said there is no guarantee workers will be paid, even though they have earned their time.

Workers are told to be careful if they miss as few as two days in one year, he said.

Nissan said that "employees are paid accident and sickness benefits at approximately 65 percent of pay for up to 26 weeks." However, a UAW spokesman in Nashville said, "Once someone is injured and takes some time off, when they come back, there's no job."

At Honda, there are no sick days. Workers must take vacation days if they are ill. Workers with attendance problems are first counseled, the Honda spokesman said.

If there is no improvement, they must follow a six-month, four-step attendance improvement program, which, if violated, results in termination, he said.

Workers at Honda who favor the union said it is unfair to have to take vacation days in the case of illness.

The workers said they are afraid to be counseled because it remains on their record even after one year.

At Mazda, if an absence is approved, a worker gets 60 percent of his base wage. There is a five-step attendance procedure, ending in termination, to deal with excessive absences. The procedure is being revised to specify the number of absences before step one.

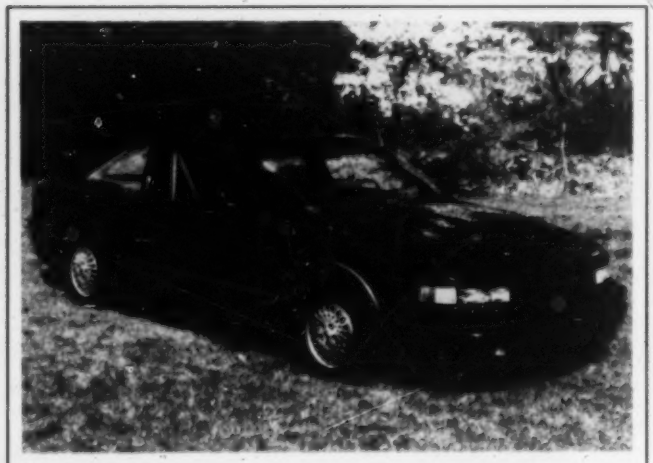
A local union officer at the Mazda plant said that, despite the extensive screening for workers with the right attitude, some have already been fired for absenteeism. The plant turned out its first car just a year ago.

At NUMMI, there is a "no-fault" absence program, but absence rules are "much more severe than in a traditional plant — a trade-off for job security," a local official said.

Workers can call in sick and be paid in lieu of vacation time. They are sent notices according to this schedule: 3 days late or absent in 90 days, first notice; 3 days late or absent in the next 90 days, second notice; same for third notice; same for termination.

The local official at NUMMI said that a joint review committee considers the termination and reverses it if they find "mitigating circumstances."

Toyota Motor Manufacturing and Diamond-Star have just begun pilot production, and their benefit packages are not yet complete for comparison purposes.



Testa-Cutlass?
The GST Aerodynamic Design Division of Stauffer Classics, Blue Mounds, Wis., offers a kit to dress up Oldsmobile's new Cutlass Supreme, and give the car a little Ferrari Testarossa flavor. The kit's pieces are made of laminated fiberglass and include cooling scoops, rear wing, chrome exhaust tips and lower door panels.

Honda ends most Civic exports

Transplants to supply 3-door and 4-door for U.S., Canada

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Honda Motor Co. plans to discontinue the export of its three-door and four-door Civic models to North America to meet a growing demand in Japan. Three- and four-door models sold in the United States and Canada will be built by Honda plants in those countries.

The Civic wagon and popular CRX, however, will continue to be exported from Japan.

Honda is conducting a successful major effort to expand its share of the Japanese market and, as a result, there is a 15,000-unit back order on Civics here. Honda has 9.1 percent of the Japanese market.

In increasing Civic output in North America, Honda will produce all three-door models sold there at its Canadian plant, while four-door sedans will be built in Ohio. Last year, 135,034 Civics were sold in the United States, 86,218 of them produced at Marysville.

Production in the United States and Canada will be increased to make up for the decrease in imported Civics.

Some Japanese news reports suggested that production of the Accord will be reduced to compensate for the increase, but a Honda spokesman said no decrease will be necessary because the company had originally intended to boost production to full capacity in Ohio this year. Honda's expansion in capacity at its Ohio plants is solely for Civic.

Meanwhile, Honda Motor Co. Ltd. showed a 10.5 percent drop in its consolidated operating income for the first half of the current fiscal year. Operating income totaled 68.6 billion yen ($549 million). Since Honda is changing its fiscal term, the six months ended March 31 were compared with the six months ended Feb. 28, 1987.

The drop in operating income was attributed to the depreciation in the value of the dollar. On the other hand, consolidated net income was up 51.7 percent to 56.6 billion yen ($453 million), due largely to strong auto sales in Japan, as well as a rebirth of the motorcycle market in Japan.

Sales of power products were off 16.6 percent to 77.3 billion yen ($619 million), primarily because of sluggish sales in the United States.

OBITUARIES

Russell DeYoung

NAPLES, Fla. — Russell DeYoung, 79, former chairman of Goodyear Tire & Rubber Co., died May 31. He led the company from 1964 to 1973.

Anthony M. Coelho

NEW YORK — Anthony M. Coelho, 49, Eastern manager for Petersen Publishing Co., died May 18. The company's magazines include Motor Trend and Car Craft.

Elmer C. Low

LaCROSSE, Wis. — Elmer C. Low, 86, founder of Low Motors here, died May 11. The store sells Ford, Lincoln, Mercury, Jeep, Renault and Mazda.

Charles William Birdsong

TEMPLE TERRACE, Fla. — Charles William Birdsong, 70, former owner of Birdsong Volkswagen here, died April 11.

Corrections

In the May 30 issue, Francois J. Castaing's title was wrongly stated as chief engineer, Chrysler Motors. He is vice president, Jeep and truck engineering, Chrysler Motors.

A May 23 news brief on Honda building up U.S. engineering staffs should have read, "Honda is expanding an engine plant in this country." Honda's engine plant, with full casting, machining and painting operations, has been in operation since July 1985.

Ford teams check Missouri ambulances

ST. LOUIS — Four teams of engineers from Ford Motor Co. arrived in Missouri late last month to inspect 100 ambulances and possibly replace cooling system hoses that are potential fire hazards.

Attorney General William L. Webster asked Ford to send engineers to inspect and replace faulty hoses after three fires in ambulance engine compartments were reported.

In press conferences in four cities — Kansas City, Springfield, St. Louis and Jefferson City — Webster said, "We appreciate Ford's cooperation in this investigation and hope the company's engineers can discover a solution to this problem. This is a cooperative effort, and our mutual goal is to find a way to prevent any more ambulances from catching fire."

A Ford spokesman said at least six and as many as 10 fires have been reported in other states including Kansas, West Virginia and Oregon during the past two months.

Ford has inspected each of the ambulance fires but said that in many instances the causes are difficult to pinpoint because the damage was so extensive.

"The vehicles end up burning so badly that by the time we get to them, it is hard to determine whether the fires are from the electrical or the cooling systems," the spokesman said.

Engineers will spend three weeks replacing the hoses installed by ambulance conversion companies and will take the originals back to Ford headquarters for inspection, according to the state attorney general's office.

Ambulances built on Ford E-350 chassis and on vans by conversion companies have been dogged by fires.

Ford voluntarily recalled and added safety modifications to approximately 14,500 ambulances last year to correct gasoline pressurization problems that caused a rash of fires.

PRODUCTION

Short week; car, truck output falls

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

With only four working days because of Memorial Day, scheduled production of cars and trucks in the United States dipped last week.

Automakers slated assembly of 137,721 cars, 14.88 percent below the previous week's 161,802 and 12.02 percent below the year-ago week's 156,545.

So far this year, 3,138,419 cars have been assembled, 8.18 percent below the 3,417,903 completed last year at this point.

Last week's estimated build was shared as follows: General Motors, 46.53 percent; Ford Motor Co., 26.53 percent; Chrysler Motors, 16.66 percent; Honda of America Manufacturing Inc., 4.29 percent; New United Motor Manufacturing Inc., 1.89 percent; Nissan Motor Manufacturing Co. U.S.A., 1.52 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.42 percent; and Volkswagen of America, 1.16 percent.

Truck output was scheduled at 72,276 units last week, 14.70 percent below the prior week's 84,729 and 7.38 percent below the year-ago week's 78,035.

Year-to-date, 1,850,524 trucks have been built, 11.20 percent more than the 1,664,175 assembled last year at this time.

Mazda added a second shift and 1,300 workers at its Flat Rock, Mich., plant last week.

The plant, which assembles the Mazda MX-6 and Ford Probe, will produce about 13,000 cars in June, some 35 percent more than the 9,600 built in May.

GM's Fiero plant in Pontiac, Mich., was idle last week for inventory adjustment. Output was expected to resume today.

GM scheduled overtime last Saturday at its Detroit-Hamtramck; Lordstown, Ohio; Wentzville, Mo.; Lakewood, Ga.; Baltimore; Pontiac, Mich.; and Moraine, Ohio plants.

All Ford plants are slated for daily overtime this week.

Canada climbs after holiday

Canadian auto production was estimated at 27,712 last week, 27.79 percent more than the previous holiday week's 21,685 and 54.63 percent above the year-ago week's 17,921. The year-ago week's build was also affected by Victoria Day.

So far this year, 519,665 cars have been assembled, 41.99 percent more than the 365,999 completed last year at this time.

Truck output was scheduled at 20,555 units last week, 29.46 percent above the prior week's 15,877 and 17.41 percent more than the year-ago week's 17,507.

Year-to-date, 419,782 trucks have been built, 15.97 percent more than the 361,976 completed last year at this point.

Chrysler Motors will halt output of the Eagle Premier at its Bramalea, Ontario, plant on June 13 for line adjustments. When Bramalea reopens on June 27, production will be reduced by about 50 units per day.

GM calendar says product time is now

Styling, engines take center stage

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chairman Roger B. Smith and President Robert Stempel like to say the payoff time is near at General Mofors.

Billions have been spent for factories and billions more for the auto giant's conversion to front-wheel drive.

Now it's time for the product teams to get the money — for distinctive models that Smith and Stempel hope will never again be referred to as cookie-cutter designs, and for technology that consumers can see, feel and touch.

It shouldn't take long for the market to judge how successful GM will be in this endeavor; in the 1989 and 1990 model years combined, GM brags, it will have introduced more new models than in any two model years in its history. Even though the 1988 model year was stretched to nine months for Chevrolet's Beretta and Corsica, it is still a hearty showing for a company that will have to compete with strong new-product assaults next year from Ford Motor Co. and overseas competitors.

GM will allocate the majority of its product spending over the next five years to its design studios and engineering centers, which are developing new engines, enhancing existing ones and developing new technologies.

For the past year, GM executives have been telling the world that GM will cut back on capital spending, which soared to a record $11.7 billion in 1986. Annual capital spending through the end of the decade is expected to be less than 1987's $7.1 billion.

At the same time, they say GM will spend more from the 1988 to the 1992 model years on product programs than in any five-year period in history.

The Chevrolet Corsica and Beretta, the new full-size trucks and the GM10 program account for the biggest chunk of the five-year product spending plan.

Even though the GM10 program was scaled back and model introductions stretched over a longer period of time than originally planned, it still amounted to a $5 billion program, the largest in GM's history. And the original estimate of $7 billion could still be reached by the time Chevrolet's sedan and coupe and the other divisions' sedans are introduced as 1990 models, and other models built off the GM10 platform are introduced in the next five years.

McCurry: Toyota truck plant to be "in the Midwest"

Toyota sees sales surge, plans big U.S. truck plant

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TORRANCE, Calif. — A new U.S. truck plant capable of producing up to 300,000 units annually is expected to help Toyota Motor Sales reach U.S. sales volume of 1.3 million vehicles a year by the early 1990s.

Toyota will use North American transplants to produce nearly half of the vehicles it sells in the United States and, as part of the program, is "Americanizing" its operations here. That drive has sparked the selection of Robert B. McCurry as the first non-Japanese board member of Toyota's U.S. sales subsidiary, as well as his recent promotion to executive vice president.

The expansion of senior management at Toyota Motor Sales is in preparation for the rapid sales growth Toyota is expecting as new assembly facilities in Kentucky and Ontario, Canada, gradually increase to full production. The Kentucky plant recently started building Camry models, and the Canadian plant will assemble Corolla sedans later this year.

U.S. capacity could double when the expected U.S. truck assembly plant is in operation. McCurry said an announcement on the site is "imminent."

Analysts expect Toyota to move up into the compact-pickup market with the new U.S. model. Early indications are the truck may be in the Dodge Dakota class and be powered by a V-6 engine.

Despite speculation that Toyota was pressuring its General Motors partner to build the trucks at their NUMMI plant in California, McCurry said the plant will be located somewhere "in the Midwest." One likely site, observers said, would be on the large tract of land Toyota owns near its present auto manufacturing plant in Georgetown, Ky. McCurry said the new plant would build all trucks for the U.S. market, including the 4Runner. It will be a large plant, he added.

The van Essen brothers, Tom, left, and Walter export cars from Canada like this Ford Probe

SECRET SALES: *Canadian exports to U.S. targeted*

By Alex Law
SPECIAL CORRESPONDENT

TORONTO — While claiming they only deal by the book, some Canadian dealers have been secretly selling cars to brokers who export them to the United States and Europe. Business has been so brisk that the Big 3 are clamping down hard and the Canadian government is investigating whether the automakers have gone too far.

As many as 50,000 cars a year have been leaving the country as Canadian dealers look to unload inventory snapped up by buyers seeking exchange-rate bargains.

Efforts by manufacturers to stem the outflow of vehicles, dealers charge, include threatening to cancel franchises, assessing chargebacks greater than their profit on the deals, and compiling blacklists of names used to acquire cars that surface in the United States or Europe.

In response, some dealers have been secretly providing brokers inventory lists and

Olds promo: McHit or McFlop?

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Oldsmobile ended its estimated $30 million promotion with the McDonald's Corp. hamburger chain last week, and some of the division's dealers are already calling the promotion an expensive flop.

But Oldsmobile officials said the promotion, which gave away hundreds of new Cutlass Supremes as prizes in McDonald's $110 million Monopoly game and through Oldsmobile dealers, attracted more than 750,000 people into Oldsmobile showrooms and gave the car unprecedented exposure to young, upscale buyers. The program began April 1 and ended June 9.

"In the next six months, I think you'll see some of the effects of the McDonald's promotion in terms of Cutlass Supreme sales," said Warren Christell, Oldsmobile general marketing manager.

Air, money, empty: Which bags will fill from patent claim?

Wisconsin entrepreneur seeks cash from giants

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

James A. Kieren may have discovered a gold mine. Or just a can of worms.

The chairman and president of an obscure Wisconsin-based electronics firm, HAI Acquiring Co., found what might be an unanticipated bonus in another small Wisconsin company he acquired two years ago — patents that just might apply to the explosive devices that cause auto air bags to deploy.

It's too early to know for sure. And at least one major air-bag component maker scoffs at the claim.

But one thing for certain is that Kieren acquired a slew of idle patents dating back to the early 1970s, when serious research on air bags began. And Kieren contends that some air-bag component manufacturers, including industry giants Morton Thiokol and Arizona-based Talley Industries Inc., are infringing on those patents.

Kieren has warned them and a number of automakers in a letter that the company will ask for an injunction soon that would bar the sale of air-bag systems on domestic and imported vehicles.

Kieren's patent lawyer isn't so sure about the patents' validity, until research on the patents comes in, but his client is wasting little time.

"We realize that this action may create a certain amount of hardship for certain 1989 model lines, but it is the only course of action appropriate at this time," Kieren said in the letter, a copy of which was sent to Automotive News.

However, Talley, which produces air-bag propellants, inflator housings and modules for Ford Motor Co., General Motors and Honda, denies that Kieren has a claim against it.

A Talley spokesman said Kieren contacted the firm only a week ago with his patent claims. The company reviewed them and believes Kieren's claims are unsubstantiated, he said.

"His patents cover compositions we don't use and

Audi tries to settle class suit

Rebates offered for resale losses

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

Audi owners who sued the company over lost resale value as a result of allegations of sudden acceleration will be offered rebates in a proposed settlement of the class action lawsuit filed in Chicago.

Owners and past owners of 1978-1986 Audi 5000 models will be offered rebates ranging from $300 to $2,000 if they choose not to opt out of the settlement and if the deal is approved by Cook County Circuit Judge Harold A. Siegan July 26.

Lawyers from three firms that brought separate class actions, which were later consolidated into one case, said they could not prove that any defect causes sudden acceleration and opted for the settlement. The three firms, Holstein, Mack & Dupree, Lawrence Walner & Associates Ltd. and Lisco & Field, are all in Chicago.

An Audi spokesman said the agreement "fundamentally vindicates the Audi 5000. The plaintiffs have been unable to identify in the class of vehicles any defect."

However, Mark Steinbach, Washington attorney representing the Audi Victims Network, said he plans to object to the proposal in Chicago on July 26. He called it a "rich man's settlement" since no one receives any money unless he buys a new luxury car.

The proposed settlement dovetails with Audi's current offering of rebates and promises to keep resale values up. Meanwhile, Audi raised prices an average of 4.3 percent last October and an average of 3 percent in May on its 5000 models.

Current owners and lessees and former owners and lessees of 1978-1986 Audi 5000 models with automatic transmissions — estimated at about 391,000 — would be bound by the settlement unless they either opt out of the class action suit or they send written notices by July 5 of objections they plan to make at the July 26 hearing.

Workers at Michigan's Cars & Concepts strike for better wages

No Mustang soft tops

Strike at Cars & Concepts halts output

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

BRIGHTON, Mich. — The sun is out, but dealers and ragtop buffs may have a longer-than-usual wait for their Mustang convertibles this spring.

Production workers who customize the hot-selling Ford Mustang convertible continued their strike against Cars & Concepts late Friday after negotiators failed to agree on the plant's first UAW contract.

The workers want higher wages and a right-to-strike clause.

The Mustang was the best-selling convertible in the 1987 model year, with about 21,000 units sold. Ford Motor Co. plans to build a little over 33,000 Mustang convertible chassis at its Dearborn, Mich., plant in the 1988-model year, a Ford spokesman said.

Since January, about 14,260 Mustang convertibles have been sold, he said.

Ford dealers said a strike would not greatly affect sales because customers are used to waiting several months for delivery.

Before the walkout, the production rate was 180 cars a day.

The Brighton facility also builds the Pontiac Fiero T-top and customizes the Cadillac Seville and the Buick Skylark, Riviera and Park Avenue.

It is also making adjustments this year on about 10,000-15,000 Chrysler models to meet European export requirements.

Last December, Cars & Concepts workers became the first workers at a vehicle customizing facility to vote to join the union. Bargainers from the company and newly formed UAW local 4077 began contract negotiations in April.

Talks broke off last Wednesday. They resumed Friday afternoon.

Richard Calmes, Cars & Concepts senior vice president of human relations and public affairs and the company's top negotiator, said, "There is no animosity, there are just disagreements."

Calmes said the company made "a fair and competitive offer, far in excess of what they (the workers) have enjoyed in the past. We have to be attractive to Ford and GM as a source. If we are running at the same level they are, they might as well do the work themselves."

The average Ford assembler makes about $14 an hour. A beginning assembler at Cars & Concepts now makes $4.50 an hour, with increases to $5.90 per hour after one year. After 10 years, the wage is $10.50 per hour, but many workers leave after a short time because of the low wages, said Jesse McComas, chairman of Local 4077's bargaining committee. There was a turnover of about 800 workers last year, McComas added.

Penske, Gelco link truck leasing firms

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Penske Corp.'s decision to enter a joint venture with GE Capital's Gelco truck-leasing unit will take Hertz Corp. out of the truck-leasing business and make Penske's operation a more formidable rival to industry leader Ryder Systems Inc.

GE Capital announced last week it will enter a joint venture combining its newly acquired Gelco truck-leasing business with Hertz Penske truck leasing.

Penske followed the announcement by saying the company will exercise its right to buy out Hertz's 50 percent stake in order to merge with Gelco. Terms of the deal will not be complete until next month. A study including the name and headquarters for the new company is still under way, according to Dan Luginbuhl, Penske Corp. vice president for communications.

GE Capital said the joint venture will create a "national full-service truck leasing and rental company" with combined assets of $1.5 billion and revenues of approximately $750 million. It will employ about 5,500 people.

The combination will leave the Penske-Gelco truck-leasing business in the No. 2 spot in the industry with 56,000 vehicles. Ryder estimates its fleet at over 50,000 in leasing and an additional 50,000 in the daily-rental market. But more important than the overall size of Ryder vs. Penske-Gelco will be their ability to dominate in different segments of the truck-leasing market.

The Penske-Gelco combination could surpass Ryder in the leasing of larger classes of trucks and equipment, where Gelco has tended to concentrate.

Gelco was purchased by GE Capital in October. Minneapolis-based Gelco provides full-service truck leasing, rental and a variety of motor freight transportation services to commercial clients across the country.

The company operates 14,000 vehicles. Its services include vehicle engineering, fleet acquisition, financing, obtaining permits and licenses, complete maintenance, and fuel and safety programs. Gelco operates 139 truck maintenance centers.

Hertz Penske, based in Red Bank, N.J., is the No. 2 truck-leasing company in the United States with 42,000 vehicles. Like Gelco, it is a full-service commercial truck leasing company, but specializes in one-way consumer truck rentals. It operates a nation-wide network of 267 service facilities. In combination with Gelco, the companies will have more than 400 locations nationwide.

Penske's decision last year to purchase a controlling share of General Motors' troubled Detroit Diesel Allison Division and form Detroit Diesel Corp. could also prove an asset in the leasing of heavy-duty trucks. Penske-Gelco could be the first truck fleet to put the Series 60 engine into wide use.

While Penske's Luginbuhl said this could happen, he said the engine maker "will have to compete at arm's length for business like everybody else. That means on the basis of price, quality, everything."

Penske Corp.'s decision to terminate its relationship with Hertz led to speculation last week that Roger Penske was uncomfortable with Ford Motor Co.'s newly acquired stake in Hertz. Nothing could be further from the truth, according to Luginbuhl.

Although Penske has long been associated with GM through his motorsports activities and through the ownership of several GM dealerships, Penske's decision to leave Hertz was "purely coincidental," Luginbuhl said.

"Penske has different relationships with a range of automobile manufacturers," he added. It should also be noted that Penske's new partner, GE Capital, is linked to Ford through the joint ownership of Capital Auto Auctions.

Roger Penske, who will serve as chairman and chief executive officer of the new company, said last week, "Penske Corp.'s goal continues to be the holding of leadership positions in the transportation industry, and all our customers and employees will receive the benefits of this new corporation."

Brian Hard, Hertz Penske executive vice president, will serve as president and chief operating officer of the new company.

GE Capital is based in Fairfield, Conn. The company is a major source of automobile financing and operates GE Capital Fleet Services, the largest fleet and leasing company in the nation.

World Congress features analysts

DETROIT — Four market researchers and analysts will share their views of the industry during the 13th annual Automotive News World Congress at the Westin Hotel, July 17-20.

They are: Ronald A. Glantz, a general partner of Montgomery Securities, an investment banking firm based in San Francisco; Gregory M. Macosko, a principal with Easton Consultants, Stamford, Conn.; James A. Mateyka, vice president of Booz, Allen & Hamilton, Washington; and J. David Power III, president of J.D. Power and Associates, Agoura Hills, Calif.

Power has spent more than 25 years in the auto industry, the past 19 as head of an automotive marketing research firm. The company numbers among its clients virtually every auto manufacturer and importer serving the U.S. market.

In his World Congress presentation, he will discuss and predict car-buying behavior and emerging market trends in the United States.

Mateyka, who specializes in worldwide automotive industry consulting, has nearly 25 years' experience in the automotive and aerospace industries.

He has also served as an advisor on automotive issues to the U.S., Canadian, Dutch and Mexican governments and the World Bank.

Macosko entered the consulting field eight years ago. At the World Congress, he will discuss the nature and depth of Japanese automotive manufacturers' penetration of the U.S. market. He will define business issues, from both a domestic and Japanese perspective, that contribute to misunderstandings.

Glantz joined Montgomery Securities in 1985, following 12 years at Paine Webber.

Prior to that, he was chief economist at Laird Inc.; a consultant with Booz, Allen & Hamilton; and an economist on the staff of the secretary of the treasury, where he served as Japanese desk officer in the Office of International Affairs.

Power, Macosko and Mateyka will address the World Congress on Monday, July 18, at 2 p.m., 2:50 p.m. and 3:45 p.m., respectively. Glantz will speak on Wednesday, July 20, at 11:15 a.m.

The World Congress will begin with General Motors President Robert C. Stempel's State of the Industry keynote address on Sunday, July 17, at 7:45 p.m.

For further information, write Automotive News World Congress, 1400 Woodbridge, Detroit, MI 48207 or telephone 313-446-6047. The cable address is TWX 810-221-5122 AUTNEW DET.

Chevy expects truck sales to cut car gap

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — Chevrolet is looking for another 15 million new-vehicle market in the 1989 model year and a bigger shift of its own sales into trucks.

Michael Erdman, Chevrolet general marketing manager, sees 10 million car sales and 5 million truck sales in the 1989 model year, about the same as the projected 1988 totals.

Erdman described current truck demand as "spectacular," saying sales will exceed five million in the 1988 model year, possibly reaching 5.2 to 5.3 million.

Chevrolet is gearing for about 1.4 to 1.5 million truck sales in the

see ERDMAN, page 62

New line of axles for Eaton

ANAHEIM, Calif. — At the International Trucking Show, Eaton Corp. introduced new trailer axles, a new medium-duty truck transmission and a new driveline warranty. It also announced the start of a professional truck driver school.

The new series of trailer axles from Eaton's axle and brake division, Galesburg, Mich., provides extended trailer brake service life and lower operating costs, company officials said.

Eaton said the brakes mounted on the axles have 40 percent more lining and a new proprietary, non-asbestos lining material that wears 25 percent longer than other premium non-asbestos linings.

The result, the company said, is a brake that provides a 75 percent improvement in miles between relines, which reduces lifetime maintenance costs.

Eaton's transmission division, Kalamazoo, Mich., introduced its latest mid-range transmission, the Fuller RT-7608LL, for medium-duty construction trucks.

Bill Parker, marketing manager for the division, said the company's Lo-Lo type transmission has been popular in the heavy-duty construction market for many years.

"We saw a need for a similar set of ratios in a mid-range diesel powertrain," Parker added.

The RT-7608LL is intended to eventually replace the RT-6613 as Eaton's offering in that market.

Parker said the RT-6613 was originally designed for gasoline engines.

Its short steps between gears were important for good performance in a gas engine, but aren't necessary with today's mid-range diesels, he said.

The RT-7608LL has two low gears of about 12:1 and 18:1 ratios in both forward and reverse. It has a typical gear step of about 35 percent, designed for mid-range diesel engines.

Officials said truck operators would appreciate the fewer gears and progressive "H" shift pattern, especially in urban driving.

Eaton also has a new Golden All-Roadranger Drivetrain Protection Plan, providing complete parts and labor coverage on Eaton drivetrain components for five years or 500,000 miles. It is an extra-cost option.

Covered under the warranty are Roadranger transmissions, Eaton drive axles and Eaton brakes.

The Eaton truck components marketing division has established a new program to train professional truck drivers.

The Eaton Roadranger Training Institute will open its first facility in Kalamazoo later this year and will feature a full array of training equipment and a driving course for practice.

The curriculum will include classroom instruction, practice, the driving course and direct experience on interstate highways and other roads.

The curriculum is being developed with help from the Department of Transportation, the newly formed Professional Truck Driver Institute of America and representatives of major trucking fleets.

Model-year sales head for 5 million

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

With light-truck sales setting a record in May, the total truck industry is now poised to sell well over five million units in the 1988 model year.

For eight months of the 1988 model year, light-duty manufacturers have retailed 3,190,819 trucks in the United States, up 7.78 percent from 2,960,603 in like 1987. The industry retailed a total of 4,959,870 trucks in the 1987 model year.

However, while the domestic manufacturers chalked up record totals in May, their import competitors continued to suffer sales declines. Their market share fell to less than 14 percent in May.

In total, light-truck manufacturers retailed 457,728 vehicles in May, a new monthly high that was 12.22 percent ahead of last year's 407,882.

For the first five months of the calendar year, the sales total of 2,078,080 light trucks was 10.14 percent above 1987's 1,886,761, the previous high.

Detroit-based manufacturers picked up more than 5 percentage points of market share in May, capturing 86.07 percent of the light-truck market, compared with 80.88 percent in the corresponding period last year.

Foreign-based manufacturers' share, by contrast, shrank to 13.93 percent from 19.12 percent a year earlier.

Foreign manufacturers held 14.34 percent of the market for the first five months of the calendar year, with Detroit-based firms holding 85.66 percent.

In May, domestic manufacturers recorded 393,986 sales, up 19.43 percent from a year earlier. Foreign manufacturers, with 63,742 sales, had an 18.28 percent decline from 77,998 in like 1987.

Among the major manufacturers, GMC had the biggest May increase on a percentage basis. Its sales of 36,766 light trucks were up 49.60 percent from a year earlier.

For five months, GMC had a total of 149,089, up 22.04 percent from 122,169 in the 1987 period.

Chevrolet similarly showed signs of increasing momentum.

Its May light-duty sales of 122,726 were up 23.45 percent from a year ago, while its five-month sales of 559,311 were up 20.31 percent.

All of Chevrolet's vehicle lines were up, with the full-sized C/K pickups and the S-10 Blazers providing its largest unit volume gains.

Ford lost a little of its momentum last month. Producing at maximum capacity, Ford is short of product in some of its lines.

In May, Ford recorded sales of 133,968 light trucks, up 6.78 percent from 125,460 a year earlier.

Ford had increases in all its truck lines last month, except for the compact Ranger pickup. Ranger has been running behind year-ago totals for several months.

For five months, Ford's sales of 631,472 light-duty vehicles were up 9.84 percent from the comparable year-earlier period.

Chrysler, continuing to draw heavily on the strength of its minivans, had a 23.74 percent gain in May on sales of 78,310 light-duty trucks. For five months, its sales of 338,475 were up 22.38 percent.

Jeep also continued to gain strength with May sales of 22,216, up from 17,146 a year ago. Jeep retailed a record 101,265 trucks in five months, up from 81,126 last year.

Cummins adds diesel

C-series engine has 250 hp, high torque

ANAHEIM, Calif. — Cummins Engine Co. has made its C-series diesel engine with ratings of up to 250 horsepower available to the automotive market.

Seperately, Cummins also received a BAA3 rating on a major new subordinated debt issue from Moody's Investor Service, New York.

The company's 6CTS-250, rated at 250 hp at 2,200 rpm, supplies the highest peak torque in its class, 728 pounds-feet at 1,500 rpm, according to Laura Wenzler, Cummins manager of automotive marketing.

Its design incorporates direct fuel injection, turbocharging and aftercooling to maximize fuel economy and performance.

Cummins C-series engines with 225 hp or less are backed by a 2-year/unlimited-mileage warranty, while those with more than 225 hp have a 2-year/100,000-mile warranty. Optional extended coverage of up to 5 years/250,000 miles is also available.

Cummins also expanded its Big Cam IV engine line with a special fleet-rated high-horsepower, high-performance engine called the Fleet 285.

The modified engine delivers 1,150 pounds-feet of peak torque at 1,100 rpm. The engine can be uprated to increase trade-in value. A modification to the turbocharger, injector, timing gasket and fuel pump code will boost horsepower from 285 to 315 or 350.

The new engine is backed by a 2-year/100,000-mile base warranty. A Customized Assurance Plan, geared to various engine repair warranty needs, is available.

Meanwhile, Moody's assigned a BAA3 rating to a $275 million subordinated debt issue from Cummins.

The rating acknowledges the company's strong market position in heavy-duty diesel engines and its continuing efforts to boost sales and improve cost efficiency.

Moody's said it expects Cummins' operating results to improve in the intermediate and longer terms.

Moody's pointed out that Cummins has a dominant position in heavy duty diesel engines, with a 55 percent market share and a growing position in medium duty engines.

However, the company's restructuring has resulted in production inefficiencies that have weakened operating results, Moody's said.

— Robert Deierlein

HME moves to Michigan
HME Inc. (formerly Hendrickson Mobile Equipment) has moved its custom truck manufacturing and parts operation from Lyons, Ill., to Wyoming, Mich. In addition to its heavy-duty long-nose conventional chassis, HME produces specialty vehicles for drill rig chassis, crane carriers, yard-spotting tractors, bus and RV chassis.

NHTSA due to act on light-truck safety

WASHINGTON — As summer approaches, NHTSA is preparing for a flurry of rulemaking activity that is concerned with the safety of light trucks.

Areas to be addressed include head restraints, side-door strength, roof crush protection and the installation of shoulder belts in the rear seats of cars and multipurpose vehicles.

The agency's agenda on light-truck safety was published in a report prepared for the House and Senate appropriations committees.

NHTSA said it will publish a notice of proposed rulemaking on "light-truck safety problems involving head restraints" in "spring 1988." The last day of spring is June 19.

The agency also said it will make a "rulemaking decision on rear-seat shoulder belts in passenger cars and light trucks" this month.

Domestics lead May sales upturn

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Retail sales of new cars rose 10 percent in May as a result of a strong performance by domestic models.

Sales of domestic and imported cars totaled 970,893 units compared with 882,696 in May 1987. The month's total was boosted by two stellar 10-day sales periods for domestic models with gains of 12 and 35 percent.

Domestic sales in May this year were 701,987, up 12.80 percent over last May's 622,303. There were 268,906 imported cars delivered in May this year compared with 260,393 last year, an increase of 3.27 percent.

Where the U.S. market was, May 1988

	Total Sales	Pct. of Total
SUBCOMPACT	81,700	8.42
COMPACT	198,760	20.47
INTERMEDIATE	287,500	29.62
STANDARD	127,848	13.15
SPECIALITY	6,292	0.64
IMPORT	268,906	27.70
TOTAL	970,893	100.00

The daily selling rate in May this year averaged 38,836 units compared with 35,308 a year ago. There were 25 selling days in May both years.

The Big 3 reported sales increases of 12 percent to 15 percent in May. Aggressive marketing and rebates helped Chrysler Motors sell 96,420 units for a 15.00 percent gain.

Even though the second quarter's incentives are lighter, they account for about 3-5 percent of total car sales, according to Scott Merlis, auto analyst for Morgan Stanley of New York.

Ford Motor Co. delivered 14.58 percent more cars in May than it did a year ago, and General Motors' sales were up 12.14 percent.

Two transplant companies reported sales gains and two reported declines in May. Honda's sales of U.S.-built cars rose 33.82 percent over last year's, and Toyota's transplant sales were up 14.27 percent. Mazda, which was not building cars here a year ago, sold 2,819 cars in May.

Nissan's sales were down 34.52 percent compared with a year ago, and Volkswagen's sales dropped 41.95 percent.

In terms of market share, imports took 27.70 percent of sales in May compared with 29.50 percent a year ago.

Toyota led the imports by delivering 57,917 units in May for a 14.29 percent increase. Honda's total imported car sales declined 14.60 percent, although its Acura Division reported a 13.14 sales rise. Mazda's sales of imported cars in May climbed 33.93 percent over the year-ago total.

The Big 3's captive imports also reported sales gains in May over a year ago. The total was 35,862, up 58.79 percent over last year's 22,584. New entries from Ford Division and Pontiac accounted for most of the increase.

Sales of domestic cars for May 21-31 totaled 281,392, an increase of 12.54 percent over 250,045 last year. The Big 3 and Honda were up; VW, Nissan and Toyota reported declines.

Dealers buying more used cars at auctions, NADA finds

A survey by the National Automobile Dealers Association finds that new-car dealers are buying fewer vehicles off the street and more at auto auctions to stock their used-car lots.

Purchases of vehicles at auctions by new-car dealers rose to 12 percent of used-car inventories in 1987 from 9 percent in 1986, according to the survey. An NADA spokesman credited the increase to more factory auction sales.

Franchised dealers obtain used vehicles from six major sources: trade-ins on new vehicles, company vehicles, auction purchases, broker's wholesale vehicles, street purchases and trade-ins on used vehicles.

Sources of used cars dropped in two categories: Street purchases dipped to 7 percent in 1987 from 9 percent the previous year; and trade-ins on new vehicles as a source declined to 52 percent in 1987 from 53 percent in 1986.

Company vehicles remained steady at 4 percent and broker's wholesale vehicles as a source stayed the same at 8 percent. Trade-ins on used vehicles stood at 17 percent.

The study is part of a larger survey done annually by NADA and published in July. This part of the study is conducted among participating members of NADA's 20 Group program and tracks the sale of used units. The number of transactions in the sample is 120,000.

According to the survey, dealers' used-vehicle departments led all other departments in percentage of dollar sales increase.

Used-car dollar volume in 1987 was up 12 percent over the previous year. Parts and service dollar volume was up 11 percent while the new-car department showed a 5 percent decline in dollar volume.

AUCTION BRIEFS

CHARLES THOMAS

Volvo picks Dallas

Volvo Finance of North America has selected Dallas Auto Auction, in Dallas, as its vehicle remarketing center for the Southwest United States.

Dallas Auto Auction — owned by Nashville-based Anglo American — will auction up to 200 Volvos every other month through the end of the year and will conduct Volvo auctions every month next year.

Under the terms of the agreement, only franchised Volvo dealers will be allowed to purchase the vehicles.

The autos to be auctioned are 240-, 740- and 760-series cars in model years ranging from 1984 to 1988. They are vehicles that have been returned from full-term leases or repossessed.

Volvo auctions will begin in July.

Volvo Finance's vehicles in Texas, Oklahoma, New Mexico, Colorado, Arkansas and Louisiana will be sent to the Dallas Auto Auction for sale. The finance company will rely on the full-service vehicle reconditioning center at the auction.

Race-car sale set

The third annual Monterey Vintage Sports & Race Car Auction on Aug. 19 in Monterey, Calif., will feature 100 rare Maserati, Ferrari, Bugatti, Jaguar and Cobra models. The event — held in conjunction with the Pebble Beach Concours and Monterey Historic Races — is sponsored by Rick Cole Auctions of North Hollywood, Calif.

Last year's event generated $5.5 million in sales. Gate receipts are donated to the Children's Services Center of Monterey, Calif.

New-vehicle supplies slip back to 59 days

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Combined inventories of unsold domestic cars and imported vehicles on June 1 were slightly higher than they were a month earlier, but stronger sales trimmed the days' supply.

And in absolute numbers, stocks were 9.94 percent or about 273,000 units lighter than last year at the same time.

Strong May sales helped trim June 1 domestic and import inventories to 2,474,699 vehicles, representing a 59-day supply vs. 2,466,962, or 67 days' worth on May 1. A year ago, the total of unsold vehicles was 2,747,950, which represented a 71-day supply.

Dealers confirmed that May new-car sales were healthy and several mentioned lower inventories. Steven Flores, general sales manager for Huber Lincoln-Mercury-Subaru, Bloomington, Ill., said he had a 60-day supply and noted: "The Continental and Grand Marquis continue to be strong. The Tracer is doing well, but with more advertising it could do better."

The stockpile of domestic cars on June 1 edged up to 1,597,668 units, equivalent to a 57-day supply at May's brisk sales pace. A month earlier, there were 1,571,272 unsold cars, which represented a 63-day supply.

On June 1, 1987, stocks of unsold cars built in the United States were 1,910,805, which was equivalent to 77 days' worth.

Imported car inventories on June 1 shrank to 676,481, representing a 63-day supply. There were 12,618 fewer unsold cars than on May 1, when the inventory was 689,099, equivalent to a 73-day supply.

Car stocks, however, were nearly 70,000 units higher than the year-ago total of 606,583, which equaled 58 days' worth.

Total import truck stocks of 200,550 unsold units, representing a 72-day supply, were reduced by 6,041 units from the previous month's 206,591 or 84-day supply. They were below year ago import truck stocks of 230,562, which represented a 67-day supply.

By country of origin, import-car stocks stood this way: Japan, 61.34 percent; Germany, 14.38 percent; all other countries, 24.28 percent.

The eight domestic carmakers shared unsold car stocks as follows: General Motors, 51.48 percent; Ford Motor Co., 29.04 percent, Chrysler Motors, 15.28 percent; Nissan, 1.43 percent; Volkswagen, 1.32 percent; Honda, 0.80 percent; Toyota, 0.42 percent and Mazda, 0.23 percent.

By size class, the June 1 domestic inventory was split this way: Intermediate, 42.97 percent; compact, 23.98 percent, standard, 18.07 percent; subcompact, 13.91 percent and specialty, 1.07 percent.

If captive import stocks are included with domestic stocks, the Big 3 U.S.-based carmakers shared 74.29 percent of total unsold inventories. On June 1, GM had 39.13 percent or a 67-day supply; Ford's share was 21.94 percent or a 58-day supply and Chrysler had 13.22 percent or a 79-day supply.

The leanest stocks belonged to two Japanese-based manufacturers. Combined import and domestic stocks for Honda were 24,104 units, representing an 11-day supply or 1.06 percent of total stocks. Toyota's combined domestic and import inventory was 45,551, equal to a 24-day supply or 2.00 percent of stocks on June 1.

Nissan's combined inventories were the heftiest of the transplants. They rose to 144,117 on June 1, which represented 86 days' worth and 6.34 percent of stocks. All other imported cars and light trucks accounted for 16.5 percent.

Among U.S.-based manufacturers, Ford Division was shy of Mustangs, Tauruses and Probes on June 1. Lincoln-Mercury had only 18 days' worth of Continentals.

Chrysler had heavy stocks of LeBaron GTS (121 days) and Dodge Lancer (152 days). On the low side were Reliant and Gran Fury at 41 days each.

Among the GM divisions, Pontiac stocks were reduced to a 48-day supply and Buick's day supply was diminished to 68 days' worth at current selling rates. Oldsmobile had an 111-day supply of Cutlass Supremes on hand June 1.

ERDMAN

FROM PAGE 3

1989 model year, an increase of 100,000 to 200,000 over 1988.

Chevrolet is also looking for 1.6 to 1.7 million car sales in 1989, compared with an anticipated 1.7 to 1.8 million this model year.

Overall, it expects trucks to account for significantly more than the 42 to 44 percent of its sales mix that they're expected to take in the 1988 model year. It is not likely to emulate Ford Division, however, in having trucks account for more than half its overall sales.

Chevrolet's biggest increase is expected to come from the full-sized C/K pickups. General Motors is adding another C/K production shift at its Pontiac East plant, boosting Chevrolet's capacity to 500,000 C/K models next year, up from an estimated 390,000 for the 1988 model year.

The additional tooling is not for any particular C/K model, but will be flexible enough to accommodate across-the-board increases, Erdman said.

Chevrolet is also looking for a sizable gain in S-10 pickup sales, projected at 275,000 for the 1989 model year or 30,000 more than in 1988.

As previously reported, it will also begin getting the new Tracker sport-utility vehicle from the GM-Suzuki joint venture in Canada. Chevrolet expects to receive about 10,000 Trackers.

As of June 1, Chevrolet and its dealers had about 75 days' supply of trucks and 80 days' supply of cars on hand.

Asked about the above-average numbers, Erdman said, "At this time of year, it doesn't concern me in the least."

He noted that GM's program of capping the amount of floorplan interest a dealer has to pay, once inventory reaches a certain days' supply level, has made it easier for dealers to carry more stock.

Said Erdman, "We're (Chevrolet) short of trucks right now. It's hard to believe, but I'd like more S-10s, more C/Ks, more minivans, more G vans."

Referring to the outlook for clearing out 1988 models, he added, "The whole industry will go down pretty clean. The further down you get (on carryover inventory by the time of new-model launches in October), the better off you are. We're looking for a good cleanup."

Chevrolet will put significantly more of its resources, including advertising, merchandising, new products and dealer support, into selling trucks next model year in what Erdman described as a "pretty focused game plan."

"The crossover of car buyers into the truck market has said to us that we, Chevrolet, have to pay much closer attention to this market," he pointed out.

Chevrolet is also trying to regain market share lost to Ford in the past year. A Ford official, in fact, recently predicted that, armed with additional automatic overdrive transmission capacity, Ford would outsell Chevrolet and GMC combined in the light-truck market.

Erdman responded by saying, "They won't outsell GM. They'll have a tough enough time just living with Chevrolet, let alone Chevy and GMC. We have some pretty responsive new players in our lineup, including our dealer organization. Chevrolet dealers do not take kindly to 1987 (when Ford Division topped Chevrolet in total vehicle sales), and that's what it takes."

He added, "They (Ford) have done an excellent job, but I'd like to think they're hearing footsteps."

After a slow start in launching its new full-sized pickups last year, the C/K models are now "really moving," Erdman said, while "competition (Ford) has begun to slip."

The most recent five-month sales data shows Ford, with 258,107 full-sized F-series sales, leading Chevrolet's 215,868 full-sized pickup sales by 19.57 percent. In the corresponding 1987 period, Ford had a 33.56 percent edge over Chevrolet in that segment, the largest in the light-truck market.

One of GM's (including Chevrolet and GMC) new pricing/marketing strategies in 1989, according to dealers, is to package truck options differently.

Generally, GM has simplified its optional equipment offerings and has added more basic content to trucks. Some dealers have expressed concern that this will drive prices up and keep them from getting inexpensive stripped-down work trucks.

Erdman replied, "If anything, it will drive prices down in the long run because you gain some efficiencies. All your packages are really customer-driven. They're all priced in line with customer needs. You take a look at what's being ordered, and the customer gains in the price/value relationship."

He noted that some truck models, "principally the three-quarter and one-ton jobs, are very difficult to package. We've kept ourselves in a position where there is still some free-flow" on options.

Mexico's April car output jumps 46%

By Kathy Barbaglia and Stephen Downer
AUTOMOTIVE NEWS STAFF REPORTERS

Mexican car output for April totaled 25,428 units, [illegible] percent more than the 17,413 cars built in April 1987.

At April's end, 109,294 cars had been built in Mexico for the calendar year, 54.80 percent more than the 70,605 built during the first four months of 1987.

General Motors built 4,354 cars in April, compared with 486 in the year-ago period.

A GM spokesman said production had been increased to build up inventory because the plant soon would be idled to modernize the paint facility. Also, April 1987's output was lower than usual because of downtime for model changeover.

GM produces Celebrity, Cutlass Ciera and Century models in Mexico. The Celebrity is the only model exported to the United States.

MEXICAN, N. AMERICAN CAR PRODUCTION
April 1988 vs. April 1987

	April 1988	April 1987	4 mos. 1988	4 mos. 1987
Chrysler	6,316	5,167	22,269	19,918
Ford	8,065	4,146	31,441	15,517
GM	4,354	486	17,651	2,627

Total Cars, Canada	103,209	69,050	391,694	299,585
Total Cars, N. American	738,843	742,330	2,811,598	3,104,233

Ford Motor Co.'s April output totaled 8,065 cars, 94.52 percent more than the year-ago month's 4,146 when Tracer production was not at full capacity. Ford also builds Topaz, Cougar, Thunderbird and Taurus models in Mexico. However, only Tracer is built for export.

Chrysler Motors built 6,316 units in April, 22.24 percent more than the 5,167 assembled in April 1987. Chrysler builds the LeBaron J, Aries, Reliant, Sundance and Shadow models for export to the United States.

April's North American production totaled 738,843 cars, slightly below (0.47 percent) the year-ago month's total of 742,330.

PRODUCTION

Truck output for May is highest ever

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic truck production of 370,127 in May was the highest ever for that month, surpassing the previous record of 338,961 in May 1979.

Last month's truck output was 8.74 percent more than April's 340,385 and 10.02 percent more than the year-ago month's 336,423.

Targeted production of 87,842 trucks last week was 19.87 percent more than the prior week's 73,284 and 16.52 percent more than the year-ago week's 75,389.

Year-to-date, 1,939,374 trucks have been assembled, 11.42 percent more than the 1,740,582 completed last year at this point.

Car production in May totaled 697,069, 14.24 percent more than April's 610,206 and 11.84 percent more than the year-ago month's 623,265.

Last week's scheduled output of 173,382 cars was 26.02 percent more than the previous week's 137,579 and 17.73 percent more than the year-ago week's 147,277.

So far this year, 3,311,659 cars have been built, 7.29 percent below the 3,572,010 assembled last year at this time.

Companies split last week's estimated production as follows: General Motors, 48.78 percent; Ford Motor Co., 24.80 percent; Chrysler Motors, 16.03 percent; Honda of America Manufacturing Inc., 4.43 percent; New United Motor Manufacturing Inc., 1.87 percent; Nissan Motor Manufacturing Co. U.S.A., 1.51 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.43 percent; and Volkswagen of America, 1.15 percent.

The Cadillac Allante line at GM's Detroit-Hamtramck plant was shut down today for approximately 2½ months for model changeover.

GM's Fiero plant in Pontiac, Mich., resumed output last week after being idle for inventory adjustment.

GM's Detroit-Hamtramck, Lansing, Mich.; Willow Run, Mich.; Janesville, Wis.; Lakewood, Ga.; Atlanta; Arlington, Texas; Baltimore; Flint, Mich., and Shreveport, La., plants were slated for overtime last Saturday.

Canadian cars best since 1977

Canadian auto production of 110,656 for May was the highest for that month since the 117,134 built in May 1977.

May's car output was 7.22 percent more than April's 103,209 and 41.87 percent more than the year-ago month's 77,998.

Last week's scheduled car production of 27,117 was 2.10 percent more than the prior week's 26,559 and 49.69 percent more than the year-ago week's 18,115.

Truck output of 80,432 units for May fell five units short of April's 80,437 but increased 21.11 percent over the the year-ago month's 66,412.

Targeted production of 20,075 trucks last week was 1.23 percent more than the preceding week's 19,832 and 10.13 percent more than the year-ago week's 18,228.

Foreign firm can be sued via U.S. unit

VW: Ruling could affect dealers, too

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Volkswagen AG and all other foreign automakers have been told by the Supreme Court that they are vulnerable to legal actions in the United States through their subsidiaries and distributors — and perhaps even franchised dealers.

The unanimous decision handed down by the court last week came in a case against Volkswagen of America and its parent. The case was filed in 1984 by the estate of a couple killed in an Illinois auto accident.

Franz and Sylvia Schlunk, along with three of their children, were killed in a Dec. 17, 1983 accident while riding in a 1978 Volkswagen Rabbit. One son, who was not along, survived. The suit alleged the Rabbit contributed to their deaths because design defects rendered the car "uncrashworthy."

The ramifications of the Supreme Court decision go beyond the German automaker as all world auto companies are put on notice that they are subject to litigation in the United States. Domestic manufacturers also fear the decision will open the door to similar treatment abroad in retaliation.

VW AG contended it was never properly served in the case, saying that it should have been notified of the litigation through the Hague Convention, an international agreement that has a mechanism for notifying companies of lawsuits filed against them in other countries.

Under the agreement — in the case of a German company — the plaintiff must submit the documents translated into German and the German government then serves the named company.

However, in this case the plaintiffs, the estate of Franz and Sylvia Schlunk, maintain that VW AG was adequately served through its subsidiary, VWoA, which was also named in the suit.

Use of the Hague Convention procedures were overruled in a majority opinion written by Justice Sandra Day O'Connor. A minority concurring opinion was written by Justice William Brennan for three justices.

"Where service on a domestic agent is valid and complete under both state law and the due process clause, our inquiry ends and the Convention has no further implication," O'Connor wrote. "And contrary to VW AG's assertion, the due process clause does not require an official transmittal of documents abroad every time there is

NADA: Politics and promos

Green nominated; would be '90 leader

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

BOSTON — The election of next year's National Automobile Dealers Association officers should be far more tranquil than last year's intense race for 1988 officers.

That tranquility of leadership transition was virtually guaranteed last week when the board of directors' nominating committee nominated a sole candidate — Ray Green, NADA director for Illinois — for the 1989 position of first vice president and, therefore, NADA president in 1990.

Green, 60, is president of nine-franchise Green Holding Co. Inc., Jacksonville, Ill.

"Someone else could be nominated from the floor at the October (1988) meeting, but I don't think it will happen," said James T. Caplinger, NADA immediate past president and chairman of the nominating committee.

Chevy's ad-group plan meets strong opposition

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

BOSTON — Factory plans to force all dealers to join, or at least pay for, dealer ad associations has met stiff resistance from the National Automobile Dealers Association board of directors.

"I think it's something the dealers are going to resist," said NADA President Jimmy C. Payton, "so that may be our next battleground."

Payton said NADA directors attending the board meeting here voiced strong objection to any manufacturer mandating ad group membership or fees.

The event that prompted the discussion was a tentative plan by Chevrolet to deduct a surcharge of one percent of invoice to finance dealer ad association contributions to local and regional ad campaigns.

Broker sales rise, puzzle Ford dealers

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division dealers have been buying thousands of cars and trucks outside standard sales channels, a phenomenon that has raised questions about defects in Ford's distribution system.

Ford dealers, particularly in the Northeast, say they are getting an unprecedented number of calls from brokers and other parties offering Ford products, sometimes in unusually large quantities.

Those who take advantage of the offers say they do it because they can't get the vehicles they need from the company. They are typically paying $150 to $500 over invoice, plus shipping, and still are able to sell the units for a profit. At the same time, though, they are wondering how anyone can get their hands on cars that appear to be so hard to get through Ford.

The issue has come to the attention of Ford and its dealers in some parts of the country. While there is some dispute over the magnitude of the problem, there is agreement that a secondary sales network corrupts the distribution system.

Many questions stem from the fact that brokered units are being shipped without sales cards — the document that registers a sale within Ford Motor Co. If a dealer arranges a sale through a broker and keeps the card, he can get credit for the sale and the right to earn additional inventory through Ford's "turn and earn" system.

Brokered cars have also clouded the issue of warranty coverage. If a dealer sells through a broker and keeps the sales card, a warranty could kick in when he turns that card in to the factory, not when the car is sold to a retail customer. And since a sale takes place twice — from one dealer to another and then to the retail owner — the end user is in a sense buying a "used" car. Buyers of used Fords pay $100 to have warranty coverage transferred.

Dealers also aren't sure whether recall notices will find their way to the owner when a car passes through extra hands before retail delivery. A Ford spokesman, however, said it can track owners through state registrations even if Ford has no record of their ownership.

NUMMI PAYOFF

Hendry brings new approach to rebuild Vauxhall operation

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

LONDON — Robert Hendry, a financial man for most of his 24 years at General Motors, learned manufacturing at the feet of the Japanese.

Now he's transferring that approach from the GM-Toyota New United Motors Manufacturing Inc. joint venture in Fremont, Calif., around the globe to Europe.

And, in the process, GM is collecting dividends from one of its biggest benefits in the Toyota project — learning to do things better.

Hendry's personal style — soliciting input from people at all levels of the organization — is a reflection of his experience as a start-up NUMMI person and later GM's top person there.

He starts a job by asking questions. There were many

Small firm, big plans in truck world

Viamax Baby 8 will shun dealers

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Can a Viamax succeed where a General Motors couldn't?

Newly formed by a group of investors, the small company has kept a low profile since taking out a charter earlier this year to produce Class 7½ trucks in Mt. Pleasant, Tenn.

But the small company has big plans. To develop a true Baby 8 rig and sell it without a dealer network, undercutting the industry giants, including GM, which turned over control of its heavy-truck operations to Volvo last year.

One of the investors is David Carroll, who described himself as a "heavy investor" in Viamax and as a "heavy investor" in Mini-Big-Rig, Bourbonnais, Ill. He declined to give his job title. Some other Mini-Big-Rig employees are investors in Viamax, as well, Carroll said.

Mini-Big-Rig operates a successful truck repowering and conversion operation for the hot-shot market. Those are low-frame-height medium-duty trucks used to carry light and stackable items. Hot shots can also be used as wreckers, ambulances, tank container vehicles and for other applications.

Carroll said only that Viamax has an "engineering idea for the total concept" that will help it outcompete larger rivals in the emerging Baby 8 truck segment. Those are trucks sized between Class 7 and 8 vehicles, designed mainly for regional short-haul applications.

Automotive News gleaned something of the company's plans, however, through another investor, M.M. McGinty, president of J.I.T. Associates, Nashville. The consulting firm has handled a lot of the market research for Viamax.

Viamax plans to focus its products on the bulkier, lightweight commodity market, underpricing competition while offering a more fuel-efficient design. It plans to bypass a dealer network, at least initially, selling directly to dedicated haulers and relying heavily

Continental will be first domestic car with dual air bags

SAFETY FIRST: *Continental debuts with dual air bags*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

This Wednesday in Washington, Ford Motor Co. plans to unveil the 1989 Lincoln Continental — the first domestic car to offer driver- and passenger-side air bags as standard equipment.

The car, which was introduced late last year, is sold out through August. But a production increase scheduled for next month is expected to trim the backlog by new-model changeover time.

Government safety and insurance industry officials are expected to be on hand as Ford stages deployment of the twin air bags. The company is calling the car a milestone in automotive safety.

The event also indicates that Ford has resolved its concerns about passenger-side bags. Since passengers tend to move about more than drivers, there were questions about protecting occupants who aren't sitting upright when the bags deploy. Ford had earlier said it wouldn't offer the bags until it had resolved the so-called "out-of-position-passenger" issue.

The company has sold driver-side air bags as options on Tempo/Topaz models since the 1987 model year.

Ford will begin production of the 1989 Continental in October at its Wixom, Mich., assembly plant.

Wixom will open an addition to its paint facility next month, which will increase overall output from 42 to 46 units an hour. In the process, Continental's share of the plant's production rise from the current 9 units per hour to 15, a company source said.

Production has held at the 9-unit level since last fall. That low output has been one reason for the lean inventories — an 18-day supply on June 1. The car has also sold better than Lincoln-Mercury had expected.

The 1989 Continental is expected to carry a higher price tag because of the air bags. On the Tempo/Topaz, the single air bag is an $815 option.

Wixom will begin building 1989 Town Car and Mark VII models in July.

Strike ends at Cars & Concepts

By Dan Morrison
SPECIAL CORRESPONDENT

Unionized employees at C&C Inc. (Cars & Concepts), Brighton, Mich., approved their first contract with the vehicle conversion company June 12.

It is a three-year pact that includes annual wage increases and a no-strike clause.

Members of UAW Local 4077 voted 303 to 80 to approve the contract, ending a three-day strike that stopped work on Chrysler export models and Ford Mustang convertibles.

Starting pay for assembly workers originally was $4.50. It will now be $5.25. The assemblers' rate rises to $6.25 after 60 working days and to $8 by the third year with the company.

Assembly workers who had been with C&C one year prior to the contract will make a minimum of $9 by year three.

In addition, workers in all classifications who were at or above the maximum pay at the time of the agreement will receive semi-annual lump-sum payments of 40 cents per compensated work hour (not including overtime) starting June 13. The maximum payment will be $832 a year.

Other terms include:

- Reducing the number of job classifications from 22 to 13.
- Delaying implementation of benefits for new hires: six months for hospitalization, surgical and life insurance and one year for dental, vision and hearing benefits.
- A no-strike clause with no exceptions.
- No limitations on subcontracting and no cost-of-living allowances.

The contract is expected to be signed this week.

Meanwhile, Defiance-Vangarde of Owosso, Mich., a C&C supplier, will vote on unionization June 24.

Chrysler bows on binding arbitration

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors is expected to abandon its campaign to include mandatory binding arbitration in its Jeep-Eagle franchise agreement to settle factory-dealer disputes.

Although the company publicly maintains that use of mandatory binding arbitration remains under consideration, several sources said Chrysler is expected to relent because of dealer pressure.

It is now anticipated that a mandatory binding arbitration clause will be optional in the Jeep-Eagle franchise agreement and in pacts used when re-signing Chrysler-Plymouth and Dodge dealers because of open points, stock transfers and dealership sales.

Chrysler's retreat on the controversial issue would mean that General Motors' Saturn Corp. remains the only domestic auto manufacturer with a mandatory arbitration provision in its franchise agreement.

Chrysler indicated it is considering backing down from imposing the arbitration clause at meetings held recently with the Chrysler-Plymouth, Dodge and Jeep-Eagle national dealer councils.

Chrysler's announced intent last fall to require mandatory binding arbitration in the Jeep-Eagle franchise ignited a storm of protest led by the National Automobile Dealers Association and members of the franchised dealer councils. Chrysler acquired American Motors in August 1987 and has refranchised former AMC dealers as Jeep-Eagle dealers.

NADA maintains that binding arbitration circumvents state franchise laws and the protection those laws give dealers.

Chrysler, however, terms binding arbitration "by far the most equitable and cost-effective method of settling disagreements." The company said "abusive" state laws exist that "cripple" the company's ability to do business and lead to protracted disputes that can take years to resolve.

In the wake of the protest, Chrysler twice revised the Jeep-Eagle franchise agreement. In October, the company said it would place an 18-month moratorium on the issue and temporarily make binding arbitration an option in the agreement.

The company said that during the 18 months, it would review state franchise laws with dealer association officials and conduct lobbying efforts to change laws in some states.

However, at the recent national dealer council meetings, Chrysler said it was lifting the 18-month moratorium. "We've removed the deadline," a Chrysler spokesman confirmed, "so we can focus on the issue, which is new franchising laws. Chrysler, NADA and the dealer councils will continue working to correct abusive state legislation."

Although the spokesman said mandatory binding arbitration "is still under consideration," sources said Chrysler has privately signaled to dealers that binding arbitration is likely to be optional in the contract.

Supplier execs to address World Congress

DETROIT — Four supplier industry executives will be among more than 30 faculty members at the 13th annual Automotive News World Congress at the Westin Hotel, July 17-20.

They are: Dr. Dieter Spethmann, chairman of the executive committee, Thyssen AG, Duisburg, West Germany; John L. Tuley, vice president and general manager, plastics division, Monsanto Chemical Co., St. Louis; Germaine Gibara, director, aluminum structured vehicle technology, Alcan International Ltd., Montreal; and Armand V. Feigenbaum, president and chief executive officer, General Systems Co. Inc., Pittsfield, Mass.

Spethmann will deliver the State of the Supplier Industry address at 8:30 p.m. Sunday, July 17.

Thyssen, which employs 130,000, is made up of more than 180 companies worldwide. Included is U.S.-based Budd Co., which is part of the German firm's capital goods and manufactured products business group.

The group, which also includes Thyssen Industrie and Reinische Kalksteinwerke, produces a wide range of automotive products and has a worldwide workforce of over 48,500 persons.

Tuley, who will speak at 2 p.m. Monday, July 18, has been with Monsanto 33 years. His assignments have included management positions in the inorganic division, textiles division, international division and Monsanto Polymer Products Co.

Tuley, who assumed his present post in 1986, has a bachelor of science degree in chemical engineering from the University of Delaware and has participated in the Columbia University advanced management program.

Gibara, a native of Cairo, Egypt, joined Alcan in 1975 as director of investor relations, a position she held until 1984 when she attended Harvard Business School's program for management development.

From 1985 to 1986, Gibara was in charge of a special strategy study for Alcan's president.

Gibara is a member of the Montreal Society of Financial Analysts, the National Investor Relations Institute, the Harvard Business School Association of Montreal and the sectoral advisory group to the Canadian government on international trade in the automotive and aerospace industries.

Feigenbaum heads an international engineering firm that designs, installs and implements quality-oriented integrated systems in major corporations throughout the world.

An innovator in quality technology and management, Feigenbaum is the originator of total quality control (TQC) and was first to define quality costs as the costs of prevention, appraisal and internal and external failures.

His "Total Quality Control" book has been published in a dozen languages and is the basic text on quality systems and improvement worldwide.

Gibara and Feigenbaum will speak at 2:50 and 3:45 p.m., respectively, on Tuesday, July 19.

The World Congress will begin with General Motors President Robert C. Stempel's State of the Industry keynote address at 7:45 p.m. Sunday, July 17.

Ford upgrades trucks

Brake, tire gains for '89 Kentucky units

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

ANAHEIM, Calif. — All 1989 F, B and L-series trucks produced at the Ford Kentucky Truck plant will have automatic slack adjuster belts and tubeless radial tires as standard equipment.

Automatic slack adjusters are in production and tubeless radials will come on line this summer, officials of Ford truck operations told a press conference at the International Trucking Show here. Both features already are standard on Ford Cargo models.

"We expect these features to deliver improved safety and performance," said Thomas D. Baughman, manager of chassis design engineering. "We are encouraged by our experience with Cargo and two years of testing for the automatic slack adjuster, including severe off-road testing and typical heavy-duty truck cycles."

Automatic adjusters help reduce the frequency and the difficulty of maintenance in addition to adding to brake life and safety. One or more brakes out of adjustment is the most frequent reason for trucking safety citations by state and federal agencies, he said.

Baughman said that Ford's use of tubeless radials on all tractors built at the Kentucky plant will make the vehicles easier to handle, thereby improving safety by reducing driver fatigue.

Fuel-economy experts will advise Ford heavy-duty and Caterpillar customers on how to get more miles to the gallon from their over-the-road Ford Class 8 trucks.

Jeff Kahn, Ford heavy-truck marketing manager, said "the specialists will consult on a wide range of fuel-economy-related issues, which typically represent about 30 percent of a heavy truck's operating costs."

Areas to be covered include the advantages and tradeoffs involved in "gear fast, run slow" strategy and how the concept applies to specific Caterpillar engines and Ford trucks. Drivetrain specifications, tire selection and the role of aerodynamics in fuel efficiency also will be covered.

PACCAR Leasing posts record revenues
PACCAR Leasing Corp., Bellevue, Wash., had record sales of more than $80 million in calendar 1987, up from $77 million the year before. Its 100 independently-owned locations leased or rented a fleet of more than 4,100 Kenworth and Peterbilt models, expanded in 1988 to include new medium-duty models.

Freightliner boss cites benefits of fewer but better suppliers

ANAHEIM, Calif. — The medium- and heavy-truck industry will move to so-called "tier 1" suppliers just as the automotive industry has done.

Peter E. Rupp, chairman of Daimler-Benz of North America Holding Company Inc. and Freightliner Corp., based the prediction partly on changes at his own company.

"We have reduced our total number of suppliers by 25 percent," Rupp told the third annual Motor Equipment Manufacturers/Heavy Duty Manufacturers Association meeting here. "The good news is I sincerely believe those suppliers who are on our vendor list now enjoy a greater sense of security than they did before."

Rupp said the "vastly improved vendor quality has been a prime contributor to a dramatic improvement in our operations."

Freightliner cut its man-hours per truck produced by a high margin, quadrupled its inventory turn rate, reduced its days' supply of material by more than 75 percent and nearly doubled its plant capacity utilization, he added.

He said the company also was able to eliminate many unnecessary options. For example, it cut more than 33 percent of its engine options. "We continue to make obscure options available, but at a price, and we don't publish them any longer in our data books," Rupp said.

He predicted that, despite changes, vendors will continue to play an important role in the industry's future.

"Even if further rationalization of truck manufacturers in the United States takes place, as I firmly expect it will, I stand here to proclaim that some of the studies that are floating around our industry and were conducted by learned institutions and consultants are wrong in stating a dramatic demise in the supplier industry, even its extinction.

"Original-equipment suppliers will have a renaissance, not a demise, if we find the working formula of optimizing our interests for what I call the 'totality of excellence,'" Rupp said. "Vertical integration is not the panacea for our industry."

Conference targets auto electronics

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Just about everybody knows electronics comprise one of the fastest-growing automotive areas, but it's nice to see someone put his arms around that growth and attach some numbers to it.

Robert J. Eaton, General Motors vice president and group executive — technical staffs group, did just that as he spoke of Convergence, an approaching biennial electronics conference/exposition centering on automotive applications.

As the event's general chairman, Eaton put it this way: "By the turn of the century, electronics for all uses will be the world's second-largest industry, second only to agriculture. The automotive electronics industry alone is expected to grow by the mid-1990s to $35 billion in annual sales from $15 billion in 1987. The electronic content per vehicle, now at $500, could more than triple by 1995."

As one example of strong growth, Eaton cited in-car telephones. He said there are 1.1 million now, up from 250,000 in 1985.

Eaton said Convergence '88, the International Congress on Transportation Electronics to be held at the Hyatt Regency here Oct. 17-18, will identify trends in electronics and emerging technologies.

Some 1,500 engineers and researchers from all over the world will focus on the meeting's theme, "System Integration, Key to Reliability, Flexibility and Cost Effectiveness." Presentations and exhibits will include such areas as traction control, systems for traffic management and guidance and powertrain and chassis control.

"The vehicle of the future will depend on systems integration in ways we are just beginning to understand," Eaton said. "Convergence will explore the ways these and other electronic devices will change where, how and what we drive in the future."

Two keynote speakers are on the agenda. They are Robert A. Lutz, Chrysler Motors president of operations, and Peter E. Rupp, chairman of Freightliner Corp. Robert C. Stempel, GM president, will speak at the conference banquet.

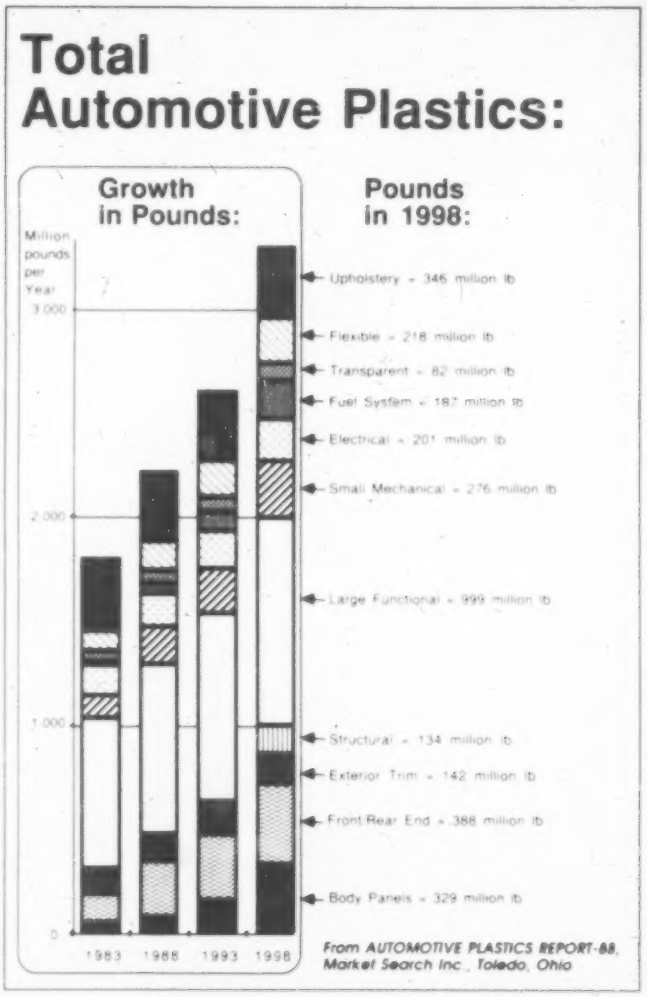
Among session topics are Trilby, GM's long-range research project; Project Alpha, Ford Motor Co.'s high-technology program; and Japan's integrated-vehicle project.

Also due for discussion are such topics as microsensors, multiplex systems, collision avoidance, air bags and navigation.

On the opening day of the meeting, a panel will discuss significant system issues.

The panel, to be moderated by Trevor O. Jones, president of International Development Corp., is expected to include Hermann Scholl, chairman and president, Robert Bosch Corp.; Jerome G. Rivard, vice president and group executive, Allied-Signal Inc.; Nagayuki Marumo, managing director, research and development, Nissan Motor Co.; Ulrich Seiffert, director, component development, Volkswagen AG; and Stuart M. Frey, vice president for technical affairs, Ford Motor Co.

Sponsors of Convergence include SAE and the Institute of Electrical and Electronics Engineers.



50% rise in plastics seen in '98 vehicles

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

TOLEDO, Ohio — A new study predicts that the use of plastics in cars and light trucks made in the United States and Canada will grow to 3.3 billion pounds in 1998 from 2.2 billion pounds this year.

In its ninth annual multiclient study, Market Search Inc. said growth during that 10-year span will be widespread and steady, but some growth areas will surprise some industry watchers.

Polyethylene gas tanks will see the greatest increase of all automotive plastics applications, said James Best, who heads the organization.

"Successful performance demonstrated in millions of tanks in Europe now has been replicated by Volkswagen and Ford Motor Co. in the United States. That experience has overcome initial product liability concerns," he said.

The Ford Pinto of the 1970s was plagued with fires, and the company in 1980 stood trial in Indiana for reckless homicide because of a fire in which three young women died. Ford was not convicted in that jury trial, but one aftereffect was a corporate reluctance to use plastic tanks and "burn up the evidence," in the words of one engineer.

Between now and 1998, the annual use of polyethylene in the tank application will increase by more than 113 million pounds, Market Search said.

Light-truck bodies and even frames will create an entirely new opportunity, consuming at least 100 million pounds per year by 1998, Best said.

The General Motors APV van, with its fiberglass-reinforced thermoset polyester body and urethane fenders, will account for around 64 million pounds per year in 10 years, the study said.

Other exceptional growth opportunities described in the study include fenders in thermoplastics and urethanes consuming 43 million pounds per year by 1998, intake manifolds in thermosets and thermoplastics offering a new market for 12 million pounds per year and composite springs with a dramatic increase to 12 million pounds per year.

"Bumper and energy absorber systems also are expected to show major growth," according to Automotive Plastics Report-88.

The study, which can be purchased for $1,995, identifies 126 specific applications in which plastics consumption will grow by at least 1 million pounds per year over the next decade. Those areas of application are described in detail in the 773 pages of new material in the report. Tables detail the projections, and charts within sections indicate trends.

Steel comeback cited

Technology helps industry show a profit

WASHINGTON — Steel, the material of choice for the auto industry for generations, is battered but advanced technology is helping it make a comeback.

The improving outlook comes after steel lost considerable ground to plastics and aluminum.

And it comes even as leaders in plastics organizations and companies make predictions of further dramatic growth for their materials in the years ahead.

Steel executives attending the annual meeting of their industry's leading trade association said a recovery is firm, is spread through most facets of the business and is growing stronger.

"Steel is emerging again as an industrial material of primary importance to the resurgence of the manufacturing sector," said David H. Hoag, LTV Steel president, in remarks to a press gathering during the 1988 general meeting of the American Iron and Steel Institute here.

In 1987, the American steel industry collectively had its first profit since 1981 when it earned $1.7 billion. The iron and steel group said the industry's net income was $1.0 billion in 1987 compared with a net loss of $4.1 billion in 1986.

Hoag said steel is competing successfully against aluminum and plastic for important automotive applications.

"Steel is being appreciated for its versatility, strength, increasing quality and stability of price when compared to other materials," he said.

Major American steel makers, Hoag said, are developing new products that allow manufacturers to reduce their total production costs and to "enhance their profitability in the face of global competition."

Hoag attributed customers' renewed interest in the metal to the steel industry's avowed dedication to reaching higher and more consistent levels of product quality control and to investments in advanced steel making and finishing technologies.

He also cited new steel making technology for part of the material's resurgence.

For example, he said the new ultra-low carbon steels, produced by the vacuum decarburization process, are growing in popularity because improved forming characteristics enable automakers to consolidate parts — to form more complex and intricate parts without interim assembly operations.

Ultra-low carbon steels also are the foundation of bake-hardenable paint-baking processes for auto and appliance makers.

Electrolytically galvanized steel, which resists rust, benefits automakers by permitting them to provide extended no-rust warranties, Hoag said.

Production cost savings of $45 per car could be obtained if automakers adopted pre-primed steel, he said.

"Complete elimination of both priming and top-coating operations could save from three to seven times that much," Hoag said.

LTV, a subsidiary of LTV Corp., is a producer of specialty steels such as stainless steel.

Student engineers race clock, each other in SAE event

Cornell entry captures top prize in SAE college design program

SOUTHFIELD, Mich. — Engineers seldom are charged with the responsibility for a complete vehicle from design to delivery. One result: A long time may pass before problems that crop up are brought to the attention of the designers.

But in the SAE's Formula SAE program each year, student engineers have to design and build a complete racing car, maintain it and sell its virtues to judges.

The rules of Formula SAE 1988 called for students to design a prototype car that was low in cost, easy to maintain and reliable.

The car, if produced in a run of 1,000 units, would be priced at $6,000 with a market of weekend competitors in autocross competitions — a race against time, typically held through a temporary course set up in a parking lot.

Students were judged on design and performance of the cars against other competitors.

Cornell University, Ithaca, N.Y., won with a car that faculty adviser John L. Lumley called conservative in design.

Other cars sported such features as fuel-injected and turbocharged engines, but the comparatively simple Cornell entry beat them.

Lumley said Cornell team members were all automobile enthusiasts with mechanical backgrounds. But, he added, the team further developed those skills in the course of the project.

Although computers were used in the design process, much of the final design — determining where components fit best or which layout worked best — was the result of trial and error, Lumley said.

IMMEDIATE DELIVERY!

Conversions by Vantasy Ltd., the largest van converter in Canada, has over 100 Ford, Chevrolet, and GMC vans in stock, and they're priced to sell now! Both U.S. and Canadian models available!

These luxury vehicles include a wide range of features and options such as Audio/Visual Entertainment Centre, security system, choice of specialty paint and running boards, power-operated tri-fold sofa bed, plus many others!

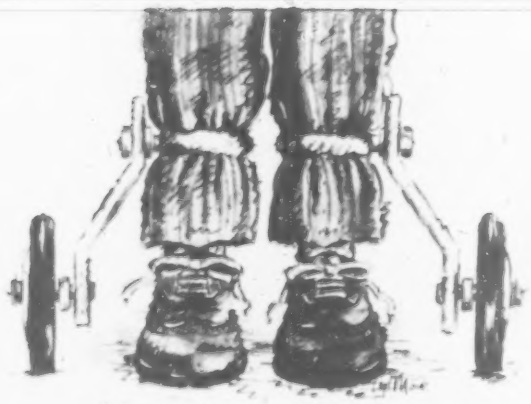
LUXURY VANS



You can train your salespeople with a set of these... or one of these:

Key Royal's "Keys to a Sale" Marketing Kit

For training, skill-sharpening, and showroom selling power, there's no product on the market like Key Royal's new **"Keys to a Sale."**

"Keys to a Sale" keeps all your sales people in constant, confident, touch with every important product feature and consumer benefit of the dealership's showroom cars. And since the communication of benefit and value is critical to sales, you'll **see bottom-line results** when you boost your staff's value selling skills with "Keys to a Sale."

This dramatically effective sales tool is really very simple. The kit contains 75 high-quality magnetic or standup product feature "Keys" for placement on showroom models. **Each attractive Key itemizes one automotive feature and lists its direct benefits to the buyer.**

Once in place, the Keys help build product knowledge, consumer benefit orientation, and poise in new sales people. As "cue cards," the Keys keep your people on track and talking about *value*. At the same time, the Keys keep experienced pros in touch with the details and features they sometimes take for granted. Consumers need benefit and value education to make their buying decisions, because their new cars will be so much more advanced than their old ones.

Even without a sales person present, **the "Keyed" cars will sell themselves, moving customer attention away from sticker price, toward product value.** That's the kind of customer thinking that adds up to higher closing ratios, higher gross profits, and higher C&I ratings.

"Keys to a Sale" will turn your showroom from a room full of cars to a **sales-activating profitability tool.** The kit comes complete with a user's guide that explains how to use more than 100 consumer features and benefits to increase sales. Order today! **Only $395.00** (U.S. Dollars)

Import sales strong in Taiwan

But Opel is only foreign make to exhibit at nation's auto show

By Stephen Vines
STAFF CORRESPONDENT

Ironically the first Taipei International Auto Show, last month at Taiwan's new World Trade Center, was less than a roaring success. Nearly all the vehicle manufacturers stayed away, leaving the bulk of the space to parts makers.

It was ironical because the show was billed as a major opportunity for international exhibitors to display their wares in this rapidly growing market for imported vehicles. Yet, the only importer on hand was Opel, General Motors' West German subsidiary.

However, on the show's opening day, it was disclosed that car imports in the first quarter rose 198 percent compared with the same period last year. With sales of 32,234 cars, importers captured a record 36.5 percent of the market.

Motor-vehicle imports began to have a real impact on the Taiwan market about five years ago. The first year of significant growth was 1985, and since then the rise has been dramatic. The increase has been spurred by a combination of eased tariffs, the strength of the New Taiwan dollar and growing prosperity.

Although the government has pledged further tariff reductions and a general easing of import restrictions, imported cars continue to sell at an average 30 percent premium against domestically produced models.

Consumer enthusiasm for imported cars is so great that price appears to be a secondary consideration. A straw poll of those attending the Taipei motor show clearly indicated that most of the visitors would always buy an imported car if they could afford it.

There is particular enthusiasm for European models because, in the words of one visitor, "they are so different from Japanese cars." Most domestic producers assemble Japanese models.

Germany has held the largest share of the import market for the past few years. Mercedes-Benz and BMW lead the luxury class, and Opel is a major contender in sales of mid-range autos.

The United States is now the second biggest car importer, having moved from sixth place in 1986. Both Chrysler Motors and GM are making a strong showing in the market.

Fiat is the top Italian import and continues to show sales strength, as does its former partner, Seat of Spain, which has only recently faltered, pushing Spanish imports from fourth to seventh place.

Sweden's Volvo and Saab have enjoyed steady sales growth, making Sweden the fourth biggest importer. Britain's Rover Group has found success with its Montego cars, and Jaguar remains strong.

Most importers expect import sales to exceed 100,000 units this year, a growth rate in line with last year's record.

The success of the imports does not please the domestic producers, but their displeasure has been tempered by the overall growth of the market and, therefore, a healthy sales increase.

Last year, their sales grew 45 percent to 251,411 units; two years ago they sold only 151,680 vehicles. In the first quarter of this year, local manufacturers sold 56,080 vehicles, a 17 percent increase over the same period last year. Full-year forecasts call for a 14 percent gain in 1988.

The biggest problem area in the auto industry centers on Yue Loong, the largest manufacturer. In the first quarter, its market share slumped to 17.6 percent from an average of 31 percent last year.

The company believes that many of its problems have been caused by a change in distribution. It has stopped selling cars through its long-time exclusive distributor, China Autos, and has established its own direct sales network, which opened for business at the beginning of April. Other motor industry sources believe that Yue Loong's problems are more fundamental.

Ford Lio Ho is the main beneficiary of Yue Loong's decline. In the first quarter, its market share rose to almost 31 percent compared with a 21 percent average in 1987. It appears that the other manufacturers will retain their previous positions in the market.

None will admit it but all the domestic producers are waiting to see what impact Toyota and Mazda will have when they start selling Taiwan-assembled vehicles later this year. Both are formidable competitors and have been out of the market during its boom years.

Taiwan is still not a serious contender in the export market. Ford Lio Ho is the only significant shipper of cars, almost all of which go to Ford's Canadian subsidiary. Sanfu, which assembles both Renault and Isuzu vehicles, has also had some success with the export of Isuzu Troopers to the United States.

Taiwan is a long way from becoming a viable competitor in world markets and the increasingly fierce competition in the domestic market, after years of protection, compounds the difficulties of securing the economies of scale required to be competitive overseas.

Boost in car-truck exports reduces auto trade deficit

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks improved for the second straight month by declining 8.1 percent in March.

A 57.4 percent boost in exports rather than a decrease in imports was primarily responsible for the improvement. Automotive imports grew 2.5 percent over the same period a year ago. February's deficit declined 10.4 percent.

U.S. Commerce Department figures show a trade deficit for passenger cars and light trucks of $3.430 billion for March. Total car and truck exports had a value of $1.125 billion during the month. Monthly car and truck imports were valued at $4.556 billion. The automotive trade deficit for March 1987 was $3.731 billion.

Exports of passenger cars in March totaled 84,514 with an estimated value of $898.9 million. Light-truck exports for the month were 21,565 vehicles with an estimated value of $226.7 million. Passenger-car exports to Japan increased 1,815 units, and car exports to Canada increased 18,243 units. Exports to other countries increased 6,952 units.

On the import side, Japan turned in a mixed performance for the month with the number and value of truck shipments continuing to slide, while the value of passenger car shipments stayed about even with March 1987. The number of Japanese passenger cars shipped to the United States continued to decline, however.

South Korea, Mexico and Brazil continued to post increases in car shipments. Shipments from West Germany, Sweden, Yugoslavia, Italy and France declined. Passenger-car imports from the United Kingdom were up 18.2 percent in March.

Total car and truck imports in March had a value of $4.556 billion, up 2.5 percent from $4.446 billion in March 1987. There were 442,865 finished vehicles imported into the United States in March 1988, compared with 453,687 in March of last year.

Imports of passenger cars reached 355,223 units for the month with a value of $3.897 billion. Imports of light trucks were 87,642 units, with a value of $658.5 million.

Japanese car imports dropped 6.4 percent for the month, but the value of the shipments increased 0.7 percent. Japanese truck imports were off 28.8 percent. Japan shipped 145,343 cars to the United States in March, down from 155,298 a year ago. Truck shipments were 62,901 units, down from 88,351 units last year.

West Germany, Sweden, Yugoslavia, Italy and France all shipped fewer cars to the United States in March 1988 than in March 1987. German shipments were off 33.9 percent. Sweden's shipments were down 42.4 percent. Yugoslavia saw exports to the United States fall 25.5 percent for the month after rising significantly in February.

The number of passenger cars imported from South Korea in March increased 76 percent from the year-ago month. Korea shipped 30,037 vehicles to the United States in March, compared with 17,064 in March of last year.

Imports from Mexico were 11,368 vehicles, up from 5,837 a year ago. Brazilian imports were 3,168 units for the month, up from 2,748 vehicles shipped in March 1987.

SPX to buy Bear, shop equipment firm

MUSKEGON, Mich. — SPX Corp. has agreed to acquire Bear Automotive Service Equipment Co. for $11 a share or $66 million.

SPX, a manufacturer of automotive diagnostic equipment and parts, was known as Sealed Power Corp. until changing its name at its April 27 shareholders' meeting.

Bear makes diagnostic equipment and wheel alignment and service equipment.

Under the agreement, Bear's two largest shareholders, John F. Stolle, chairman and president, and Investment AB Argentus, a Swedish company, will sell their shares to SPX, subject to the approval of both company's boards and federal regulatory review. The two shareholders own about 56 percent of Bear's stock.

Conn. helps shoppers get word on lemons

HARTFORD, Conn. — New computer systems in Connecticut enable consumers to check whether cars they are considering buying have ever been repurchased by manufacturers or dealers because they are lemons.

But state officials said they still recommend that consumers try to protect themselves when buying used vehicles by talking to the previous owners and having the vehicles checked by independent mechanics.

One of the new computer systems will be run by the state Department of Consumer Protection. It will include information on all vehicles ordered repurchased from consumers under the state's lemon law.

The Department of Motor Vehicles will have available in a computer system that information and the identification numbers of vehicles repurchased under private vehicle-arbitration programs.

Both systems require the consumer to provide a vehicle's 17-digit identification number.

The record-keeping systems were developed because of reports that defective vehicles repurchased from consumers are being resold to unsuspecting motorists in Connecticut and elsewhere, sometimes in violation of state law.

In some cases, dealers and manufacturers ignored laws and regulations that require them to disclose defects or failed to meet the requirements under which a lemon can be resold without disclosing its past.

Consumer and motor vehicle officials had done little to ensure that defective vehicles were not being illegally resold in the state.

Motor vehicle officials said they are also taking steps to ensure that manufacturers comply with the law that requires them to notify the state whenever they repurchase a defective vehicle under state or private programs.

1988½ Isuzu Impulse
The 1988½ Isuzu Impulse SE is a limited-edition model that features a 2.3-liter, 110-horsepower normally aspirated four-cylinder engine. Only 551 units will be produced, and each model has power windows and door locks, air conditioning, sunroof, four-wheel disc brakes and a Lotus-engineered suspension. The car, equipped with a five-speed manual transmission, carries a $14,399 sticker price.

New Saturn job for GM Saginaw

SAGINAW, Mich. — General Motors' Saginaw Division, already tapped to provide steering components for GM's Saturn Corp., also will make rear brake drums for the new car line.

GM's Delco Moraine Division, which will produce brake assemblies for Saturn, has chosen Saginaw Division to produce the rear brake drums at its plant in Saginaw, Mich., officials said.

"It's going to start at 1,100 a day in 1991," said Dave Baldwin, director of the final drive business unit at Saginaw Division. "We look forward to that doubling as Saturn (increases) its manufacturing capacity."

The unit plans to produce 1,400 drums daily in 1992 and 1,800 in 1993, Baldwin said.

Saginaw Division was chosen earlier to provide steering components for the Saturn car, scheduled for production at a plant in Spring Hill, Tenn.

Maryland bank offers car-loan rebates

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

In an effort to recoup market share for its direct retail auto loans, Maryland National Bank of Baltimore is conducting an auto loan program that offers a rebate of up to $500.

"We anticipate a doubling of our volume," said Richard M. Croswell, assistant vice president and product manager.

Maryland National Bank no longer makes indirect retail loans. Although it does handle showroom leases, the bank no longer buys retail purchase finance contracts from dealers.

The program was designed to help bank new-car loans compete more effectively against dealer-arranged financing.

The loan rebate offer, believed to be the first, is "really a very simple program," Croswell said. "We did not adjust our annual percentage rate," he said. "We're using our regular street rate of 9.9 percent."

In order to qualify, loans must be at least $11,250 and at least 48 months in length, and the car buyer must make all scheduled payments.

At the end of the loan, the bank will pay a cash rebate that varies by loan amount.

On loans of $11,250 to $12,499, the bank will rebate $100. The rebate is $250 on loans ranging from $12,500 to $15,000 and $500 on loans greater than $15,000.

The offer began May 13 and runs through June 30. Croswell declined to discuss the operational details of how the bank can afford to pay the rebates.

"The program is designed to drive business in and to generate an interest in our products," said Croswell, who conceived the rebate idea. "In those terms, it has been very successful," he said.

Sales slip 4.8% for U.S. cars in early June

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

In the wake of major incentive reductions, sales of U.S.-built cars in the first 10 days of June slipped 4.82 percent below the depressed count for the same period a year ago.

The eight U.S. makers reported sales of 198,647 cars compared with 208,699 in the June 1-10 period of 1987.

The daily-selling rate for June 1-10 was 22,072 compared with 23,189 a year ago. Both periods had nine selling days.

Early-June sales also dropped 2.75 percent below the first 10 days of May 1988, when deliveries totaled 204,270.

Ford Motor Co.'s sales dipped 3.19 percent to 58,461 units compared with 60,389 a year ago. However, Lincoln deliveries rose 11.01 percent. Ford also said that dealer orders for the new Ford Probe have topped 100,000.

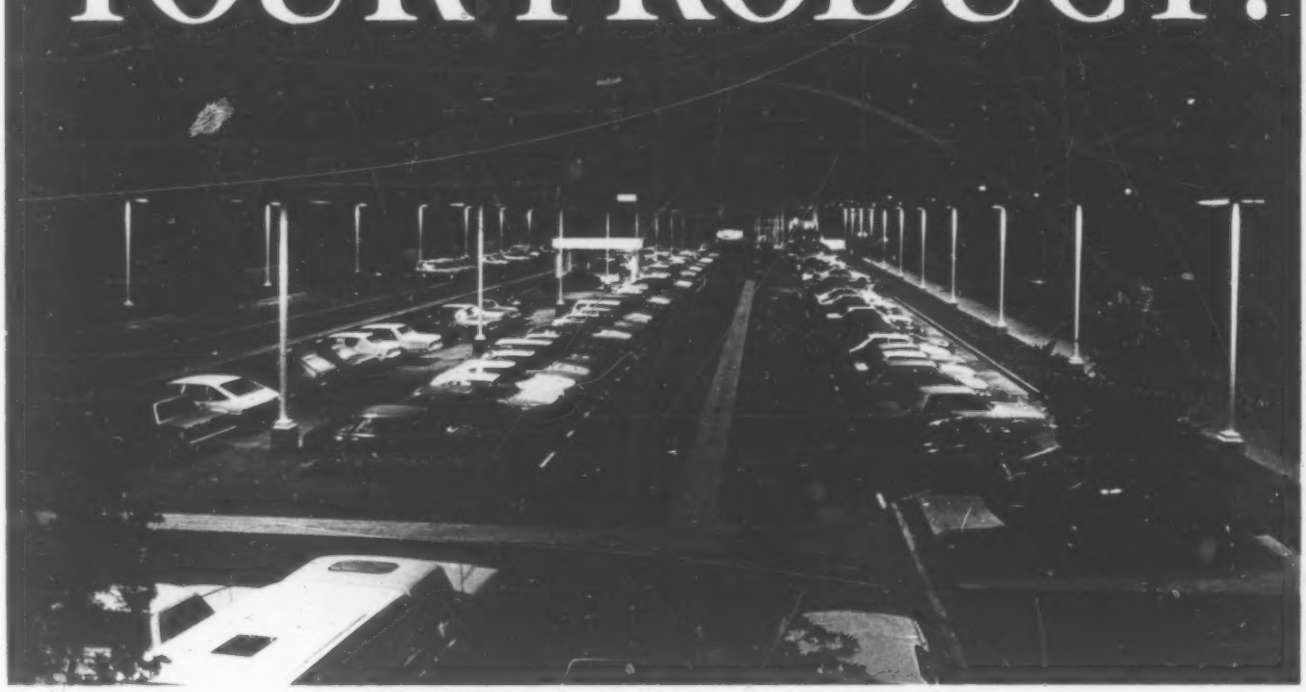
General Motors delivered 100,721 cars, 6.24 percent fewer than 107,427 in the same period a year ago. Pontiac sales continued to improve with a gain of 10.24 percent. Cadillac was off 26.91 percent. Chrysler Motors sold 27,779, down 6.38 percent from 29,673 last year, though Dodge sales rose 11 percent in the period.

Among the transplants, Toyota sold 1,052 cars, more than six times as many as the 160 sold in the first 10 days of June last year. Mazda sold 607 domestic cars; it was not marketing cars in the United States last year.

Honda's 10-day deliveries of U.S.-built cars balanced at 6,692, almost the same as last year's 6,712. Nissan's sales dropped 27.63 percent to 2,418 compared with 3,341. Volkswagen's sales declined 8.02 percent to 917 from 997 for the period last year.

SOME LIGHTING SYSTEMS JUST LIGHT UP YOUR LOT.

ELSCO SELLS YOUR PRODUCT!



Let's face facts. A well lit merchandise area is a must when it comes to selling automobiles. If it looks good it sells! That's why it's important to have Elsco's Auto King VI lighting on your lot.

Energy efficient and cost-effective, Auto King VI operational characteristics contribute to greater profitability with performance second to none.

Whether you're building a new location or retrofitting an existing one, you'll see why Auto King VI is setting the standards for quality, performance, efficiency, and design.

To learn more about the amazing Auto King VI call or write Elsco Lighting Products, Inc.

Manufacturing plants in Stockton, California; Mississauga, Canada; and Hong Kong. Offices in all principal cities.

GM salutes top-quality suppliers

DETROIT — Four General Motors suppliers have been honored as the first recipients of the corporation's new Targets for Excellence award for outstanding supplier performance.

The program, announced last September, recognizes GM suppliers who demonstrate ongoing superiority in five areas: management skills, product quality, cost, delivery and technology.

The winning suppliers were:

- Prince Corp. of Holland, Mich., with three facilities that supply GM with visors, consoles, armrests and electronic assemblies.
- GM Fisher Guide Division's Rimir plant in Metamoros, Mexico, which produces fascias for a variety of GM car lines.
- Shell Chemical's Marietta plant in Belpre, Ohio, a supplier of Kraton polymers, a family of thermoplastic elastomers used to produce conduit, shifter boots, electrical connections, shift levers and wire insulation.
- Milliken & Co., headquartered in Spartanburg, S.C., with five regional locations that supply GM with body cloth for vehicle seats, pre-cut laminated trim parts and speaker cover fabric.

GM began conducting supplier assessments last fall.

Kruse plans new Indiana quarters

Kruse International plans to build a $4 million auction facility near its home town of Auburn, Ind., for its Auburn-Cord-Duesenberg sale that is held annually over the Labor Day weekend.

"The sale has outgrown its current site on the grounds of the local high school," said Mike Butler, executive vice president. "We are expecting a crowd of more than 100,000 for the auction of approximately 1,700 antique and classic cars at this year's Labor Day sale."

He said construction of the 200,000-square-foot auction facility on the 250-acre site will begin this fall with completion to coincide with the 1989 Labor Day sale.

Kruse sold a record of 1,250 cars at last year's event and drew about 100,000 spectators and buyers.

Plans call for 20 entrance gates and a parking lot large enough to park 10,500 vehicles. Unlike dealer auctions that have upwards of 20 lanes, Kruse's facility will consist of one or two lanes.

"We want to remain flexible," said Butler. "This is not planned as a dealer auction so far. Antique-car auctions are a sort of community event, so we don't work at the same pace as dealer auctions where 10 lanes are going all at once."

Instead of more lanes, the company's strategy is to schedule more sales, lumping cars like 1950s convertibles, specialty vehicles and others into groups.

Kruse International, a privately held company, had sales of $100 million in 1987 and holds about 40 auctions a year, said Butler. The company sold about 10,000 vehicles last year. It has 40 full-time employees at its Auburn headquarters and another 50 in offices around the country.

Butler said the company has cornered about 75 percent of the antique-car auction market since holding its first antique-car auction 18 years ago.

AUCTION BRIEFS

CHARLES THOMAS

Tanks for the fish

A 1961 Cadillac DeVille complete with a 17-gallon freshwater fish tank built into the rear window will be auctioned at the Newport Beach Collector Car Auction July 9-10 in Newport, Calif.

Three longtime California new-car auto dealers will put their combined collections of vintage cars up for sale at the auction, which is hosted by Rick Cole Auctions.

Bob Estes, a 60-year dealer in Beverly Hills, will put up 23 vintage cars. A majority of them are Lincolns and Thunderbirds.

Jack Wall, owner of Jack Wall Chevrolet, Glendale, Calif., will consign 50 cars — 20 of them rare Corvettes including a 1955 roadster. Larue Thomas, Larue Thomas Chevrolet, Los Angeles, has consigned 23 vintage Cadillacs.

California will review emissions break

SACRAMENTO, Calif. — The California Air Resources Board will reconsider a program that allows manufacturers to sell a limited number of vehicles that do not meet state emission requirements.

The program allows carmakers to sell 49-state cars in California by drawing on a bank of credits they have built up in prior years by selling cars that were cleaner than the state's standards.

The purpose of the program is to give California buyers access to the few powertrain familiesthat do not meet the state's tighter emission regulations.

However, the board's staff now believes that some manufacturers have been abusing the program by selling cars that either could meet California standards or avoiding the state's stricter recall requirements. The board will reconsider its program at its July 14 meeting.

On another front, the federal EPA has revised its rules covering non-conformance penalties for heavy-duty vehicles attempting to meet federal emission standards but titled, registered or used principally in California.

EPA will waive collection of a penalty so long as the identical penalty is paid in California. However, EPA reserves the right to collect any penalties that have been waived if the manufacturer fails to pay the quarterly fine to California when due or if the amount paid to California is less than would have been due to EPA.

PRODUCTION

Car output slips a bit; trucks rise

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production of 167,724 dipped 1.23 percent below the prior week's 169,807 but increased 9.80 percent over the year-ago week's 152,750.

The 1987 week's output was held back by downtime at several plants for model changeover.

So far this year, 3,475,808 cars have been assembled, 6.50 percent below the 3,717,565 built last year at this point.

Companies split last week's scheduled output as follows: General Motors, 47.98 percent; Ford Motor Co., 25.11 percent; Chrysler Motors, 16.07 percent; Honda of America Manufacturing Inc., 4.58 percent; New United Motor Manufacturing Inc., 1.94 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.57 percent; Nissan Motor Manufacturing Co. U.S.A., 1.56 percent; and Volkswagen of America, 1.19 percent.

Truck output was estimated at 87,760 last week, 1.35 percent more than the previous week's 86,420 and 12.82 percent more than the year-ago week's 77,791.

Chrysler closed its Newark, Del., plant today for a 16-week model changeover to the new Plymouth Acclaim and Dodge Spirit four-door sedans. The shutdown affects about 1,600 workers.

On Aug. 1, Chrysler will lay off 1,200 workers at its Kenosha, Wis., plant for four weeks because of a material shortage caused by a change in production plans.

A company spokesman said Dodge Omni and Plymouth Horizon output at Kenosha had been scheduled to end in July but now is slated to continue until the end of 1988. The change led to shortages of steel and other materials.

GM began building 1989 Buick Skyhawks at its Janesville, Wis., plant last week. Production of the Skyhawk was temporarily halted when GM closed its Lordstown, Ohio, plant in April. GM scheduled output of two units last week.

GM slated overtime last Saturday at its Lordstown, Ohio, Flint, Mich., Pontiac, Mich., Shreveport, La., and Moraine, Ohio, plants.

All Ford plants except the Louisville, Ky., facility are slated for daily overtime this week.

Car build falls 9% in Canada

Canadian auto production was scheduled at 24,646 cars last week, 9.36 percent below the previous week's 27,192 but 34.69 percent more than last year's 18,298.

So far this year, 579,350 cars have been assembled, 41.84 percent more than the 402,097 built last year at this point.

Estimated truck output of 20,555 units last week increased 2.31 percent over the prior week's 20,091 and rose 13.03 percent over the year-ago week's 18,186.

Year-to-date, 459,705 trucks have been completed, 15.63 percent more than the 397,565 assembled last year at this time.

As reported earlier, Chrysler Motors' Bramalea, Ontario, plant is idle until June 27 for line adjustments.

Ford OKs dealer purchase by public firm

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The closely watched proposed joint venture between a publicly held British firm and a group of California dealerships cleared a major hurdle, winning the approval of Ford Motor Co. and making public ownership of a domestic franchise a reality for the first time.

The joint venture between Campbell Automotive Group Inc. and Lex Service PLC was also approved by Mitsubishi Motor Sales of America Inc. last week. The approvals will permit Campbell, which owns seven dealerships in Orange County, Calif., to sell a 50 percent interest for $13.5 million to Lex, the largest retailer of cars and trucks in the United Kingdom.

Still other approvals are needed from several of the seven makes sold by Campbell, but industry eyes were on the Ford approval since that represented the largest franchise held by the chain. The factory had frowned on public ownership of its dealerships.

In addition to Ford and Mitsubishi, other franchises in the Campbell group include Nissan, Mazda, Audi, Porsche and Volkswagen. No rejections were anticipated.

While public ownership has been opposed by the manufacturers, dealers are now exploring the option as a source of capital for costly expansion.

"Obviously, we are very pleased that Ford acted quickly and rationally in approving the agreement," said John Campbell, president of Campbell Automotive. "We are looking forward to showing that our joint venture can do business at a level of customer satisfaction that Ford and our customers ex-

Big-car rise due in Japan with tax cut

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japan's seemingly innocuous proposal to change its auto taxation system — far from dull-sounding internal policy-making — could have far-reaching impact around the globe, allowing Japanese manufacturers to boost big-car production while cutting costs even more.

The tax-law changes could also go a long way toward opening this market to outsiders, notably American and European manufacturers who traditionally produce bigger cars.

But the big gains from a change in the Japanese tax law would benefit the larger Japanese companies — with Toyota leading the pack — who could further their so-called "product rationalization" programs and gain greater economies of scale.

By opening the Japanese market for larger cars and larger engines through lower taxes, Japanese manufacturers would be freed from the design constraints dictated by those laws that created a two-tier product strategy — large cars for export, smaller versions for domestic consumption.

And by selling more big cars at home, the makers will be able to drive their production costs downward and boost the profits they bring in.

The change also takes on added significance in that Japan, as a result of the run-up in the yen, has become a high-wage producer relative to the United States. The manufacturers will need those larger cars to absorb the differential and remain competitive on a worldwide basis.

While transplants may build trucks, economy and family cars, and low-wage newly industrialized countries may flood entry-level markets, the Japanese will be able to save jobs by building the next wave of luxury cars in Japan.

In addition, a strong yen and exploding real estate values in Japan have created a luxury-car boom in the world's third largest car market — an opportunity that could prove to be a gold mine for the domestic makers.

Saturn Corp. picks plastic for its car body

Reatta is a pleasant dilemma for Buick

Plastic Saturn, Reatta rage

DuPont's Bexloy called body choice

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — When Saturn Job One moves down its spanking-new Spring Hill, Tenn., assembly line in the summer of 1990, it will be wearing a skin of plastic, not sheet steel.

Industry suppliers at a convention here say a cage-like steel structure will support the fiberglass-reinforced plastic in much the same way the steel space frame supports the plastic outer panels of the Pontiac Fiero.

When the death knell for that car was rung, there was speculation that the space frame construction concept would be abandoned for automobiles. The reports of Saturn's injection-molded plastic body, therefore, are surprising many in the industry.

At Saturn headquarters in Troy, Mich., a spokesman said, "We are not talking about

New Buick sold out, sidesteps Allante pitfall

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

LANSING, Mich. — As Cadillac struggles to sell its two-seat luxury sports car, Buick suffers from a different dilemma: How to cope with increasing demand for its similar specialty vehicle, Reatta.

Buick's is a dilemma each General Motors division — and every automaker — dreams about.

For the 1988 model year, all 3,000 copies of the $25,000 Reatta scheduled to be built at the 650,000-square-foot Reatta Craft Centre in East Lansing, Mich., are spoken for. Cadillac, meanwhile, has restricted Allante production to one-third of its capacity and has taken the car out of production for 2½ months.

Six months after Reatta was introduced to the public, the market is being generous to

GM's Johnson may quit today

By Charles M. Thomas and Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors is expected to announce today that Elmer W. Johnson, executive vice president of the operating staff, will leave the company and return to his law practice with the Chicago-based firm of Kirkland & Ellis.

Elmer Johnson

He joined GM in 1983. Speculation that Johnson — one of four contenders to replace Roger B. Smith as GM chairman when he retires in 1990 — may depart began surfacing last week on the heels of an article in American Lawyer magazine.

The article suggests that Johnson's counter-culture tendencies were not easily tolerated within the strict corporate confines of GM.

James Gustafson, a professor at Emory University in Atlanta, Ga., and longtime friend, said he spoke to Johnson three weeks ago and was told by him that resigning was a possibility.

"He didn't talk much about it but he was obviously frustrated by the bureaucracy," said Gustafson. "He mentioned reshaping his whole situation there."

He added that if Johnson has resigned, it would

Training for the top: The Ford School

Gilmour tells how program pursues goal of excellence

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Who is most likely to succeed Donald E. Petersen as chairman of Ford Motor Co.?

Who is in line to become the next president of Ford of Europe, or the next executive vice president in charge of North American automotive operations?

What are the probable next steps up the corporate ladder for cousins Edsel B. Ford II and William Clay Ford Jr.?

The answers to those questions, along with other juicy morsels of management information, lie behind the locked doors of a top-secret room on the 11th floor of Ford world headquarters here.

Its official name is the Management Development Conference Room. Unofficially, it's dubbed the War Room.

Says Allan D. Gilmour, executive vice president in charge of international automotive operations, "It's

Some good ones got away to lead other big companies

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — As a group, they go by some motley names — "retreads," "Fordos," "WIWAFs," "dropout kids" — but the people who have left jobs at Ford Motor Co. over the years make up an impressive roster of executive talent.

Ford, more than any other domestic automaker, has carried a reputation for supplying executives to other companies. And its pipeline has gone well beyond Chrysler Corp., where its most famous alumnus — Lee Iacocca — has transplanted an entire team of Ford men into the front office.

Between the early 1950s and the early 1980s, Ford lost 16 officers who went directly to the presidency of other companies, according to Eugene Jennings, a business professor at Michigan State University. Jennings has been charting auto industry "dropouts" for more than three decades.

Daimler-Benz, China sign heavy-truck agreement

By Stephen Vines
STAFF CORRESPONDENT

BEIJING, China — West Germany's Daimler-Benz AG has signed the largest agreement to date for the production of heavy trucks in China.

The contract is for technology transfer and assistance along with parts supply for a truck-making venture in China's Inner Mongolia Autonomous Region.

Announcing the agreement at the start of the 1988 China Automotive Exhibition last week, Mercedes-Benz China President Michael Bassermann said the goal was to build 6,000 trucks per year ranging in size from 16 tons to over 40 tons.

The German company's partner is North Industrial Corp. (Norinco) of Beijing, one of China's largest industrial conglomerates.

Bassermann told Automotive News the agreement does not involve any direct investment by his company because Norinco is well funded and does not require additional capital.

He declined to estimate the value of the contract but said the technical cooperation aspects were being provided at cost while complete knockdown kits would be supplied on the "usual commercial basis."

Bassermann said the amount of money involved "could be a lot, or it could be a little, the idea at the moment is to get the factory running."

The current Norinco factory in Baotou, which will house the new program, makes heavy-duty off-road vehicles. Bassermann said it will be possible to start production in the first half of 1990. He stressed that there would be a fairly slow start-up, aiming for an ambitious 95 percent local content once it reaches maturity.

Negotiations for the contract started three years ago.

News of the Daimler-Benz contract comes after what appears to be the failure of the only other foreign heavy-truck-making venture, involving the Austrian company Steyr. There are also few signs of progress on the technology transfer agreement with Fiat's truck subsidiary, Iveco, for the production of medium-range trucks.

Japan's Isuzu, however, is still doing steady business at the lighter end of the market with 1.5- and 1.7-ton truck assembly at two plants.

Meanwhile, Daimler-Benz has suffered a minor setback in its attempts to make a greater impact on China's car market — losing out to Volkswagen in a bid to produce mid- and high-grade automobiles at the First Automotive Works factory.

Damiler-Benz had hoped to expand upon its contract with First Automotive Works to supply CKDs for the assembly of 1,000 limousines.

The agreement with Volkswagen is for technology and equipment transfer for the production of a new car based on the Audi 100. The Chinese optimistically forecast that they will produce 30,000 annually within three years, with production eventually rising to 150,000 per year in 1995.

Volkswagen is highly regarded in China due to the success of the Shanghai Volkswagen joint venture, which Chinese officials often cite as a model for foreign cooperation.

Report cites global might of the Big 3

Some European, Asian firms at risk

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The relatively good health of the U.S. Big 3 could mean bad times ahead for the global auto industry.

That is the prediction of a report by the International Labor Organization.

Faced with growing worldwide overcapacity in automobile manufacturing and flat or falling demand for cars in most global markets, one or two of the smaller European or Japanese auto companies may face extinction in the 1990s, the report says.

The reason for that somewhat surprising prediction is the unexpected resilience the Big 3 have shown in the United States.

In recent years, General Motors has lost market share, but Ford Motor Co. and Chrysler Motors have increased sales. Now, European and Asian automakers should worry whether the capacity they built to take advantage of a drop in Big 3 sales was a mistake, the report warns.

The study, "International Structural Change in the Automotive Industry: A North-South Perspective," also cautions, "If the United States does make a comeback in the major exporters' league, the market situation would be truly dramatic."

The report estimates that worldwide overcapacity was 3.3 million cars in 1985. It does not provide a more recent number, but does list the considerable new U.S. capacity built or planned since 1985. The report observes that global automotive consumption seems to be falling from its 1986 high of 33.2 million units.

The study, written by Peter O'Brien and printed in Geneva by the International Labor Organization, estimates Europe will be hardest hit by overcapacity with as much as three-quarters of the world's excess automotive output. Labor cutbacks in France, Italy and the United Kingdom can be expected to displace between 5,000 and 15,000 workers, the report says.

In the 1990s, Europe will have to find a way to cut back production, and the United States and Japan will have to jointly scale back their output, the report advises.

Probe lands in Japan
The first shipment of U.S.-built Ford Probes was greeted in Japan last week with a ribbon-cutting ceremony, brass band and other fanfare. Mazda Motor Corp. will begin selling the car in September.

NHTSA won't end Audi probe

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Despite pleas from Audi dealers to end its probe of alleged sudden acceleration in Audi 5000 models, NHTSA said it will continue its two-year-old investigation.

NHTSA Administrator Diane Steed on Friday sent a response declining to end the inquiry.

"It would be premature to close the investigation pending completion of the (recall) audit," she wrote.

Lee G. Seidman, a Cleveland Audi dealer and chairman of the American International Automobile Dealers Association, and Robert McElwaine, president of the dealer group, met last week with NHTSA officials to present a letter signed by 10 Audi dealers. The dealers asked that the agency end is defect investigation.

An Audi spokesman said the company did not request the meeting.

The letter demanded an "immediate end" to the probe because of the appellate court's ruling in the General Motors X-car case that said NHTSA failed to prove the car had a safety-related defect. The court also held that customer complaints alone are not evidence a defect exists.

Meanwhile, Rep. George J. Hochbrueckner, D-N.Y., and the Center for Auto Safety have started surveying members of the Audi Victim's Network and persons who have complained to NHTSA and Audi about the 5000 model. The effort was launched to keep pressure on the safety agency over the sudden acceleration issue.

Also last week, Volkswagen of America reached an out-of-court settlement in a sudden-acceleration case it lost in White Plains, N.Y., that subsequently was thrown out of court.

Judge Matthew F. Coppola had ordered a new trial because the jury had seen newspaper and television accounts and heard inadvertent references to post-manufacturing changes in the Audi 5000 contrary to court instructions.

The jury had ruled in favor of Marie Rustin, who said an earlier back injury was aggravated when her car was struck by an Audi 5000 in a drive-in bank line.

The driver of the Audi, Sally Mears, claimed her car experienced sudden acceleration. She had failed to bring the car in for two factory recalls, one for adjusting pedal height and the other to install an automatic shift lock.

Automotive News Staff Reporter Helen Kahn contributed to this report.

$4,000 rebate attacked in lawsuit against Audi

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

A $76 million suit filed in a New York court charges Volkswagen of America and Audi of America with false and deceptive practices in a current sales promotion.

The program offers former and current owners a $4,000 rebate on leftover 1988 Audi 5000s and gives salesmen $250 bonuses for selling Audi 80/90 models.

The suit has two plaintiffs, one in New York and another in Massachusetts, but seeks to represent more than 400,000 persons who received the rebate offer.

The action coincides with reports that the Federal Trade Commission is considering "bait and switch" charges against the company on the rebate offer. The commission will neither confirm nor deny that.

However, various state attorneys general have shown interest in pursuing possible "bait and switch" cases.

The New York suit charges that Audi's "Private Purchase Plan II" offering a $4,000 rebate on the purchase of 1988 Audi 5000s is "deceptive" since Audi knows it does not have enough 1988 cars to "meet reasonably anticipated response." Rather, the suit charges, the intent was to "jumpstart" sales. It says the same is true for bonuses offered to dealers and salesmen.

A spokesmen for Audi of America said the law firm simply does not understand how the car business works, especially at the end of the model year when rebates and incentives are common because stock is limited. He said the company estimates it takes 243,000 potential customers to generate 5,500 sales.

Honda official belittles work with British

By Edward Peabody
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Honda Motor Co. Ltd. has learned little technologically from Austin Rover Group Ltd., its British partner in automaking.

In fact, dealing with the British has been a frustrating experience — "much talk and negotiation with few conclusions reached," according to Nobuhiko Kawamoto, president of Honda R&D Co. Ltd., who spoke last week following the EniChem Detroit Grand Prix.

Kawamoto touched on several other subjects during a press briefing: Honda's plans to design and manufacture cars in the United States exclusively for North America; its commitment to build subcompact cars and eschew trucks; a new technical direction, which he dubbed "interfusion;" and Honda's research and development philosophies.

Honda's affair with Austin Rover Group began nearly 10 years ago. In 1981, they agreed to develop and build an upscale car — the Acura Legend/Rover 800. It reached the U.S. market as the Sterling in 1986.

Despite frustration felt by the Japanese when dealing with the British, Honda and Austin Rover eventually settled their differences because they had a product to get out, Kawamoto said. But when asked if his experience with the British had yielded Honda little technologically but much in terms of cultural frustration, Kawamoto thought for a moment, then simply replied, "Yes."

Kawamoto's remarks were "a little surprising" to Austin Rover officials. "We believe the relationship to be mutually beneficial — not one-way," said Brian Johns, Austin Rover public affairs director.

Johns noted that at the recent launch of the newest Honda-Rover joint-venture product, the Concerto, in Japan, Honda Motor Co. officials were upbeat about their relationship with Austin Rover.

He added that one of the things Honda has learned from Austin Rover is how to package car interiors.

Johns said Honda developed the powertrains and associated electronics for Legend and Sterling, and Austin Rover performed computer-aided body engineering for both companies. He added that Concerto will follow in the path of Legend and Sterling.

However, the agreement between Honda and Austin Rover to co-produce Concerto is not expected to follow the Legend/Sterling pact down the tubes. Honda and Austin Rover announced earlier this year that they will cease joint production of the luxury models this fall because of quality problems with the early British-built Legends and lower-than-expected production volumes. Honda will continue to build the Legend in Japan and Austin Rover will build Sterling in England.

On other topics, Kawamoto said Honda plans to produce cars in the United States exclusively for North America, but that is "in the very far future."

Kawamoto also spoke of Honda R&D's new technical direction, which he called "interfusion." He said Honda is not in a "fashion competition" with those that pursue with abandon the latest trends, such as turbocharging and multiple camshafts.

Rather, Honda is stressing efficiency. No matter how high an automobile's technology, it should benefit the driver, Kawamoto said.

Survey knocks some marques, lauds Cadillac

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The nation's best-known automotive nameplates are not necessarily the brands that carry the best image, according to a national consumer survey.

Take names such as Pontiac, Dodge and Volkswagen. The three are among the best-known corporate brands in the United States. But when consumers were asked how they felt about those nameplates, the three ranked low in esteem.

Landor Associates, a New York-based image consulting firm, recently asked 1,000 consumers in 12 U.S. markets about awareness and perceptions of 672 corporate brands — from cars, to soap. Landor, which has designed the Saturn Corp. logo and worked on projects for Mercedes-Benz, said it equally weighed the consumer group in terms of income level and gender.

A brand's "Share of Mind Rank" — or the level of consumer awareness about a given brand — was combined with its "Esteem Rank" — a measurement of how good its image is with consumers — to give an overall "Brand Power Rank."

Coca-Cola and Campbell's Soup were the top two brands in Brand Power Rank, followed by Pepsi Cola and communications giant, ATT.

Cadillac had the highest Brand Power Rank among the 27 automotive nameplates included in the Landor survey, while Mitsubishi scored the lowest. Cadillac ranked 26th and Mitsubishi ranked 299th in brand power among 672 corporate brands.

Stewart Owen, director of research for Landor Associates, attributed Cadillac's high score to the perception of Cadillac as "a symbol of the best."

Cadillac ranked 81st in terms of esteem and 16th in share of mind (awareness). Other automotive brands ranked higher than Cadillac in esteem but their Brand Power Ranks were diminished by lower awareness levels.

Owen noted that the domestic makers generally have very high awareness levels but do not get comparatively high esteem levels.

Ayrton Senna's McLaren-Honda won the June 19 Detroit Grand Prix with an average speed of 82.2 mph

Ford races alone — for now

But other domestics may join for promo, engineering

By Dan Morrison, Wes Raynal and Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Despite grumbling from drivers about track conditions, auto manufacturers and suppliers involved with the seventh annual Detroit Grand Prix said they were confident the event will produce promotional and technical benefits.

EniChem, the Italian petrochemical company, reported "very positive" results from its sponsorship.

Honda's involvement continued on the racetrack — powering race winner Ayrton Senna.

A Honda Formula 1 spokesman said the company's young engineers get training in Formula 1.

"Of course, the advertising aspects of F1 are very beneficial to us as well, although I'm really not sure how much in the United States, compared to Europe and other parts of the world," he added. Honda funnels its F1 success to its advertisements for Acura.

Ford was the only domestic automaker involved in this year's Formula 1 race. Ford of Europe Engineering and Ford Electronics helped develop Thierry Boutsen's third-place Benetton-Ford car that ran with a DFR 3.5-liter normally aspirated engine.

"Since the rules have changed to phase out turbos in 1989, we're concentrating on the normally aspirated engine," said Ford Director of Special Vehicle Operations Michael Kranefuss.

"Ford Europe is planning dealer promotions next year, but a lot is dependant on how the Benetton car does next year," he said. Ford was clearly the most active promoter of the event this year, sponsoring parties and arranging media interviews.

Formula 1 also allows Ford to experiment with systems that can later be used in production cars.

Ford Electronics has developed an experimental electronic engine management system for the Benetton car. Normally under the dash in production vehicles, the Benneton car's version, called EECIV, is mounted next to the engine, where heat and dirt can get to it.

"The intention is to develop a packaging system that can withstand race conditions. If successful, it may be used in future production models," a spokesman said.

Another Ford spokesman said rule change to prohibit turbochargers in 1989 will allow more domestic makers and suppliers to become involved with Formula 1 for much less money.

Chrysler will make a go at Formula 1 in 1989 with a new V-12 Lamborghini engine in the Larrousse-Calmels car.

Asked if General Motors is considering a Formula 1 powerplant effort, Chevrolet Chief Engineer Fred Schaafsma said GM is always looking at motorsports but, "I can't confirm that we are looking at Formula 1. It would be intriguing as an engineering project. Formula 1 really is big league."

Before GM could get involved in Grand Prix racing, the company would first have to determine which products would be best to promote in the mainly European series and which name would be cast on the engine.

Three-day attendance was down from 246,000 in 1987 to 236,340 this year. CBS estimated 3.36 million U.S. viewers watched the Formula 1 race this year, 738,000 more than in 1987. Commercial sponsorship was consistent with last year, it said.

Is Chrysler about to buy DeTomaso?

Firms deny deal after stock flurry

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Speculation that Chrysler Corp. might buy DeTomaso Industries touched off last week's heavy trading and higher prices for the common stock of the New Jersey-based DeTomaso Industries, which has a 66 percent indirect equity in Maserati S.p.A.

DeTomaso Industries' common stock, which had been trading in the range of $7 a share for several months, climbed to $14 a share between June 17 and June 23, according to a stock analyst.

Traded volumes, which typically total 1,000 shares daily, reached 39,000 shares last Wednesday and 77,400 shares Thursday, according to Frank J. Lazar, vice president of Financial American Securities, Cleveland. By early afternoon Friday, 16,000 shares had been traded in a range of $10.75 to $11.50 per share.

Lazar has traded DeTomaso Industries for 10 years and followed the company for 14 years. He said Financial American controls one-third of the floating shares — shares owned by those other than Alejandro DeTomaso's family and close associates.

Lazar said that rumors of a possible purchase of DeTomaso Industries by Chrysler were fueling the heavy trading.

Both companies discounted a possible buyout. DeTomaso Industries last Thursday afternoon issued a statement stating that rumors that Chrysler would pay $40 to $50 a share in an August buyout were "absurd."

The DeTomaso Industries statement curbed the trading activity, and the stock closed at $11 per share Thursday, down from a high of $14 earlier in the day, according to Lazar.

Last Thursday, DeTomaso Industries General Counsel Howard Chase said he had spoken with Chrysler officials about the rumored August bid and had been told they were unaware of any such action.

Chase said a takeover by Chrysler could only be completed if DeTomaso Industries Chairman and President Alejandro DeTo-

'M' is a theme line for World Congress

DETROIT — Megadealers, motorsports, media and markets will be major subjects of discussion during the 13th annual Automotive News World Congress at the Westin Hotel, July 17-20.

Among faculty members tackling those topics will be: J.R. "Rick" Hendrick III, owner of Hendrick Management Corp. and Hendrick Motorsports, Charlotte, N.C.; Marian G. Confer, director of marketing services, Family Circle magazine, New York; Stuart J. Hamilton, manager of sales operations, Volkswagen United States Inc., Troy, Mich.; Leon D. Rosen, national marketing services manager, American Isuzu Motors Inc., Whittier, Calif.; and Albert T. Warner, director, motor vehicle division, office of automotive industry affairs, U.S. Department of Commerce, Washington.

Hendrick Management Corp. controls 20 dealerships in seven states. Franchises include Chevrolet, Honda, Acura, Toyota, BMW, Mercedes-Benz, Volkswagen, Volvo, Porsche, Audi, Sterling, Suzuki, Range Rover, Subaru and Kenworth. Hendrick will address the World Congress at 10:30 a.m. Monday, July 18.

Confer joined Family Circle in 1985 as research director, following five years in that post at The New Yorker. She will speak at 2:50 p.m. Monday, July 18.

Hamilton became manager of sales operations at VW U.S. this month. Previously, he was manager of market representation. Hamilton's talk is scheduled for 2 p.m. Tuesday, July 19.

Prior to joining American Isuzu eight years ago, Rosen was with Samsonite and Chinook International. Rosen's will speak at 2 p.m. Tuesday, July 19.

Warner's division in Washington is responsible for analyzing all developments within U.S. and foreign automotive industries and recommending appropriate policy options affecting the U.S. auto industry. Warner will speak at 11:15 a.m. Tuesday, July 19.

The World Congress will begin with General Motors President Robert C. Stempel's State of the Industry keynote address at 7:45 p.m. Sunday, July 17.

For further information, write Automotive News World Congress, 1400 Woodbridge, Detroit, MI 48207 or telephone 313-446-6047. The cable address is TWX 810-221-5122 AUTNEW DET.

Kahn retires in Washington

WASHINGTON — Helen Kahn will retire June 30 after 27 years in the Automotive News Washington Bureau. She has been Washington bureau chief since 1964.

As a reporter, Kahn has long been adept at spotting Washington currents that would have a major effect on the auto industry. She was the first to recognize the impact of Ralph Nader, and she tabbed the industry-government safety confrontation as a prime story long before it became big news throughout the country.

In retirement, Kahn will continue to report for Automotive News on a part-time basis, covering the EPA and legal activities related to the industry — beats she pioneered.

Heated-windshield option will melt ice on '89 Cadillacs

ANDERSON, Ind. — General Motors' Delco Remy Division soon will begin producing a heated windshield it says will get rid of ice with the flip of a switch and will be standard on almost all cars in 10 years.

The ElectriClear windshield will melt one-tenth of an inch of ice within two minutes without any help from wipers, its designers said. Unlike the conventional electric-grid rear defogger, the ElectriClear has no lines and is just slightly tinted. It clears ice through a computerized heating system controlled by the driver.

Delco Remy, in a joint venture with Libbey Owens-Ford of Toledo, Ohio, will begin production of the ElectriClear in midsummer. It will be an option on 1989 Cadillac DeVille and Fleetwood models. Production will be 40,000 units annually at first and could rise to 3 million, Delco Remy said.

Ford Motor Co. introduced heated windshields on its 1986 Taurus and Sable and offers it on the 1988 Continental. The Ford windshield, called Insta-Clear, is a $250 option.

GM has not said how much the ElectriClear windshield will cost.

"Within the next 10 years, we're looking for this to be on 90 percent of all vehicles," said Neil Cráteau, director of new product marketing for Libbey-Owens-Ford. "We think in the next 10 years the heated windshield will be used as much as the rear-window defogger."

Libbey-Owens-Ford is not affiliated with Ford Motor Co. It developed the ElectriClear windshield in cooperation with Delco Remy. In the ElectriClear joint venture, Libbey-Owens-Ford will provide the windshield and Delco Remy will manufacture ElectriClear's power and computer systems.

ElectriClear production will require expansion of Delco Remy's alternator line and the creation of lines for the product's power module and electronic control system, a Delco Remy spokesman said. However, he said initial production will not require additional workers at the Delco Remy plant, which now employs about 7,000.

— The Associated Press

4X4 VANS

4-WHEEL DRIVE CONVERSIONS FOR FORD, DODGE, CHEVY, GMC and MINI-VANS

For tough, off-road use and severe weather, nothing beats Pathfinder four-wheel drive vans. Our Ohio plant produces more 4 x 4 conversions than any other. Pathfinder is known for better engineering, quality installations, and longer life. Ship-Thru available for authorized dealers.

For information call or write: Pathfinder, P.O. Box 1272, Industry, CA 91749 (800) 423-9491/(818) 961-5471

PATHFINDER — THE 4x4 CONVERSION THAT PROTECTS YOUR FACTORY WARRANTY

Pathfinder EQUIPMENT CO. INC

THE LEADING SUPPLIER OF FOUR-WHEEL DRIVE VANS

STUDY

FROM PAGE 2

The study also theorizes that the number of automobile manufacturing and exporting nations will hold fairly constant until the world's overcapacity is addressed. The reason new countries will be unable to join the automobile manufacturing club is because new production is dependent on investment from automobile manufacturers in Europe, Japan and the United States, and they already are worried about overcapacity.

The study reports that during the past two decades global car production has increased 38 percent. Between 1980 and 1986, output in Japan and Brazil increased 240 percent; output in Spain increased 300 percent; and production in South Korea was up 500 percent.

In contrast, production fell 40 percent in the United Kingdom; remained fairly static in Italy; and increased slightly in the United States, West Germany and France. Global auto sales went up 35 percent during that period.

Between 1981 and 1985, the 12 leading companies decreased their combined output by an estimated 6.1 million vehicles, mostly by slowing down the rate of assembly, the report says.

In 1985, Renault and Peugeot-Citroen used their capacity at 69 percent and 78 percent, respectively. The figures were 80 percent for Fiat, 87 percent for Honda, 94 percent for Volkswagen-Audi and 98 percent for GM. Capacity utilization for GM and Volkswagen-Audi has declined since then.

The study points to other trends, including:

- The automobile industry will no longer be a major source of future employment. There will be fewer — but better jobs — with the emphasis on technical and engineering staffs.
- Rapid change in production and organization systems will take the competitive edge off low-cost labor. The success stories of Brazil, Mexico and South Korea will have little chance of being repeated elsewhere.
- Overall demand is unlikely to expand substantially, due mostly to slow growth in the world economy. Steady demand will mean fierce competition and protectionist pressures.
- Tight markets could increase the frequency of direct investment and joint ventures in the automobile industry.

The report said automakers must be judicious in their choice of production sites and products, flexible in their reaction to market changes and adept at managing engineering and supply systems linked to component suppliers if they are to prosper in the 1990s.

U.S. AUTO CAPACITY

Company	1985 capacity (million units)	1990 Expected capacity[a] (million units)
General Motors	5.00	5.40
Ford	1.80	1.80
Chrysler	1.35	1.65
AMC	0.13	0.13
Volkswagen	0.11	0.11
Honda	0.15	0.36
Nissan	0.07	0.24
NUMMI	0.08	0.25
Mitsubishi/ Chrysler	—	0.24
Toyota	—	0.25
Fuji/Isuzu	—	0.12
Total capacity	8.69	10.59
of which (%) ..		
United States firms	95.2	82.9
Foreign firms[b]	4.8	17.1
United States auto sales	10.70	10.80
Imports	2.71	3.40[c]
Domestic sales	7.99	7.40
Excess capacity	0.71	3.19[c]
Capacity utilization (%)	92.0	69.9[c]

[a]—Figures in this column are on best estimates available at the time of writing. Changes could, of course, occur either because additional foreign firms decide to construct plants which come on stream quickly (e.g. Hyundai) an American firm is closed down (e.g. AMC), or present calculations of the date at which plants will reach full capacity working turn out to be too optimistic.

[b]—NUMMI, a 50/50 joint venture between Toyota and GM, is treated as a foreign firm for purposes of this calculation.

[c]—This figure assumes that foreign-based firms realize their current production and marketing plans and that no further protective barriers are imposed.

[d]—Assuming that there are no CBU exports from the United States. If there are, excess capacity would fall and capacity utilization rates rise.

LaForza selected as new name for Fissori sport-utility in U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

HAYWARD, Calif. — Fissori North America is changing its name but still expects to have a Range Rover-class vehicle on sale by October.

The new corporation is called LaForza Automobiles Inc., after buying out Italian coachbuilder Rayton Fissore's interest in the luxury sport-utility vehicle, said Robert P. Oliver, chairman and chief operating officer.

LaForza also will be the name of the vehicle, which originally was to be on sale late this summer as the Fissori (the U.S. spelling was changed as a prononciation guide).

"It would have been wrong to call it a Fissori because it won't be their vehicle any more anyhow," Oliver said. "We thought we might as well just bite the bullet on the name change before we had dealers and vehicles on the road."

Oliver said the manufacturing process will remain essentially the same even without Rayton Fissore. The LaForza chassis and body will be still be sourced in Italy and shipped to Cars & Concepts in Brighton, Mich., where a 5-liter Ford V-8 engine and a shift-on-the-fly, four-wheel-drive transfer case and Ford automatic overdrive transmission will be added.

LaForza is still projecting sales of 2,000 units the first 12 months, starting with about 30 dealers this summer and 60 by year end. The vehicle will have a retail price of $38,850.

While the volume and price are similar to Range Rover, Oliver said LaForza has more potential than the British 4wd luxury import, despite starting with a unknown name. LaForza means "the strength" in Italian.

"It's a larger vehicle than the Range Rover and we'll be aiming at a different market, selling it as more of a touring vehicle," Oliver said.

LaForza also has committed itself to greater volume, based on favorable marketing studies and dealer response, plus the greater production capability of its Italian supplier, Oliver said. The company garnered more than 300 dealer inquiries at the National Automobile Dealers Association convention last February in San Francisco, he said.

Rayton Fissore, which introduced a diesel version of the vehicle several years ago, called Magnum in Europe, was bought out by LaForza's British-based parent company, Automotive Industries. Automotive Industries also is the majority stockholder of an Italian manufacturing liaison office in Turin.

Boats called good line for auto dealers

By John A. Russell
SPECIAL CORRESPONDENT

NEW YORK — A major boat manufacturer and a marketing company in South Carolina have joined forces to expand a boat dealer network utilizing auto dealers.

The marketing company, North American International Marine Co. Ltd. of Columbia, S.C., is calling the boat franchise the "sixth profit center" for auto dealers.

The firm is headed by Michael Cary, a former Toyota regional executive and auto dealer. It is spearheading the drive for Sun Runner Marine of Spokane, Wash.

Dave Henry, chief executive officer of Sun Runner, said that as the marine business grows, auto dealers are ideal candidates for a marine franchise. Among the advantages for dealers, he said, are better margins on boats and the fact that most inboard engines are based on auto engines so dealer service staffs already are familiar with the powerplant.

"Auto dealers are aggressive and understand flooring," he said. Dealers also understand finance and insurance and know how to retail products, he added.

He termed this concept the "wave of the future," saying that the concept of buying a boat from a dealer "on the water" is "outmoded."

Cary said the marine business is an ideal profit center for the auto dealer and auto dealers bring to the marine industry a retail sophistication.

And the grosses for the dealer are high — they average $2,500 to $5,000 per sale.

Sun Runner has been in business for 14 years. It produces boats in various lengths from 16.5 feet to 61 feet. Cary said the auto dealer only has to utilize his existing capacity and can floorplan the inventory.

He said dealers have all the necessary facilities to take advantage of this concept. The boats arrive at the dealership on trailers, ready to go and covered. The dealer can use the space on his lot and stock replacement parts in his parts department.

Sales and service training will be provided by North American International Marine Co. Ltd., Cary said, adding that the dealer needs only one mechanic and a salesman to support the operation.

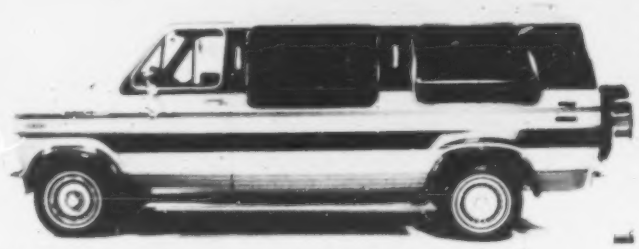
The boat business itself is booming, he said, especially since several major financial institutions, including General Motors Acceptance Corp., are now financing boats. The total pleasure boat business is approximately $16 billion per year.

And, Cary said, the business is not confined to coastal areas. Boat sales are brisk in any area near lakes, he said.

A marine division for auto dealers can supply extra profits by using existing facilities and personnel, Cary said.

Sun Runner is offering an exclusive franchise area, Cary said. The franchise agreement is with Sun Runner, not with North American International, and the company offers a lifetime warranty on the hulls of its boats.

Cary said he is targeting entry-level buyers with the program.



Royal Vans' top-of-the-line Southern Belle conversion model

Texas firms rebound

7 van converters in top-volume ranks

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Since the 1984-1985 slump in the oil patch, Texas — and the Southwest — have been staging a comeback in the van conversion business.

Seven Texas van conversion pool companies were included in Automotive News' recent compilation of top-volume converters, underscoring the importance of the region.

Bentley Good Times Van, Grandview, Texas, is Chevrolet's ninth largest converter. High Caliber Vans, Mansfield, Texas, and Regency Vans Inc., Arlington, Texas, ranked sixth and seventh, respectively, on Dodge's list.

Road Runner Vans Inc., Richardson, Texas, had the eighth fastest retail turnover rate among Dodge pool accounts.

Tra-Tech, Fort Worth, Texas; Premier Editions, Marshall, Texas; and Royal Vans of Texas Inc., Round Rock, Texas, also made the top 10 volume lists for GMC and Ford.

Royal Vans, a Ford-only pool account, has been a particularly fast mover this year. Its 33 percent sales increase will put it well over 1,000 wholesale deliveries in the 1988 model year, according to Timothy Buck, vice president of the family-owned firm. His father, Raymond Buck, is president.

Like many other Ford converters, the company is selling every chassis it can get and could do better if it had more product to sell.

Equally important, though, is Royal's retail turn rate.

Buck said Royal has been at or near the top of Ford's turn-rate list the past several months "because we've been concentrating on dealers who are aggressively marketing our vans and working closely with them in that regard."

Ford does not publish its retail turn rate, but does give individual dealers their ranking over the phone.

Royal Vans has been operating autonomously since 1982. Prior to that, it was a part of Royal Coach, which is now part of the Gerwin organization. The converter distributes throughout Texas, Louisiana, Oklahoma and Arkansas and, to a lesser extent, Kansas.

Its current expansion plans center on trying to pick up another bailment pool account from Chevrolet or GMC.

For the most part, Royal Vans plans to continue concentrating on its current markets, expanding its presence there and slowly expanding geographically.

Royal Vans has about 70 dealers, the majority very aggressive in retailing van conversions, Buck said.

The company works closely with them to develop their profitability in selling its products. It helps them develop advertising and works on keeping customers happy after the sale through quality product, warranty and service, he added.

Right now, it has enough dealer orders to carry it well through the summer.

Buck described his conversions as "classy and elegant, but attractively priced." The majority wholesale in the $3,500 to $4,500 range on full-sized chassis.

For 1989, Royal plans to stay with the formula that has made it successful, without any drastic change in products or image, Buck said.

Shipments move up, but dip is predicted

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale RV shipments continued to rise in April, though some forecasters look for a slight decline in the third quarter.

John W. DeWolf, economic consultant to the Recreation Vehicle Industry Association, said the recent sharp rise in interest rates makes a sales dip almost inevitable, though he believes it will not approach the status of an industry recession.

He said he believes the drop will show up in the third quarter.

As a result, DeWolf is now predicting wholesale shipments of 219,000 units in 1988, up slightly from 218,300 last year.

He predicted that "towables," including travel and park trailers, fifth wheels and folding camping trailers, will be up 5 percent; truck campers will be up 4 percent; while motor homes will be off more than 8 percent.

With their strong first-quarter start, van conversions are expected to have their best year ever. DeWolf sees a gain of almost 3 percent to 187,000 units in 1988.

However, he believes that in 1989 van conversion shipments could fall between 9 percent and 10 percent, to just below 170,000 units.

For the first four months of calendar 1988, van conversion shipments totaled 66,300, up 5.07 percent over 63,100 a year earlier.

Conversion shipments in April totalled 18,800, a 12.57 percent rise over the 16,700 shipped in April last year.

Total RV shipments of 43,000 in April were up 6.44 percent over 40,400 a year earlier.

For the first four months of calendar 1988, RV shipments totaled 148,000, a 3.79 percent increase.

Meanwhile, shipments of van chassis without seats from Detroit manufacturers to converters dropped off in April. The four major domestic van suppliers shipped 21,200 van chassis with the seat-delete option in April, a 7.42 percent drop from 22,900 a year earlier.

They shipped 17,000 full-sized van chassis in April, a drop from 19,600 last year, and 4,200 compact chassis, up from 3,300 last year.

Manufacturers shipped 86,000 chassis to converters during the January-April period, up 1.29 percent from 84,900 in first four months of 1987.

They also shipped 69,000 full-sized chassis during that period, compared with 71,900 in like 1987, and 17,000 compact van chassis, up from 13,000 a year earlier.

One of the reasons for the decline in April's van chassis shipments was the chassis shortage Ford has been experiencing.

Because of the strength of its chopped van business, Ford has been funneling more Econolines into the high-cube/parcel-delivery van market and also has been continuing chopped van shipments to the RV side of the market.

RV firms retain sales rights at Kansas shows

RESTON, Va. — Members of the recreation vehicle industry in Kansas were successful in preserving their right to sell RV products to consumers at RV shows throughout the state, though a new rule taking effect there is likely to impact the automotive market.

The Recreation Vehicle Industry Association said the RV industry successfully gained exclusion from the new Kansas law, HB 3085, which would have prohibited all sales at vehicle shows and limited sales to the dealers' established places of business.

Dianne Farrell, RVIA vice president of government affairs, said, "Bills like this outlawing sales at vehicle shows are intended more for the automotive than the RV industry.

"Typically," she said, "they are introduced at the request of state new-car dealer associations to alleviate the problems their members have with rental-car firms that sell new and used rental models at significantly lower prices than local auto dealers in communities without appropriate dealership facilities for warranty and repair service."

RVIA lobbied state officials nationwide for two years to get RVs excluded from proposed legislation that prohibits the sale of vehicles at shows.

In addition to its recent victory in Kansas, the association has succeeded in Georgia, Texas, Utah, Maryland, Missouri, Oklahoma, California, Washington, Kentucky and Illinois.

It plans to pursue exemptions from similar legislation in all other states that threaten to prohibit sales at vehicle shows.

Meanwhile, RVIA tentatively set July 27-28 as the drawing dates for supplier and manufacturer exhibit space, respectively, at its 36th annual RVIA Recreation Vehicle Show in Los Angeles in November.

Bob Lee, president of Country Coach Inc., Junction City, Ore., and chairman of RVIA's Los Angeles show committee, said supplier and manufacturer space will be assigned by lottery, starting at 9 a.m. each day at RVIA's Western region office in Orange, Calif.

First draw will go to RVIA members with seniority as show participants, second draw to all other RVIA members and third draw to nonmember exhibitors.

Suppliers received initial space offerings in late May. To participate in the space drawing, supplier exhibitors must submit their application with a 50 percent deposit no later than July 21.

The initial offering of space to manufacturers brought requests from 75 exhibitors, covering 391,234 net square feet.

To participate in the space drawing, manufacturer exhibitors must submit a deposit for 40 percent of the cost of their space request by July 21.

Any applications with deposits received after the specified deadline will be assigned space after all other requests for space have been assigned.

Potential exhibitors are not required to be present at the drawings. However, persons planning to attend must notify RVIA's Western region office in writing by July 21.

Exhibitors attending the drawing will not be permitted to change their written booth selections during the space assignment procedures. Booth selections may be changed on a first-come, first-served basis only after all exhibitors participating in the drawing receive their contracts for space and booth assignments.

The show will be held at Dodger Stadium in Los Angeles and is the largest event of its kind in the Western United States. It is open to the trade Nov. 1-2 and to the public Nov. 4-13.

Argentine engines to power new Brazilian Fiat in 1991

SAO PAULO, Brazil — Fiat Automoveis SA, the wholly owned Brazilian subsidiary of the Italian automaker, is planning to use Argentine-built engines exclusively in a new medium-sized vehicle being readied for introduction in 1991.

The engines will be supplied by Fiat affiliate Sevel, which builds cars under license in Argentina. The company also makes the 1.5-liter engines that power Fiat's Brazilian-built Uno line of cars.

Sevel builds Fiat's Regatta, for which it makes 1.6- and 2-liter engines, in Argentina.

A Fiat Automoveis source said the company is considering bringing in two versions of the 2-liter engine built by Sevel, a standard and a high-performance model, and perhaps adding the 1.6-liter later.

The new car, which some insiders are calling the "new Regatta," may actually be a sedan version of the Tipo that was introduced recently in Europe. It would compete in Brazil's prime market segment against top sellers like General Motors' Monza and Volkswagen's Santana.

European car sales move ahead

Gain resumes after one-month lapse; Peugeot leads advance

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Following a decline in April — the first in 15 months — European new-car sales rebounded in May.

Peugeot S.A. made the biggest spurt, advancing 21.8 percent in unit sales for the month and strengthening its grip on third place in Europe over Ford.

Industrywide sales rose 4.3 percent in May, compared with the year-earlier month, after a 3.2 percent drop in April, according to industry estimates compiled by Automotive News. For the first five months of 1988, sales were 5.4 percent ahead of the 1987 pace, which brought a record total of 1.24 million for the full year.

Total sales in May were 1,170,400 units in the 17 West European nations, up from 1,122,600 in May 1987. The five-month total was 5,719,100, compared with 5,424,000 for the same period last year.

Fiat remained No. 1 through five months of 1988, but Volkswagen AG — Europe's sales leader in the previous three years — is closing the gap.

Fiat Group sales, including Lancia and Alfa Romeo, amounted to 887,900 cars through May, an increase of 8.5 percent and good for 15.5 percent of the market. VW AG, with Audi and Seat, was in second place with 14.4 percent. VW's volume was 2.8 percent ahead of last year through May at 822,000 units. However, VW outsold Fiat in Europe in April and May, gaining ground in the United Kingdom and Spain and maintaining its first-place 29 percent share in Germany.

The telling battle between VW and Fiat will be waged later in the year as supplies improve for Fiat's new Tipo subcompact and VW's new Passat intermediate.

Peugeot S.A., buoyed by its one-year-old 405 model and the continuing strength of the 205 and 309 ranges, is making the biggest advance among Europe's six volume manufacturers.

The French group's European market share — including both Peugeot and Citroen — was 12.7 percent through May, a full percentage point higher than the same period last year.

Peugeot SA's 21.8 percent jump in May reflected increases of 45.3 percent in the United Kingdom, 46 percent in Spain and 10.5 percent in Italy. Sales also grew 24.3 percent in France in May, outperforming the overall market.

For five months, Peugeot SA was up 15.3 percent in Europe, with sales of 728,900. Automobiles Peugeot climbed 19 percent — to 451,100 units — and Citroen was up 11 percent for the year.

Fourth-place Ford held 11.5 percent of the European market after five months with sales of 656,500. That was only 1.8 percent better than 1987; however, momentum was stalled earlier this year by a 10-day strike in the United Kingdom, Ford's best European market.

General Motors was up 1.6 percent to 609,500 in 1988, a 10.7 percent share of the market. Renault was sixth with 582,800, a 3.5 percent gain and a 10.2 percent share.

BMW is riding high with the new 5 series that was introduced in January. European sales for the German specialty manufacturer in January-May were 12.2 percent over last year's, a rate of increase second only to Peugeot's.

BMW sales totaled 147,200 in the first five months with just over half that amount in West Germany. BMW was up 15.6 percent in its domestic market after losing market share in 1986 and 1987.

Combined Japanese sales were 628,800 through May, a growth of 6 percent or about the same as the overall market. The Japanese share of the European market remains at about 11 percent.

Nissan continued to rank first among Japanese makes with sales of 159,700 through May and a 2.8 percent share of the total market.

West Germany held on as Europe's largest national market with 1,215,900 unit sales in five months. But German new-car volume was down 1.3 percent for five months, and May sales were off 3.7 percent.

Second-place Italy with 1,024,900 sales during the five-month period was up 8.5 percent over last year, while the United Kingdom was up 10.4 percent at 936,100 and France rose 8 percent to 911,400.

The Italian market increased only 1.4 percent in May, while France gained 18 percent and the United Kingdom was up 10.8 percent during the month.

In April, Spain suffered its first monthly decline since the summer of 1986, but it recovered in May. Sales in Spain improved 13.3 percent during the month and were 14.7 percent ahead of 1987's pace, which resulted in a record 925,000 sales for the full year.

Toyota boss sees sales record for Japan

TOKYO — Shoichiro Toyoda, president of Toyota Motor Corp., predicted that car sales in Japan are likely to rise 11.8 percent this year to a record 4.85 million units.

He based the prediction on strong growth in the domestic economy.

Toyoda said his firm expects to sell 2.1 million cars in Japan this year, up from the last year's record 1.87 million. That would be an increase of 190,000 units over the target the company set last January.

Toyota's share of the total domestic market was 43 percent in 1987.

Toyoda said Toyota expects to keep 1988 exports at last year's level of 1.77 million cars.

The strong sales in Japan contrast with weakness in car exports. In January, Toyoda said Toyota's 1987 exports fell 6 percent from 1.88 million in 1986 and were expected to dip to 1.75 million in 1988. At that time, he cited the high value of the yen and reforms in the United States tax system as the cause of sluggish exports.

Toyoda

The Japanese yen has doubled in value against the U.S. dollar in the last three years, driving up the cost of exports, including cars, and reducing the competitive edge of Japanese manufacturers.

Mikio Okazaki of the Japan Automobile Dealers Association said car sales in Japan in the first five months of this year totaled 2.06 million, an increase of 34.3 percent over the year-earlier period.

If the trend continues throughout the year, 1988 sales would exceed the record 4.344 million cars sold in 1987, he said.

In addition to the promising trend in domestic business, Okazaki said consumers are moving to areas far away from Tokyo because of soaring land prices in the capital and its surrounding areas. That is also fueling the demand for cars, he said.

— The Associated Press

Vehicles are younger

Polk reports big decline in median age

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

The aging trend of the vehicle population in the United States reversed dramatically in 1987.

In its yearly car and truck census, R.L. Polk & Co. reported that the median age of the car population was reduced from 7.0 years on July 1, 1986, to 6.1 years on June 30, 1987. The median age of trucks dropped from 7.7 years to 7.2.

The younger car population does not reflect increased scrappage of older vehicles, according to R.D. Borthwick, vice president and manager of aftermarket services in Polk's motor statistical division.

"Cars older than 10 years are being pulled off the registration rolls at normal rates," he said.

It also does not necessarily mean more people are buying new cars.

"The age of the fleet in general or gross scrappage don't have too much to do with new-car sales," observed David Healy, automotive analyst, Drexel Burnham Lambert. He said it is useful to look at the number of two- to five-year-old vehicles on the road as a measure of market saturation.

Two factors affected median age, Borthwick said. Three years of weak sales in the early 1980s were followed by strong sales for four years that helped reduce the age of the total fleet.

Nearly 120 million cars traveled U.S. roads in 1987, an increase of 2.2 percent. The truck population grew 5.6 percent to 47.34 million.

The number of cars scrapped dropped by more than 300,000 units to 8.10 million cars in the year ended June 30, 1987, compared with the record 8.44 million units the prior year. At the same time, new-car registrations fell 400,000 units to 10.7 million.

Truck scrappage reached a record 2.36 million units in the year ended June 30, 1987. It rose about 50,000 units over the prior year's record. New-truck registrations rose for the seventh consecutive year to a record 4.88 million.

Auburn museum welcomes visitors

AUBURN, Ind. — For months the dust has been flying, but now it is settling and the Auburn-Cord-Duesenberg Museum has reopened exhibit areas that had been closed because of construction.

More than 140 automobiles are on display in those areas.

Parts of the museum had been closed due to installation of new heating/air conditioning and sprinkler systems. Most of the work now has moved outside to complete a new roof.

The museum building originally housed the administrative offices of Auburn Automobile Co., which closed in 1937. Auburn was a subsidiary of Cord Corp., which manufactured Auburn, Cord and Duesenberg vehicles.

After Auburn closed, several businesses occupied the building until the early 1970s when Auburn Automotive Heritage Inc., a citizens group, purchased the building, restored it and reopened it as the Auburn-Cord-Duesenberg Museum.

Porsche expects fewer sales, fewer dealers

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Porsche Cars North America is planning for sales of 17,000 to 18,000 vehicles in 1989 and will probably lose some of its smaller dealers as a result.

Porsche's U.S. sales network currently numbers 315 dealers.

Speaking to the Washington Automotive Press Association, John Cook, company president, said he thinks it is likely that Porsche dealers "who are only selling six cars a year will come to us and want out of their franchise." However, "We do not have a secret plan to get rid of our U.S. dealers," he said.

"I think dealers with small volume will have to ask themselves whether their sales justify the investment that is needed to sell and service Porsche cars," he said. Cook did not say how many of Porsche's dealers are selling "six cars a year," nor did he speculate on how many dealers might drop the franchise.

Cook said Porsche plans to take its vehicles upscale in 1989 by raising prices and abandoning its lowest-priced model, the 924-S, at the end of this year. Cook predicted Americans will not be able to buy a Porsche for less than $38,000 in 1989. The base 924-S now is $26,560.

Porsche sold 23,632 cars in the United States in 1987, following sales of 30,471 in 1986.

"Higher prices will be good for dealers because they will realize a higher unit profit; good for customers because there will be less depreciation; and good for the company because we will make more money," he said.

On a more candid note, Cook added that the move to higher prices also reflects Porsche's attempt to make "lemonade out of lemons." Referring to the unfavorable exchange rate between the United States and West German currencies, Cook said, "We can't change the currency. We cannot afford to build profitably in the lower price range."

Cook said part of Porsche's plan to rebuild its exclusive image includes the one-year sale of 700 to 800 Speedster models in the United States. The Speedster will sell in the $60,000 range and will be a big hit with collectors, he predicted.

Cook made light of Porsche's showing at the Indianapolis 500 last month, calling its entry the "three-wheeled Indy car." Porsche's much-heralded debut at Indianapolis ended on lap 29 when a rear wheel came off.

He said that despite setbacks, the company is committed long-term to the Championship Auto Racing Team series.

"Roger Penske didn't win his first year at Indy, and I think it will take us about three years to get where we want to be," he said. "We kind of limped into Indy this year and I think our engineers' pride has been stung. I have the impression they will work hard next year."

He said a top priority is to race with a Porsche chassis, rather than the March chassis used last month. "Porsche will win with a Porsche car at some point," he said.

"We race for image as well as product. I know every manufacturer says that, but we intend to use a street version of our Indy engine in our cars. The engine was developed with this in mind," he said.

Why rely on word-of-mouth when you can build a crowd in the back of Automotive News?

Automotive News is read by virtually every dealer in the country, and read with interest. Dealers who are looking to buy or sell look in the back of the book. If your ad is there, it puts you in touch with the buyers . . . and the sellers.

GE auctions report major gains

1987 revenues top $88 million on sales of 440,000 vehicles

GE Capital Auto Auctions, a division of GE Capital Corp., had revenues of approximately $88.8 million on sales of about 444,000 vehicles in 1987, up from $34.7 million on the sale of 111,000 vehicles the previous year.

The company's 17 auctions, while under GE ownership, consigned 751,000 vehicles in 1987, up from 193,000 vehicles in 1986. Auto reconditioning accounted for an estimated 20 percent of the revenues.

Combined sales rate for dealer consignment sales and factory sales was 59 percent.

The rate for dealer consignment sales was about 52 percent, said a company spokesman. Auctions have a higher sales ratio at factory auctions.

The company grossed about $200 per vehicle in 1987, up 10 percent from the prior year, he said.

GE's growth was due to the acquisition of nine auto auctions in 1987. Overall sales for the company's 17 auctions last year, including total sales for auctions purchased during the year, were 585,000 vehicles, up 21 percent from 486,000 in 1986.

Company officials predict a 26 percent growth in 1988 including a 10 percent hike in dealer consignments. The rest is expected to come from gains in fleet, lease and factory business.

As it now stands, 50 percent of GE Capital's business is dealer consignment with 30 percent fleet and lease and 20 percent factory sales.

Other milestones for the company in 1987 include the construction of three new auctions in Chicago; Denver; and Hayward, Calif., at an estimated cost of $40 million including property.

The company also began construction of reconditioning centers at the Southern California Auto Auction, Greater Chicago Auto Auction and Portland Auto Auction.

Company officials project 1988 sales at 750,000 and 1989 sales at 1 million vehicles. GE Capital predicts sales rates this year at 64 percent.

A recent survey conducted by the National Auto Auction Association pegged use of auto auctions by new-car dealers at 12 percent in 1987, up from 9 percent in 1986.

GE Capital Auto Auctions said this trend will continue as more new-car dealers begin using auctions.

"We view new-car dealer consignment as the next big growth area," said Mike Zafirovski, president of GE Capital Auto Auctions.

GMAC picks Lexington

Greater Lexington Auto Auction got a sales boost recently when General Motors Acceptance Corp. selected it as the regional repossession disposal center for the mid-South region.

Located in Lexington, Ky., Greater Lexington Auto Auction is independently owned and operated. It will auction about 500 vehicles per month for GMAC beginning in July.

The auction had consigned an estimated 400 repossessed vehicles per month from Chrysler Credit Corp. and area banks before winning the GMAC contract. It had been auctioning about 80 GMAC vehicles per month previously.

Under the terms of the agreement, all dealers will be invited to attend every sale. Vehicles include all makes and models repossessed by GMAC.

GMAC's vehicles in Louisville, Owensboro and Lexington, Ky.; Chesapeake and Marietta, Ohio; Charleston, W.Va.; and Knoxville, Tenn., will be sent to Greater Lexington Auto Auction for sales held on the first three Thursdays of every month.

Dick Sutherland, secretary of Greater Lexington Auto Auction, said the five-year-old auction has four lanes and recently expanded from 11 acres to 15 acres and has parking for 1,200 vehicles.

A reconditioning center is under construction and is scheduled to open in October. Chrysler Credit Corp. sales are held on the first and third Thursdays of the month.

Sutherland said GMAC approached the auction several months ago after deciding it was going to standardize and consolidate disposal of its vehicles.

Mid-June sales drop; fewer days is reason

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Mid-June sales of U.S.-built cars were off about 1,100 units or half of a percent from deliveries in last year's June 11-20 period, but the daily selling rate was considerably stronger this year.

Total deliveries were 222,262 units compared with 223,376 in the same period of 1987. Last year's mid-June total dropped 11.33 percent below the 1986 figure.

The daily selling rate for June 11-20 was 27,783 or 11.94 percent better than last year's 24,820. There were eight selling days in the period this year and nine last year.

Three of the eight domestic carmakers — Chrysler Motors, Honda and Toyota — reported volume gains of 8 percent to 18 percent for the mid-June period.

Chrysler Motors' sales improved 8.17 percent to 30,932 compared with 28,596 a year ago.

Toyota delivered 1,300 domestic cars in mid-June for an 8.51 percent increase over last year's 1,198, and Honda's sales rose 18.62 percent to 9,781, up from 8,246.

Ford Motor Co.'s sales slipped to 66,851, down 2.02 percent from 68,232 last year, and General Motors dealers delivered 108,079 cars, which was a drop of 2.99 percent from last year's 111,405.

Nissan's deliveries of U.S.-built cars dropped 20.08 percent to 3,462 from 4,332 in the year-ago period, and Volkswagen's 10-day sales were 1,050, down 23.08 percent from 1,365 a year ago. Mazda, which was not producing cars here a year ago, sold 807 in the 10-day period this year.

Heat walkout at St. Louis plants costs Chrysler 1,000 vehicles

By Jack Bernstein
SPECIAL CORRESPONDENT

FENTON, Mo. — Chrysler Motors assembly plant workers here walked out on three successive days last week because of excessive heat, and the company lost about 1,000 units of production of its minivans, Chrysler LeBarons and Dodge Daytonas.

The strike started with paint shop workers at Plant No. 1 (LeBaron and Daytona) during the second shift on Tuesday. Workers returned to the plant on Wednesday, but when reports circulated that a second-shift worker at Plant No. 1 had died of the heat, workers at both Plants No. 1 and 2 walked off the job.

However, Mary Case, St. Louis County assistant medical examiner, said the collapse in the paint shop and subsequent death of Willie Benton, 54, was "due to coronary artery disease, not to heat."

After negotiating for several hours Thursday, the company and UAW Local 136, representing Plant No. 1, reached agreement that workers would return to work beginning with the second shift on Thursday.

Interviewed on television, Local President Ed Boyer said the agreement included additional ice water for workers, 25 additional people to increase the frequency of breaks and first-aid passes to be issued whenever a worker complained of feeling ill.

The St. Louis area reported temperatures over 100 degrees Wednesday, and a health alert was issued Thursday as the mercury approached 100.

The only other U.S. assembly plant that halted production because of the heat was Ford's Kansas City plant.

BETTE LAW: *Court says Ford can be sued for Midler sound-alike ad*

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — A federal appeals court ruled that singer-actress Bette Midler can sue Ford Motor Co. over the use of a sound-alike singer who performed a Midler song in a 1985 Lincoln-Mercury commerical ruled.

Noting that "to impersonate her voice is to pirate her identity," a three-judge panel of the 9th District Court of Appeals remanded the case to trial in federal district court in Los Angeles.

That court had granted summary judgment in favor of Ford and ad agency Young & Rubicam because it found no specific California statute against the impersonation, although the judge characterized the defendants' conduct as that "of an average thief."

When Midler was originally asked to perform her song "Do You Want To Dance?" for the commercial, she declined. Young & Rubicam then hired Ela Hedwig, a backup singer for Midler for 10 years, to imitate her voice.

PRODUCTION

Car build is 161,630, down 2%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production was targeted at 161,630 last week, 2.45 percent below the prior week's 165,688 but 10.93 percent more than the year-ago week's 145,711.

So far this year, 3,635,402 cars have been assembled, 6.06 percent below the 3,869,929 completed last year at this point.

Last week's scheduled output was shared as follows: General Motors, 50.08 percent; Ford Motor Co., 27.53 percent; Chrysler Motors, 10.95 percent; Honda of America Manufacturing Inc., 4.75 percent; New United Motor Manufacturing Inc., 2.01 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.78 percent; Nissan Motor Manufacturing Co. U.S.A., 1.66 percent; and Volkswagen of America, 1.24 percent.

Truck production was scheduled at 81,238 units last week, 7.82 percent below the previous week's 88,129.

Workers walked off the job last Tuesday at Chrysler's St. Louis No. 1 plant because of excessive heat. They returned on Wednesday, but walked out again, along with workers at Plant No. 2, when they heard that a worker had died from the heat.

The death of Chrysler worker Willie Benton was not, in fact, due to the heat but to coronary artery disease, said Mary Case, St. Louis County assistant medical examiner.

Production on the second shift resumed at both St. Louis plants Thursday and the first shift went back to work Friday.

Chrysler's Sterling Heights, Mich., plant was idle last week because of a parts shortage. It was expected to resume output today.

As reported earlier, Chrysler's Newark, Del., plant is idle for model changeover until October.

Production of Dodge 600 and Plymouth Caravelle models ended last week. Those lines will be dropped for 1989.

Ford's St. Louis truck plant shut down for vacation today. Output is scheduled to resume July 11.

Overtime was slated last Saturday at GM's Lordstown, Ohio; Lansing, Mich.; Linden, N.J.; and Arlington, Texas plants.

Cars, trucks slip in Canada

Last week's scheduled Canadian car output totaled 24,310 units, 1.70 percent below the prior week's 24,730 but 39.27 percent more than the year-ago week's 17,455.

So far this year, 594,744 cars have been built, 41.57 percent more than the 420,115 completed last year at this point.

Truck output was slated at 20,075 units last week, slightly below (0.26 percent) the prior week's 20,127 but 6.66 percent more than the year-ago week's 18,822.

Year-to-date, 479,352 trucks have been assembled, 15.17 percent more than the 416,202 built last year at this time.

Chrysler's Bramalea, Ontario, plant was expected to resume output today. The plant has been idle for two weeks for line adjustments.

Ford signs license agreement for new-wave Aussie engine

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In one of the most significant engine developments in two decades, Ford Motor Co. signed a licensing agreement to power future small cars with a modern Australian version of the two-stroke engine made famous in lawnmowers and early Saabs.

After weeks of speculation that an American automaker was close to signing a deal with the inventor of a high-tech, stratified-charge version of the two-stroke, Ford's non-exclusive agreement was disclosed last week.

The agreement says Ford can use the two-stroke produced by Orbital Engine Co. of Australia — an engine so small you can carry it under your arm — "in future products if technical and business developments now under way prove successful." However, such details as the cost of the license and its length were hidden under terms of a confidentiality agreement.

Robert Brooks of Technology Commercialization, Waukegan, Ill., a consultant specializing in automotive technology, called the Ford action the most significant engine development in nearly 20 years.

Brooks represented Audi-Wankel in this country in the 1970s. Of the two-stroke, he said, "It has everything we wanted but did not have with the Wankel. It has efficiency, low emissions, low cost and manufacturability."

Orbital two-stroke: an engine so small you can carry it under your arm

Big beefs win big bucks from Olds

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Who says it doesn't pay to complain?

Oldsmobile told its dealers last week that it will offer dissatisfied customers of some 1985 Oldsmobiles a wide range of incentives — including cash rebates on new cars, free service or repairs, loaner vehicles and extended warranties — doled out in relationship to how unhappy the customers are.

Consumers will be able to voice their feelings about their ownership experience via an extensive survey underwritten by Oldsmobile. The program, called "The Oldsmobile Partnership Customer Commitment," is a pilot program to improve satisfaction among owners of 1985 vehicles.

The division is mailing 413,000 surveys and letters to owners of 1985 Ciera, 98 and Delta 88 models. Olds said it will mail approximately 34,000 every two weeks between May 1 and Oct. 6. The 1985 models were selected because customers are most likely to replace a three-year-old car and the nameplates represent some of Oldsmobile's core products.

The direct-mail piece includes a letter from Oldsmobile General Manager William Lane asking owners to fill out a three-page survey and express their true feelings about the division and its products.

The survey asks them how much they agree or disagree with statements such as: "I'm proud of my Oldsmobile," "I feel I could keep my Olds for 10 years," "Being an Oldsmobile owner is nothing special to me" and "Oldsmobile technology is competitive with other cars I'd consider."

Consumers are also asked to give information and opinions on their overall ownership experience, including mileage on their 1985 Oldsmobile, how many times the vehicle has required service, and how much money the consumer has spent on non-warranty repairs.

The final question on the survey asks what the di-

Optimism rebounds for China

Joint ventures move into black

By Stephen Vines
STAFF CORRESPONDENT

BEIJING, China — After years of bad news for overseas companies making vehicles in China, a mood of cautious optimism is now taking hold. The most troubled of the foreign partnerships, the joint-venture companies, appear to have turned the corner and are finally on the way to making money.

Due in part to the previous misfortunes of those companies, other foreign manufacturers have been reluctant to invest in China, although there are signs that more technical cooperation agreements are underway.

Those agreements do not require foreign investment but offer overseas companies the prospect of earnings from parts supply and technology transfer fees.

The latest involves Daimler Benz AG of West Germany, which has just signed the largest contract to date for the production of heavy trucks with China's massive North Industrial Corp. at Baotou in the Inner Mongolia Autonomous Region. (Automotive News, June 27).

The goal is to build 6,000 trucks per year employing German technology and, in the early stages, parts from the Mercedes-Benz truck division.

Recently, General Motors signed a deal to supply used tooling to a Beijing factory for a production line capable of building 300,000 engines per year.

RAIN PAIN: *Heartland drought hits auto sales, too*

By Dan Morrison
SPECIAL CORRESPONDENT

Farmers aren't buying trucks, mechanics repairing their old ones are swamped, and used cars are becoming more enticing as the drought continues in the heartland of America.

"We haven't felt the effects of the weather yet," said Verne Chittenden of Gene Steffy's Chrysler, Fremont, Neb. "This time of year, we get most of our trade from city people. The fall (when farmers sell their crops and normally do their buying) is really the time that we could be hurt."

Chittenden is an exception.

Dealers in the farm belt are already reporting slow sales that will in all likelihood only get worse if rain — and enough rain — doesn't come. Manufacturers may soon feel the pinch, too.

Ford, Dodge, Toyota and Chevrolet haven't done anything so far to promote sales specifically in the drought-stricken regions, either with special rebates or incentives. However, they seem leery about this fall when farmers do most of their car and truck shopping.

So far, truck sales in the Midwest are actually up over last year. But most agree the drought-driven worst is yet to come — and that, in some cases dealers that cater mostly to farmers might be able to take up the slack by drawing customers from neighboring cities.

As for imports, one expert says, "I don't think the impact of the hot weather will be

Japan readies 4-year product deluge for U.S.

Will assault market segments long dominated by domestics

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Japanese automakers are preparing a massive onslaught of new products for the U.S. market over the next four years, especially in performance-luxury, van and specialty-truck segments traditionally dominated by the domestics.

The veil of secrecy surrounding Japanese future product plans is loosening slightly, but even professional prognosticators still have trouble looking more than four or five years ahead with Japanese-based companies.

That compares to up to eight or nine years with European and U.S. automakers.

Part of the reason is that longer product cycles and greater leadtimes for Europeans and domestics make it easier to chart their plans far into the future, said George Peterson, president of The AutoPacific Group, Newport Beach, Calif., and publisher of "The Competitive Battleground," a quarterly journal of global automotive product cycles.

"We used to be able to just spring a new engine or car line on the public at the last minute, but now we go

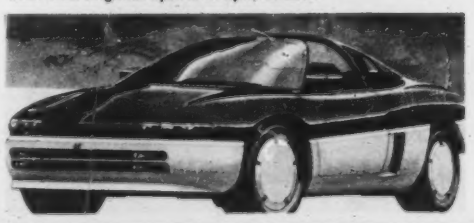
United States will get '89 Suzuki Swift, top; Isuzu may offer mid-engined sports coupe, bottom



But snags arise in luxury sector

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Honda's move into the U.S. luxury segment has been a huge success, but as Toyota and Nissan prepare to follow, there are reminders of how tough it is to break into prestige sales.

At least two image-leader car programs have been delayed and perhaps scrubbed, and Nissan's Infiniti Division may miss its original internal start-up goal of September 1989.

Product development snags are familiar subjects to every automaker and delays in launching new brands are not uncommon, but these are the first concrete signals that a wave of Japanese Cadillac-sized cars with V-8 engines isn't

GM shuffles high posts; race for top steams up

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — As General Motors reassigned some of its commanding officers, GM watchers disagreed on what those changes portend for the future of some key players and for the corporation.

Two of the people whose corporate future the analysts are eyeing more closely: Executive Vice President F. Alan Smith, seen as the newest rising star, and President Robert C. Stempel, who has been many analysts' odds-on favorite to reach GM's top spot.

"I have to think F. Alan Smith is the real winner," said Ronald A. Glantz, an automotive analyst for Montgomery Securities in San Francisco.

"He is a winner," concurred another Wall Street analyst who asked to remain anonymous. "And as far as I'm concerned, the bean-counters won.

"One thing is for certain: Stempel is no longer a winner. They put another layer between him and those who run (Stempel's) groups. By this announcement, (GM Chairman) Roger Smith now has two people dancing on the head of a pin — F. Alan Smith and Stempel — and Alan Smith is dancing a little higher."

On that point analyst Glantz disagrees. He sees Stempel as destined for the chairmanship.

"In my opinion, Stempel's running the company," Glantz said. "I suspect Stempel will be the next chairman and F. Alan Smith will succeed Stempel as president."

Glantz, who said he predicted many of the announced moves, said they don't do much to confront the crux of the automaker's current woes.

"I'm disappointed that no one is being penalized for the market-share erosion and that GM still has lower operating margins than its competitors," Glantz said.

"General Motors is very much a geriocracy. What was most disappointing was that no one was fired — and that people were only elevated (in job stature)."

The changes were made, GM Chairman Smith said, to prepare a selection of candidates who could succeed him when he retires in 1990.

"There are two years before I go, and I hope a lot is going to happen before I go," Smith said. "We have some bright young people and we want to show them off."

The announcement came one day after the resignation of GM Executive Vice President Elmer Johnson, said to have been in the running for the GM chairmanship. But opponents of the counter-cultural Johnson pointed out that he was an outsider within GM and questioned his credentials to run the world's largest automaker.

Johnson, a partner in the Chicago law firm of Kirkland & Ellis before joining GM five years ago, has rejoined the law firm.

Smith said the the personnel change was accelerated by Johnson's departure but that the two incidents were otherwise not related.

Last week's board-approved changes included the appointment of three new executive vice presidents as well as the formation of a new corporate entity — the power prod-

New faces and a farewell at World Congress

DETROIT — There will be some new players on stage at the 13th annual Automotive News World Congress at the Westin Hotel, July 17-20. And there will be a fond farewell for one faculty member.

Making his farewell address to a Detroit audience before leaving on a new assignment will be Robert J. Eaton, former vice president and group executive in charge of General Motors' technical staffs group.

Last week, Eaton was appointed president of General Motors Europe. His World Congress address will be his last in Detroit — at least for a few years — before heading overseas.

Eaton's new appointment was among the personnel changes announced last week by GM Chairman Roger B. Smith.

Among other World Congress faculty newcomers this year are: Norimasa Furuta, president, Mazda Motor Corp., Hiroshima, Japan; Vittorio Ghidella, president, Fiat Auto S.p.A., Turia, Italy; J.R. "Rick" Hendrick III, owner of Hendrick Management Corp. and Hendrick Motorsports, Charlotte, N.C.; Robert P. Oliver, chairman, Laforza Automobiles Inc., Hayward, Calif.; Roger S. Penske, president, Penske Corp., Red Bank, N.J.; and Dieter Spethmann, chairman of the executive committee, Thyssen AG, Duisberg, West Germany.

Furuta succeeded Kenichi Yamamoto as president of Mazda last December. Prior to that, he was senior managing director in charge of the corporate communications division.

Ghidella started his career at Fiat in 1956, following graduation as a mechanical engineer from Polytechnic of Turin.

He became president and chief executive officer of the automobile operations of Fiat group in 1979. The company's car lines include Fiat, Lancia, Alfa Romeo, Autobianchi and Ferrari.

Since its beginning in 1984, Hendrick's motorsports team has won 15 NASCAR Winston Cup races, including the 1986 Daytona 500.

He is also sole owner of Hendrick Management Corp., a holding company that owns more than 20 car and truck dealerships.

Oliver's company recently changed its corporate name to Laforza Automobiles Inc. from Fissori North America, and changed the name of its new luxury sport-touring vehicle to Laforza.

The first national exposure of the Italian-made vehicle, under the name Fissori, was at the National Automobile Dealers Association convention last February.

Penske's corporation is a privately held firm comprised of three business groups: transportation services, retail automotive and automotive performance.

His Penske Racing Team has won seven Indianapolis 500-mile races and seven Indy car national championships.

Spethmann heads a company that employs 130,000 and consists of more than 180 companies worldwide, including U.S.-based Budd Co. He will deliver the State of the Supplier Industry address at this year's World Congress.

GE Auctions mulls publication of price guide

GE Capital Auto Auctions had a hectic 1987 that included a buying spree that netted the company nine auctions. But now the industry powerhouse may be preparing to launch an even chancier venture — publication of its own used-vehicle price guide.

"We have looked at it, but it is still very much on the drawing board," said Mike S. Zafirovski, president of GE Capital Auto Auctions. "It is in the exploratory stages and we have to complete plans to see how it would operate."

Liese C. Spiegelberg, vice president of marketing and development for GE Capital, said the company has looked at a variety of new businesses including a price guide, but she denied the project has received the green light.

"We will look at anything that will make a profit, but we are not sure that this is a profit opportunity," she said.

However, Spiegelberg said GE is looking at the project over the long term — perhaps five years from now.

Speculation that GE wants to start a guide book began several months ago when the company discussed the venture with Lynn A. Weaver, editor of the NADA Official Used Car Guide.

The National Automobile Dealers Association price guide is the biggest in the industry with more than 400,000 subscribers.

"I think GE is very serious about starting a book," said Weaver. "But GE will have problems putting it together because they don't generate enough data for a guide book."

Most of the price guides rely on data collected from auctions to formulate prices for used cars, but they also obtain information from other sources.

So Weaver said he doubts that price data only from auctions is enough to launch a price guide.

"Auctions sell a lot of cars in big numbers but only on the high end," he said. "They have very little data on low-volume vehicles like imports and older vehicles. How do you formulate a price if only one 1983 Cutlass Supreme shows up at an auction?"

Yet, Weaver conceded that GE has the money to publish a price guide, and he said the company has the resources to begin publishing one within six months.

"I don't think I discouraged them," Weaver said. "They have a bottomless pit of money. GE is new to the auction business and even though there are a lot of good people there, I have to wonder if it would be biting off more than it can chew with a price guide."

One industry source suggested that a price guide published by GE Capital could be dangerous. Ford Motor Co. owns 20 percent of GE Capital Auto Auctions and sends hundreds of thousands of cars through its auctions.

"GE has cradle-to-grave cars now," he said. "With pricing on the other end — it could lead to editorializing of the data — the possibility of manipulating numbers exists."

Tony Moorby, executive vice president of Anglo American Auto Auctions, said he is not surprised that GE Capital would consider publishing a price guide — Anglo also looked at the possibility of publishing one several years ago.

"We even prepared a brochure of prices aimed at the fleet and lease market," he said. "But Anglo dropped it after two editions because the company did not have the data or the information accrual to continue publishing it."

However, Moorby agreed that auctions own data that is valuable to huge numbers of people in a variety of markets including the insurance industry, fleet and lease industry and financial institutions.

"The most sensible thing is for everyone in the auction industry to pool the information, massage it and then sell it," he said.

Moorby said the data should be sold through the National Auto Auction Association.

"It would provide income for the NAAA and allow it to hire a staff that would also include marketing experts," he said.

AUCTION BRIEFS

CHARLES THOMAS

Anglo buys No. 21

Anglo American Auto Auctions has acquired Albuquerque Auto Auction in Albuquerque, N.M., for an undisclosed amount. It brings to 21 the number of outlets owned by the company and is its second site in Albuquerque.

The company also owns Dealers Auto Auction of Albuquerque — a two-lane facility that receives consignments of about 500 vehicles per week from dealers.

Michael J. Richardson, Anglo president and chief executive, said the company plans to run the two auctions independently until they are merged on a 40-acre site now under development.

Albuquerque Auto Auction has had a troubled five years that included three owners before Anglo's decision to purchase it. The auction receives consignments of 500 vehicles per week, has a sales rate of 40 percent and has about 500 registered dealers.

BMW holds first sale

BMW held its first closed auction sale at the Atlanta Auto Auction in Red Oak, Ga., recently, selling 213 vehicles for about $6 million. It drew representatives from 25 percent of the BMW dealerships nationwide.

The sale included company cars and cars coming off lease from GE Credit Corp., which serves as the financial agent for BMW of North America. The wholesale prices of the cars ranged from $9,000 to $45,000 and all of them were sold.

Special financing and transportation were arranged for dealers. The auction used the event to inaugurate its newest selling lane — the ninth for the suburban-Atlanta facility. Atlanta Auto Auction is owned and operated by Atlanta-based Manheim Auctions.

Steel firm fined in Saturn death

NASHVILLE, Tenn. — Century Steel of West Mifflin, Pa., has been fined $2,430 by a state safety agency for alleged violations in the death of a worker at the Saturn Corp. plant in Spring Hill.

The company is contesting the findings, said a spokeswoman for the Tennessee Occupational Safety and Health Administration.

The worker, Calvin Bruce Davis, fell 50 feet to his death in December while bolting steel components at the plant.

The agency said Davis failed to wear proper protective equipment. It also said the company failed to use safety nets where a ladder, scaffolding, temporary floor, catch platform or safety lines or belts were inappropriate.

Budd Wheel & Brake

© 1988 The Budd Company

Budd Network.

In just the last year, Budd Plastics has announced two breakthroughs in automotive plastics technology. The first, Budd System 59,™ was the first SMC process in automotive production history to break the one-minute cycle barrier.

Then came Budd Tron-Bonding.™ Using the latest in technology, it cuts SMC bonding and curing time by 87%—to an incredible 50 seconds—while it actually improves the Class A surface quality of its SMC panels.

Extraordinary quality control.

The Budd Network takes quality design and manufacturing as seriously as you do. From our Wheel & Brake Division's Uni-Mount-10™ wheel assembly system, to the cold-weather starting aids manufactured by the Temro Division of Budd Canada, Inc., our products have earned a reputation for durability over the years.

Today, we use some of the most advanced quality-control procedures in the business. Like the Taguchi design of experiments and quality function development. These techniques enable Budd engineers to achieve optimum quality and cost effectiveness, and help to reduce your start-up and production costs.

It all adds up.

A force of talented automotive engineers. State-of-the-art equipment. A track record of successful, innovative new processes and service.

That's The Budd Company, a network of suppliers which includes the Stamping & Frame, Wheel & Brake and Plastics Divisions, plus these Budd subsidiaries: Waupaca Foundry, Milford Fabricating and Temro. A network backed by the technical resources of Thyssen AG, an international partner in the automotive industry with materials, components and systems. Budd is a subsidiary of Thyssen.

To put the Budd Network to work for you, write:
The Budd Company,
Public Affairs Department,

NATIONAL HOLE-IN-ONE ASSOCIATION

THE CO-OP SCENE

Manufacturer	Number of dealer advertising associations	Percent of dealer body enrolled in dealer ad associations	Range of per-vehicle contributions by dealers	Factory support funds available	Use of factory ad agency required to receive factory funds?	How program works
BUICK	145	47	$45 to $150	$20 million	No	Buick will pay for one-third of the media costs of an approved ad while the dealer group pays for two-thirds. Factory support rises to up to 50 percent when dealer group runs factory-produced ads for special promotions.
CADILLAC	52	55	$75 to $230	$7 million	No	Cadillac will pay for an average of one-third of the media costs of an approved ad, while the dealer group pays for two thirds. Actual factory support is up to Cadillac zone manager or zone merchandising manager.
CHEVROLET	150	47	$2 to $200[1]	$80 million	No	Dealers collect their own funds and spend the money on media in their own markets. Division runs factory-produced regional ads and marketing programs seperately from dealer association ads.
CHRYSLER-PLYMOUTH	50	99	Majority of dealers contribute between 0.5 and 1 percent of vehicle base invoice price.	$15 million	Yes	Chrysler-Plymouth contributes between 9 and 25 percent of the media cost of dealer association ads. Actual factory contributions depend on the expenditures.
DODGE	51	99	Majority of dealers contribute between 0.5 percent and 1 percent of vehicle base invoice price.	$15 million	Yes	Dodge contributes between 9 and 25 percent of the media costs of dealer association ads. Actual factory contributions depand on percent of invoice that dealer group contributes.
FORD DIVISION	68	99	$45 to $150	Ford Funding Program — $20 million; Regional and market support — $13.3 million	No	Ford distributes factory money to its Ford Dealer Advertising Fund (FDAF) groups based on each groups' expenditures in six media categories. If the group spends 10 percent of the total dealer expenditures, that FDAF will recieve 10 percent of the $20 million Ford Funding Program. Additional monies are available to each FDAF. Regional and market support monies pay for regional sales promotions, including incentives but rarely for advertising.
HONDA	Acura 21; Honda 54	Acura 50[2]; Honda 58	Acura $150 to $300; Honda $50 to $150	$0	Acura — No; Honda — No	Honda and Acura give their dealers an advertising allowance per car based on how long the individual has been a dealer. The program is front loaded. Dealers who want to organize a group tell the importer how much they want to collect and American Honda puts it on the invoice. Honda dealers received factory support last year for a special program.
JEEP-EAGLE	28	100	One percent of base invoice plus $50	$37 million	Yes	Jeep-Eagle will pay for 60 percent of dealer association media costs during the 1988 and 1989 model years. Factory contribution level will decrease to an unknown level in the 1990 model year. Dealers pay for production cost of requested creative executions.
LINCOLN-MERCURY	26	100	Lincoln $75 to $250; Mercury $50 to $200	Regional marketing program $14.9 million; Marketing support funds $3.5 million	Yes	Regional marketing funds are distributed on a joint division dealer group participation formula. Market support funds distributed according to requests from district manager and association, and association spending level.
MERCEDES-BENZ	248	99	$100	$9 million	Yes	Mercedes-Benz contributes $100 per car in a dealer matching program instituted in the 1988 model year. Matching funds pay for dealer association media costs, however dealers can take up to 10 percent of dealer/factory money to fund non-advertising programs.
NISSAN	62	83	Included in invoice price beginning in 1989 model year	$15 million	Yes	Beginning in the 1989 model year, Nissan will include dealer advertising costs in the invoice price of the vehicle. Nissan will not match dealer funding. All creative will be handled by Chiat/Day. Factory will work with dealers and place ads in the local media.
OLDSMOBILE	146	65	$40 to $200	$20 million	No	Oldsmobile divies up its regional marketing budget and gives a portion to four assistant general sales managers. Dealer groups decide on per-car collection amount and Oldsmobile negotiates what it will spend. Spending based on Oldsmobile sales in that market and media costs.
PONTIAC	125	50	$50 to $200	$18 million	No	Pontiac pays for $1 of dealer ad association media costs out of every $2 the dealer group spends in media.
TOYOTA	23[3]	99	$185 to $275	$15 million	No	Dealers under Toyota Motors distributors' system receive variable contribution rates from the factory ranging from 10 percent to 50 percent. Dealers select months when sales are strongest and TMS shares in media costs. Toyota national sales events require dealers to use factory ads.
VOLKSWAGEN	107	96	$125 to $400[4]	$6 million[5]	Yes	Dealers decide how much per-vehicle they will contribute to local advertising fund and Volkswagen matches dealer money dollar-for-dollar. There are spending caps for each market.
VOLVO	187 single point co-op dealers[6]; 37 major market groups	98	$150	$10.5 million[7]	Yes/No[8]	Volvo matches $150 per car for both retail and fleet for every $150 the dealer group contributes per car (began in June 1988).

THE CO-OP SCENE

FROM PAGE 1

In the last two months, Chevrolet and Nissan have unfolded plans to add local advertising costs to the invoice price of vehicles, beginning in the 1989 model year, to fund dealer association advertising. Top GM executives say GMC Truck will institute a program similar to Chevrolet's.

The franchise-offering circular for GM's new Saturn subsidiary calls for mandatory membership in local marketing groups with fees ranging from $150 to $300 per car, significantly above dealer contribution levels for other GM divisions.

Dealers are expressing mixed emotions over those new policies and others. Some dealers believe policies like mandatory advertising charges will bring equality among dealers paying for local ads. Dealers who haven't participated in co-op programs would be forced to fund ads they previously enjoyed free-of-charge, supporters say.

But detractors argue that the new policies are a way of forcing dealers to subsidize the cost of factory ads run in local markets while also limiting dealer groups' ability to tailor "buy now" ads to regional tastes.

"Manufacturers are getting more and more dictatorial in what they are demanding of the dealers, and dealers are wondering where they are going with these ad groups," said Jimmy C. Payton, president of the National Automobile Dealers Association, which recently took a stand against mandatory dealer participation in ad associations.

One big incentive for automakers to keep a closer eye on dealer funds is the skyrocketing number of contributions from dealers. In fact, local automotive advertising by dealer groups, manufacturers and individual dealers is the fastest growing segment in the advertising industry. Those three entities spent $1.3 billion in local advertising in 1987 — an almost five-fold increase from the $276 million spent in 1981, according to Robert J. Coen, senior vice president and director of forecasting, McCann-Erickson Inc.

The numbers include magazines, spot television, outdoor and newspapers ads. Coen said the reported spending could be "only

Payton: "Manufacturers are getting more and more dictatorial in what they are demanding of the dealers, and dealers are wondering where they are going with these ad groups."

the tip of the iceberg" since many mediums — such as local radio — are unmeasured.

The explosive growth of local automotive advertising has been fueled by several factors including the formation of more ad groups by domestic dealers and a proliferation of new automakers entering the marketplace and establishing dealer ad groups.

Manufacturers also have tried to channel dealer association funds into regional marketing efforts, tailoring ads to regional tastes and cultures. Dealer groups have helped the manufacturers direct their marketing programs, advertising and products to local areas or regions. For some automakers, regional programs are executed by the dealer group and funded by either the factory or the dealer or both.

Others — especially the domestic carmakers — are pumping additional local ad and marketing money into regions to complement dealer efforts. For instance, Ford Division distributes $20 million among its 68 dealer groups for dealer association (co-op) advertising in addition to the $13.3 million the division spends in regional marketing programs.

Meanwhile, firms such as Volvo and Mercedes-Benz — both of which offer fewer models and have smaller advertising budgets than the domestics — use their dealer associations for their regional thrust.

Mercedes-Benz, which previously had only national and individual-dealer advertising, now spends $9 million to support its dealers with a $100-per-car contribution to the dealer. The dealer also puts up $100. Gerd Klauss, vice president of operations for Mercedes-Benz of North America, called the new program "the marketing weapon (previously) missing from our tool box."

Chevy deals wait word on intro cars, Geo

By Detch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet dealers will learn this week why they will have no say in what models they have on their showroom floors to launch the 1989 model year.

They also will learn what it's going to take to sell import cars through Geo, which is being called the "franchise of the mind."

At the 1989 new-model meetings held for Chevrolet dealers across the country, the dealers will be told of a new divisional allocation program that will be implemented this year called "Easy as One, Two, Three." The program will take from Chevrolet dealers the opportunity to choose for themselves the kinds of models, trim levels and colors they will initially have to sell.

Chevrolet dealers only last week received the 1989 new-car order guide, something that in the past had arrived by May.

The allocation plan, devised by the Chevrolet Marketing Center, will prepackage cars in up to three available trim levels and offer to dealers, on an "order image" basis, the model types and packages that each dealer sold in 1987 and 1988. Trim levels and option packages that have sold well regionally will also go into the distribution equation.

The new plan is an effort to ease model-startup manufacturing and give product uniformity at introduction to dealers across the country, said Greg Zuccker, sales manager of the Chevrolet Marketing Center. Zuccker also said that such model uniformity could make a national package discount sale easier.

Currently, Chevrolet is the only General Motors division with such a program. Glenn Smith, Pontiac director of distribution and sales analysis, said Pontiac has suggested pattern orders for dealers at startup, but said it is not policy to force the issue.

Phase one of the Chevrolet plan calls for the first three weeks of build-up, which equals about 80,000 cars, to be specified by the marketing center's orders.

After that period, Chevrolet dealers will be able to special-order cars for customers. There are no plans to extend phase one of the program past the initial build-up.

Also at the meetings, Chevrolet officials will tell the dealers how they can qualify to sell the Geo brand cars. Part of what Chevrolet dealers will be told will be that they must sign an addendum to the current Chevrolet franchise agreement, invest in parts and tools inventory, send sales and service personnel to training seminars and install special Geo signage.

Geo dealers will be allowed to either use a separate sales and service facility or simply set aside existing showroom space for Geo products.

Since the Isuzu-built LUV pickup truck was introduced in early 1972, Chevrolet dealers have sold domestic-badged imports alongside Detroit-built iron.

For 1989 that changes. Only Geo brand dealers will sell Chevrolet's import cars — Japan's Isuzu and Suzuki cars and trucks — and the joint-venture car built at the New United Motor Manufacturing Inc. facility in Fremont, Calif.

Chevrolet is calling the Geo brand "lifecycle vehicles" — there are enough cars in the lineup to appeal to a full range of buyers.

Cars for sale under the Geo label include Metro, which will be a reskinned Suzuki Sprint; the current Spectrum, which will remain in the line for 1989 but will be redesigned and named Storm for 1990; and Prizm, which will replace the NUMMI Nova next spring. A fourth vehicle is a sport-utility called Tracker that will be built by Suzuki. Tracker will be introduced first on the East and West coasts, in Hawaii and in Michigan.

Coming later will be a Metro convertible.

Chevrolet dealers learned of the Geo marketing plan in March. Described were the Geo philosophy, import buyer profiles in demographic and psychographic terms, and an outline of Geo dealer requirements. This week's meeting will begin the process of Geo dealer sign-up.

Not every Chevrolet dealer is expected to choose to be part of Geo's "franchise of the mind." Because of the investment involved, some Chevrolet dealers likely will choose not to take the brand. However, Chevrolet expects dealers in areas with historically strong import sales to add Geo.

Chevrolet said there will be limited availability of Geo cars the first year. An increase in product flow is scheduled for 1990 when a joint venture between GM of Canada and Suzuki, called CAMI, will produce cars for the U.S. market.

Automotive News Staff Reporter Rick Kranz in Detroit contributed to this report.

At Nissan, the dealer ad groups were not helping the importer develop a clear, consistent image following the nameplate change from Datsun to Nissan in 1982. The 62 dealer ad associations were working with more than 30 independent agencies, some of which were not developing campaigns "consistent" with the national message.

The advertising associations turned into a political arena; some dealers would resign because they didn't like another dealer in the advertising group," said Robert Thomas, Nissan division vice president. "We thought we had to gain a lot more influence on the ads and get some sort of creative control."

The dealers, tired of the politics and the fuzzy image, agreed to discuss a change. Last month, Nissan said it would no longer distribute factory funds based on dealer contributions. Instead, local ad costs will be built into the vehicle's wholesale price.

All creative will be executed by Chiat/Day, Nissan's national advertising agency, instead of by the independent agencies. Nissan dealers are free to form their own groups or continue to use existing dealer ad groups, but funding will be the total responsibility of the dealers. Even if dealer groups choose another agency and pay for the advertising, Nissan will continue to place factory-created regional advertising in their markets.

At GM, co-op advertising is presenting a different set of problems. GM is finding that the percentage of its dealers participating in factory advertising groups is below that of its competitors. Slightly less than half of the Chevrolet and Buick dealers participate in an ad group, while domestic rivals Ford and Chrysler have 99-plus percent participation. Buick plans to offer its dealers incentives to join ad groups in the 1989 model year.

Pontiac has exactly half of its dealers participating while Cadillac, which has made a big push in recent years to organize new groups, has a 55 percent dealer participation rate. Oldsmobile has 65 percent of its dealers participating in ad groups.

Although GM dealers' participation levels are lower than those of competitors, GM marketing executives say dealers participating in groups make up 70 percent to 90 percent of each division's sales.

One reason for the low participation is the late start many dealers had in organizing groups. Many groups were organized around major metropolitan areas in the 1960s and 1970s, while dealers in sparsely populated areas were largely unorganized.

The big push started in the early 1980s and was stepped up after the GM reorganization began in 1984. Chevrolet, for instance, went from approximately 20 dealer groups located around major metropolitan areas in 1981 to its current roster of 150.

Dealers found they could maximize their message by pooling funds instead of advertising by themselves. But as GM's market share has declined, there has been heightened concern that the corporation is being outspent by its competitors in terms of advertising expenditures per vehicle, at national and local levels.

"GM is being outspent in the marketplace (in advertising) by $500 million in terms of share of voice; competitors got aggressive and got into GM's market share," said Don Mann, chairman of the Oldsmobile National Dealer Council and owner of Don Mann's Hansel & Ortman, Stockton, Calif. Share of voice means a company's adexpenditures in relation to all advertising in its category.

The Television Bureau of Advertising has been quite vocal in criticizing the domestics — especially GM — for that, claiming that the importers' increased "share of voice" —

Erdman: "You can follow share of voice and share of market and there is a direct correlation."

or the amount they spent as a percentage of spending by all automakers on television ads — has resulted in an increase in car market share for those manufacturers.

The bureau, a trade organization for the television advertising industry, said domestic makers on the other hand have suffered a loss in market share as their share of voice versus their import competitors dropped.

Lloyd Reuss, GM executive vice president in charge of North American operations, disagrees with the theory that GM can increase its share of market by increasing its share of voice. "There's a lot of over emphasis on the share of voice, share of market idea where we're standing — when you're at 40 percent of the market it doesn't make that much difference but when you're at 5 or 10 percent of the market it may apply."

However, some GM marketing executives say the low share of voice level of individual divisions has concerned them.

"We would like to see dealer participation in advertising groups increase so we can increase our share of voice and thus increase our share of market," said Jay Qualman, Buick general director of advertising.

"You can follow share of voice and share of market and there is a direct correlation," said Mike Erdman, Chevy marketing manager.

In fact, in an attempt to leverage more ad dollars locally, Chevrolet will assess a 1 percent charge on the invoice of each Chevrolet vehicle delivered to the dealer beginning in the 1989 model year to fund dealer associations. Fleet orders are excluded.

The money will be given back to the associations to produce campaigns and place ads locally. Chevrolet is the only GM car division that does not have a co-op program; factory money is spent on a regional basis without dealer participation.

The advertising charge will appear on the dealer's invoice as a line charge and will be assessed whether the dealer wants to belong to an association or not. Membership in an association will continue to be voluntary.

Erdman said the 1 percent charge on the invoice will not be a dramatic change for most of the Chevrolet dealer groups since the average dealer contribution is close to 1 percent of the average invoice price anyway. He added that groups can elect to collect up to 2 percent of base invoice.

Chevrolet said if a dealer does not want to belong to a local ad group and does not want the money from his invoice assessment to be given to that ad group, Chevy will collect the money and put it into its regional advertising budget for that area. Agency sources close to Chevrolet say the division could collect approximately $150 million additional under the new collection program since all dealers will be participating instead of the current level of 47 percent.

The program was presented to key dealers several weeks ago and will be explained to the entire dealer body this week. Chevrolet will continue to run factory-funded local advertising and sponsor regional marketing efforts under the new program.

GMC Truck Division is working with Chevrolet to institute a similar program, and sources at other GM car divisions say they will closely monitor the effectiveness of the new collection procedure. But some are doubtful it will work for them.

Some of GM's dealer advertising groups have already adopted the percent of invoice

see CO-OP, page 74

THE CO-OP SCENE

FROM PAGE 73

system to collect ad monies, however some dealers say that if 1 percent of invoice is mandated for all dealers, the large-city dealers could be hurt.

If a dealer group in Los Angeles or New York sells a lot of smaller, lower-priced cars, it may be difficult to pay the high cost of advertising in those cities.

"The 1 percent (of invoice collection) system would not help us out in New York City but it could benefit the rest of the country," said Larry Brostoff, president of the Buick National Dealer Council and owner of Larry Buick, Long Island City, N.Y.

In addition to the collection procedure, one of the most controversial aspects of co-op advertising has been whether dealers have a right to select an agency other than the factory's national advertising agency.

Many agencies have recently begun handling dealer groups because of the desire of the factory to have all of its dealers under one agency. For instance, McCaffrey, McCall began rapid regional expansion when Mercedes instituted its dealer program last year. Similarly, William Esty set up 25 new regional offices to handle all 28 Jeep-Eagle dealer groups when Chrysler Corp. purchased American Motors last year.

In both the Mercedes and Jeep-Eagle situations, dealers were informed that they would not receive factory contributions to their advertising associations if they did not sign up with the factory agency.

In the case of Jeep-Eagle, the announcement met with some resistance from AMC dealers who had previously been able to choose their own agency and receive factory funds. Chrysler disbanded AMC's 65 dealer groups and organized 28 new Jeep-Eagle groups around existing Chrysler Motors sales zones.

"We had some pretty difficult meetings (with the dealers). There were a lot of changes for the dealer and a lot of it was 'Trust me (Chrysler),' " said Robert M. Williams, Jeep-Eagle dealer marketing manager.

"We wanted to use the agency (Esty) because we were launching the Eagle brand. No one was coerced. But after the merger, they thought they'd give it a try," said Williams.

Jeep-Eagle also gave the dealers a carrot: The factory would pay 60 percent of the dealer advertising group's media costs for the 1988 and 1989 model years to launch the Eagle brand if the group went with the factory ad agency. All of the dealers' associations voted to hire William Esty and resign their accounts with several independent shops.

Reuss: "There's a lot of over emphasis on the share of voice, share of market idea where we're standing — when you're at 40 percent of the market it doesn't make that much difference but when you're at 5 or 10 percent of the market it may apply."

Chrysler's factory contribution to Jeep-Eagle dealer advertising will decrease in the 1990 model year. Chrysler is also collecting Jeep-Eagle dealer funds on a 1 percent of invoice basis.

Chrysler Motors' other divisions operate on the same policy with non-factory advertising agencies, although some dealers have voiced their discontent with the system. In fact, two Dodge groups and three Chrysler-Plymouth groups are using independent advertising agencies and do not receive factory funds.

But Chrysler marketing executives said that besides helping to promote a consistent national image, using the factory agency helps the automaker avoid ad-related legal problems and reduces the number of staff people coordinating dealer advertising.

Volkswagen began its Tactical Marketing Associations for its dealers in 1983 and now funnels about $50 million in dealer association and factory support money to its national agency DDB Needham.

"We did it for control, basically. We told the dealers if everyone is making a deposit and no one is making a withdrawal, you have more in your bank account," said Bill Gelgota, VW advertising manager.

Taking a different tack, manufacturers such as Ford, Toyota and Buick allow their dealers to choose the agency of their choice and contribute to the dealer groups regardless of the agency they choose. National advertising agencies for all three manufacturers also handle dealer groups.

Buick and Ford have taken similar positions, although executives from both companies admit that their field staffs are "encouraged" to present the benefits of using McCann-Erickson in the case of Buick or J. Walter Thompson in the case of Ford Division.

"Since working at Lincoln-Mercury where all the dealers use Young & Rubicam for their group advertising, I see tremendous value in having all the dealers singing off the same song sheet. But we don't live in a perfect world and dealers are independent businessmen," said John Vanderzee, Ford Division advertising manager.

Currently, 44 of the 68 Ford Dealer Advertising Fund groups, or FDAFs, hire J. Walter Thompson. The remaining 24 use approximately 18 independent advertising agencies, many of them run by former J. Walter Thompson account representatives.

Hugh Trenkamp, JWT senior vice president and head of the agency's retail FDAF accounts, said JWT began regionalizing itself several years ago in order to get closer to the FDAF groups and their markets. Now, each regional office has its own creative team and account representatives to handle the FDAF.

JWT is trying to win more FDAF business, and has bought ads in the Ford dealer magazine with laudatory quotes from FDAF chairmen who use JWT.

But the results of the effort have been somewhat disappointing. JWT has won two accounts back from independent agencies but at the same time there have been several defections.

At GM, McCann-Erickson is the only national advertising agency among the five car divisions currently handling dealer advertising groups. Other divisions are adamantly opposed to their national agency going after dealer business.

"There is a determined policy not to have D'Arcy, Masius, Benton & Bowles handle the creative executions for dealer marketing associations," said Peg Dilworth, manager of dealer marketing associations for Pontiac. "We feel that the dealers are the best regional marketers."

The 74 independent agencies that handle Chevrolet will be the recipients of the 1 percent of invoice collected from dealers for local advertising.

Reuss said GM will not mandate a policy on factory advertising agencies and dealer groups.

Members of Saturn's dealer advisory board have said they see certain benefits in having new advertising agency Hal Riney & Partners handle all of Saturn's dealer groups.

Despite the freedom to choose independent advertising agencies for creative at GM, the national agencies for Buick, Oldsmobile, Pontiac and Cadillac place ads funded with division money in local media as part of the dealer co-op program. As noted, Chevrolet has no co-op program.

Cadillac has been the only exception to that rule. But beginning in the 1989 model year, Cadillac's national advertising agency — D'Arcy, Masius, Benton & Bowles — will handle all the media buying for $7 million worth of Cadillac-funded ads under the dealer co-op program. Independent agencies will continue to place dealer-group-funded ads in local media.

"We felt that it was an effort to work with our national agency and be more consistent with the rest of the GM divisions. I think that as we understand it, it's the overall efficiency with the GM Media Council leverage," said Peter Levin, Cadillac director of advertising.

But independent agencies say they have more clout with local media representatives and argue that the turnaround time on ads produced by an independent agency is faster than at the larger national agencies.

There has been a concerted effort on the part of the manufacturers whose dealers are using independent agencies to coordinate campaigns with those shops. Manufacturers present their marketing plans at the beginning of the model year so that dealer groups can tie in with national campaigns.

Film footage and music from the national campaign are usually made available to the independent ad shops for use in locally produced commercials. Factories often encourage dealer groups to tie their campaigns into the national theme.

In some cases, factories will increase their contributions if the dealer groups use advertising for specific promotions produced by the factory ad agency.

For instance, Buick paid 50 percent of the dealers' media costs when its dealer groups ran Regal commercials produced by McCann-Erickson in 1987. Toyota also increases its participation when dealers run factory-produced spots during special national sales events.

Daihatsu America, a newcomer to the U.S. auto market, decided to buck the industry trend by not offering a factory program for its dealers.

"When we announced it (no co-op program), our dealers applauded," said C.R. "Dick" Brown, executive vice president of Daihatsu America.

But some Daihatsu dealers are questioning whether the absence of dealer funds for advertising has contributed to the thin advertising budget and disappointing early sales results.

As competition increases in years to come, top automotive marketers are predicting that manufacturers will use co-op advertising in different forms.

Some will try to exert more control over dealer advertising in an attempt to control the manufacturer's image. Others will allow individual dealers to determine what that image should be in specific markets and support campaigns from the agency of their choice.

Said Payton of NADA: "I think the new co-op advertising policies of some factories are something that dealers are going to resist, and that may be our next battleground."

ROVER

FROM PAGE 1

ropean Commission Competition Commissioner Peter Sutherland met July 5 in Brussels, Belgium, to work out remaining differences.

That followed a letter from Prime Minister Margaret Thatcher to European Commission President Jacques Delors asking the commission to render a quick decision in the face of growing nervousness in the United Kingdom.

The stumbling block is apparently the size of the assistance package from the British government. It has proposed to write off £800 million ($1.5 billion) in Rover Group debts as a condition of the sale, while Sutherland reportedly wants the figure cut by £200 million to £300 million.

At issue is whether British Aerospace, which essentially wants a debt-free company, is prepared to accept a smaller cash injection from the government.

Lord Young told reporters last week that the matter will likely be settled before the British Parliament recesses later this month.

According to one report last week, British government officials are worried that the commission is under pressure from the West German government to block the sale to British Aerospace and make possible a VW takeover. VW officials deny any West German interference in the proceedings.

But virtually every large-volume manufacturer in Europe looms as a potential buyer. In the hands of one of the Big 6 automakers, Rover's 3.5 percent share of the European market could sharply change the sales rankings. VW, Fiat, Peugeot, Ford, General Motors and Renault now range in share from 10 to 15 percent.

Acquisition of Rover would make Ford unchallenged in the U.K. market, where it is already No. 1. Rover would provide VW with a new production base outside high-cost Germany and solidify VW's first-place position in Western Europe over Fiat.

Ford's mention on the Jaguar front late last week fueled speculation that if it can't acquire one British company, Rover, because of its strong ties to the government, it would go after the other — Jaguar, in which it could buy a strong position in the public market.

Jaguar stock was up £0.12, to £3.04 ($5.21) a share Thursday as rumors of a takeover gained steam on the London Stock Exchange. On Friday, shares took another jump, to £3.15 ($5.40) a share.

In previous months, prices have held steady in the £2.85 ($4.90) range, a Jaguar spokesman said. The spokesman noted that anyone buying more than 15 percent of Jaguar shares must get approval from the British government. That provision was part of the deal that took Jaguar out of government hands in 1984.

"We have no knowledge of anyone, including Ford, buying our shares," the spokesman said.

A Ford spokesman said the company is not buying Jaguar stock. But he would not comment directly on the possibility of Ford acquiring Jaguar.

The British Aerospace deal has come under criticism from some quarters for excluding proposals from rival bidders. In an interview after the British Aerospace bid was accepted, Ford of Europe Chairman Alex Trotman said Ford discussed making a counter-offer, though he did not reveal the outcome of those deliberations.

YOSHINO

FROM PAGE 1

fast," he said with a laugh, "so there is no need to rush a decision."

This is the third time Yoshino has followed Irimajiri into a new job.

The two entered Honda together in April 1963, the same time as Nobuhiko Kawamoto, now president of Honda research and development. Yoshino and Irimajiri were not only classmates and friends at Tokyo University, they formed a pitcher-catcher battery on the baseball team as well.

And, at Honda — like Irimajiri — Yoshino often has been mentioned as a likely successor to Tadashi Kume as president.

Yoshino spent 15 months in the United States, starting in January 1969, the first Honda man to go to the United States from the r&d division. His mission was to study U.S. exhaust emission standards.

Yoshino says during his earlier time in the United States, he particularly enjoyed the "open-mindedness" of American society.

The great unknown this time is how open-minded Marysville workers will be to Yoshino and his reputation for assembly speed.

The Suzuka plant Yoshino is leaving turns out 1,250 units daily of six different models with 11 variations.

Yoshino has a straightforward explanation for that. "We move fast," he said, "because we have to."

The plant has to keep up with a backlog of demand, Yoshino says. Also, company policy favors high speed, high intensity production.

"That is how we are trained," Yoshino says, from the days of the company's founder, Shoichiro Honda.

In Marysville, increased line speed is already all too familiar, according to several workers. A Honda assembler said the company announced in January the speed of one line would be increased by 50 cars a day — to 365 from 315 cars per shift — by the end of February. Workers were told to find ways to do their jobs more quickly, he said.

The worker said people were having trouble increasing their pace and that, "It actually took them until about May to get to 365." He added: It used to be if you got good enough, you had a few seconds to breathe. Not anymore."

The Marysville worker said there was talk in the plant that the target was 1,750 — 500 more than at Suzuka — cars a day by 1991, and that date was moved up to 1989. The plant now builds about 1,536 a day.

At Honda's and Yoshino's success story in Japan — Suzuka — if there is any one factor that makes such a rapid, intense operation possible, Yoshino suggests it might be age, or rather the lack of it. In Japan, the average age of the Honda worker is 27, he says, about 10 years younger than the competition.

Honda officials say the average age of Marysville workers is 29-30. And one 28-year-old worker there refers to his colleagues as "kids."

At Suzuka, Yoshino emphasizes efficiency in the component supply system, so much so that the average lead time on major items is now approximately 10 days. The goal, Yoshino says, is zero-inventory, with production almost to order.

Yoshino arrives in the United States on Thursday to take up his new position, replacing Irimajiri who has returned to Japan to head all of Honda's worldwide manufacturing.

Automotive News Staff Reporter Louise Kertesz contributed to this report.

First-half deliveries climb 8%

Cars and trucks share gains in strong market; domestics shine

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Strong consumer confidence, extended incentives — mainly rebates — and healthy economic indicators created enough momentum to move U.S. car and truck sales ahead 8.59 percent in the first half of 1988.

Enthusiasm prevails among dealers and automotive analysts, who suggest that strong sales should continue despite tight inventories.

And there is still pent-up demand in some regions of the country, according to Jack V. Kirnan, Kidder, Peabody & Co. auto analyst.

"The first six months were very strong for us," said James Hoffer, general manager of Jordan's Automall (Ford-Toyota-Volvo), Mishawaka, Ind.

"The only problem is that we have shortages of certain product lines like Probe," he said. "The final six months will be even better."

Although sales were up for the first half, a Fort Lauderdale, Fla., Cadillac dealer said: "Sales are slow and inventories are low. Eldorado is on the move. I think a rebate available directly to the customer would help."

In spite of lower stocks, total new-vehicle deliveries in the United States from January through June were 8,218,545 units, or nearly 650,000 units stronger than the 7,568,714 vehicles sold in the first six months of 1987.

This year's first-half total includes an estimate of 167,000 medium- and heavy-truck deliveries.

Combined sales of new domestic and imported cars climbed 8.62 percent to 5,524,165 compared with 5,085,931 for the first six months last year. There were 438,234 more cars delivered in the first half this year.

In the first half, domestic-car sales gains surpassed the upturn in import deliveries by more than three percentage points.

Sales of U.S.-built cars pulled ahead 9.54 percent to 3,989,933 units vs. 3,642,525 in the first six months of 1987. The volume gain was 347,408 units.

Sales of imported cars rose 6.29 percent to 1,534,232 from 1,443,406 in the previous year's first half. Import deliveries increased by 90,826 units in the first six months, although the import car share slipped to 27.77 percent from 28.38 percent last year.

Truck deliveries were equally strong in the first half of 1988. Deliveries of light, medium and heavy trucks were estimated at 2,694,380, up 8.52 percent from 2,482,783 in the first six months of 1987. Trucks accounted for 32.78 percent or nearly a third of the total vehicle market.

The Big 3 U.S.-based manufacturers gained a larger share of the U.S. car and light-truck market in the first six months this year. They took 73.85 percent of the total compared with 71.42 percent a

year ago.

General Motors' share, including captive imports and light trucks, rose about half a percentage point to 35.46 percent vs. 34.93 percent in the 1987 first half.

GM's total vehicle sales grew 10.26 percent or 271,243 units to 2,914,067, compared with 2,642,824 cars and light trucks a year ago.

Ford Motor Co. took nearly a fourth (23.97 percent) of combined car and light-truck sales in the first six months. Ford sold 1,970,173 cars and light trucks in the first half.

That was an increase of 13.16 percent or 229,056 units over last year's first half. Its market share was 23.00 last year.

Chrysler Motors' share of the car and light truck market (including captives) also rose almost a percentage point.

Chrysler took 14.42 percent of the vehicle market in the first half compared with 13.49 percent in the year-ago period. Chrysler delivered 1,185,342 vehicles vs. 1,020,802. That was a gain of 16.12 percent or 64,740 more cars and trucks.

Two of the four Japanese carmakers with transplant operations reported increased car and light truck sales for the first six months.

Honda juggled delivery gains and losses in the first half to reap an overall sales gain of 9.02 percent. Transplant sales surged ahead 19.42 percent in the first half and import deliveries dropped 8.17 percent below last year's first six months.

MARKET SHARES, JUNE 1988

	Total Sales	Pct. of Total
SUBCOMPACT	90,884	9.03
COMPACT	203,634	20.23
INTERMEDIATE	294,725	29.28
STANDARD	127,292	12.65

TOTAL	1,006,564	100.00

Honda's market share in the United States crept up to 4.47 percent vs. 4.45 percent in the comparable year ago period.

Among Japanese makers, Toyota sold the most vehicles in the first half. Total car and light-truck sales rose 3.99 percent in the first six months, although Toyota's market share slipped from 5.49 percent to 5.26 percent.

Sales of Toyota vehicles built by New United Motor Manufacturing Inc. rose 50.81 percent to 27,571 in the first half.

Nissan's market share slid to 3.93 percent from 5.17 percent a year ago, and its total sales of U.S.-built and imported cars and light trucks tumbled 17.50 percent in the first six months.

Those three Japanese companies held 13.66 percent of the U.S. car and light-truck market in the first half compared with 15.11 percent in the first half of 1987. All other foreign carmakers accounted for 12.49 percent of the 1988 market.

The fourth transplant, Mazda, sold 14,005 U.S.-built vehicles in the first half. It began producing cars in Flat Rock, Mich., in September 1987. Mazda's import-vehicle deliveries rose 29.67 percent in the first six months of 1988.

U.S. and import car manufacturers posted moderate sales gains in the second quarter of 1988. Car deliveries were 2,876,037, up 4.47 percent, or almost 113,000 units over last year's.

GM's import and domestic car sales were up 2.72 percent. Ford's deliveries rose 11.05 percent and Chrysler sold 8.75 percent more cars in the second quarter.

Japanese car sales improved 7.20 percent in the second three months and Korean deliveries were 9.27 percent stronger than in the second quarter of 1987.

European car sales fell 21.33 percent in the second quarter.

The two top-selling vehicles in the first six months of 1988 were both trucks. Ford's F-series pickup was the sales volume leader in the first half. Chevrolet's full-sized pickup took second place.

Ford Taurus ranked third, followed by Ford Escort and Honda Accord held fifth place.

For the first six months, five of the eight U.S. car manufacturers reported gains in domestic deliveries. GM's first-half domestic car sales rose 5.63 percent above last year's comparable period. Buick and Pontiac sales and market share improved. Cadillac and Chevrolet sold more cars but lost market share. Oldsmobile's sales and share lagged behind last year's first half.

Ford's domestic-car sales climbed 13.53 percent in the first half and Ford Division outsold Chevrolet in the first six months. Ford Division delivered 800,935 U.S.-built cars while Chevrolet sold 758,130 in the first half.

Chrysler's car sales rose 15.07 percent or 75,261 units in the first half. Dodge Division car and truck sales were the best ever according to the company.

Transplant sales for Honda and Toyota climbed dramatically in the first six months. Honda's U.S.-built car sales rose 19.42 percent, and Toyota's transplant deliveries climbed 50.81 percent. Nissan's transplant sales declined 22.89 percent and Volkswagen's U.S. built deliveries dropped 26.28 percent compared to last year's first half. Mazda sold 14,005 U.S.-built cars.

Import-car makers sold 6.29 percent more cars in the first six months this year. Big gains were reported by Honda's Acura Division, up 22.20 percent; Mazda, up 29.67 percent, Hyundai, up 16.87 percent. A big loser was Audi, down 52.85 percent.

Domestic-car deliveries finished the first half with a flourish. June 21-30 domestic deliveries swelled 34.19 percent.

The full month's sales of U.S.-built and import cars were up 7.27 percent. Total car sales in June were 1,006,564 compared with 938,311 a year ago. Domestic sales jumped 9.99 percent to 722,364 from 656,727 last year. Imports edged up 0.93 percent to 284,200 from 281,584 a year ago.

Trucks rocket to record; 2.7 million for first half

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic truck sales turned in a stellar first-half performance, putting the industry in line for model-year and calendar-year records.

Truck manufacturers retailed 2,694,380 trucks, including an estimated 167,000 mediums and heavies, during the first six months of this year, 8.52 percent above last year's total, the previous record.

Sales in the first half ran at an annualized rate of 5.3 million units, according to Detroit auto company analysts.

They now feel fairly sure that sales will hit 5.2 million in the 1988 model year and believe the industry also is squarely in line for 12 million in the calendar year.

For the 1988 model year to date, with three months remaining, truck manufacturers have retailed about 3.9 million units.

They retailed 4.97 million in the entire 1987 model year and 4.96 million in the 1987 calendar year. Both are records.

Light-duty trucks, with 2,527,380 sales in the first half of calendar 1988, are the major driving force behind the industry's upturn. They were up 7.89 percent from 2,342,525 in first six months of 1987.

The industry also retailed an estimated 167,000 medium and heavy trucks, up 19.07 percent from 140,258 in the first six months of calendar 1987.

Light-truck inventories at the end of June were a bit thin but were adequate to continue the industry's current sales pace.

Ford, for example, had a 57-day supply of trucks at the end of June; Chrysler, 55 days; and Jeep, 65 days. Chevrolet was estimated to have about a 60-day supply.

U.S.-based light-truck manufacturers picked up about 5 percentage points of market share during the first half, as higher import prices, triggered by the yen/dollar situation, continued to hurt foreign-based manufacturers, particularly in their high-volume pickup lines.

U.S.-based light-truck manufacturers captured 85.98 percent of the market during the first six months of this year, up from 80.94 percent in like 1987.

Conversely, the foreign-based manufacturers' share dropped to 14.02 percent from 19.06 percent a year earlier.

All U.S.-based manufacturers except Ford, which was selling at capacity last year, showed double-digit percentage increases in their sales during the six-month period.

Jeep had the largest gain, with sales of 124,104 trucks, up 22.24 percent from a year earlier.

GMC had an 18.83 percent gain on light-duty truck sales of 181,142 during the six-month period.

Chevrolet posted an 18.21 percent gain on sales of 683,742 light-duty trucks.

Chrysler was up 17.96 percent on sales of 417,238 light trucks, and Ford had an 8.03 percent gain on sales of 766,926.

Collectively, foreign-based firms retailed 354,228 light trucks during the six months, down 20.66 percent from a year earlier.

Full-sized pickups continued to be the comeback story of the year and the major source of strength for Ford and Chevrolet.

Ford's F series accounted for nearly 41 percent of its light-truck total, with sales of 312,847, up 15.42 percent over last year.

Chevrolet's new C/K and older R/V full-sized pickups, with 263,774 sales, rose 27.65 percent over the year-earlier total.

June sales plunge 70% for Suzuki

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Suzuki dealers are struggling to cope with a 70 percent nosedive in sales of the Samurai after Consumers Union labeled the sport-utility vehicle "unsafe."

The company sold 2,199 units last month in the United States compared with 7,479 in June 1987. Sales in May were 6,074.

While dealers maintain that Samurai owners seem to be happy with the vehicles despite their tarnished reputation, they admit that isn't helping draw buyers.

In an attempt to attract customers, Stillman Suzuki in Englewood, N.J., for instance, is offering a "Try Before You Buy" campaign in which customers can rent a Samurai for up to a week before deciding whether to buy one.

"Frankly, it's not brought a lot of people in, but it has generated some interest," said Dick Brahs, general manager for Stillman Suzuki. The dealership's radio ads tout an inventory of "more than 200" Samurais to choose from, but Brahs conceded that number is about twice what he would like.

Customers with a valid New Jersey driver's license can rent a Samurai for $150 for a weekend or $375 for a week, provided they leave a $500 deposit. If the customer decides to buy the Samurai, the money goes toward the purchase, Brahs said.

Some of Suzuki's biggest U.S. dealers last week said they are interested in the "Try Before You Buy" idea, but they're waiting for word from Suzuki of America Automotive Corp. in Brea, Calif., before embarking on any programs of their own.

"We have not as yet resorted to any particular program to counteract the bad publicity," said Eric Jones, general manager of Courtesy Suzuki in Tampa, Fla. "The corporation is supposed to release some information as to exactly what our posture is going to be."

Brahs said dealers have been told to expect "some kind of statement" from Suzuki in the next week to 10 days. "Whether that's going to be a marketing program, or some kind of statement opposing Consumers Union, I have absolutely no idea," he said.

A Suzuki spokesman at the company's public relations agency in Los Angeles said he was "not aware of any program Suzuki is putting together with its dealers."

"Dealers have inventory to sell," Brahs said. "We believe we have a safe product, and it's up to the dealers to move it."

Dealers said despite the drop in sales, people who already own Samurais remain loyal customers.

"Owners of Suzukis have banded together," said Mike Guinn, sales manager for Red Bird Suzuki in Duncanville, Texas.

"We're getting support from those you'd expect it from least, the owners. You'd think they'd be terrified, beating our doors down, but we've got them banding together instead," Guinn said.

One of Red Bird Suzuki's customers, Kenneth George, 26, has gone so far as to have bumper stickers printed that say, "I'm Proud of My Samurai."

PRODUCTION

Auto output nudges up to 161,502

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto production of 161,502 increased slightly (0.95 percent) over the prior week's 159,987 and doubled the year-ago week's 80,517 when Ford Motor Co. plants were idle for vacation.

So far this year, 3,795,261 cars have been assembled, 3.81 percent below the 3,945,521 completed last year at this point.

Companies split last week's targeted auto output as follows: General Motors, 48.55 percent; Ford, 26.15 percent; Chrysler Motors, 14.37 percent; Honda of America Manufacturing Inc., 4.63 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.85 percent; New United Motor Manufacturing Inc., 1.61 percent; Nissan Motor Manufacturing Co. U.S.A., 1.60 percent; and Volkswagen of America, 1.24 percent.

Truckmakers scheduled production of 75,874 units last week, 8.35 percent below the previous week's 82,788 but more than double the year ago week's 31,557.

All Ford car and truck plants will be closed this week and next for vacation. Output is slated to resume July 18.

Honda, NUMMI and Nissan plants are idle until July 11 for vacation.

GM's Fiero plant in Pontiac, Mich., is down until July 11 for inventory adjustment.

GM announced it will move production of certain light-duty truck models from its Janesville, Wis., plant to its Flint, Mich., plant next spring to make space for a new medium-duty truck scheduled to be built at Janesville. About 650 workers will be recalled at the Flint facility.

All assembly plants are closed today in observance of Independence Day.

Holiday cuts Canadian build

Car and truck production in Canada last week fell below the previous week's total because of the Canada Day holiday, which was celebrated on Friday.

Last week's targeted car production of 20,803 dipped 14.04 percent from the prior week's 24,200 but rose 56.58 percent from the year-ago week's 13,286.

The year-ago week's output was affected by the Canada Day holiday and downtime at Ford Motor Co. plants for vacation.

So far this year, 615,437 cars have been built, 42.42 percent more than the 432,124 assembled last year at this point.

Last week's scheduled truck production of 15,090 dipped 24.84 percent from the prior week's build of 20,077 but increased 12.29 percent over the year-ago week's 13,439.

Year-to-date, 494,444 trucks have been assembled, 14.96 percent more than the 430,092 completed last year at this time.

Honda of Canada Manufacturing Inc. closed its plant in Alliston, Ontario, this week for vacation. Production is slated to resume on July 11.

Makers now call tune on co-op ads

New fees, control tie dealers' hands

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

For some car and truck makers, cooperative advertising was a marriage made in heaven: Manufacturers spent millions from their advertising budgets in local markets and their dealers in those markets chipped in based on sales.

But something happened to that state of wedded bliss.

Manufacturers — facing escalating advertising costs and a host of new competitors — are changing the traditional co-op relationship with their dealers. New strings are being attached to factory market support dollars, and new policies are being adopted to amplify national messages at the local level.

Already, some are saying this could be the next big factory-dealer battleground.

Some dealer groups are asking factories to help fund advertising campaigns that the makers believe are low-quality and inconsistent with the image being created by the national campaign. Individual dealers in some areas are refusing to join advertising groups, forcing participating dealers to foot the entire bill for local campaigns while the non-participants share in the benefits.

And several manufacturers are now requiring their dealers to use factory advertising to receive factory funding or higher factory contributions. Others are requiring dealer groups to promote specific models in order to receive factory funds or higher factory contributions.

In fact, at this week's 1989 new-product meetings across the country, Chevrolet will tell its dealers about the extent of their now-mandatory contribution to the regional advertising plan.

Too hot to handle — even on payday AUTOMOTIVE NEWS/JOE WILKENS

Second-shift workers at Chrysler Motors' Sterling Heights, Mich., assembly plant stood outside in 100-degree heat Thursday evening and did not report to their stations. It was payday, and Chrysler officials said most workers were inside doing their jobs. Several hundred walked out of the plant Wednesday complaining of heat.

Chevy revises RV allocation

Maker expects gains, but some converters will be hurt

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet plans a major revamp of its recreational vehicle distribution and consignment pool operations — one that will put many smaller converters out of business and sharply reduce the profits of some of its largest dealers.

On the other hand, Chevrolet officials argue, the new program will restore more equitable distribution and pricing for its products, and ensure higher-quality production and customer satisfaction.

Chevrolet's new program, announced to dealers over the weekend, takes effect with the 1989 model year in October.

Under the program, dealers will no longer be able to order seat-delete or upfitter package versions of the compact Astro vans, full-sized G vans and Suburbans for non-consignment pool accounts.

Chevrolet will no longer drop-ship such units to dealers. All of them must go through one of its bailment pool accounts.

Currently, it has 64 bailment pool companies. They handle about half its conversion business.

High-volume dealers, like Paul Sherry Chevrolet, Piqua, Ohio, and Friendly Chevrolet, Dallas, have generated a thriving business out of supplying non-consignment pool companies who do the other half of Chevrolet's conversions.

Dave Arbogast, general manager of Paul Sherry, called Chevrolet's new program a "disaster for us. It's going to take half the yearly net profit out of my dealership," he added.

Chevrolet officials claim, however, that some dealers have been getting an unduly high amount of its total van production, causing shortages and imbalances elsewhere in the distribution system.

Thomas Pfingst, Chevrolet assistant director of fleet sales and special vehicles, said that with the current shortage of Chevrolet van chassis, some dealers are having to pay $500 over invoice for a

Ford, VW mull bids on U.K. makers

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Ford Motor Co. and Volkswagen AG were reported to be at the heart of takeovers involving Britain's two largest automakers — Rover Group and Jaguar.

Stock prices for Jaguar plc soared late last week in London on reports that Ford was planning a takeover bid for the British company, which has undergone a massive transition to strong sales, public ownership and profitability in recent years.

While Ford spokesmen declined to comment specifically, they said Ford was not buying Jaguar shares in the public market. And Jaguar officials said they were unaware of any takeover bids by Ford.

But those reports surfaced amid increasing difficulty for the proposed takeover of Rover Group by British Aerospace. That takeover was engineered by the British government without considering outside bids. But the sale must be approved by the European Commission and that appeared less than certain in recent weeks.

Those European Commission negotiations reached a critical point last week amid rumors that VW has emerged as one of the prime alternative candidates to acquire British government-owned Rover. Along with Ford, the West German group is said to be interested in bidding should the commission reject British Aerospace's £150 million ($255 million) takeover proposal on grounds that it is anti-competitive.

Ford and VW have been frequent partners around the world, such as the joint-venture company they formed in Brazil, Autolatina. But both Ford and VW have denied they are preparing Rover bids in the event the negotiations with the commission collapse. However, VW Chairman Carl Hahn, in a recent interview, made clear his interest in the British manufacturer, and Ford has said it considered countering the British Aerospace bid before it was accepted by the government in late March.

After weeks of negotiations, British Trade and Industry Secretary Lord Young and Eu-

Hiroyuki Yoshino heads to Marysville, Ohio

YOSHINO: *Honda's U.S. carbuilder takes control this week*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Catcher Hiroyuki Yoshino knew how to get the most out of the best pitcher on his college baseball team — Shoichiro Irimajiri.

Now Yoshino will try to do the same with the 5,000-person workforce he inherits from Irimajiri when he replaces his Tokyo University classmate as president of Honda of America Mfg. in Marysville, Ohio, this week.

Yoshino brings to the job a reputation as the fastest car builder in the world — pushing out a new Honda every 41 seconds at the famous Suzuka plant where he has been general manager for the past 18 months.

In Ohio, Yoshino comes in a year when the line speed is increasing and where he also will oversee plans to add more new models to the Marysville production roster — although he's not saying which ones.

"There will probably be more models produced at HAM (Honda of America)," he says coyly, careful not to confirm reports that quote Irimajiri as saying the additional model would be the Acura Integra.

Officially, Honda officials maintain no decision has been made about Integra and Marysville. On that score, Yoshino agrees.

"When we make up our minds, we move

2% increase due in price of auto steel

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors and Ford Motor Co. have agreed to pay about 2 percent more for steel in the 1989 model year in a turnabout that reverses five years of declining steel prices.

"Our discussions so far indicate that flat-roll and bar stock purchases appear to be increasing," said Daniel Marion, steel purchasing agent for Ford.

Both automakers are midway through negotiations with steel suppliers, including USX Corp., which apparently led the campaign to reverse the downward spiral and obtain higher prices.

Thomas C. Graham, president of the USS Division of USX Corp., had said in April when talks began with GM that "we don't know what's going to happen, but I would not characterize our prices as declining."

A higher cost for steel probably will have little or no impact on showroom sticker prices for cars and trucks next year, said Ronald Glantz, analyst with California-based Montgomery Securities.

"By itself, it would raise prices a tenth of a percent," he said. "More important to the auto companies is the price of health care, non-ferrous metals and forest products."

According to Glantz, steel prices — once an important economic indicator — are no longer symbolic of inflation. "It's fair to say that the automakers in the new model year would like to raise car prices 3 percent — almost twice as much as the last model year — but with the strengthening of the dollar and likelihood that sales will weaken later in the year, full recovery of higher costs might be prohibited," he said.

Marion described estimates of a 2 percent increase as reasonably accurate. GM — historically the pattern setter — and the steel companies declined comment.

Steelmakers were able to pry an increase from auto manufacturers with low supplies at a time when demand is high. Marion said steelmakers have reduced capacity; some countries have agreed to voluntary export restraints on steel and foreign steel is a less attractive purchase due to the exchange rate.

Thompson: "Our people want to win, they want to work together"

Thompson's mission

GM parts groups strive for global gains

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — It is the early 1960s. A young man named Stempel is an Oldsmobile transmission design engineer working on what is to become the front-wheel-drive Toronado.

Also assigned to the Toronado project is a fellow named Thompson, an assistant chief engineer for Saginaw Steering Gear Division.

Now crank things up a quarter century to 1987.

Robert C. Stempel has just become president of General Motors. One of his first moves is to have the ex-Saginaw engineer report directly to him.

But W. Blair Thompson is no longer working on front-drive systems. He is GM vice president and group executive in charge of automotive components groups (ACG).

Now switch to April of this year. Stempel pushes another button, OK'ing the formation of an ACG group planning and coordination activity.

The move officially blesses what had been an in-house task force probing deeply into the strengths, weaknesses and future prospects of the 15 component divisions that comprise ACG.

Now, with the formal approval of GM's powerful executive committee — which is responsible for sanctioning product plans and capital expenditures, and is chaired by Stempel — ACG is off and away on a venture to become a global force in the business of supplying original-equipment components to world vehicle producers.

It is a mission Thompson relishes. It is a mission whose success Stempel has deemed a top GM priority.

Some might call it Mission Impossible.

After all, GM's component divisions through the years have been viewed as a coddled bunch of captive vendors protected by the size and strength of their biggest customer — GM's vehicle divisions.

How can those in-house cats and dogs possibly survive — much less thrive — in the jungle-like vendor world beyond GM's walls? Especially in these days of world-class suppliers that must compete glob-

EPA and NHTSA sign cooperation accord

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — EPA and NHTSA now have a formal memo of understanding to deal with any crossover problems that might arise over safety rules and emission control regulations.

It is the first formal agreement between the two agencies to coordinate their rulemaking efforts.

The memo emerged after bitter complaints from Rep. John Dingell, D-Mich., whose House Energy and Commerce Committee oversees both agencies, about the lack of liaison on the onboard vapor control issue.

NHTSA and EPA have agreed to consult regularly and exchange rulemaking and other regulatory and policy documents of mutual concern. The two agencies also agreed to meet at least quarterly to discuss those issues.

EPA will identify potential problems as soon as possible in the planning stage. It will send NHTSA drafts of rulemaking notices that may impact safety, fuel economy, theft or any other vehicle program. EPA said it will notify NHTSA of all its efforts, not just those under the Office of Mobile Sources.

Both agencies will review proposals before they go to the White House Office of Management and Budget.

EPA will consider and "accommodate" NHTSA's comments, where appropriate, consistent with Clean Air and other laws. EPA will discuss matters at quarterly meeting and again consider NHTSA's views. This will continue through the draft of the final rule and prior to the issuance of the final rule "where appropriate."

NHTSA promised similar consideration, with a pledge to keep an eye on environmental impact statements.

The memo of understanding was sent to Dingell on June 28, following a sharp letter from him dated June 13.

In that letter, he accused both agencies of "footdragging" and threatened to move ahead with legisolation, if necessary.

Dingell's concern was first focused on the problem when EPA proposed onboard vapor recovery systems for passenger cars. NHTSA objected to the proposal on safety grounds. The debate went beyond the crash-related fire hazard of the system to include such issues as fuel volatility, fuel tank integrity, stalling and driveability.

Dingell's committee, which conducted hearings on the issue, tried to sort out the differences. Dingell maintained that the two agencies should have ironed out the problems beforehand.

NRA boss fires boycott hint at Iacocca

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A war of words between the National Rifle Association and Chrysler Corp. is brewing over handgun control remarks Chrysler Chairman Lee Iacocca made in his latest book "Talking Straight."

J. Warren Cassidy, NRA executive vice president, dubbed Iacocca a "peripatetic pop-off" in his column in the July editions of The American Rifleman and The American Hunter magazines.

Cassidy also suggested that NRA's 3 million members boycott Chrysler products: "Let's use our freedom of choice when next we spend our hard-earned dollars on the new family car."

Yet it was Iacocca who fired the first volley when he wrote that the "National Rifle Association's propaganda that 'guns don't kill people, people kill people' is a lot of hogwash."

Iacocca continued his assault by saying that "the NRA is even backing Teflon-coated bullets, which can cleanly penetrate a bulletproof vest. Why should a powerful special interest group get away with such malarky?"

Cassidy was unavailable for comment but an NRA spokeswoman said the remarks were made in his personal column and reflect his opinions.

And Chrysler said Iacocca's book reflects his opinions. "It is their right to boycott our cars just as it is Mr. Iacocca's right to speak out on handgun control," said a company spokesman.

Nissan Mexicana steps closer to vehicle sales in Japan

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Nissan Mexicana boss Shoichi Amemiya said he believes the time is approaching when Mexican-built Nissan vehicles will be exported to Japan.

"I feel the moment is coming when we might be able to do it," he said in an interview, "but not this year or next."

Amemiya is president of the Nissan Mexicana board of directors and general director of the company. Nissan Mexicana has been sending finished-vehicle samples to its parent company in Japan for some time. Last March, it sent a Tsuru 2 (known as the Sentra in the United States) and, for the first time, billed the parent.

"This means that we have more confidence in our products," Amemiya said, "and it is quite interesting to let people know about our quality, which we feel has been increasing steadily."

"So far we have not received any criticism," he added. "We feel we have passed the test."

Last year, Nissan Mexicana exported 16,000 vehicles to 22 countries, and it hopes to export 20,000 this year. The company was founded in Mexico 27 years ago and has been a manufacturer for 22 years.

But its export plans may be hurt by the political situation in Panama. The Central American country was its main foreign market last year, with purchases of about 6,000 vehicles.

Sales to the Bahamas, another good market, also have fallen off. Amemiya said the company has shipped about 100 vehicles to the Spanish Canary Islands as it searches for more buoyant markets. Other vehicles have been sold in Nigeria.

Nissan Mexicana is also hoping to boost monthly sales to Puerto Rico to 400. During the past year, about 250 Mexican-made Nissans were shipped there monthly.

Amemiya considers sales of Nissan Mexicana vehicles to the United States to be possible though remote, although in the past few years the company has shipped about 20 sample vehicles to Tennessee.

"The Tennessee plant manufactures the same lines of vehicles as we do here," said Amemiya. "We would need to increase our production capacity before exporting to the United States."

Nissan Mexicana has been exporting about 6,000 1.5-liter engines per month to the Smyrna, Tenn., plant for use in the Sentra. However, Amemiya said the program is scheduled to end in late August when the vehicle receives a new powerplant.

This year, the company will spend up to $60 million on improvements for its three production operations. About two-thirds of the money will be spent at the Aguascalientes engine plant in northern Mexico. The remaining portion will be invested in the expansion and modernization of the vehicle assembly plant in Cuernavaca and Nissan's foundry in Lerma. Both Cuernavaca and Lerma are near Mexico City.

Nissan's new 2.4-liter engine is designed for commercial vehicles and is expected to be on the Mexican market in two years, Amemiya said. Next year, the Mexican company will begin exporting up to 4,000 engines per month to Japan. In addition, 5,000 to 6,000 engines per month will be exported to Smyrna for use in trucks.

Nissan Mexicana was relegated to second place in overall wholesale vehicle sales in Mexico by Chrysler Mexico during the first four months of the year.

But Amemiya said the Japanese firm is bouncing back.

"I feel confident that we can turn things around," he said. "We sold 7,500 units of all types in June. That is a very high figure, a record for us in any one month." Amemiya said the company set other records in June including the export of 1,300 vehicles and total production of 10,000 cars and trucks.

Chrysler Mexico claimed 26.56 percent of the overall market of 92,446 vehicles for the first four months of this year, its deepest penetration since it started selling vehicles in Mexico 70 years ago.

Amemiya said Nissan has increased its advertising efforts and focus in response. "We are now putting more emphasis on easy credit, easy maintenance costs and fuel economy," he said.

One of the reasons for Chrysler's sales surge, according to Erick A. Reickert, Chrysler Mexico president and managing director, is the introduction of a retail credit plan called "Valor Chrysler."

The plan allows payments to be spread over 36 months. But Chrysler executives admit the program is risky at a time of economic uncertainty in Mexico.

Amemiya said Nissan Mexicana does not have sufficient financial clout to introduce such a program.

"It is a risk for Chrysler but it has produced results," he said. "The economy seems to be more stable than at the beginning of the year. So their risk was worth taking."

COLORFUL: *White cars, long the standard, give way to varied hues in Japan*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — For years, the first thing a visitor noticed on the roads of Japan was the color of the cars; or the lack of it because just about all cars were white.

Factory tours revealed mainly white cars on assembly lines interspersed with color, which usually indicated an export.

Toyota claims credit for establishing white as *the* image for cars in Japan. For nearly 25 years, up to 70 percent of cars were white. That tradition was emphasized by Toyota in 1981 with its Soarer, introduced in "super white," whiter than white.

In Japanese culture, white indicates purity and formality, also sober-mindedness. Despite intermittent color fashions, white remained the prominent, overwhelming color. It also helped that the resale value for cars of any other color was much lower.

But finally, white is fading. The change started as new aerodynamic shapes began taking hold in the last two years. White may have enhanced the straight lines of earlier models, but it did nothing for the newer curved shapes, giving only a flat, dull appearance.

When Honda introduced its new Prelude a year ago, it presented a steel-gray color that became something of a signature color. Now, only 40 percent of the Prelude models sold are white, down from 70 percent.

Only 20 percent of Nissan's new wide-bodied Cima models are white. Most are a gray-blue shade. And the signature color for the new Silvia is a lime green. All the promotion for the new model is coordinated in the same color.

The trend appears to have taken hold, manifesting itself in a variety of colors on assembly lines and translating into the higher prices for non-white models on used-car lots.

VW reports increase in sales, profits

WOLFSBURG, West Germany — Volkswagen AG reported a 2 percent increase in net profits for the first six months of 1988 to 310 million marks ($171 million).

Group sales revenue for the first half rose 5 percent to 29 billion marks ($16 billion), with most of the gain achieved in Europe outside the West German domestic market.

Volkswagen AG, which includes Audi and Seat, is forecasting a further sales gain in the second half on the strength of the new VW Passat intermediate, which was introduced in Europe recently.

VW profits rose 3.1 percent to 598 million marks ($330 million) in 1987. Last year's results were depressed by a 380 million mark charge for closing the Westmoreland, Pa., assembly plant.

New Norway distributor appointed by Fiat

OSLO, Norway — Fiat has a new disributor in Norway, Nortial Auto A/S.

The former distributor, Norsk Auto A/S, has gone bankrupt, and the new company has been established to take its place.

Nortial employs the same personnel and is located in the same facilities as the bankrupt company.

Lasse Finstad, the former owner of Norsk Auto A/S, has reportedly left Norway and is now living in Spain.

Chrysler economist expects recession to follow election

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Election-year consumer optimism has kept new-vehicle sales in the United States above expectations for the first half of 1988 and should keep sales strong for the rest of the year.

However, 1989 will bring a post-election recession no matter who wins November's presidential election, according to Donald Hilty, Chrysler Corp.'s chief economist.

"We still feel that if the Democrats get it, they would say 'the Republicans have made a mess of the economy with the budget deficits, we need to solve this' and they would probably raise taxes and reduce spending," Hilty said. "It would probably come soon, and this slowdown in economic activity could cause a modest recession.

"If nothing is done, and the Republicans are talking that way — Bush is talking like 'everything is OK, why change?' — then we think the financial markets would force things and then the recession might come a little later, but maybe it would be a little deeper."

Despite what Hilty sees as an inevitable recession next year, he said consumer attitudes are at a high for the current recovery period that began in November 1982.

Hilty

"I think it's mainly that the unemployment rate is so low," he said. "I think that people who want a job can find one."

He said that after Black Monday, last Oct. 19, consumer confidence "fell like a rock" but has recovered steadily.

Chrysler measures consumer attitude by averaging the University of Michigan study — which Hilty feels has a financial bias toward interest rates so that when interest rates rise the study drops — and the Conference Board study, which Hilty says has a bias toward unemployment so that when unemployment drops the Conference Board study becomes more optimistic.

"We think sales will continue quite strong for the rest of the year, mainly because consumer attitudes are so bullish," Hilty said. "We are amazed that the combination of the two is at the highest level since November 1982. That's just a fantastic phenomenon."

Still, the list of auto industry leading indicators — that is, indicators that precede market changes — is still mixed at best, using conventional green-yellow-red designations.

According to Chrysler's view, installment debt is "red," interest rates have just changed from yellow to red; consumer attitudes have just changed from yellow to green; price pressures remain yellow; disposable income is red; average length of workweek remains yellow; the low number of new unemployment claims is green; while the stock market is yellow.

That combination — three reds, two greens and three yellows — yields a composite indicator of yellow.

Currently, Chrysler is forecasting a calendar 1988 sales total of 10.1 million cars and 5.1 million trucks, which just six months ago was the company's optimum view of the 1988 market if everything fell into place perfectly.

Hilty said the strong 1988 market has been the result of long-term pressures on the automakers to keep unit volume constant, which have caused the carmakers to use innovative incentives, plus unflagging consumer confidence and the willingness of consumers to take on debt.

Hilty said his staff did an analysis of presidential election years and found that economic conditions have improved and unemployment has dropped in about 80 percent of them.

"So the consumer is not all that cynical because he has some facts on which to base the thinking that nothing can go wrong in an election year," he said. "It can, and it has, but the probabilities suggest that it won't."

Safety items win discounts from insurers

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Automobile insurance companies are continuing to offer discounts on personal injury and medical payment coverage for cars equipped with automatic safety belts or air bags.

In releasing a list of discounts offered by major insurers, NHTSA said that most insurance companies provide discounts for cars with factory-installed automatic crash protection.

The discounts apply to premiums for medical payments for occupants of the insured automobile or, in states with no-fault insurance, to personal injury protection for the occupants of the insured vehicle.

NHTSA Administrator Diane Steed said, "The dollar amount saved from these discounts varies from state to state, and some states set their own discount policies.

"Although the company discount polices listed (by NHTSA) have been filed nationally or in states where the companies do business, not every state insurance department has adopted them. Hawaii, Massachusetts, North Carolina, Texas, Illinois and Kentucky do not permit the discounts."

She added, "By 1990, the annual production of cars with air bags is expected to exceed two million."

NHTSA provided the following list of insurers and the discounts they are offering:

Leading Automobile Insurance Companies with Discount Policies
(As percent of personal injury or medical payment premium)

Company	At Time of Purchase	Next Year	Second Year
Allstate	20	30	30
Automobile	25	40	40
State Farm	20	30	30
Liberty Mutual	20	30	30
Nationwide	30	30	30
USAA	60*	60*	60*
Travelers	15	30	30
GEICO	30	30	30
Continental Casualty	30	30	30
Prudential	30	30	30
Aetna	20	30	30
AMICA	30	30	30

PRODUCTION

Truck output sets record for quarter

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF

U.S. truckmakers built 1,085,676 units in the second quarter of this year, the highest output ever for that quarter. The previous record was 1,009,342 in 1987.

The April-June truck total was slightly higher (0.54 percent) than the first quarter's 1,079,887.

Production of trucks during June totaled 375,164, 1.36 percent more than May's 370,127 and 11.38 percent more than the year-ago month's 336,818.

Car production during the second quarter was 2,032,772, up 19.55 percent over the first quarter's 1,700,404 and 5.14 percent more than the 1,933,439 built in the year-ago quarter.

June car output totaled 729,941 units, 5.39 percent more than May's 692,625 and 11.56 percent more than the year-ago month's 654,307.

Automakers scheduled 83,443 cars to be built last week, 47.72 percent below the previous week's 159,618 due to downtime for the holiday and vacations.

Last week's estimated auto production was shared as follows: General Motors, 72.56 percent; Chrysler Motors, 22.29 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.23 percent; and Volkswagen of America, 1.92 percent.

All Ford plants remain closed for vacation until July 18. They also were closed last week.

Honda Motor Manufacturing Inc., New United Motor Manufacturing Inc. and Nissan Motor Manufacturing Co. U.S.A. plants resumed output today after being idle for vacation.

As reported earlier, VW will close its Westmoreland, Pa., plant permanently Thursday due to slow sales of its Jetta, Golf and GTI models. The closing will idle 2,500 workers.

GM's Detroit-Hamtramck plant went down for model changeover last week and its Lansing, Mich., plant is scheduled to close for changeover Wednesday. Both plants are slated to be down the rest of this month.

Quarter's build rises in Canada

Second-quarter output of Canadian cars totaled 327,486 units, 13.52 percent more than the first quarter's 288,485 and 56.37 percent more than the year-ago quarter's 209,434 when several plants were closed for vacation and model changeover in May and June.

June output of 113,621 cars increased 2.68 percent over May's 110,656 and was 45.67 percent more than the year-ago month's 77,998.

Second-quarter truck production of 248,951 was 1.42 percent more than the first quarter's 245,463 and 19.12 percent more than the year-ago quarter's 208,999.

Truck output for June totaled 88,082, 9.51 percent more than May's 80,432 and 21.22 percent more than the year-ago month's 72,662.

All Ford plants remain idle for vacation until July 18.

Pontiac may get Brazil van

Opel Kadett base for global vehicle

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors do Brasil may produce an Opel Kadett-derived minivan for sale by Pontiac in the United States, Adam Opel and Vauxhall in Europe, and its operations in Brazil.

Sources said Robert Stone, managing director, General Motors of Brasil, is currently in Detroit discussing the project.

The global minivan being engineered by Opel, GM's affiliate in Russelsheim, West Germany, is pegged for introduction in 1991 or 1992 if final approval is granted.

Brazilian trade sources said production volume is predicted at 200,000 annually, with the bulk earmarked for the United States. A small number would be sold in Brazil and 15,000-20,000 annually in Europe.

Sources in Brazil said the vehicle may be produced at a new plant, which might be built in Sao Jose dos Campos, a town in the state of Sao Paulo.

The Brazilian minivan would include a four-wheel-drive version, probably using a sophisticated new 4wd system co-developed with Austrian all-wheel-drive specialist Steyr-Daimler-Puch. The technology will debut next year on Opel's

AUTOMOTIVE NEWS/JOE WILSBERG

Celebrate with a bang!
While crashing a car seems an odd way to celebrate, it was appropriate to mark the 20th anniversary of the General Motors Safety Research and Development Laboratory at GM's Milford, Mich., proving ground. The side-impact test on this 1988 Oldsmobile Cutlass Calais is just one of 400 annual crashes that help GM develop safety devices. The driver-side anthropomorphic dummy, dubbed Hybrid III and developed by GM, "survived."

Rover deal tough but done

British Aerospace balks, finally OKs compromise

By Richard Johnson and Jake Lucas
AUTOMOTIVE NEWS STAFF

British Aerospace's acquisition of Rover Group took a series of abrupt turns, with the aircraft maker agreeing to proceed with the takeover after initially balking at conditions imposed by the European Economic Commission.

In agreeing to the compromise package worked out between the British government and the European Commission, British Aerospace settled for a smaller cash injection and fewer tax breaks. The purchase price remains £150 million ($255 million). The company had hoped to acquire a debt-free Rover Group, which includes Austin Rover Cars and Land Rover, maker of off-road vehicles.

The unexpected snag, which emerged just as an agreement was to be announced after three months of negotiations, resulted from the EC's insistence that British Aerospace strictly adhere to a five-year corporate plan outlined for the carmaker by Rover Chairman Graham Day.

The five-year program required £1.5 billion ($2.55 billion) in spending for new models, plant and equipment and twice-annual reports, a provision that struck British Aerospace executives as excessive interference. Failure to meet the five-year plan would result in a £250 million ($425 million) fine to the EC.

While agreeing to the semi-annual reports, company officials last Thursday won assurances that it would be allowed to

World Congress: Huge challenge faces industry

DETROIT — Competition, new technology and relentless demands for quality will make business more challenging for the auto industry but will make life easier for the people who buy automobiles.

That message emerged as a common theme in the keynote addresses — one from the manufacturing side, one from the supplier side — delivered at the Automotive News World Congress Sunday night.

The congress will conclude Wednesday with the first U.S. address by Boris Hubaev, a leader in the Soviet Union's auto industry. He will provide an update on the Soviet auto industry, while spelling out its plans for exporting cars to the rest of the world.

In texts prepared for the opening night speeches, General Motors President Robert Stempel and Thyssen AG Executive Board Chairman Dieter Spethmann said their companies are prepared to deal with the demands of an increasingly global auto industry.

But both foresee strong challenges. Stempel cited his worries about new government regulations that could remove the market's hand in determining the industry's winners and losers.

Spethmann noted the task of meeting the demands of a single, global automotive market. Suppliers and automakers will have to deal with each other more efficiently if they are to jointly reach that goal, he said. He proposed the idea of a manufacturer-supplier "bill of rights" that would serve as a guide as they work more closely together in coming years.

He said that suppliers and manufacturers need to "deal with each other with integrity," as their ties become closer in years to come. His company, Thyssen AG, is the West German parent of The Budd Co., which does nearly $2 billion in North American sales annually, mostly in the auto industry.

The company is made up of more than 180 companies worldwide and offers steel, plastics and other products for automotive uses. Thyssen also has developed a mag-

THE BEST OF 1988: *Petersen, Stempel lead reader balloting*

It's 1988 Automotive News All-Star time.

This year — for the first time — the team was chosen by votes of Automotive News readers and staff.

Ford Motor Co. landed 11 of the 30 All-Star positions. General Motors captured nine spots, Chrysler Corp. four, and Honda Motor Co. Ltd. two.

Here's the team:

Chief Executive Officer Worldwide: Donald E. Petersen, Ford.
Chief Operating Officer Worldwide: Robert C. Stempel, GM.
Chief Executive Officer U.S.: Donald E. Petersen, Ford.
Chief Executive Officer Europe: John F. Smith Jr., GM Europe.
Chief Executive Officer Asia: Tadashi Kume, Honda Motor Co.
Chief Operating Officer U.S.: Robert C. Stempel, GM.
Chief Operating Officer Europe: Louis E. Lataif, Ford of Europe.
Chief Operating Officer Asia: Tadashi Kume, Honda Motor Co.
Domestic Division Manager: J. Michael Losh, Pontiac.
European Import Division Manager: Graham W. Whitehead, Jaguar Cars.
Asian Import Division Manager: Robert B. McCurry, Toyota Motor Sales U.S.A.
Design: Jack J. Telnack, Ford.
Engineering: Robert J. Eaton, GM.
Product Planning: Max L. Jurosek, Ford.
Manufacturing: Richard E. Dauch, Chrysler.
Purchasing: Clinton D. Lauer, Ford.
Finance: Robert S. Miller Jr., Chrysler.
Marketing/Sales: Robert L. Rewey, Ford.
Service/Parts: Joseph A. Kordick, Ford.
Truck Operations: Edward E. Hagenlocker, Ford.
Dealer Relations: C.N. "Bud" Moore, GM.
Government Relations: James D. Johnston, GM.
Labor/Industrial Relations: Peter J. Pestillo, Ford.
Advertising: J.W. "Jay" Qualman, Buick.
Public Relations: Bernard F. "Moon" Mullins, Chrysler.
International Affairs: Michael N. Hammes, Chrysler.
Rookie of the Year: Robert C. Stempel, GM.
Dealer of the Year: Roger S. Penske, Penske Corp.
Supplier Executive of the Year: Ralph E. Reins, ITT.
Industry Leader of the Year: Donald E. Petersen, Ford.

Sales boom forecast for Midwest

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

There is still pent-up demand for 2 million to 3 million cars and trucks in the United States — most of it in the Midwest.

A recent study of regional trends by Kidder, Peabody & Co. reports that as much as half of the nation's untapped demand will come from the Midwest, which makes up about a fourth of the motor vehicle marketplace.

The anticipated growth in the Midwest market is expected to benefit traditional domestic automakers that have a large share of the market.

"Most observers looking at traditional patterns say pent-up demand has been absorbed in the Mid-Atlantic and New England areas. We feel that whatever shortfalls there are, will be more than offset by strong sales in the Midwest, South Atlantic and Pacific/Mountain regions which account for up to 70 percent of the market," said Jack V. Kirnan, automotive analyst for Kidder, Peabody.

Short of major economic shock to the system, vehicle sales in the future will be less cyclical Kirnan said.

"The use of incentives, which effectively cut vehicle price, and the impact of excess capacity, which also constrains pricing, mean that more marginal buyers will come into the marketplace," he said.

These factors, in conjunction with the regional shifts, mean a period where sales will be surprisingly stable, Kirnan said.

"*The Rebirth of Industrial America*," from Kidder, Peabody, the investment banking arm of GE Financial Services, New York, outlines U.S. regional economic shifts that indicate a much stronger outlook for U.S. vehicle sales.

Based on new regional research, the group has upgraded its 1988 total vehicle sales forecast to 15.3 million units. The 1989 and 1990 estimates also have been revised to 15.2 million and 15.5 million, respectively.

The report predicts total U.S.

Classic car show — the eyes have it

"Eyes on the Classics, Automotive Design — Past, Present and Future" was the theme of a car show held in Grosse Pointe, Mich., earlier this month. Admiring this 1938 Cord is its designer, left, Gordon Buehrig; Jack Telnack, vice president of design, Ford Motor Co.; and Charles Jordan, vice president of design, General Motors. The show benefited the Detroit Institute of Ophthalmology. Buehrig received a Stueben crystal lifetime achievement award.

A reprise of 1985?

Car haulers vote; last time, they walked

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The nation's 22,000 car haulers will begin voting on their new agreement Friday, and the auto industry is recalling 1985.

In July 1985, a 21-day strike by the haulers drained dealer inventories and slowed showroom traffic, causing a 10 percent drop in early August sales and a fear that a glut of older models would be on hand at new-model introduction.

That problem was resolved when a wave of factory finance programs led to record late-August sales.

Most new cars are transported to showrooms by trucks driven by Teamsters Union members, whose contract expired in May.

Bargainers from the Teamsters and the National Automobile Transporters Labor Division, which represents car-hauling companies, have reached a tentative agreement.

Teamster Vice President Walter Shea said the pact "made significant gains in wages, benefits (and) working conditions." But Ken Paff, director of the dissident Teamsters for a Democratic Union, called the agreement concessionary and said, "I think it will be voted down like the last one was."

At the beginning of this month, the import-car supply was 58 days, almost double the figure before the 1985 strike. But Honda, with a 16-day stock, would be pinched.

The import-truck supply was 81 days on July 1 this year.

Big 3 car supplies on July 1 were: Ford, 58 days; General Motors, 63 days; and Chrysler Motors, 67 days.

The July 1 inventory numbers show below-average stocks of some models. At Ford, those models include Ford Probe, 32 days' supply; Mercury Grand Marquis, 41; Ford Taurus and Crown Victoria, 46; and Ford Mustang, 48.

GM models with low inventories: Pontiac Grand Am, 35 days; Pontiac Bonneville, 36; Pontiac Sunbird, 40; Chevrolet Corsica/Beretta, 41; and Pontiac 6000, 42.

Chrysler Motors' cars in tight supply include the Dodge Dynasty, 42 days; Plymouth Sundance, 47; and Dodge Shadow, 48.

After the haulers returned to work in 1985 and began moving the cars that were stockpiled at assembly plants and railheads, GM cleared its backlog of 1985 models with a 7.7 percent financing deal — then the lowest ever for GMAC.

The other domestics also jumped on the cut-rate-financing bandwagon and sales took off.

Incentives geared to calmer cleanup

By Laura Clark
and Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTERS

Car buyers looking for the "fire sales" that characterized domestic makers' cleanup sales campaigns for the last three model years may be disappointed this time around.

Ford Motor Co. and Chrysler Motors have announced new wide-ranging incentive programs that actually reduce rebates on many vehicles. Small sweeteners were added to a few slow-selling models.

Chrysler, the only domestic maker offering cut-rate loans this cleanup season, also reduced the complexity of its multi-tiered annual-percentage-rate program.

By contrast, last year each of the Big 3 offered low-interest-rate loans and rebates and advertised those year-end sales bonanzas heavily.

GM's 1987 final cleanup campaign offered interest rates as low as 1.9 percent and cash rebates up to $2,000. So far, GM is offering no low-interest loans but is giving up to $1,000 directly to consumers on selected cars and trucks. It could still launch heavy cleanup incentives, however.

Ford's 1987 cleanup program, which followed GM's program, consisted of loans as low as 1.9 percent and rebates up to $700. Ford's cleanup campaign this year, which runs from July 13 to Oct. 5, skips cut-rate loans but does offer rebates up to $1,000.

Chrysler also offered loans as low as 1.9 percent and rebates up to $750 at the end of the 1987 model year. The 1988 Chrysler program, which began July 13 and runs indefinitely, calls for loans as low as 6.8 percent and rebates up to $1,000.

"What we're seeing are better managed incentive programs," said Thomas F. O'Grady, president of Integrated Automotive Resources, Wayne, Pa.

"The auto companies have learned from one another how much these incentives cost. They have also learned to sell fewer vehicles and to make money on them," said O'Grady, who added that inventories for domestic vehicles were down 20 to 25 percent on June 30 compared with a year ago.

Dealer incentive programs by the domestic makers also are slim. However, Cadillac is offering up to $2,000 per car for Eldorado, Seville and Brougham sales during June and July if dealers meet sales objectives.

Nissan, meanwhile, revamped its consumer rebate program on selected cars and trucks, while Mitsubishi began offering dealer incentives and a special lease on Precis.

Suzuki is paying dealers a $2,000 rebate on sales of its Samurai sport-utility vehicles, and there is a unique feature: a $600 advance before the sale. Samurai sales plunged 70 percent in June after Consumers Union labeled the vehicle unsafe.

The following programs have been announced:

CADILLAC: Cadillac is giving dealer rebates up to $2,000 per car if dealers meet individual sales objectives for 1987 and 1988 Eldorado, Seville and Brougham models. The program began June 1 and ends July 31.

Dealers receive $1,000 per car if they meet 25 percent or more of their sales objective for any of the three models and $2,000 per car at 70 percent. The rebates are not retroactive to the first sale.

CHRYSLER: The "America's Winners Clearance" incentive program covers selected 1987 and 1988 vehicles. The program began July 13 and has no expiration date. No dealer financial participation is required.

Chrysler reduced incentives on Plymouth Reliant and Dodge Aries from $400 to $300; Jeep Comanche two-wheel-drive short-bed pickup truck from $500 to $300; Dodge Daytona (base model) from $500 to $400; Eagle Premier LX and ES from $750 to $600; standard Dodge Ram pickup from $1,000 to $750; Daytona Pacifica from $1,500 to $1,000; and Chrysler Conquest from $1,500 to $1,000.

Chrysler increased incentives on Dodge Dakota pickups (excluding S model) from $500 to $750 and on Chrysler LeBaron GTS and Dodge Lancer from $750 to $1,000.

The following vehicle rebates remained the same in the new program: Plymouth Sundance, Dodge Shadow, Plymouth and Dodge Colt, $500 each; 1988 Eagle Medallion, $1,000; Cherokee two-door, $500; and Jeep Comanche 2wd long bed and 4wd models, $750.

Chrysler added the following rebates: Plymouth Horizon/Dodge Omni, $300; Plymouth Caravelle, $500; Chrysler LeBaron sedan, $500; 1989 Eagle Medallion, $500; and Dakota S, $300.

Buyers may also choose low-interest-rate loans between 6.8 percent for 48 months and 9.8 percent for 60 months as an alternative to the rebate for all incentivized vehicles except Omni/Horizon. Omni/Horizon buyers can receive the $300 in addition to a 10.8 percent loan financed for 61 to 72 months.

FORD: The new incentive program runs July 13 to Oct. 5. No dealer financial participation is required.

Ford reduced customer rebates on Ford Taurus and Mercury Sable from $600 to $500; Ford Mustangs equipped with 2.3-liter engines from $750 to $500; and Ford Tempo and Mercury Topaz models from $500 to $400. It previously offered $500 only on the two-door and all-wheel-drive versions of Tempo/Topaz.

Rebates on Ford EXP increased from $500 to $600. All Mustang buyers in California and Hawaii will receive a $500 rebate in the new program; the previous regional program offered a $500 rebate only on those equipped with 5-liter engines.

Ford added Aerostar rebates of $600 for July 8-31 only.

Rebates remained the same on Ranger S, $300; Festiva LX and Festiva L Plus, $300; 1988 Escort, $300; 1988½ Escort, $500; 1987 Lynx, $500; Thunderbird (excluding Turbo Coupe) and Cougar (excluding XR-7), $600; Thunderbird Turbo Coupe and Cougar XR-7, $1,000; Tracer, $650; Ranger (except S model), $750; Bronco II 4wd, $750; Bronco II 2wd and F-series conventional pickup trucks equipped with manual transmission, $500.

MITSUBISHI: The new dealer incentive program covers 1988 Mirage, Cordia, Starion, Sigma, wagons, vans, Montero and trucks.

Dealers receive $250 for each unit between 10 and 20 sold during July; $350 for the 21st through 40th; $500 for the 41st through

GE taps American Express for vehicle-lease program

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

GE Capital and American Express will offer an auto lease program to American Express' two million small-business customers that promises savings of up to 20 percent on monthly retail lease payments.

Thai Lee, marketing manager — American Express Travel Related Services, said the company has a joint program with GE Capital to lease a broad range of domestic and import vehicles to American Express Corporate Card members.

"GE has several leasing companies, expertise in leasing and a dealer network," said Lee. She declined to speculate on the number of vehicles the company expects to lease, except to say it will be in the "multi-thousands."

Lee said GE will purchase cars from dealers and has negotiated prices with different auto manufacturers.

GE officials declined to comment.

American Express brings a market base and solicitation to the joint program and GE agreed to supply the vehicles, Lee said.

An advertising campaign launched in May described the program to card members.

Members call a telemarketing center in Barrington, Ill. — home to GE's leasing and auction operations — where they are provided with quotations based on dealership prices or the "factory-order option." GE declined to elaborate.

"All of the vehicles are delivered to members through the GE dealer network," said Lee. Billing is done through American Express cards and the leases are through GE Capital.

GE Capital has several leasing companies, including GE Capital Fleet Service, GE Capital Auto Financial Services and GECAL. The company says it has more than 400,000 cars on lease.

College aid now available to laid-off auto workers

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Beginning with the 1988 school year, many laid-off auto workers and their families will be eligible for the first time for federal financial aid to attend college.

Meanwhile, a college in Missouri has made 100 scholarships available for the children of laid-off auto workers. The program begins this fall.

New eligibility requirements for federal financial aid — effective July 1 — no longer consider a laid-off worker's income for the previous year nor the value of the family home.

"That made our people essentially ineligible before," said Phil Mastin, manager of government relations at the GM-UAW Human Resource Center in Auburn Hills, Mich.

Laid-off workers, their spouses and children who apply for student aid must now report expected income for the coming year.

About 60,000 workers are laid off at General Motors alone. Plant closings accounting for about 40,000 of that total.

The new eligibility requirements apply to laid-off workers in all industries.

Workers enrolled at an accredited college are eligible for up to $2,100 a year in Pell grants, national direct student loans, college work-study grants and supplemental educational opportunity grants.

The Pell program alone is funded at more than $3 billion annually, Mastin said.

David Lah, a U.S. Department of Labor analyst, said some applicants will still be ineligible, based on expected family income.

"People seeking federal student aid should work with their college financial aid officer," who will help determine eligibility, he said.

Meanwhile, children of laid-off UAW workers are eligible for a new scholarship program established by Tarkio College in northwest Missouri.

The school has allocated $1.28 million from its general scholarship fund for the program, which will provide 100 annual scholarships of $3,200 each, guaranteed renewable for four years.

Vehicle supply steady

Domestic cars at 60 days; imports, 58

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Robust sales in June held the combined stocks of unsold U.S.-built cars and imported vehicles to the equivalent of a 61-day supply on July 1.

Inventories of unsold domestic cars and imported vehicles totaled 2,490,542 on July 1. That was 10.79 percent — or about 301,100 units — lighter than a year earlier when there were 2,791,643 unsold vehicles on hand. Last year's stocks represented a 71-day supply.

The July 1 total was 15,000 higher than the 2,474,699 unsold vehicles in inventory on June 1 of this year. That represented a 59-day supply.

In spite of June's improved sales performance, domestic car stocks moved up to 1,663,109 units on July 1, which represented a 60-day supply. On June 1, the stockpile of U.S.-built cars was 1,597,668 units, equivalent to a 57-day supply. A year ago on July 1, there were 1,900,096 units, representing a 75-day supply.

Imported-car inventories were whittled down to 634,143 units on July 1, a 58-day supply. A month earlier, there were 676,481 unsold imported cars representing a 63-day supply. On July 1 last year, imported car stocks totaled 650,508 units, which was equivalent to a 60-day supply.

"We have a 30-day supply and need about every model. Sales have been fair. They are not as good as last year, however, last year sales were great," said Scott Clark, owner of Toyota City, Charlotte, N.C.

Total import truck inventories rose to 193,290 vehicles on July 1, representing an 81-day supply. On June 1, there were 200,550 unsold units, equivalent to 72-days' worth. Last year on July 1, import truck stocks were fatter — 241,039 unsold imported trucks, which represented a 71-day supply.

Japanese and German shares of unsold car stocks edged up slightly in June. On July 1, import-stocks by country of origin were divided this way: Japan, 61.82 percent; Germany, 14.99 percent and all other countries, 23.19 percent.

Domestic and major transplant carmakers' shares of total stocks (including captive imports) on July 1 were: General Motors, 36.55 percent; Ford Motor Co., 20.68 percent; Chrysler Motors, 13.42 percent; Nissan, 6.25 percent; Toyota, 3.10 percent; Honda, 1.27 percent; all other manufacturers, 18.73 percent.

A year ago, inventory shares were split this way: GM, 44.38 percent; Ford, 19.78 percent; Chrysler, 12.55 percent; Nissan, 7.46 percent; Toyota, 3.92 percent; Honda, 0.91 percent and all others, 11.00 percent.

By size class, the July 1 domestic-car inventory was divided as follows: intermediate, 43.85 percent; compacts, 23.04 percent; standards, 17.53 percent; subcompacts, 14.63 percent; specialty class, 0.95 percent.

A year ago, stocks by size class were: intermediate, 42.97 percent; compact, 23.98 percent; standard, 18.07 percent; subcomapct, 13.91 percent; specialty, 1.07 percent.

GM shaved its total domestic and captive import car stocks to 910,251 units or 64-days' worth vs. 1,131,928 units, an 86-day supply, on July 1, 1987.

Ford's stocks, including captive import cars, were reduced to 515,100 units, representing 60-days' worth vs. 504,517, a 68-day supply a year ago. Chrysler's stocks including imports dropped to 334,127 units, equivalent to 75-days' worth of unsold vehicles compared with a year-ago inventory of 350,444, representing an 82-day supply.

Transplant Honda reported the slimmest stocks — 31,558 domestic and import cars, representing a 16-day supply compared with 23,263 units, representing a 13-day supply last year.

The second slimmest stocks belonged to Toyota, which reported inventories of 77,227, equal to a 25-day supply vs. 109,444 or a 38-day supply a year ago.

Nissan's combined import and domestic vehicle stocks totaled 155,541, representing a 65-day supply on July 1. Although inventories were fatter than on June 1, they were down considerably from last year's 208,221, equivalent to a 73-day supply.

Among U.S.-based manufacturers, Ford's slimmest inventories in terms of day supply belonged to Lincoln Continental and Ford Probe. Ford reported heavier Thunderbird, Festiva and Mercury Tracer stocks on July 1.

Chevrolet was shy of Corsicas/Berettas, and Pontiac's Sunbird, Grand Am and 6000 models were in short supply on July 1.

Cadillac's DeVille and Eldorado stocks grew and the division had a 117-day supply vs. a 75-day supply last month.

Dodge was low on Shadow and Dynasty models although Dodge Omni and Plymouth Horizon stocks were higher.

The slimmest import car stocks belonged to Honda with a 15-day supply, and Hyundai reported that its stocks dropped to a 32-day supply on July 1. Hefty import car stocks were reported by Audi, and Yugo's stocks were slightly higher than a month earlier but represented a 227-day supply.

Auto trade deficit rises after 2-month downturn

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks increased slightly in April, following two months of improvement. The trade deficit edged up 0.8 percent in April compared with the year-ago period. The upturn was due to a 3.9 percent increase in imports, while export growth slowed for the month.

Trade numbers from the U.S. Commerce Department show a trade deficit for passenger cars and light trucks of $3.850 billion for April. Total car and truck exports had a value of $914.4 million during the month. Monthly car and truck imports were valued at $4.764 billion. The automotive trade deficit for April 1987 was $3.817 billion.

Exports of passenger cars reached 69,736 vehicles with an estimated value of $732.6 million in April. Light-truck exports for the month were 17,738 vehicles with an estimated value of $181.8 million. Passenger-car exports were up 55.1 percent to Japan, and increased 6.5 percent to Canada. Exports to other countries increased by 5,612 units.

On the import side, Japan turned in a mixed performance for the month with the quantity and value of truck shipments continuing to slide, while the value of passenger-car shipments increased 1.8 percent over April 1987. The number of Japanese passenger cars shipped to the United States continued to decline, however.

South Korea, Mexico and Brazil all continued to post increases in car shipments. Canada and Yugoslavia also sent more cars to the United States for the month. Shipments from West Germany, Sweden, the United Kingdom, Italy and France declined.

Total car and truck imports had a value in April of $4.764 billion, up 3.9 percent from the $4.585 billion of automotive imports shipped in April 1987. There were 472,307 finished vehicles imported to the United States in April 1988, compared with 476,136 vehicles in April of last year.

Imports of passenger cars reached 394,651 units for the month with a value of $4.176 billion. Imports of light trucks were 77,656 units with a value of $588.3 million.

Japanese car imports dropped 5.1 percent for the month, but the value of the shipments increased by 1.8 percent. Japanese truck imports were off 72.5 percent. Japan shipped 171,586 cars to the United States in April, down from 180,825 a year ago. Truck shipments were 24,991 units, down from 90,853 units a year ago.

West Germany, Sweden, United Kingdom, Italy and France all shipped fewer cars to the United States in April 1988 than in April 1987, continuing a year-long trend. German shipments were off 35.7 percent. Sweden's shipments were down 41.4 percent. French and Italian manufacturers — which already import only a small number of cars — sent 37.3 percent and 52.4 percent fewer vehicles, respectively, to the United States for the month. Imports from the United Kingdom were off 9.7 percent.

The number of passenger cars imported from South Korea in April increased 50.1 percent from the year-ago period. Korea shipped 43,988 vehicles to the United States in April 1988, compared with 29,303 in April of last year.

Imports from Mexico were 10,806 vehicles, up from 7,524 one year ago. Brazilian imports were 10,022 units for the month, up from 4,452 vehicles shipped in April of 1987. Yugoslavia saw exports to the United States rise 17.9 percent for the month, after falling slightly in March.

FTC tells GM 1983 agreement doesn't override New York law

WASHINGTON — The Federal Trade Commission said General Motors is mistaken in claiming a 1983 consent settlement with the commission preempts the 1986 New York lemon law.

FTC lawyers filed the opinion June 30 in a pending lawsuit filed by GM in 1986 against the state of New York. In the case, GM said a 1983 consent agreement with the FTC establishing a nationwide arbitration system to settle warranty disputes exempts it from New York's law.

GM said the system, administered by the Better Business Bureau, sets "binding rules" of liability.

FTC attorneys disagreed. They said the cases aired under the FTC order are to be settled on a case-by-case basis and that it is not the commission's intent under the agreement to "preclude states from adopting laws designed to benefit consumers who participate in arbitration programs."

The 1983 consent order settled complaints brought against GM in 1980 involving the THM-200 automatic transmission, camshafts and lifters in certain Chevrolet gasoline engines and fuel injection pumps and fuel injectors in certain Oldsmobile diesel engines.

FTC said it can and in certain situations does pre-empt state laws but it did not intend to do so with the GM consent order and is unaware of any existing pre-emptive intent. Nor was the order viewed as a comprehensive regulation of arbitration so as to leave no room for state action, FTC said.

"In fact, it contains numerous references to state law and in each instance indicates that arbitration under the order will comply with, not pre-empt, the law," the FTC opinion said.

It concluded that it is not the commission's intent to "deny states the opportunity to experiment with legislative approaches to consumer protection, adding, there is "no evidence that this sort of nationwide uniformity was a goal of the commission's order."

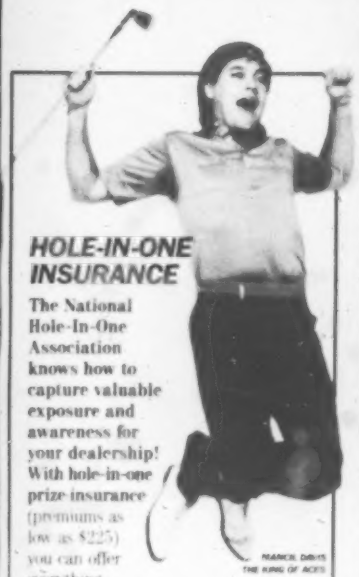
Mustang alive until early '90s if sales hold up

DEARBORN, Mich. — Ford Motor Co. has asked the city of Dearborn for a tax abatement on $58 million in planned improvements to its plant there which builds the Ford Mustang.

The request marks another show of support for the Mustang, whose future had been in question. Ford now says it expects to build the car at least into the early 1990s if sales hold up.

The $58 million would be used to install a new clearcoat paint system. The investment still has to be approved by Ford's board of directors.

An abatement would cut Ford's tax bill on the improvements by as much as 50 percent over 12 years.



HOLE-IN-ONE INSURANCE

The National Hole-In-One Association knows how to capture valuable exposure and awareness for your dealership! With hole-in-one prize insurance (premiums as low as $225) you can offer everything from a new car to up to one million dollars in cash! Your golfers have a great time, and if someone makes an ace, we pay the claim.

Call us today for a fast, free no obligation quote and learn how the National Hole-In-One Association can help you put a car on the green!

Lemon-law pre-emption faces a new foe

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Auto industry proposals to use Federal Trade Commission approval of informal dispute resolution mechanisms to pre-empt state lemon laws have been attacked by the National Association of Consumer Agency Administrators.

Meanwhile, both domestic and import car companies are taking sharp issue with the legal objections filed by 41 state attorneys general over the industry petition.

The Motor Vehicle Manufacturers Association and the Automobile Importers of America, said in a letter that their intent is to press for uniform procedures for private settlement mechanisms while allowing states to set their own arbitration programs.

They also said their April petition should make more manufacturer informal dispute settlement mechanisms available. They said that would benefit consumers directly since "only a small portion of warranty problems are covered by state lemon laws."

In opposing FTC pre-emption, the National Association of Consumer Agency Administrators cited three reasons. First, the group said, state lemon law regulations are appropriate because they fill a void created when no manufacturer offered a complete warranty under the 1975 Magnuson-Moss Warranty Act with provisions for repair, refund or replacement of lemons. Since the states filled that void, the group said, they should also determine the "appropriate role and form of private dispute settlement mechanisms.

Second, the group said, state regulation occurred because of FTC's "disinclination" to act on its Rule 703 under Magnuson-Moss permitting arbitration. In 1982 after Connecticut passed the first lemon law, controversy arose over whether programs claiming to meet the FTC rule actually did so. FTC's response was to treat it as a state matter. The consumer agency group said in its letter that "the commission cannot now justifiably turn around and pre-empt" the state rules it invited.

Finally, the group said, it would be inappropriate for the FTC to act since the same issue of pre-emption is now in litigation. If Congress feels the courts are misinterpreting the purposes and policies of the Magnuson-Moss Act, it can take appropriate action, the group said, but that is a fundamental policy decision properly left to Congress, not the commission."

The group said FTC cannot approve the programs since it is expressly forbidden by language in the conference report ironing out differences between the Senate and House versions of the 1975 Magnuson-Moss Act.

But the consumer group admitted that the MVMA Automobile Importers of America petition on the FTC rule has potential for consideration if the issues of pre-emption and FTC certification of settlement mechanisms are dropped. However, the industry associations feel their petition should be approved because in addition to providing a uniform settlement mechanism, other consumer benefits include better training for arbitrators, more oral hearings and more information on the programs.

They add that in the 21 states whose lemon laws merely incorporate the FTC rule by reference or those six states that do not have lemon laws, consumers would benefit greatly" from the changed FTC rule with greater consumer protection.

While the state attorneys general and the industry associations disagree over what would be pre-empted under the Magnuson-Moss Act, the automakers maintain that the pre-emption sought in their petition would affect fewer than half the states with lemon laws and that a handful of states would have their laws invalidated by such action.

Contrary to charges that they want a shortened rulemaking, the auto industry associations say they welcome public hearings on the matter.

Scam tags 6th former Pontiac aide

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A federal grand jury last week indicted another former Pontiac employee on charges stemming from warranty scams.

Indicted on five counts of mail fraud was Allen Peek, former assistant zone manager for service in Pontiac's Detroit zone. He currently is employed by BMW on its national warranty audit staff.

He will be arraigned before a federal magistrate in Detroit, probably during the week of July 25.

The grand jury last week charged that this alleged warranty scam worked similar to an earlier one in which five persons pleaded guilty.

The grand jury charged that Peek used his authority to direct dealership service department employees to submit claims to Pontiac for repair work — reimbursable beyond normal warranty coverage — that was never performed. It charged that Peek then approved the checks that were paid to "a personal friend and associate" of Peek.

The indictment charged that Peek allegedly was responsible for five bogus repair orders totaling $5,736.39, which were processed through two Detroit-area dealerships, Bob Sellers Pontiac-GMC, Farmington Hills, and Shelton Pontiac-Buick, Rochester.

No dealership personnel have been indicted.

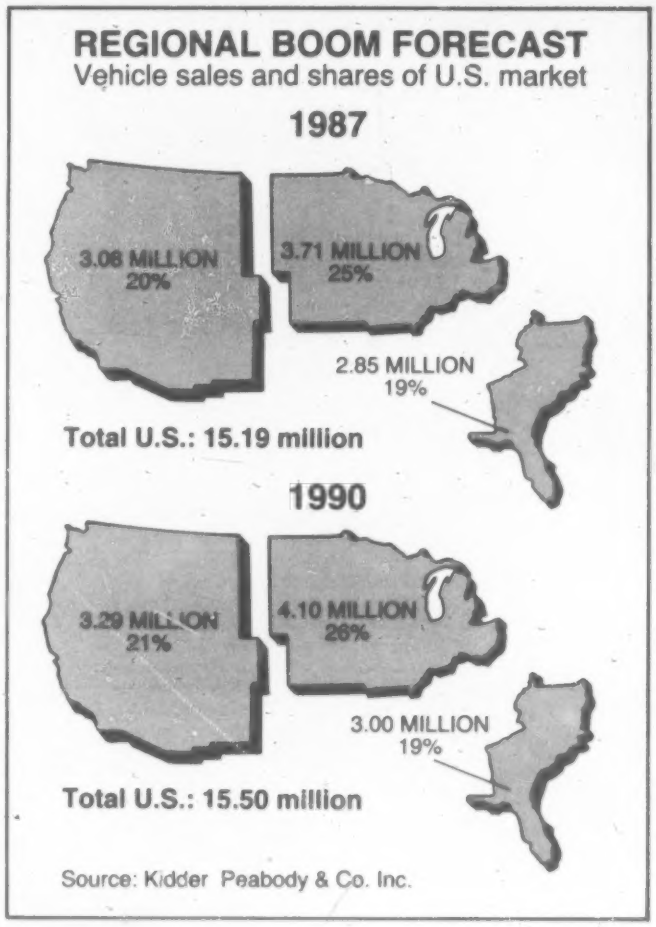
Separately, the fifth and final defendant in the original Pontiac warranty scam indictments — involving the Detroit and Buffalo, N.Y., zones — was sentenced in federal court in Ann Arbor, Mich.

All five of the original defendants pleaded guilty to various charges.

On July 13, U.S. District Judge George LaPlata sentenced Darrell D. Osland to two years in prison plus a consecutive five-year probation.

Osland earlier pleaded guilty to one count of mail fraud and one count of interstate transportation of property taken by fraud as part of a plea-bargaining agreement with the U.S. attorney's Detroit office.

He had been zone service manager in the Buffalo zone and dealer service consultant in the Detroit zone.



DEMAND

FROM PAGE 3

new-car sales of 10.3 million units in 1988 and sales of 10.2 million units in 1989. Sales of traditional domestic makes are expected to total 6.65 million in 1988 and 6.55 million in 1989.

Transplant car sales are projected to rise significantly to 650,000 this year and 850,000 in 1989, while import vehicle sales are expected to decline to 3.0 million this year and 2.8 million in 1989.

The overall import-car sales share is anticipated to decline over the next two years from a 31.1 percent share in 1987 to 27.5 percent in 1989, according to the report.

The report details regional sales patterns since 1964 and projects future sales trends based on a regional econometric model that considers regional economic growth, employment, income and population migration.

The key focus of the study is on untapped demand potential in the Midwest. The weaker dollar has "improved the international competitiveness of many basic industries" in the Midwest, which has only recovered about 40 percent of the volume that was lost during the last economic downturn, according to the report.

Improved Midwest vehicle sales should lead to better than expected domestic market share gains because 80 percent of all vehicles sold in the Midwest are domestic, compared with 67 percent on a national average basis, the report said.

Two other regions will contribute to the strength of the market. The Pacific Mountain region's economic strength is influenced by the weaker dollar, which has boosted export demand for lumber, aircraft, high-tech machine manufacturing and computer equipment manufacturing, according to the report.

Key industries in the South Atlantic region — including textiles, chemicals and high-tech office equipment — benefit from the lower dollar, according to the study which reports: "Motor vehicle sales should remain above trend line due to expected migration flows, a growing service sector and specific regional impacts of the lower dollar."

Car-like seat belts required for trucks

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has decided to require that all trucks, buses and multipurpose vehicles weighing more than 10,000 pounds meet new safety-belt regulations.

The new rules will make seat belts easier to use in those vehicles and will keep them cleaner. The agency has found that truckers will not wear dirty seat belts.

NHTSA's final rule, published July 6, specifies that all vehicles manufactured after Aug. 31, 1990, must meet the new requirements.

Since 1972, NHTSA has required manufacturers of vehicles weighing more than 10,000 pounds to install safety-belt systems and meet federal belt-strength requirements. Until now, however, NHTSA has not required those vehicles to meet passenger-car regulations that make seat belts easier to use.

The new rules require that all trucks, buses and multipurpose vehicles over 10,000 pounds use a standardized buckle-release mechanism, be equipped with a locking retractor that prevents the belt from tightening excessively around the wearer and have a retractor that is movable with the seat.

NHTSA said it based much of its rulemaking on studies of belt usage by truck drivers and of accidents involving those vehicles.

"There are substantial data showing that occupants of heavy vehicles, particularly heavy trucks, face a significant risk of death and injury in vehicle crashes," NHTSA said in its rulemaking announcement.

"For instance, there are approximately 1,000 deaths annually of heavy-vehicle occupants. Total or partial ejections, which could be substantially reduced by increased belt usage, accounted for about 30 percent of all heavy-vehicle fatalities. The agency estimates that about 43,000 injuries occur in heavy vehicles annually," NHTSA said.

The agency classifies any truck, bus or multipurpose vehicle weighing more than 10,000 pounds as a "heavy" vehicle.

"Surveys of belt usage among heavy-truck drivers have found usage to be as low as 6.2 percent, which is substantially below the national average for passenger-car drivers," the agency continued. "Surveys of heavy-vehicle drivers have noted several behavioral and vehicle-design-related reasons for low belt use among heavy-truck drivers."

One of the most significant reasons for low belt usage, NHTSA said, is that "belts in heavy vehicles were often too dirty to wear because most safety belts in heavy vehicles on the road today are not equipped with retractors. Absent a retractor, the belts can dangle from the seat structure and become soiled with dirt and grease on the vehicle's floor."

The agency said its rulemaking will help interstate truckers meet a belt-use requirement set by the Office of Motor Carrier Standards and mandatory safety-belt-use laws in various states.

Korean workers target union, supplier

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — As labor unrest continues here, members of two unions have expressed dissatisfaction with their leadership, and a work stoppage at a components supplier threatens to halt production at two auto companies.

Workers at Hyundai Motor Co. adopted a no-confidence motion against Lee Yong-Bok, chairman of the company's trade union. The workers are unhappy because the union signed a contract without the approval of the rank and file.

Some 14,000 workers have joined in a call for a general meeting and are seeking government permission to name one union member empowered to convene such a meeting.

Meanwhile, after ending their strike in May, several thousand workers at Daewoo Motor Co. staged sporadic sit-in protests demanding the resignation of Won Yong-Bok, their union leader. Workers accused him of being "insincere" in the early stages of negotiations with the company.

Daewoo Motor and Ssangyong Motor Co. are threatened with disruption in production as a result of labor problems that have re-emerged at Daewoo Precision Co., which supplies both automakers with components. If the situation continues, the two assemblers may be forced to suspend operations.

Labor problems at Daewoo Precision, which flared up in May, ended after a month of negotiations. However, the company's trade union resumed the strike on June 25 over wages.

The company manufactures carburetors, shock absorbers, steering knuckles and liquid crystal displays used in instrument readout panels.

The company is also a defense contractor and, as such, is subject to laws that forbid strikes in the defense industry.

South Kyongsang Gov. Cho Ik-Rae has warned the Daewoo Precision workers that their "unlawful labor dispute has caused a serious impediment to the defense industry." He vowed to take legal action, if necessary, to order workers back to their jobs.

VAN

FROM PAGE 1

new Vectra compact.

Last week, European sources confirmed the existence of the minivan project, for which preliminary approval has been granted by GM's executive committee in Detroit.

"If we get a program it might be something like a high-roof car — like (Renault) Espace — based on a Kadett platform," said an insider at Opel, which heads up all GM engineering outside North America.

"It will not be a Kadett as such. There will be more differences than similarities. It's not anything you could call a Kadett and it won't be badged a Kadett."

Another GM official said, "I know we've got an interest, no question. It would be an addition to our line, a niche product." He said the main block of volume would be designated for the United States as a Pontiac.

GM do Brasil currently is completing a $500 million investment program to build a modified version of the Kadett in Brazil for South American distribution. The car is set to go into production in 1989 and be badged as a Chevrolet for sale there. Chevrolet is not expected to get a version of the minivan for the United States.

Both GM spokesmen and insiders last week denied a report in a Sao Paulo newspaper that said GM would export the Brazilian Kadetts to several markets around the world, including North America and Europe.

The aerodynamic, German-designed subcompact already serves as the basis of the Pontiac LeMans, which is built for GM by Daewoo in Korea. Conceivably, a Kadett-derived small van developed by Opel also could be produced by GM's Korean partner.

John Smith, GM's new head of overseas operations, said in a recent interview that a Brazilian-sourced utility car/van "is something that has been looked at, but nothing has been approved."

Usines Chausson SA, the French coachbuilder and body engineering specialist, did some of the preliminary body engineering work on the project and is believed to have competed with Italy's Pininfarina for the main project development work.

The vehicle would complement the forthcoming plastic-bodied APV (all-purpose van) being readied for the Chevrolet-Pontiac-Canada Group. A 4wd version of that vehicle was scrapped for cost reasons, opening a niche for the 4wd version of the Kadett-based small van.

The APV launch for Chevrolet and Pontiac has been delayed and is now planned for the mid-1990 model year.

GM officials have been openly enthusiastic about export prospects for its Brazilian operations. But Richard McGill, GM-Europe's head of national sales operations, in a recent interview denied rumors that Europe's Opel Senator luxury sedan may be built in low-cost Brazil for both the U.S. and Brazilian markets.

Staff correspondent Rik Turner in Sao Paulo, Brazil, contributed to this report.

Auto sales tumble 14% for July 1-10

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Early-July sales of domestic cars dropped 14.38 percent from the year-ago period. Only Honda and Toyota reported gains.

Deliveries for the July 1-10 period totaled 142,110, a decline of 23,860 units from 165,970 a year ago. Two years ago, 189,474 domestic cars were delivered in early July.

This year, the daily-selling rate slipped by 445 units or 2.14 percent to 20,301 compared with an average rate of 20,746 last year. There was one less selling day in the 1987 period.

Honda's sales rose by 314 units or 3.34 percent, and Toyota's deliveries climbed 24.66 percent or 164 units in the first 10 days of July compared with a year earlier.

The Big 3 reported sales declines ranging from nearly 2 percent to 18 percent. GM delivered 14,249 fewer cars than last year, a dip of 17.59 percent.

Ford's sales declined 8,819 units or 17.55 percent in the first 10 days of July compared with last year.

Chrysler's deliveries slipped 1.83 percent or 405 units from last year's equivalent period, although Dodge delivered nearly 1,400 more cars in early July this year.

Nissan's transplant deliveries were off 247 units or 14.89 percent compared with a year ago.

Mazda delivered 281 cars built at its Flat Rock, Mich., plant. The company was not producing cars in the United States at this time last year.

Volkswagen stopped reporting sales June 30; its plant in Westmoreland, Pa., permanently closed July 21. A year ago, the German transplant operation sold 899 cars in the first 10 days of July.

INCENTIVES

FROM PAGE 3

70th, and $750 per unit thereafter.

Mitsubishi also is offering dealers a $500 bonus on all Monteros and wagons sold during the program, which runs until July 31.

The lease program on Precis five-door models, which is being run through Security Pacific Auto Finance, will continue through Aug. 31. The leases range from 36 to 60 months. The program will be backed by an advertising campaign in USA Today and local publications.

NISSAN: Nissan Motor Corp. in U.S.A. has unveiled new customer rebates in a program called Customer Cash Back II. It began July 6 and runs through Sept. 2.

It includes 1987 and 1988 Sentra, Pulsar, Maxima and 200-SX cars; 1987 and 1988 special, non-standard non-Hardbody pickups; and 1988 Hardbody special pickups.

Dealers must contribute to the rebates on all models except 200-SX. Rebates on that model range from $1,000 for four-cylinder models up to $2,000 on V-6 models.

Standard Sentra models carry a $300 rebate that includes a $75 dealer contribution. Other Sentras have a $700 rebate, including $175 from the dealer. Pulsar NX XE has $500 ($125 from dealers), while the SE model rebate is $700 ($175 from dealers).

The Maxima rebate is $1,000, including a $250 dealer contribution.

Truck rebates range from $500 ($125 from dealers) on standard pickups and 1988 Hardbody specials to $700 ($175 from dealers) on the non-standard Hardbody pickup.

SUZUKI: American Suzuki Motor Corp. is paying its dealers a rebate of $2,000 on each Samurai sport-utility vehicle sold from July 13 to Sept. 2, but dealers do not have to wait until the end of the program to get a portion of the money.

Dealers were given an advance of $600 for each Samurai in their inventory as of July 13. If rebates at $2,000 per sale exceed the advance, the dealer will pocket the difference. If sales rebates fail to cover the advance, the shortfall will be charged to the dealer's parts account.

Court upholds 4-year extension for passenger-side air bags

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A federal appeals court has upheld a NHTSA decision to allow cars equipped with driver-only airbags to count toward its passive restraint standards through 1994.

NHTSA had granted a petition by Ford Motor Co. in March 1987 to allow cars with a driver-side air bag and passenger-side manual belt to count toward the requirement that all cars be equipped with front-seat passive restraints by 1990. Ford maintained the extra four years was needed to develop passenger-side bags and the extension would insure that a greater number of cars would be equipped with driver-side air bags.

However, the Center for Auto Safety and Ralph Nader's Public Citizen sued over the extension.

The Insurance Institute for Highway Safety and all auto companies argued that passenger manual belts would encourage more driver-side air bags.

Ford promised it would produce a 1988 model with full front air bag protection; the Lincoln Continental has such a system. Ford also promised to produce 500,000 to 1 million driver-only air bags between the 1990 and 1994 model years.

EPA ruling steams up importers

Agency calls for emissions test at U.S. ports, not home plants

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Auto importers are fighting EPA's proposal to conduct emission-control testing at U.S. ports instead of on foreign assembly lines. They are basing their complaint on cost and legality.

The Automobile Importers of America, as well as non-members Volkswagen of America and Mercedes-Benz of North America, have objected to the EPA's proposal. Selective enforcement audits currently are conducted by EPA engineers at each manufacturer's assembly plant abroad.

The Automobile Importers of America opposes the move because EPA has announced the change without going through formal rulemaking, as it has done in the past whenever it changed assembly-line test procedures.

The group's primary concern is that using ports "would result in inequitable treatment of foreign manufacturers." Moreover, it said, doing so would "significantly increase costs and testing difficulties for our member companies."

The importers' letter also includes a legal analysis, which contends that EPA does not have the authority in its existing regulations to enforce its decision to use ports.

In preparing that view for the importers, attorneys Norman Shutler and Matthew Low, both former EPA officials, said there never was any intention to use ports for the selective enforcement audit program since "few, if any foreign manufacturers" had test facilities in the United States when the rules were written.

They also pointed to a special exception granted to General Motors by the EPA that allows GM to use preferred assembly plants for various engine families. That, they said, "suggests not only that the agency intended that selection occur at assembly plants but that the agency intended to be bound by the manufacturer's choice of plants for such selection."

Shutler and Low said importers will have to set up test facilities.

VWoA has told the EPA that additional pre-testing would be needed to screen salt water and other damage resulting from transportation that may affect emissions. These factors, VW said, are "outside manufacturer control."

The company suggested that "the manufacturer who elects to have the SEA conducted in the country where the vehicles are produced could be assessed a fee by EPA equivalent to the differences in expenses incurred by EPA as a result of conducting the SEA in that country rather than in the U.S."

Mercedes-Benz of North America cited "clear legal problems" and "significant cost issues" in opposing use of ports for testing. Mercedes said it believes foreign makers should be allowed to pay the cost of a foreign selective enforcement audit if EPA lacks the money.

Festival time for Brazilian industry

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Brazil's vehicle production, domestic market sales and exports were all up during the first half of this year.

Sales in Brazil rose an encouraging 20.7 percent despite the relative price freedom enjoyed by the industry for several months.

According to figures released by the country's automotive manufacturers' association, ANFAVEA, exports rose 9.9 percent in volume and 38.2 percent in value, compared with the first half of 1987, indicating an increase in the average unit value of the country's vehicle exports.

Vehicle production totaled 523,770 units, a 13.8 percent increase over the 460,272 built during the same six-month period in 1987. Sales in the domestic market rose to 337,906, compared with 279,859 a year earlier, while exports increased to 173,194 from 157,569 units for the 1987 period.

The industry earned $1.624 billion on foreign sales from January through June, a 38.21 percent hike over 1987's $1.175 billion.

ANFAVEA President Andre Beer said the industry's 1988 export forecast already has been revised upward, increasing $500 million from the original projection of $2.5 billion, and he said that estimate may still be too conservative.

However, in announcing the figures, Beer mentioned the widening gap between increases in the industry's costs and value of the cruzado. He criticized government's reluctance to devalue the cruzado at a faster rate in the face of a monthly inflation rate of about 20 percent.

Brazil's government has decided to devalue the cruzado in one percent increments rather than take a large decrease in the currency's value. Export industries, such as the automobile business, have found it difficult to remain competitive. As a result, prices have increased on exports by both Ford and Volkswagen to the point that both companies have lost some U.S. orders.

Beer said costs in the face of the overvalued cruzado increased 46.3 percent from January 1987 to May 1988. "We're now suffering losses on each unit exported," he said, adding that the government has so far taken no action on the industry's request for assistance.

Proposals include lengthening the period manufacturers can hold tax revenues from car sales before handing them over to the government.

In addition, the companies seek authorization to convert Brazilian foreign debt paper into payment for exports, which would allow importers to receive discounts on their purchases while manufacturers would receive the cruzado equivalent of the face value of the paper.

On the home front, Beer said the industry is not worried by the government's decision last month to allow alcohol fuel prices to rise.

Until the change, the government had held the price of the fuel to 65 percent of the price of gasoline in order to compensate for its higher consumption per kilometer.

Alcohol is actually more expensive to produce than gasoline at current oil prices, and Petrobras, the federal oil company, has been registering huge losses each month on its alcohol operations. Thus, in an effort to reduce Petrobras' losses, the government upped the parity to 70 percent of the gasoline price.

ROVER

FROM PAGE 1

adapt the five-year plan as conditions dictate.

British Aerospace's hesitancy was viewed by some observers as a last minute gambit to win further financial concessions. However, the company's chairman, Roland Smith, said his sudden reluctance to conclude the deal was not because it objected to financial details.

The British government's original agreement with the aircraft maker, reached last March, called for a cash injection and debt writeoff in excess of £2 billion ($3.4 billion). For competitive reasons, the EC — which is also investigating whether Fiat was allowed to buy Alfa Romeo too cheaply — decided that was too much.

Following three months of tortuous negotiations, the compromise package reached reduced the government's cash injection to £469 million ($797 million) from £800 million ($1.36 billion). Debt write-offs were also reduced to £500 million ($850 million) out of accumulated losses of £1.6 billion ($2.72 billion).

Furthermore, the tax credits may be applied only against Rover profits and not used to lower the aircraft maker's overall tax bill.

But the compromise did permit £78 million ($137 million) in regional government aid for individual Rover plants.

The tab for the five year plan prepared by Day, including the cost of reducing Austin Rover capacity in Britain, is said to be £1.5 billion ($2.55 billion) before the end of 1992. The deal also calls for the EC to closely monitor British Aerospace's adherence to the plan.

The final step in the sale is for British Aerospace to get shareholder approval for the Rover takeover, which is expected within three weeks.

Meanwhile, earlier rumors of Ford taking a position in Jaguar cooled last week. However, the flurry of unexplained buying activity that led to the speculation — which Ford denied — also spurred talk of possible moves by other manufacturers to gain a foothold in the British luxury-car maker.

The British government's "golden share" in Jaguar prevents acquisition of more than a 15 percent stake by a single entity before December 1990. But several analysts believe that several makers may want smaller stakes in advance of the date. That would give them leverage and possibly drive up the share price to help ward off other predators.

Jaguar's low share price at the moment makes it attractive, analysts say. With the value of the marque, it is seen as a far better buy for a carmaker than for private investors.

PRODUCTION

Auto output rises 20% after holiday

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production totaled 100,900 units, 20.08 percent more than the prior holiday week's 84,028 and 9.91 percent more than the year-ago week's 91,804.

Last week's and the year-ago week's car and truck numbers were affected by downtime at several plants for vacation and model changeover.

Companies split last week's scheduled output as follows: General Motors, 66.32 percent; Chrysler Motors, 18.14 percent; Honda of America Manufacturing Inc., 7.41 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.35 percent; New United Motor Manufacturing Inc., 3.22 percent; and Volkswagen of America, 1.56 percent.

All Ford Motor Co. plants were idle last week for vacation. Output was scheduled to resume today.

Nissan Motor Manufacturing Co.'s plant in Smyrna, Tenn., resumed output today. The plant was idle for a two-week vacation.

Truckmakers scheduled production of 40,495 units last week, 1.07 percent below the previous week's 40,935 and 40.46 percent below the year-ago week's 68,008.

The following GM plants are idle until Aug. 1 for model changeover: Doraville, Ga.; Tarrytown, N.Y.; Framingham, Mass.; and Willow Run, Mich.

GM's Detroit-Hamtramck plant will be down until Aug. 24 and the Lansing, Mich., plant until early August. Both are idle for changeover.

GM's Janesville, Wis., and Wentzville, Mo., plants will close Thursday for changeover. Janesville will resume output Aug. 1 and Wentzville Aug. 2.

Chrysler's Belvidere, Ill., and Warren, Mich., plants are idle for model changeover. The Warren plant is scheduled to resume output July 25 and Belvidere is slated to reopen Aug. 1.

Chrysler's St. Louis truck plant resumed output today. The plant had been down for one week for vacation.

Vacations cut Canada output

Scheduled production of cars and trucks in Canada dipped from the prior week's output as several plants shut down for model changeover and vacation.

Car output was targeted at 8,495, 31.18 percent below the previous week's 12,343 but 84.63 percent more than the year-ago week's 4,601. The year-ago week's production was also affected by plant closings for changeover and vacation.

Truckmakers scheduled 7,003 units last week, 54.29 percent below the previous week's 15,320 and 26.68 percent below the year-ago week's 9,551.

All Ford plants were idle last week for vacation. Production was slated to resume today.

Chrysler's Windsor, Ontario, truck plants and its Brampton, Ontario, facility are idle for vacation until July 25.

Lab links cruise control, runaway cars

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER
Copyright 1988 Automotive News

A respected Swedish research agency conducted a laboratory simulation and driving test that shows a flaw in one supplier's cruise control system may lead to unintended acceleration.

The agency's report first reached the United States last week and was obtained by NHTSA on Thursday. It was not clear how relevant the study would be in providing answers to the controversial problem of unintended acceleration — sometimes called "sudden acceleration" — which has baffled the industry and has been blamed for hundreds of accidents involving many carmakers.

Several were quick to question the significance of the findings. And even the Swedish Defense Research Establishment, which conducted the tests, was itself careful not to draw too much from its study.

"The weaknesses (in the cruise control system) disclosed in this report may be the causes of unintended acceleration in some of the alleged cases," it said. "However, no conclusions should be made from this investigation concerning the causes of malfunction in any specific case."

The report said SDRE demonstrated how, under certain conditions, a defect in the cruise control's electronic circuit board can cause a car to jump from idle to full throttle without the gas pedal being depressed. Tests

WORLD CONGRESS: *Auto leaders assess issues that shape industry's future*

By Philly Martha
AUTOMOTIVE NEWS STAFF REPORTER

Focusing on customer satisfaction and service, creating products to define new niche markets and mapping out the dramatic changing markets here and abroad were common themes woven into talks at the 13th annual Automotive News World Congress in Detroit last week.

Hundreds of industry executives were given a perspective of the unrelenting global competition along with crystal-ball projections of excess capacity and robust second-half sales but perhaps lower sales in the future for the United States.

The downward shift in exchange rates is expected to continue and will increase Japanese transplants' presence here, according to analysts, and some Japanese transplant executives talked of exporting vehicles to Japan and Europe in the near future.

"We're edgy and confident and a little blase and a little scared at the same time," said Bennett E. Bidwell, president — product and marketing, Chrysler Motors Corp.

Bidwell told World Congress participants: "We were giving too many shots away for quite a while. But today — with the yen/dollar relationship where it currently is — we're playing the Japanese about even. No strokes. Not too much in the way of excuses. Basically good, flat out, fair competition."

However, there are serious challenges ahead. "There are more competitors in the North American automotive market than any of us ever expected. . . . Today, 27 major manufacturers produce more than 40 brand names for the U.S. market," Robert C. Stempel, General Motors president, told the opening-night session.

He warned that some of the more ambitious government standards for reduced exhaust emissions, fuel economy and gas-guzzler taxes are "counter to market forces" and "are a clear disadvantage for full-line U.S. manufacturers" like GM.

Looking ahead in the short-term, Stempel recognized that "more manufacturers will be looking for niche markets and lower volumes, moving with the customer's desire for something unique."

Marina v.N. Whitman, vice president and group executive of GM's public affairs staff group, agreed that there have been unprecedented changes in the nature of demand. "Consumers are more

Chrysler eyes plan to update Soviet plant

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors has discussed with representatives of the Soviet government a possible venture to modernize a vehicle assembly plant on the Baltic Coast.

Chrysler executives made an initial exploratory trip to the Soviet Union earlier this month.

Preliminary discussions focused on the possible modernization of the RAF factory in Riga on the Baltic Coast. The plant now produces an 11-passenger minibus (RAF-2203) and derivatives primarily used as medical ambulances, fire protection and traffic control vehicles.

In Detroit at the Automotive News World Congress, Boris G. Hubaev, first deputy general director of Avtoexport, the Moscow-based auto export organization, said an initial meeting was held in early July between Chrysler executives and representatives of Avtoexport and the Soviet ministry of automotive industry.

A Chrysler spokesman confirmed that Chrysler executives visited the Soviet Union but declined addi-

Infiniti's dealers get financial perks

By Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTER

Nissan will provide its Infiniti dealers extraordinary financial assistance while the luxury marque gets established.

Nissan Motor Acceptance Corp. is prepared to offer to the first dealers in primary and secondary market facilities no-points financing with longer-than-usual amortization schedules, interest-only payments for the first five years and 10-percent dealer down payments.

The program was made public in a speech to the Automotive News World Congress by Thomas Mignanelli, executive vice president of Nissan Motor Corp. in U.S.A.

"We will do a little more to help our (Infiniti) dealers as far as margins and the like," Mignanelli said after his speech.

"The risk to dealers' profitability in the launch phase is that they have no back-end (service) business to support them . . . and we have no image," explained Infiniti Division General Manager William R. Bruce. So the division will offer dealer margins equal to the most prestigious marques, he said. Although he declined to specify the dealer discount, that would put it around 20 percent.

Bigger cars move ahead in first half

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Significant increases in sales of mid-sized and large cars helped the auto industry register a gain of nearly 9 percent in the first six months of this year.

The total was 5,524,166 this year, up from 5,085,931 in the first half of 1987.

Driving in comfort and luxury seemed to be consumers' pleasure in 1988, as opposed to the years when saving money and gas led to gains in the compact and subcompact classes.

Sales of the mostly sporty, expensive models in the specialty car segment slid almost 20 percent, with the bulk of the loss coming from two-seater models. It was an indication of the consumer demand for larger, more comfortable cars.

Sales of the intermediate-sized cars for the first six months of this year totaled 1,962,203 — 16.05 percent or 271,346 units more than 1,690,857 sold in the comparable period of 1987.

Domestic-car sales were responsible for most of the increase in the segment. Sales of U.S.-built intermediates totaled 1,629,912, or 19.63 percent above the 1,362,508 sold in 1987. By contrast, sales of imported intermediates rose 1.20 percent.

General Motors' contribution of 161,978 new W-body (GM10) cars helped boost the intermediate segment. The models the GM10 cars replaced had sales of 89,027 in the first half of 1987. Also hiking the intermediate count were Chrysler Motors' new Dodge Dynasty, Chrysler New Yorker and Eagle Premier and Mazda's new 929 model.

The standard-sized car market showed sales of 763,669 cars for the first half, 10.23 percent more than the 692,775 units sold in the comparable period of 1987.

In that segment, the imports' gains outpaced those of the domestic makers. Domestic sales of standard-size cars increased 10.09 percent over last year; imports, 16.60 percent.

Big pickup sales top compacts

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Full-sized pickup trucks reversed a long-time trend by outselling their compact counterparts during the first six months of this year and regaining their status as the industry's largest truck volume category.

Compact vans, particularly passenger models, continue to be the fastest-growing segment of the light-truck market, however.

The introduction of restyled full-size pickups by General Motors and Ford Motor Co. last year, coupled with a decline in Japanese compact pickup sales triggered by the strong yen, have led to a major reversal in the sales patterns of those two segments.

During the 1980s — until the 1988 model year — compact pickup sales had been growing steadily, while market share of the full-sized pickups declined.

Full-sized pickups dropped from 51.78 percent of industry light truck sales in the 1980 calendar year to 25.80 percent in the 1987 calendar year. For the first six months of this year, their market share bounced back up to 27.74 percent.

Meanwhile, compact pickups, which had 23.08 percent of the light-truck market in calendar 1980, climbed to 30.13 percent in calendar 1987. They dropped precipitously in the first half of 1988. Their market share is now down to 25.80 percent of the light-truck market.

The big change began to occur in the third quarter of last year, when the impact of the strong yen on Japanese truck prices really began to be felt.

As recently as the 1987 model year, the industry sold 275,000 more compact pickups than full-sized models.

During the first half of calendar 1987, compact pickups held a 119,217-unit sales lead over full-sized models, according to an Automotive News analysis. During the same period this year, the compacts trailed the full-size light-duty models by 49,356 sales.

Sales of the conventional full-sized light pickups were up 100,087 units in the first six months this year, while compact pickup sales were off 68,486 units from a year earlier. Overall, the light truck industry recorded 2,527,380 sales in the first half of calendar 1988, up from 2,342,525 a year earlier.

Full-sized pickup sales of 701,366 were up from 601,279 a year earlier. Conversely, compact pickup sales dropped to 652,010 from 720,496 last year.

Arthur G. Davis, an automotive analyst with Prescott Ball & Turben, said a number of factors, including further erosion in Japanese pickup sales and higher prices coming up for compact trucks generally and technological improvements in the full-sized models themselves, would continue fueling their popularity in 1989.

Davis: Basically, there's no competition for domestic manufacturers in that market segment

"There's increasing evidence of full-sized pickups gaining in popularity," Davis said. "Basically, there's no competition for domestic manufacturers in that market segment. And in the compact market, we see Japanese sales tumbling by 125,000 this year and another 100,000 next year. That's a giveup to the full-sized market."

In other industry categories, passenger-model minivan sales jumped to 386,775 from 286,023 a year earlier. At the same time, cargo-model minivan sales increased to 64,451 from 60,602 in the first half of 1987.

House unit looks into rollovers

Did Steed veto safety standard?

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A House Energy and Commerce subcommittee is investigating whether NHTSA Administrator Diane Steed vetoed a proposed vehicle-rollover safety standard after a rulemaking request was approved by four members of NHTSA's senior staff.

The original request for the rulemaking was made in 1984 by then-representative, now senator, Timothy Wirth, D-Colo.

In announcing the investigation, Rep. Tom Luken, D-Ohio, chairman of the House Energy and Commerce Subcommittee on Transportation, said the subcommittee would look into press reports saying Steed overruled her senior staff by deciding last summer not to write a rollover standard.

Luken noted that Consumers Union, the New York product-testing organization, recently asked NHTSA to establish a minimum safety standard regarding rollovers when it labeled the Suzuki Samurai "unacceptable" due to an alleged propensity to tip over. Suzuki has fought the charge, but the company has suffered a nationwide sales slump since Consumers Union made its charges.

Luken and Rep. John Dingell, D-Mich., Energy and Commerce Committee chairman, have sent a letter to Steed asking for detailed responses to 13 questions dealing with light-truck safety and rollover research. Steed was asked to respond to the questions by Aug. 12.

A NHTSA spokesman said the agency had no comment on the investigation.

Luken's investigation will focus on NHTSA research activity regarding vehicle rollovers and will attempt to judge whether Steed's decision not to proceed with a new safety standard was justified. Luken and Dingell have asked for "all internal letters, notes, memoranda, studies, etc." dealing with

New Audi warranty covers most maintenance

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Audi of America will upgrade its warranty on its latest models beginning Aug. 1 and begin footing the bill on virtually all maintenance and repairs for three years/50,000 miles.

In addition, the company will extend its unlimited-mileage corrosion protection from 6 years to 10 years. With that, Audi will match Porsche's warranty against rust as the longest in the U.S. market.

Dealers attending Audi's preview of the new 100/200 models in Chicago last week said the programs have been designed to provide worry-free ownership. They said Audi buyers will pay for no more than gas, tires and insurance during the warranty period.

Audi's current warranty also extends for three years/50,000 miles. But it does not cover routine maintenance for such things as oil changes, wheel allignments, tune-ups and brake pads. The new warranty will cover those parts and services but won't pay for negligence, collision damage and wear and tear on the trim.

The maintenance coverage appears to be the most comprehensive in the nation. The maintenance portion of the Yugo America warranty is similar, but it provide coverage for one year/12,000 miles. Some manufacturers offer longer-term warranties than Audi but don't pay for routine upkeep.

The new warranty program will be provided on all Audi 80/90 models sold after Aug. 1 and the new 100/200 series, which debuts that day. The 100/200 replaces the Audi 5000.

The steps are part of a plan to rebuild the franchise in the wake of damaging publicity about unintended acceleration incidents in the Audi 5000. Concerns about safety and resale value have been factors in Audi's dramatic sales slide since 1985. Audi is attempting to defuse such concerns with these and other plans.

One of those offers a guaranteed trade-in price on 1988 Audi models. It will now be expanded to apply to 1989 models as well.

Dealers said they expect the warranty program to be attractive because there is no fine print to spoil the initial appeal.

"It's a bold step. It really shows that there is no reason not to buy this car," said Jory Hite, a dealer in Aurora, Colo., and a member of the dealer group that worked with Audi in developing the program.

Audi also announced prices for the new 100/200 models at last week's meeting. The 100 series will be naturally aspirated and the 200 series will be turbocharged. Each will be available in wagon and four-wheel-drive "Quattro" versions.

The Audi 100 sedan will be priced at $27,480; the 100 wagon, $28,960; and the 100 Quattro, $30,805. There will also be a 100-E model, which will carry fewer standard features than the 100 and sell for $24,980. The Audi 200 will retail for $32,455; the 200 Quattro, $36,355; and 200 Quattro wagon, $37,855.

The 100/200 will retain the exterior styling that helped make the car a hit after its launch in 1983. The interior will be significantly improved, however, dealers said. More features will be made standard.

Currently, prices on the Audi 5000 range between $22,850 and $36,310.

Dealers reported that they were pleased with the 100/200 prices, and the announcement reportedly drew mild applause. In contrast, some dealers and the automotive buff magazines have said the 80 and 90, which were introduced last fall, have been overpriced.

Truck sales fly high

1st half best ever; June just short of peak

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Total retail truck sales of just under 2.7 million set a record in the first six months of the 1988 calendar year.

Manufacturers retailed 477,599 light, medium and heavy trucks in June, just shy of last year's record 482,446. They retailed 2,689,040 trucks in the first six months, up from 2,488,591 in 1987.

Light-duty, Class 1-3 trucks, accounted for 2,521,576 sales in the six-month period, up from 2,348,333 a year earlier.

Although light duties have been the major sparkplugs in the industry's upturn, mediums and heavies have also been scoring big gains.

The Class 4-7 medium segment, particularly, has recorded a big upsurge, due to the impact of Ford's Super Duty chassis in Class 4 and the aggressive efforts of Japanese importers.

The medium segment tallied 95,725 sales in the first six months, up 25.47 percent from 76,293 a year earlier, according to the Motor Vehicle Manufacturers Association.

Ford's Super Duty, a brand new entry in the 1988 model year, has been instrumental in pumping up Class 4 sales from a mere 359 in the first half of last year to 10,085 in the most recent six-month period.

The Super Duty has drawn Class 3 buyers who might otherwise have bought a light-duty truck and overloaded it or a Class 5 and underutilized it.

Class 3's 1,323 sales in June were off from 1,542 a year earlier, according to MVMA, as were Class 5 sales.

Class 3, though losing ground, still managed sales of 7,185 for the first six months, slightly ahead of 7,101 a year earlier.

Class 5 sales of 4,215 were off from 4,329 during the first half of last year.

Classes 6 and 3 have been the other major gainers this year, with sales of 29,672 and 71,739, up from 20,158 and 63,965, respectively, in the year-earlier period.

All the major Class 8 manufacturers are benefiting from the strong market upturn, and Peterbilt is having a particularly strong year.

Peterbilt's six-month sales of 7,981 were up 52.48 percent from last year's 5,234.

Volvo, after taking over General Motors' heavy-truck operations, also turned in a strong showing with 7,979 sales during the first six months, up 30.85 percent from 6,098 a year earlier. The 6,098 does not include GM's heavy-duty sales last year.

Iveco's Jerr-Dan Wrangler car-towing vehicle

Iveco adds van and stake truck, makes towing unit for Jerr-Dan

BLUE BELL, Pa. — Iveco Trucks has formed a joint-marketing agreement to produce a new commercial tow vehicle and has introduced several other new products including a contoured van and a new stake body truck.

Iveco made an agreement with Jerr-Dan in which the Jerr-Dan Wrangler roll-back body will being mounted on its cab and chassis models.

The new product is designed to allow automobile towing companies to haul one standard-sized car on the deck while towing another behind on the three-position tow bar.

The units are available on the Iveco Euro 220, EuroTurbo 220 (14,800-pound GVW) and EuroTurbo 230 (16,900-pound GVW), providing an ergonomic cab designed for driver comfort.

The Jerr-Dan Wrangler body is made of polished aluminum; is 17 feet, 11 inches long; and has an 8,000-pound winch installed on the front end and a three-position tow bar standard on the back. Optional equipment includes a chrome bumper and chrome hub caps.

Iveco also introduced a van body, designed to carry and deliver greater payloads through crowded city streets more conveniently. The vehicle uses the Supreme European-design contour body mounted on Iveco Euro 110 and 220 and EuroTurbo 120A and 220 cutaway chassis.

The contoured van has 647 cubic feet of cargo space, with payload capacity ranging from 5,080 pounds to 7,716 pounds in an aerodynamic body.

Iveco is also working with the Supreme body company to offer an all-steel stake body to handle a variety of hauling needs.

The Iveco Stake Supreme truck is available in Euro 110 (11,600-pound GVW) and Euro 220 (14,800-pound GVW) models, providing up to a two-ton payload capacity. Both models are available with a five-speed manual or automatic transmission.

The vehicle has an ergonomically designed cab, good maneuverability and a low bed-to-curb loading height, according to Jim Underwood, Iveco senior vice president of sales. It also features a fuel-efficient six-cylinder diesel engine, he said.

SERVICE MANAGEMENT

Lexus, Infiniti stress service as they plan debut

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — As Toyota and Nissan prepare to move into the U.S. luxury segment, both companies have given top priority to developing service programs that will be offered to the buyers of their new cars.

They plan to make service and customer satisfaction throughout the ownership cycle key ingredients in their marketing strategy. Both the Toyota Lexus and Nissan Infiniti lines are scheduled for introduction in the the fall of 1989.

Lexus has appointed Richard L. Chitty corporate manager, parts, service customer relations, and has named Robert Rinkel customer satisfaction manager. Chitty formerly was Toyota's national technical service manager, and Rinkel was manager of Toyota touch activities, a corporate customer satisfaction operation.

Richard J. Lueders Jr. has been appointed Infiniti national parts and service manager. He formerly was Los Angeles regional service manager for Nissan.

Both Chitty and Lueders indicated that their divisions are entering a new era in customer relations and satisfaction.

"The whole basis for everything we develop and everything we are doing in service, parts and customer relations at Lexus is with the customer in mind and geared toward the ultimate in customer satisfaction," Chitty said.

"Customer satisfaction is what we are going to deliver, and that starts with the development, design and production of the car, right on through the delivery of the car and servicing of the car."

Minimum standards for a Lexus dealership, according to Chitty, are based on a total commitment to achieving the absolute highest levels of of owner satisfaction.

For example, all dealership personnel whose work involves customer contact will undergo, at the dealer's expense, an intensive training program prior to introduction. Training of service personnel will start in July or August 1989, prior to the Lexus introduction in September of that year.

Standards also call for the adoption of a customer relations system that will be reviewed at least quarterly by Lexus field representatives. It will be subject to an annual review by Lexus management.

Dealerships also will be required to own or lease a computer data system that meets compatibility requirements for interfacing with a nationwide database of information on all Lexus vehicles and customers.

HIDDEN IMAGE: HANS B. LEHMANN

When Nissan Infiniti bows in fall 1989, its dealers will aim to provide premium service

"When a customer brings his car in for service, the service consultant will be able to track the complete history of the car by entering a VIN number or any other designated code," Rinkel said.

"Instantaneously, the consultant will have a complete record of the service work — warranty, maintenance or customer-paid — done on the vehicle, whether it was done at the that dealership or one 3,000 miles away."

Also, dealership parts departments will be required to maintain the highest customer fill rate in the industry. It is anticipated that dealerships will be assigned minimum parts stocking levels and participate in automatic parts reordering systems.

The system will be set up to automatically reorder parts from headquarters in Torrance, Calif., after a completed work order is entered into the computer.

Chitty said Lexus also will provide the owner with a 800 toll-free phone number that the Lexus owner can use for 24-hour emergency roadside service.

The emergency call will be handled in Torrance, Rinkel said, and will be referred to a Lexus dealership, if it is in the vicinity, or to a backup road-service network that is being developed.

"We are not only going to fix the car but also going to fix the customer by finding out what his personal needs are," Chitty said. "For example, if he has an appointment to meet, we will try to get him there on time. If he wants his wife notified that he will be late, we will do that. We will do whatever has to be done to make it easier for an owner in that situation."

Lexus will also have a no-hassle warranty that will take care of the customer, he said.

"After all, you have to keep in mind that the Lexus is a luxury car and certain things are expected. We want to make sure that what we offer is the very best and the very most that can be expected," he said.

Rinkel said Lexus is basing part of its program on the fact that there won't be many problems with the car.

That will be true because Lexus will establish product quality check points at the factory, ports of entry and at the dealerships, Rinkel said.

After service, a diagnostic/quality control team will check out repairs and make sure the vehicle is in top condition before it is returned to its owner, Chitty said.

The Lexus V-8 sedan is expected to be priced in the $30,000 to $35,000 range, while the V-6 is targeted around $20,000. Lexus has selected its first 81 dealers and expects to name about 20 more to met its start-up goal of 100 outlets.

Nissan's Infiniti Division also is in the initial stages of setting up its management organization, dealer network and service programs.

Infiniti will develop an operating procedures and standards manual for parts, service and sales and then use an interlocking computer system to back up those procedures, Lueders said.

In the service writeup area, for example, the dealer will have a procedure outline and a computer system that takes information and relays it to the customer in the form of a repair order, Lueders said.

"Dealers, specifically in the service and parts areas, are looking for clear-cut direction from the manufacturer," Lueders said. "Not from the standpoint of us telling them what to do, but giving them a good framework within which to operate with our ultimate goal being to push the decision-making process down to the lowest possible level."

In the warranty field, Infiniti's general direction is to be competitive with upscale franchises such as BMW and Mercedes-Benz, an Infiniti spokesman said.

"We still don't have a definite blessing from Tokyo at this point as to what we are allowed to announce as our warranty," he added, "because we are going back and forth on some details."

At this point, Infiniti has decided only that it will offer a warranty that will not confuse the customer, he indicated.

"What we want to do is send the customer the highest signal that the car has good quality and that he can rely on the car," he said.

Infiniti, like Lexus, has developed and is providing its dealers with a facility design guide.

The key design element of an Infiniti dealership is its axial configuration to provide an open corridor that extends diagonally the length of the building.

All key elements of the dealership are located along that axis — the reception center, showroom, retail merchandising center, parts counter and cashier.

The same attention given to the new-car showroom is reflected in the service area as a function of axial design.

A special area is designated as the service drive with a reception desk where customers are greeted and assisted.

The design includes offices for service advisers that overlook the entire service drive as well as the balance of the dealership.

The service adviser's space opens onto the service drive so if the customer has to demonstrate a problem, the vehicle is readily available.

The service workshop, according to Lueders, will be equipped with the latest tools, equipment and systems to support customer needs and vehicle servicing.

The parts department is centrally located in the dealership design. The parts counter also is located for ease of identification to stimulate impulse purchases.

The initial Infiniti offerings will be a full-sized sedan with a four-liter V-8 and a V-6-powered specialty coupe. The four-door model will be priced in the $30,000 range, the two-door will be in the $20,000 bracket.

Infiniti has appointed 23 of the 75 dealers scheduled for 50 metropolitan markets when the line is launched in the fall of 1989.

Service Index moves up for month, year

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts volume at new-car dealerships in April increased slightly, compared with the year-earlier month.

In April 1988, shop volume at new-car dealerships was 0.5 percent above business in April 1987, according to the Automotive News Service Index.

Service business during the first four months of 1988 registered at 4.9 percent above the volume reported in the year-earlier period.

When the January 1988 figures were announced, an analyst at one of the Big 3 automakers predicted a slowdown for April, partly as a result of declining warranty work.

This month, a Southwestern Cadillac dealer said its body shop reported a 2 percent increase but mechanical service fell as a result of less warranty work and less drive-in traffic.

An Eastern Oldsmobile dealer also said warranty volume declined and other dealer service operations stayed about even.

SERVICE INDEX
100.5*

	April, '88 vs. April, '87	4 mos., '88 vs. 4 mos., '87
Gross Profit on All Labor and P&A Sales	+3.0%	+6.8%
Repair Orders Written	−2.7%	+1.4%
Total Labor Sales (Customer & Warranty)	+5.0%	+5.8%
Shop Parts Sales (Customer & Warranty)	−0.5%	+5.6%
Sales of All P&A	−2.2%	+4.7%

* Survey by Automotive News shows that dealers' service and parts business in April 1988 was 100.5 percent of business in April 1987. Service business in the first 4 months of 1988 was 104.9 percent of business in the corresponding period in 1987.

A Northwestern Ford dealer said a direct-mail campaign led to a large increase in service business.

A Buick dealer in the Rocky Mountain-state area, who reported an increase in service also said he added a new outlet about 15 months ago and increased promotion of service.

Parts and accessories sales to off-premises customers fell 6.5 percent in April, compared with the year-earlier month. In the first four months of 1988, parts and accessory sales to off-premises customers increased 7.1 percent.

ASIA provides career data for students

The Automotive Service Industry Association has produced a packet of information for high school, technical school and college level students interested in a career in the aftermarket.

John W. Nerlinger, Automotive Service Industry Association president, said the association receives an average of 50 requests per week for information.

"They (students) are looking to ASIA for direction, information and leadership in providing pertinent data on career opportunities in our industry.

"Our new packet of career information contains the most complete description of the total job market available anywhere," he said.

The packet contains 21 career briefs for both technically inclined and creatively oriented students. The briefs include job descriptions for accountants, automotive machinists, painters, technicians, manufacturer's representatives, technical writers and training instructors.

The packet is available for $10 but the association encourages instructors and counselors to reproduce the career information from the packet.

For more information, contact the Automotive Service Industry Association, Attn: William R. Host Jr., 444 N. Michigan Ave., Chicago, IL 60611.

SHOP TALK

ARTHUR FLAX

Parts video

Autronix Video of Santa Monica, Calif., has designed a computer system that allows customers to purchase automotive parts and accessories at just the touch of a finger.

The unit, which occupies only 5½ square feet of retail space, permits shoppers to retrieve information and order parts from an inventory that would be impossible to stock, even at the largest automotive supermarkets, the manufacturer said.

The system tracks parts' availability at the retail store, and at manufacturers and distributors.

"Maintaining sufficient inventory to cover thousands of vehicle makes, styles and year combinations would require the rental of the Grand Canyon," said Fred C. Robin, Autronix chairman.

"The VideoShopper kiosk can not only preview and demonstrate each product with the impact of television, it can interact with the customer and close the sale," he said.

Consumers enter information into the computer on their vehicle and touch the unit's color, 19-inch video screen, instructing the computer to display and demonstrate specific components.

The parts information is stored in a laser disc catalog.

The unit also can generate a printout of the customer's order after confirming availability, a shipping date or inventory status at the retail store.

The system was developed in association with ByVideo Corp., Sunnyvale, Calif.

Canadian vehicle sales up 16.3%

May's domestic, import truck deliveries jump 27%; cars, 12%

A booming Canadian market fueled by continued strong demand for trucks pushed May's vehicle sales 16.3 percent over the year-earlier period.

The Canadian industry sold 168,139 domestic and imported vehicles during the month, compared with 144,273 in May 1987.

Domestic and imported car sales totaled 116,216 units, a 12.3 percent gain over a year earlier, while sales of domestic and imported trucks rose 27.2 percent.

The industry's domestic and import vehicle sales for the January-May period rose to 674,394 units, compared with 627,876 for the 1987 period. Car sales for the first five months of 1988 were up 2.2 percent over last year, while truck sales surged ahead 20.7 percent.

Aided by Jeep, Chrysler's May truck sales were the largest in the company's history. Sales jumped 64.9 percent over May 1987, totalling 12,905 imported and domestic vans and light trucks compared with 7,827 last year.

General Motors, paced by its full-sized pickups, tallied a 31.6 percent boost in truck sales over May 1987. GM sold 19,076 domestic and import trucks compared with 14,491 last year.

Ford truck sales were up 15.4 percent over a year ago to 15,130 units, compared with last year's 13,107. It was Ford's 12th consecutive month of improved sales.

Sales of the Big 3's domestically built and imported cars were ahead of the May 1987 pace. GM was up 20.9 percent; Ford followed with a 19.1 percent boost; and Chrysler rose 16.8 percent.

On the import side, Suzuki was up 166.6 percent on sales of 544 cars followed by Subaru with a 67.4 percent spurt over May 1987.

Mazda enjoyed a year-to-year sales gain of 27.9 percent, selling 3,382 cars this May compared with 2,645 in the year-ago period. Nissan got things turned around with a gain of 9.7 percent following a 41.2 percent drop in April.

The soft spot in the May market was the import luxury segment, with Mercedes-Benz, Volvo and Saab all seeing some sales erosion.

ROSS

FROM PAGE 4

Adding to Wixom's capacity will be expensive, Ross said. But the alternative poses some risks, too. The level of training, job skills and quality controls are higher at a plant like Wixom than they are at a typical plant.

"We're reluctant to do it somewhere else," he said. "I'm leaning toward Wixom." The decision will come in another month or two.

Wixom's output is already scheduled to jump this month from 42 units to 46 an hour when a new addition to the paint shop opens. In the process, output of the hot-selling Continental will go up from 9 units to 15.

Ross is taking the blame for the sales estimates that kept Continental production as low as it has been. "I blew it," he said. "I could have changed it had I had the foresight to know how successful it would be."

On another production front, a joint study to build a minivan with Nissan "is still looking positive." The two companies had been expected to wind up their research this past spring. Now it may not be finished until fall.

Ross said the task force is ironing out the the same types of issues that typically pop up on any new vehicle program: profitability, sourcing, location and others. Although signs are pointing toward Avon Lake, Ohio, as the production site — the company just exercised options to buy 108 acres adjacent to its Ohio Truck Works plant — Ross says that is just one of the places being considered. The venture will produce about 100,000 units annually, with each company splitting the output.

Despite that and other vehicle projects, powertrains will get a disproportionate amount of Ford's attention in coming years. Ford will spend at least 50 percent more on powertrains in the next five years than it has in the past five, Ross said. In the process, virtually every Ford engine will be replaced or upgraded.

The company recently started converting its Romeo, Mich., tractor plant to an engine facility, a $1 billion project that will create a new family of powertrains — first V-8s, then V-6s and maybe 4-cylinder versions later on.

The engines will bring Ford more flexibility in production. For the consumer, "you'll have the ability to get more horsepower if you want, but you'll see it in smaller displacement engines," he said. Overall, the engines will be lighter and deliver better fuel economy. No car engine will be larger than five liters. Romeo's first engine will be a 4.6-liter V-8.

Ford has expanded transmission and transaxle capacity in the last year. The moves will help give the company the supply of components it will need if it decides to increase assembly capacity.

But in the meantime, product shortages mean more than lost sales. Ford division, for example, has been playing detective lately in an effort to close up pipelines that are feeding hard-to-get products through brokers to Ford dealers.

"(Ford Division General Manager Tom) Wagner and (General Sales Manager Dick) Fenstermacher have been on this since the beginning of the year," Ross said. "If you can get units from the broker, why can't you get from the dealer? It affects the credibility of our distribution system, and that's what bothers me. We want a credible distribution system — we think we have one — and we don't condone the practice."

Ford is coming off a first half that saw all but three of its car lines record sales increases over their year-ago levels. Other than the Continental, the biggest gainers were Taurus/Sable, up 25 percent, and Tempo/Topaz, up 18 percent.

Models that are down from a year ago are the Mark VII, 16 percent; Lynx/Tracer, 3.4 percent; and Crown Victoria, 0.3 percent. Ford stopped building the Lynx nearly a year ago, several months after the launch of its replacement, the Tracer.

Ross said he is satisfied with the sales of the Scorpio and XR4Ti. The two imports from Ford of Europe accounted for 6,400 sales in the first half of the year, compared with 5,133 at the same point in 1987. Scorpio was launched in May of last year. Its first-half sales in 1988 were curtailed by a production halt made to accommodate various changes in the car.

A price increase on those two models is "inevitable," however. Currency purchases made by Ford have so far offset the effects of the dollar's decline against the German mark in recent years, Ross said. But eventually that protection will diminish, and Ford will have to raise prices to reflect the higher cost of importing a German product.

AROUND THE WORLD

Fiat holds midyear lead in Europe

New Tipo helps Italian maker top VW; Peugeot in 3rd place

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Fiat Auto is clinging to first place in a European new-car market that after six months has defied predictions of a decline.

Fiat also held first place midway through 1987, but surrendered the top spot to Volkswagen in September. The West German group went on to finish No. 1 in Europe for the third straight year.

The differences this year, analysts say, are the slight downturn in VW's West German domestic market and Fiat's introduction of the subcompact Tipo in a segment where it was extremely weak last year.

Aside from the battle for first place, the biggest story in the first half of 1988 was the emergence of Peugeot S.A. as an unchallenged No. 3.

Six months ago, most analysts forecast a drop in 1988 from the record European sales of more than 12.4 million units last year. But through June, new-car sales in the 17 Western European nations increased 5.1 percent to 6,843,400, according to industry estimates compiled by Automotive News. Most auto companies are now projecting that 1988's sales will be at least as high as last year's.

Some alarms went off when April showed the first monthly decline since January 1987. But European sales increased in both May and June over the year-ago totals. Industry volume was up 2.5 percent last month, with only West Germany, among the four major markets, registering a decline.

Fiat, including Alfa Romeo and Lancia, held first place through the entire six-month period. Through June, car sales for the Italian group totaled 1,066,900, an increase of 8 percent over last year and good for 15.6 percent of the market.

Alfa was up 15.5 percent to 119,300 for the first six months. The marque has benefited from the introduction of its 164 sedan in Italy, where sales have jumped nearly 20 percent. The big Alfa will be introduced in other European markets starting early this autumn.

Overall, Fiat is maintaining its 60 percent share in an Italian market that was up 8.5 percent for the first half. The Tipo, which was introduced in Italy earlier this year, is expected to boost Fiat's drive for No. 1 as it is launched in other European countries. The Tipo competes directly with VW's Golf, the best-selling car in Europe.

Second-place VW held 14.6 percent of the European market through June with volume of 996,100, a 2.8 percent increase over last year. VW has slipped some in West Germany, where it is the leader with nearly 30 percent of the market. VW sales in the home market were off 3.7 percent for the first half, while total sales in Germany were down 1.7 percent.

Across Europe, the VW brand is about even with 1987's pace. However, wider introduction of the new Passat intermediate in the second half should spark VW figures.

VW's Audi unit rose almost 7 percent and the Seat brand improved just over 9 percent in the first six months.

Peugeot SA, including Peugeot and Citroen, has grown far faster than any other major producer in Europe this year. Sales in the first half ran 15.5 percent ahead of the 1987 period, with unit volume for the French group at 868,700.

Peugeot outperformed its French domestic market, increasing its first-place market share at home to nearly 36 percent in the first half, compared with 33.5 percent in the first six months of 1987.

Automobiles Peugeot sales — buoyed by the new 405 compact — increased 20.5 percent in Europe during the first half and show no signs of slowing down. In June alone, the Peugeot brand improved 28.5 percent in Europe.

Peugeot S.A.'s 12.7 percent share gives it a firm grasp on third place over Ford, which was stalled in February by a lengthy strike in the United Kingdom that affected Ford's entire European operations.

Ford's sales amounted to 776,800 units through June, an 11.4 percent share and up less than 1 percent for the period. Ford's first-place share in the United Kingdom dropped from 29 percent for the first six months of 1987 to just under 27 percent.

With Austin Rover also down in the United Kingdom, General Motors' third-place Vauxhall and fourth-place Peugeot SA have gained considerable ground in Britain.

Throughout Europe, GM was up 2.4 percent to 729,100 units for the first half and held a 10.7 percent share. Sixth-place Renault had 10.1 percent of the market on sales of 688,000, a 2.1 percent increase.

Among other makes, BMW — on the strength of its new 5- and 7-series models and strong 3-series performance in West Germany — was up 14.6 percent for the year to 179,300.

Japanese makers kept pace with overall European market growth. Combined sales increased 4.7 percent to 754,300, good for an 11 percent share. Nissan remained the best-selling Japanese brand at 193,500 units for the first half, giving it a 2.8 percent share and a 7.2 percent improvement over last year.

Among national markets, West Germany's 1.7 percent decline to 1,471,500 units in the first half was in line with projections for a slight tail-off to 2.7 million units this year, after a record 2.9 million registrations in 1987.

But the other three major markets — Italy, France and the United Kingdom — are all on target to reach two million units, while Spain climbs to one million for the first time in its history.

Through June, Italy was No. 2 with 1,239,100 car sales, the United Kingdom was third with 1,104,900, up 10.2 percent, and France was fourth at 1,049,900, a gain of 5.5 percent.

Spain's dramatic surge is now nearly two years old and shows little sign of fading. Sales declined in April, but last month the Spanish market rose 22 percent. Sales for the first half were up 17.5 percent to 538,900.

ACS Proudly introduces
the availability of the Application System/400.

This is the computer system that can carry your company into the future. Handling from 1 to 480 screens/printers, it can fit in your office or fill a room.

It not only runs the applications your dealership needs today, it runs the applications of tomorrow. Combine its one-year warranty with the low maintenance of an ACS Software System, and you may never change systems again. First dealer installations are scheduled for August 1988. Call for a demonstration and proposal from the company that pioneered IBM systems for dealerships and is now the first to make the AS/400 available.

ACS - The way it should be.

Managers high on service biz

But fewer expect auto market to improve in the next two years

The nation's dealer service managers are less bullish about the automobile market today than at any time in the past four years.

But they are more optimistic about the outlook for future business at their own dealerships than they were a year ago.

These are among the findings of the fifth annual nationwide survey of dealer service managers, conducted by *Automotive News* last month.

Only 44.3 percent of those polled said they expect the business outlook for the automobile market will improve during the next two years. That is the lowest "improvement" response in the five-year history of the survey, and the first time it has dropped below 50 percent.

Major reasons given by those who do not expect auto sales to climb include: an economic downturn following this year's elections; an expected recession by 1990; rising car prices; and longer car ownership by customers.

Noted a service manager in Orlando, Fla.: "Business has been very strong for five years now. But I'm starting to sense saturation in the marketplace."

However, 78.4 percent of those surveyed indicated they believe business at their dealerships will improve over the next two years. That is up from 74.3 percent a year ago.

Reasons cited for increased dealership business include: better vehicle quality to attract customers; more parts and service work; more efficient operations by dealerships; and a trend by car owners toward having franchised dealers, rather than independents, do repairs.

A service manager in Oklahoma City said: "I feel the competition by imports has brought up the quality of domestic cars. When quality by all car manufacturers increases, it will lead to more sales. And more sales means more service business."

Well over 90 percent of service managers said they and their dealership management believe the service department offers a potential for increased profits in the future.

A typical comment on that subject came from a service manager in Cincinnati: "Our service department has set a goal of working toward greater productivity and profitability, while maintaining integrity and customer trust."

Only 67.5 percent believe their dealerships are spending enough on advertising and promotion to improve their service business.

A service manager in Gulf Port, Miss., noted: "With competition as competitive as it is, you can't do too much advertising or coupon mailing."

A new service manager in Washington, D.C. said: "I've made a change at the dealership. We're advertising weekly, and business is growing."

According to the survey, tuneups continue to be the most profitable service operation, followed by brake and transmission work. The least profitable operation continues to be wheel balancing, followed by engine overhaul and body shop work.

A service manager in Phoenix said: "Tuneups require a specialist today. The independents are having a difficult time keeping up in this field, so there is less competition."

Another in Rock Island, Ill., said: "Manufacturer quality of original-equipment pads and rotors in our area seems to result in short brake life. We have set up two complete brake lathes in one shop, and one in a second shop, and can really do the work fast."

The most significant generator of business, according to service managers, is general customer drive-in. This is followed by new-car warranty work, offering of special service packages and extended service contracts.

Among those surveyed, 58.8 percent said their dealerships will purchase service equipment this year.

Exactly 57 percent said they will buy computerized diagnostic equipment in 1988 (37.7 percent consoles, 19.3 percent hand-held). Major interest also was indicated for wheel alignment equipment (31.6 percent).

The increasingly important role of the service manager in the dealership's acquisition of shop equipment shows through in this year's survey. All phases of equipment purchasing — originating the purchase request, giving advice on equipment needs, approving makes of equipment purchased and negotiating terms — show greater involvement by service managers this year than last year.

In fact, an all-time high 32.1 percent said they now participate in negotiating terms of the shop equipment bought by their dealerships.

Indicating a trend toward longer service department hours, 13.9 percent of the managers said their shops are open more than 60 hours a week. That is up from 4.2 percent in 1987 and 2.0 percent in 1986.

Also on the rise is service department employment. This year, 17.5 percent of the managers said they have more than 40 people working in their shops. That compares to 6.9 percent last year.

Also up, to 11.3 percent this year from 6.9 percent last year, are departments with 31 to 40 employees.

Service managers are increasingly assuming responsibility for hiring their dealerships' technicians. Four years ago, 85.7 percent said they did the hiring. The number climbed to 92.3 percent this year.

In contrast, dealership owners (11.3 percent) are doing less of the technician hiring now than during any of the five years in which the survey has been conducted.

A service manager in Wilmington, Del., said: "I'm responsible for the department. I know my people better than anyone else. I feel I have the best opportunity to make the right choices."

Another in Atlanta, Ga., said: "I know who and what I need. Experienced people are easy for me to spot. I train and supervise my people."

Asked whether finding competent technicians today is more difficult than a year ago, 71.1 percent of the service managers said yes.

Said a Reno, Nev., service manager: "The work force is not keeping up with the technical aspects of auto repair. Vocational and technical schools are not keeping up either."

Another in Long Island, N.Y., said: "Competent service technicians are nearly impossible to find. Experienced technicians do not leave their jobs anymore because of seniority, profit sharing and vacations. And while the need for technicians is great, fewer and fewer people want to become technicians."

On the other hand, there is a definite move toward higher monetary compensation for service managers.

In 1984 and 1985, most service managers (27.0 and 24.1 percent, respectively) had annual incomes in the $25,000 to $29,999 range. In 1986, most of them (20.8 percent) were in the $35,000 to $39,999 bracket.

Automotive News Survey of Dealer Service Managers

Note: Figures indicate percent of total responses for each question, each year; in some cases, totals do not add to 100 percent because either multiple responses to a question were given or no response was given. Blank areas indicate questions that are new to this year's survey.

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?

Automobile Market	1988	1987	1986	1985	1984
Improve	44.3	50.0	61.2	64.9	69.7
Same	39.2	27.9	32.6	25.7	7.6
Worse	12.4	22.1	6.2	9.4	2.7
Dealership					
Improve	78.4	74.3	88.0	86.9	92.1
Same	16.5	20.0	8.0	10.2	5.3
Worse	1.5	5.7	4.0	2.9	2.6

Question 2: Do you, as a service manager, feel that your service department offers a potential for increased profits in the future?

	1988	1987	1986	1985	1984
Yes	94.8	94.4	98.0	98.6	97.2
No	5.2	5.6	2.0	1.4	2.8

Question 3: Do you feel that your dealership management believes the service department offers the potential for increased profits in the future?

	1988	1987	1986	1985	1984
Yes	92.8	90.0	96.0	97.1	94.4
No	6.2	10.0	4.0	2.9	5.6

Question 4: Do you, as a service manager, believe your dealership is spending enough on advertising and promotion to improve your service business?

	1988	1987	1986	1985	1984
Yes	67.5	62.5	74.0	72.3	74.3
No	30.4	37.5	26.0	27.7	25.7

Question 5: Who hires the service technicians in your service department?

	1988	1987	1986	1985	1984
Dealership owner	11.3	18.1	15.5	15.7	17.8
Dealership manager	5.7	2.7	2.9	5.7	6.7
Service manager	92.3	91.7	88.9	87.6	85.7
Other	10.8				

Question 6: Compared to last year, finding competent service technicians today is:

	1988
Less Difficult	3.1
Same	23.7
More Difficult	71.1

Question 7: Do you have women service technicians?

	1988
Yes	5.2
No	92.3

Question 8: When your dealership buys new service equipment and services, are you involved?

	1988	1987	1986	1985	1984
Yes	96.4	100.0	100.0	100.0	97.2
No	3.6	0.0	0.0	0.0	2.8

If yes, which one statement below best describes your involvement?

	1988		1986	1985	1984
Originate purchase request	57.8		62.0	62.9	39.9
Approve make(s) selected	47.6	3	48.0	38.6	24.3
Negotiate terms	32.1	19	28.0	22.9	3.7
Give advice on needs	49.2	47	58.0	37.1	53.5

Question 9: Does your dealership plan to buy any service equipment this year?

	1988	1987	1986	1985	1984
Yes	58.8	59.2	55.0	61.5	69.4
No	38.1	40.8	45.0	38.5	30.6

If so, what type?

	1988	1987	1986	1985	1984
Tuneup	15.8	30.9	24.5	21.4	27.7
Wheel alignment	31.6	21.4	26.4	18.6	21.3
Wheel balance	12.3	14.3	11.8	10.0	14.9
Brakes	15.8	11.9	7.1	5.6	10.6
Transmissions	7.0	9.5	2.9	1.8	4.3
Engine overhaul	1.8	9.5	3.7	2.9	2.1
Refinishing	14.0	9.5	1.8	—	—
Frame-body straightening	7.0	7.1	10.8	10.0	12.8
Computerized diagnostic (console)	37.7				
Computerized diagnostic (hand-held)	19.3				
Other	25.4	40.5	30.0	29.7	26.3

Question 10: Are 1988-model cars more profitable to service than those of previous years?

	1988	1987	1986	1985	1984
Yes	8.2	12.5	13.7	11.4	11.8
No	43.6	40.3	50.9	54.3	52.9
Same	46.4	47.2	35.4	34.3	35.3

Question 11: Are 1988-model cars more difficult to service than those of previous years?

	1988
Yes	40.7
No	25.3
Same	33.0

Continued on page E6

COVER STORY

Continued from page E2

The upward spiral really spurted in 1987 when 21.1 percent of those surveyed indicated their incomes were $50,000 or more. This year the figure jumped to 25.8 percent.

In most cases (42.8 percent), compensation is comprised of salary and bonus.

As was the case the previous two years, most service managers this year (20.6 percent) are in the 35-to-39 age bracket. And most (24.9 percent) have been service managers for less than three years.

Perhaps this is why most service managers (62.9 percent, the highest figure since 1984) now believe their salaries and benefits are commensurate with their experience. ■

Shop is still a man's world

Auto dealership service departments remain very much a man's world. Only 5.2 percent of service managers responding to the *Automotive News* survey said they have women technicians in their shops.

Service bosses across the country cited two main reasons for an absence of female mechanics: qualified women technicians are not available; few if any women apply for service technician jobs.

"There's none available. I'd hire one tomorrow," said Dave Kulig, service and parts director, Warnock Ford Country, Morristown, N.J.

Noted a service manager in St. Louis: "I have not had the opportunity to speak with an applicant of the feminine gender."

Another in the Detroit metro area observed: "I did have one woman apprentice, but she relocated. Her performance and ability were below expectations anyway."

Still another in the Cincinnati area said: "Most techs are macho and would offend females."

But a Providence, R.I., service manager without a woman technician got the last word. "Our service manager is female," she said. ■

CSI Sensitive?

Find Out How Offering The Montgomery Ward Auto Club Can Increase Product Sales And Boost Dealer CSI... Why offer membership in the Montgomery Ward Auto Club as a sales incentive premium or service agreement add-on? Because when you do, your customer leaves the showroom with 20 outstanding on-the-road protection benefits — with the assurance he has made the *complete* new car purchase from *your* dealership.

And that's a goodwill extra your customer will appreciate, while helping to pump up dealer CSI.

MWAC makes it easy: we administer the Club directly and handle the details; you just include MWAC with the sale, enjoy your enhanced CSI and earn income for each Club renewal.

Club benefits include: Emergency road service reimbursement; custom trip routing; emergency travel expense reimbursement; arrest and bail bond; and much more. Because your needs may be unique, we're flexible in our benefit offerings.

Question 12: How many hours per week is your service department open?

	1988	1987	1986	1985	1984
Less than 45 hours	12.9	11.1	18.0	18.6	11.1
45 to 50 hours	38.7	54.2	60.0	38.6	47.2
51 to 55 hours	22.7	20.8	14.0	27.1	19.4
56 to 60 hours	11.9	9.7	6.0	11.4	8.3
More than 60 hours	13.9	4.2	2.0	4.3	14.0

Question 13: How many employees are there in your service department including parts and service personnel?

	1988	1987	1986	1985	1984
1 to 10	23.2	25.0	28.0	25.7	33.3
11 to 20	32.0	27.8	18.0	28.6	27.8
21 to 30	15.5	33.4	36.0	15.7	13.9
31 to 40	11.3	6.9	8.0	17.1	11.1
More than 40	17.5	6.9	10.0	12.9	13.9

Question 14: What is your most profitable service operation?

	1988	1987	1986	1985	1984
Tuneup	37.6	50.7	24.0	40.3	39.8
Wheel alignment	12.9	14.5	6.6	9.0	11.3
Wheel balance	8.2	8.7	4.0	1.8	2.7
Brakes	32.0	34.8	25.3	20.4	25.6
Transmissions	13.9	15.9	6.6	10.4	8.4
Engine overhaul	9.8	10.1	13.3	3.3	1.8
Rustproofing	12.9				
Body shop	10.3	11.6	9.3	6.1	7.7
Other	14.9	13.0	10.6	8.7	2.7

Question 15: How much do the following contribute to your service profits?

1988	Significantly	Some	None
New car warranty work	41.2	50.0	7.2
Extended service contracts	36.1	56.2	3.6
General customer drive-in	73.6	23.8	0.0
Special service packages	38.7	46.9	7.7
1987	**Significantly**	**Some**	**None**
New car warranty work	40.3	54.2	5.5
Extended service contracts	34.3	62.9	2.8
1986	**Significantly**	**Some**	**None**
New car warranty work	40.8	48.9	10.2
Extended service contracts	27.0	66.6	6.4
1985	**Significantly**	**Some**	**None**
New car warranty work	44.3	48.6	7.1
Extended service contracts	17.1	67.3	15.6
1984	**Significantly**	**Some**	**None**
New car warranty work	48.8	43.9	7.3
Extended service contracts	8.6	74.3	17.1

Question 16: What is your age?

	1988	1987	1986	1985	1984
18 to 24	2.1	2.9	4.0	0.0	0.0
25 to 29	8.8	9.7	16.0	15.7	9.8
30 to 34	18.6	15.3	16.0	11.4	19.5
35 to 39	20.6	26.4	26.0	18.6	29.3
40 to 44	18.6	20.8	16.0	22.9	7.3
45 to 49	12.9	8.3	10.0	12.9	4.9
50 to 54	8.8	6.9	2.0	11.4	12.2
55 to 59	5.7	6.9	4.0	4.3	14.6
60 to 64	2.1	1.4	6.0	2.8	2.4
65 or over	1.0	1.4	—	—	—

Question 17: Before becoming a service manager at your present or at any other dealership, what type of job did you have?

	1988	1987	1986	1985	1984
Write-up man	34.2	30.6	24.6	31.4	24.4
Mechanic	51.0	43.4	43.4	37.2	44.1
Parts manager	21.1	7.3	8.6	5.7	9.8
Other	37.1	18.7	23.4	25.7	21.7

Question 18: How many years have you been a service manager (including time spent at previous dealerships)?

	1988	1987	1986	1985	1984
1 to 3	24.9	20.8	19.6	22.9	22.9
4 to 7	19.7	19.4	33.3	21.4	26.6
8 to 11	22.3	26.4	17.6	15.7	11.4
12 to 15	12.4	13.9	5.8	12.9	15.7
16 to 19	8.8	8.4	9.8	11.4	9.2
20 or more	11.9	11.1	13.9	15.7	14.2

Question 19: What was your total compensation last year for being a service manager?

	1988	1987	1986	1985	1984
Less than $15,000	0.5	2.7	4.1	2.9	2.7
$15,001 to $19,999	3.1	11.3	4.1	10.0	8.1
$20,000 to $24,999	11.9	14.1	18.7	14.3	18.2
$25,000 to $29,999	11.3	7.0	10.4	24.1	27.0
$30,000 to $34,999	12.9	9.9	8.3	11.4	13.5
$35,000 to $39,999	12.9	12.7	20.8	10.1	10.8
$40,000 to $44,999	9.8	11.3	14.5	8.7	6.8
$45,000 to $49,999	5.7	9.9	6.2	10.2	9.5
$50,000 or more	25.8	21.1	12.5	8.3	5.4

Question 20: What was your total compensation for being a service manager based on?

	1988	1987	1986	1985	1984
Salary only	12.9	15.3	9.4	8.6	11.8
Salary + overtime	0.0	0.0	1.8	1.9	2.9
Salary + bonus	42.8	31.9	26.7	38.6	41.2
Salary + incentive	30.9	41.7	43.6	45.2	35.3
Salary + stock	0.0	1.4	—	—	—
Salary + other	11.3	9.7	18.5	5.7	8.8

Question 21: Do you believe your salary and benefits are commensurate with your experience?

	1988	1987	1986	1985	1984
Yes	62.9	50.0	48.9	54.2	63.6
No	33.0	50.0	51.1	45.8	36.4

SEGMENT

FROM PAGE 3

Mercedes-Benz helped boost the standard-class numbers by adding sales of 3,363 new 300-SEL models, while Pontiac sold 64,811 Bonnevilles that weren't on the market during the same period in 1987. Bonneville outperformed the Parisienne, Pontiac's 1987 big car, by a wide margin. Parisienne sales totaled 52,777 in the first six months of 1987.

Subcompact sales for the first half totaled 1,269,930, a jump of 6.65 percent over the 1,190,765 sold in 1987.

The only newcomer in the segment during the first half of this year was Daihatsu, which reported first-half sales of 5,273 Charades.

First-half sales of compact cars increased 3.31 percent to 1,412,773 over last year's first-half total of 1,367,523.

Reporting first-half sales for the first time in the compact market were Ford Probe, with 18,837, and Audi 80/90 with 6,146. The 80/90 replaced the Audi 4000, which had sales of 4,508 last year.

Sales of speciality cars for the six-month span totaled 112,255, 18.52 percent below the 137,772 sold in the comparable period of 1987.

Fiero sales showed the largest decline of any model in the specialty segment. Sales of the once-popular two-seater dropped 10,707 units from last year's first half.

Chiefly because of slow sales, Pontiac will close its Fiero plant in Pontiac, Mich., and discontinue the line this fall.

Another hurting two-seater in the speciality market was the Nissan 300-ZX, reporting a first-half sales loss of 8,757.

The only new entry in the speciality market for the first half was Buick's Reatta. Sales of that model totaled 1,634.

Sterling picks ad agency to replace Riney

MIAMI — Austin Rover Cars of North America confirmed that it has awarded its advertising account to New York-based AC&R/DHB & Bess Advertising.

The ARCONA account previously was handled by Hal Riney & Partners, San Francisco, but Sterling terminated the account when Riney won the Saturn Corp. account. Saturn, a GM subsidiary, will begin building cars in summer 1990 at a plant in Spring Hill, Tenn.

ARCONA sells Sterling models through 180 dealers in the United States. Britain's Austin Rover Group recently acquired total control of ARCONA from majority owner Braman Enterprises, which is headed by dealer-entrepreneur Norman Braman.

The ARCONA account is reportedly worth some $20 million, though company officials declined to disclose the size of the account.

Monroe, Bosch to make electronic suspension

BROADVIEW, Ill. — Monroe Auto Equipment Co., Monroe, Mich., a division of Tenneco Automotive, has reached an agreement with Robert Bosch GmbH of Stuttgart, West Germany, to co-develop and sell a new electronic ride-control suspension system.

The system will enable a vehicle to adapt automatically to changing road surface and driving conditions, according to Robert Bosch Corp. here, a subsidiary of Robert Bosch GmbH.

A Tenneco spokeswoman said the company hasn't decided which of the partners will market the system, but she said it would be an original-equipment item.

Balance Engineering forms new division

TROY, Mich. — Balance Engineering Corp. has established a new operating division here called Dynotech Engineering.

The division will provide single-sourced balancing services, prop-shaft/driveline research and dynamometer engine testing services for standard and high-performance engine configurations.

Balance Engineering was established in 1987 in a management buyout from General Motors. It had been part of GM since 1923.

Trade bill awaits vote in Senate

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Senate is expected to vote soon on an overhaul of U.S. trade laws.

The House already has approved a new plant-closing notification bill and also has passed separate legislation on trade. Both measures carried by margins, sufficient to override a presidential veto.

The measure requiring companies to give workers 60 days' notice of plant closings or large layoffs passed 286-136, four votes more than is needed to override a veto. The trade bill was approved 376-45.

The Senate already has passed its version of the plant-closing bill and will vote on the trade measure now that the Democratic National Convention is over.

President Reagan vetoed the trade bill in May, primarily because it included the plant-closing measure. Now, it looks as though the trade-reform measure and the plant-closing legislation will become law anyway.

Political observers here say the president may sign the trade bill and simply allow the plant-closing measure to become law without his signature. The unpopularity of the president's trade-bill veto has become an embarrassing election-year issue for Republicans, especially the president's opposition to advance notice of plant closings.

Domestic automakers and the UAW have supported trade reform, while import automakers and car dealers have opposed the legislation. The plant closing bill may affect some non-union auto suppliers but is not expected to have an impact on the auto industry's mainstream.

Union contracts already require advance notice of layoffs and plant closings throughout most of the industry. Small businesses, including car dealerships, are not covered by the bill.

'88 Continentals recalled for gearbox, electric fixes

DEARBORN, Mich. — Ford Motor Co. is voluntarily recalling 27,757 1988-model Lincoln Continental passenger cars in response to two electrical wiring-related conditions and a transmission gearshift mechanism condition.

The recall involves nearly the entire 1988 model production.

Heat resistant fiberglass tape will be installed around an engine compartment electrical wiring harness located above the engine exhaust manifold.

The harness is covered by a nylon shield that under extremely severe temperature and driving conditions could melt and drip onto the exhaust manifold, possibly resulting in an engine compartment fire. The tape will enclose and insulate the nylon shield.

A new ignition switch and certain ignition circuit electrical wiring and connectors will be installed on most of those cars.

In some Continentals, the presently installed ignition switch wiring can become overheated under heavy accessory use and lose electrical contact. That would cause such systems as the turn signals, radio, heater and air conditioner blower motor to stop functioning.

The brake system pump also would be affected, and the vehicle could experience substantially reduced braking capability if the brake system malfunction warning light were ignored.

In most of the vehicles, new transmission shift-control cables also will be installed. The present cables, in some cases, may come apart at one end, and when the vehicle is shifted, the transmission may be in a gear different from that indicated on the instrument panel "PRNDL" display.

Of the vehicles being recalled, 26,217 are in the United States, 1,347 are in Canada and 193 have been exported.

Owners will be notified of the safety recall by letter and will be requested to return their Continentals to dealers for modification. There will be no charge to owners for the recall service.

In a separate action, Ford Motor Co. is voluntarily recalling approximately 16,000 1986-87 F-series and B-series and 1986-model year C-series trucks over 14,000 pounds GVW to assure acceptable evaporative emissions levels. The affected vehicles are equipped with 6.1-liter 4-barrel and 7-liter 4-barrel engines.

The emission levels of some of those vehicles exceed applicable standards. To correct that condition, dealers are being asked to remove two purge control valves. The work will be performed at no cost to owners.

Of the trucks being recalled, 15,988 are in the United States and 90 are in export locations.

Vehicles built for sale in Canada are not affected by this action.

PRODUCTION

Changeovers trim week's car output

With more plants shutting down for model changeover, last week's targeted domestic car output of 88,929 was 5.38 percent below the previous week's 93,984 but 19.96 percent more than the year-ago week's 74,130, which was also affected by downtime.

Companies spit last week's estimated output as follows: Ford Motor Co., 43.70 percent; General Motors, 27.27 percent; Chrysler Motors, 10.12 percent; Honda of America Manufacturing Inc., 8.64 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.80 percent; New United Motor Manufacturing Inc., 3.65 percent; and Nissan Motor Manufacturing Co. U.S.A., 2.82 percent.

Truck production was slated at 71,682 units last week, 80.46 percent more than the prior week's 39,721 when all Ford plants were down for vacation along with several others for changeover.

The following GM plants remain idle until Aug. 1 for model changeover: Janesville, Wis.; Doraville, Ga.; Arlington, Texas; Fairfax, Kans.; Linden, N.J.; Tarrytown, N.Y.; Framingham, Mass.; and Willow Run, Mich.

These GM plants are also down for changeover: Flint, Mich., until Aug. 2; Wentzville, Mo., until Aug. 2; Lansing, Mich., until early August; Orion Township, Mich, until Aug. 8; Van Nuys, Calif., until Aug. 15.; Framingham, Mass., until Aug. 18; and Detroit-Hamtramck until Aug. 24.

Two Chrysler plants are closed until Aug. 1: Sterling Heights, Mich., and Belvidere, Ill. Sterling Heights is idle for vacation and Belvidere for changeover.

Chrysler's Toledo, Ohio, and Kenosha, Wis. (No. 1) plants are down until Aug. 8, and Kenosha (No. 2) is down until Aug. 29. Its Newark, Del., plant is down until early October for changeover.

Chrysler's Warren, Mich., facility resumed output today after being down for changeover.

Only five plants build in Canada

With only five car and truck assembly plants open, last week's scheduled output in Canada dipped considerably from the prior week's total.

Car production was targeted at 5,654 units, 34.01 percent below the previous week's 8,568 and 33.76 percent below the year-ago week's 8,536.

Truck output was scheduled at 5,070 units last week, 10.19 percent below the prior week's 5,645 but 45.15 percent more than the year-ago week's 3,493.

General Motors' Oshawa, Ontario, (No. 2) plant is closed until Aug. 1 for changeover. The Scarborough, Ontario, and Ste. Therese, Quebec, facilities are closed until Aug. 15 for changeover.

Ford Motor Co.'s Oakville, Ontario, car and truck plant resumed output today. Both were idle three weeks for vacation.

Chrysler Motors Windsor, Ontario, and Brampton, Ontario, plants are slated to reopen today after being idle for vacation.

Ford, VW hit snags in S. America

Engines, exports trouble Autolatina

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Heralded two years ago as a joint venture prototype for the future, the Ford-Volkswagen Autolatina alliance is now wrestling with strains from its product decisions, dealers upset by the sharing of technology and political-economic pressures in this inflation-plagued country.

As Ford and VW have faced those issues — and altered strategies in the process — agreed-upon plans have become muddied. And reactions have been strong.

VW dealers are threatening legal action against Autolatina to stop technology transfers between the partners. There are plans to lay off 500-600 workers as a result of lost orders for VW's Fox in the United States, and the Brazilian press is reporting that the partners differ in their views of VW's U.S. export program.

All this greets Ford's new top official in the Brazil-Argentina linkup of the two companies. By the end of this year, James D. Donaldson, Ford's executive director of marketing for North American automotive operations, will become the new vice president of Autolatina, replacing Wayne Booker, who was sent to Brazil in 1986 to negotiate the merger with VW.

Booker will return to the United States after Donaldson, who recently arrived, completes a months-long transition.

Meanwhile, the latest round of problems stemming from dealer concern over the swapping of components began when the Ford dealer network started running ads comparing prices for the Escort compact with those of competitors such as the VW Golf and claiming that the Escort was a better value

The merger: One year later

Both are changed, stronger, richer — and happier

By Mary Connelly and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

While the merger of Chrysler Corp. and American Motors one year ago relegated AMC to the annals of automotive history, the effect on Chrysler has been just as significant, if less dramatic.

Chrysler today is clearly not the same company it was one year ago. It has been fundamentally changed — by AMC people, product, facilities and attitudes.

The acquisition created both challenges and opportunities for Chrysler as it moves into the 1990s.

It burdened Chrysler with the need to launch a new car brand — Eagle — in a market already glutted with 40 competitors.

It instantly lost for Chrysler the title of low-cost domestic producer by slicing its manufacturing capacity utilization rate 20 percent.

But the purchase also gave Chrysler a springboard into international markets, increased its product and platform flexibility and made it a more formidable player in the truck market.

Jeep was the crown jewel sought by Chrysler when it made the purchase on Aug. 5, 1987, that will eventually cost it $855 million to $1.2 billion. Although Chrysler acquired a 1,472-member dealer network to market Jeep, it also inherited a weak AMC car lineup.

Consequently, Chrysler took on one of the greatest challenges wrought by the merger: the company would attempt to launch a new domestic car brand in a crowded U.S. market.

Chrysler acknowledges it will take years and millions of dollars before Eagle becomes an automotive household name.

Dealer groups initiate talks to join forces

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The industry's two primary retail trade groups are engaged in private, top-level negotiations aimed at merging the American International Automobile Dealers Association into the National Automobile Dealers Association.

High-level executives from NADA and AIADA held a two-hour meeting July 15 at NADA's McLean, Va., headquarters to discuss the matter.

Although the talks have been termed "preliminary" by both sides, early discussions have included a scenario whereby AIADA would remain an autonomous division within NADA.

The July 15 meeting was attended by NADA Executive Vice President Frank McCarthy, two NADA dealer directors and another NADA staff member, McCarthy said.

AIADA was represented at the meeting by McCarthy's counterpart, AIADA President Robert M. McElwaine; AIADA Chairman Lee G. Seidman, a nine-franchise import dealer in Cleveland; and another AIADA dealer director.

"The talks are in the embryonic stage," Seidman said last week. "We had the meeting to explore any common ground, and the key word is 'explore.' "

"Nothing is close," McCarthy said. "We had a preliminary discussion to ask, 'Does it make any sense to have an affiliation?' and 'What are the issues that would have to be resolved if we decide to have an affiliation?' We have an interest, but we are not pushing it."

Seidman said AIADA's nine-member future planning committee will discuss the affiliation topic — along with several other matters, including a five-year organizational forecast — at a 3½-day meeting later this month.

McCarthy said it is likely the matter — perhaps only as a briefing — will be on the agenda at the next NADA directors' meeting, to be held Oct. 25-26 in Pebble Beach, Calif.

The July 15 meeting of the dealer groups was the result of informal conversations between two old friends — Seidman and Ron Tonkin, NADA first vice president who is virtually certain to be elected 1989 NADA president. Tonkin is a Portland, Ore., mega-dealer with 12 import and two domestic franchises and he is an AIADA member.

Seidman said he and Tonkin first discussed the

LOW FINANCE: *Yugo offers loans to spur buying*

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — It's often difficult for Yugo buyers to obtain financing because the lowest-priced car sold in America also tends to attract the lowest-income car buyers in America.

So Yugo America has announced a new finance plan for first-time buyers. It begins today and will be administered by San Diego-based Imperial Savings Association.

The finance plan will start with a pilot program with 50 participating dealers for 90 days, followed by a nationwide launch, according to William E. Prior, Yugo America president and chief executive officer, and Frank Mercer, vice president of Imperial Savings.

As many as 70 percent of the people who want a Yugo can't get financing, Prior said.

And since many Yugo dealers are dualed with one or more other nameplates, a lot of those customers end up being steered into other makes or into used cars, he said.

While Yugo has attacked the entry-level market on price, its financing program has rates that are closer to credit cards than car loans.

The Yugo program can afford to fi-

Saturn's first 9 dealers will spend $175 million

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — General Motors' Saturn Corp. has named its first complement of dealers, who collectively will spend $175 million on their Southern California franchises.

Three of the nine dealers have no previous GM affiliation. Three have Ford franchises. All but two have import franchises. One minority dealer is included. All have top customer satisfaction index ratings. And one already has received approval to bundle his Saturn franchise with seven others and sell a half interest in them to a publicly traded British firm.

Price hike of 3% expected on 1989 Big 3 cars

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Domestic automobile manufacturers are expected to raise prices about 3 percent on 1989 models.

None of the Big 3 automakers has made an official announcement regarding prices, although Chrysler has notified dealers that fleet prices will rise 3 to 5 percent and retail prices will climb about 3 percent, and General Motors is offering dealers price protection up to 4 percent.

Dealers and analysts believe industrywide domestic price increases will be around 3 percent and no more than 5 percent.

The increase could be double the hike on the 1988 models at introduction time. The higher increase is seen by dealers and analysts as a way to restore the automakers' profit margins and pay for costly incentives that are bound to continue through the 1989 model year.

Dealers also predicted the automakers will expand the strategy they started in earnest last year of eliminating bare-bones base models and grouping options in packages.

GM dealers said they expect a 3 percent increase when the company makes its pricing announcement later this month. The automaker is offering its dealers price protection up to 4 percent on orders for 1989 models that they take now.

Last year, GM said it raised prices of its entire fleet an average of 1.9 percent. Base sticker prices rose considerably more than that on 1988 GM models, but GM said that with more standard equipment included in the base price, the cost of a third of its 1988 fleet was actually lower than comparably equipped 1987 models.

Ford followed GM's lead last year, hiking 1988 prices 1.3 percent over comparably equipped 1987 models. Ford raised the base prices on some models four or five times the 1.3 percent but, like GM, promoted many items from extra-cost options to standard equipment.

Ford has issued no official 1989 prices except for the Aerostar minivan, which went up 3.5 percent. That action leads dealers to believe that Ford's overall price increase on 1989 models will be between 3 and 5 percent. Some expect the increase to be closer to 3 percent, considering today's competitive market.

Meanwhile, Chrysler has already indicated to its dealers that prices of 1989 models will rise about 3 percent. Chrysler told dealers 1989 fleet prices — an early indication of what retail prices will be — will rise 3 to 5 percent.

Bennett Bidwell, Chrysler Motors president of product and marketing, said last month that cost pressures were mounting and the company would have to increase prices more than it did the last two or three years. Among the higher costs he cited were the addition of air bags on five Chrysler models, Chrysler's new labor agreement with the UAW last fall and rising costs of materials.

"If we didn't (raise prices)," Bidwell said, "we would have further profit margin erosion, and we don't feel we can afford that now."

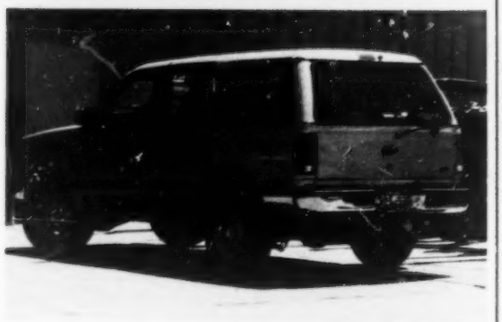
Bidwell said he doubted that Chrysler would raise prices more than 3 percent. He did suggest that the increase on the Omni/Horizon America models would be greater, saying, "I think they would be as good a buy at $6,295 as they are at $5,995."

A $300 hike on a $5,995 car is 5 percent.

Bidwell said that Chrysler had "underpriced the industry for three straight years fairly significantly." However, he said that if he had the opportunity to do it over again, he would have suggested higher price hikes to make up for the massive incentives offered in recent years.

Chrysler said it raised prices an average of 1.7 percent overall on its 1988 models. But on a comparably equipped basis, it said it actually reduced prices by about 1 percent.

Like its domestic counterparts, Chrysler raised base prices significantly more than the 1.7 percent, especially on its most popular models, as it made more optional equipment standard.



POPULAR MECHANICS/JIM DUNNE

4-door Bronco II
Ford will increase the size and engine displacement of the Bronco II when it adds a four-door version in late 1990. At 181 inches, the new four-door model will be about 10 inches longer than the new 2-door Bronco II, which itself will be upgraded and lengthened by 13 inches. Track for both will be widened. They will be powered by a 4-liter inline-6.

Big 3 profits smash record

$3.49 billion for 2nd quarter; 1st half just misses

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Although the battle for market share in the United States curtailed Big 3 profits in the second quarter, overseas and non-automotive operations buoyed results enough to make second-quarter profits a record and first-half profits the second best in industry history.

In the second quarter, domestic automakers reported combined net income of $3.49 billion on combined sales of $60.74 billion. Earnings were up 19 percent from $2.93 billion on sales of $53.79 billion in 1987, when American Motors was still in business.

The old industry profits record for the quarter was $3.33 billion in 1984.

For the first six months of the year, the domestic automakers reported combined earnings of $6.39 billion on sales of $115.63 billion — up 13 percent from $5.64 billion profits on sales of $105.16 billion in the first half of last year. However, the results for the first half of this year were slightly below the January-June net income record of $6.55 billion, set in 1984.

The 1987 and 1984 industry results include AMC as a separate entity.

Only Chrysler Corp. failed to improve on last year's second-quarter and first-half profits, as Ford Motor Co. reported record earnings and General Motors reported its best profitability since 1984.

The performances of both Ford and Chrysler — which reported their earnings last week — were adversely affected by a margin squeeze in the United States, directly related to competitive price pressure and retail incentives.

GM, which reported its earnings the previous week, said its profitability in the United States improved.

The Big 3 automakers had a combined net profit margin — net income as a percent of sales — of 5.75 percent in the second quarter compared with 5.45 percent in the same period last year.

Individually, only GM, which reported higher earnings as well as favorable accounting changes, improved its margin — to 5.04 percent in the second quarter from 3.67 percent last year.

Ford's second-quarter margin slipped to 7.43 percent from 7.68 percent last year. Chrysler's margin was 3.79 percent in the second quarter compared with 6.61 percent last year.

AMC, which was reported separately last year, had a 2.56 percent margin in the second quarter of 1987.

Chrysler Corp.

Chrysler reported lower profits on higher sales for the quarter. Its net earnings of $320.4 million ($1.45 a share) on sales of $8.45 billion in the second quarter compared with earnings of $424.1 million ($1.98 a share) on sales of $6.41 billion in the same period last year.

The company said that "conservative pricing" and "aggressive incentive programs" contributed to the earnings decline.

Parts firms see bonanza in light-truck boom

By Mary Klein
SPECIAL CORRESPONDENT

CHICAGO — A generation of compact trucks is aging, much to the delight of the automotive parts industry. Members of that industry gathered in seminars and at convention exhibits here, trying to calculate how best to tap the massive replacement and accessories market on the horizon.

New market opportunities overseas were also addressed by speakers at the Automotive Parts and Accessories Association show last week.

Participants filled the sessions in which experts predicted that booming light-truck sales into the 1990s will translate into a booming parts market.

By 1992, there will be 46.5 million light trucks operating in the United States compared to 33.3 million last year, predicted Judith Broseker, managing director of market research for the association.

"A General Battery study indicates that 82 percent of light-truck owners plan to buy some accessory or equipment for their trucks within the year," she said.

"Research has shown that vehicles in the three-to-10-year-old age group tend to receive more attention in terms of repairs, accessorizing and customizing than newer or older vehicles," she said.

In 1987, there were about 27 million light trucks aged three to 10 years, comprising 59 percent of the light-truck population. In the next few years, an average of 2.5 million light trucks will be added annually to that group, she said.

Yet concentrating solely on the domestic market may soon not be enough for parts makers and aftermarket suppliers.

To succeed in the future, the American automotive industry must learn how to sell its products and services worldwide, said Heinz Prechter, chairman and chief executive officer of ASC Inc.

The European market in particular could be lucrative for the American auto industry, he said. In 1992, the European Economic Community will lift all trade barriers among member countries and "theoretically become the biggest uniform economic unit in the world," he said.

To tap foreign markets, U.S. manufacturers "must forge business partnerships that are based on trust and designed to enhance the capabilities and opportunities for both parties," Prechter said.

For American firms, such partnerships would expand market opportunities, help offset fluctuations in the U.S. and world economies and create jobs.

The U.S. auto industry should take a lesson from the Japanese auto manufacturing firms, he said. Although the Japanese have been criticized for their aggressive export tactics, "any one of us in the same position would do the same; that is, identify a business opportunity and go for it."

The Japanese succeed, he said, because they understand the needs of American car buyers, continuously improve the quality of their cars and export high-quality, affordable cars to the

Controversy cools; Chevy van deal moves ahead

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

A good deal of the early controversy surrounding Chevrolet's 1989-model van conversion program has subsided, and officials are beginning to implement the program.

Thomas Pfingst, Chevrolet assistant director of fleet sales and special vehicles, said new converters will be added to the consignment pool in waves of 10 or more.

Chevrolet has met with the first 13 companies being considered for admission. In mid-July, it sent letters to all Recreation Vehicle Industry Association members outlining guidelines for admission.

More than 60 non-consignment pool converters have submitted letters requesting admission, including 36 from Indiana and 21 from Georgia.

Pfingst said there is no firm limit on how many companies will be admitted.

Chevrolet officials are hoping to complete the selection process within a month.

Meanwhile, General Motors Acceptance Corp. will play a major role in Chevrolet's new program by taking over administration of the financial portion. That will provide benefits for both the converters and dealers.

With GMAC's involvement, bailment companies won't need letters of credit from their local financing sources to back the units they order. That will free their credit for other uses.

GMAC will handle wholesale financing of the van conversion units in much the same way it handles dealer floorplan financing. It will base bailment company charges on units in their current inventory, rather than on a worst-case scenario inventory level. Currently, converters must have a letter of credit, which costs them money, covering what they think would be their maximum inventory level.

A second advantage to dealers is that they can, if they choose, automatically add the price of the upfit packages or conversions to their floorplan costs.

Currently, dealers are automatically invoiced for the chassis, which goes on their floorplan charges, but they have to pay for the upfit package separately.

Normally, they either carry it on their open accounts or have to fill out a form asking GMAC to add it to their floorplan.

Under the new program, converters still have to pay an insurance fee. Insurance will be handled by Motors Insurance Co., a GMAC subsidiary, as part of the package.

Converters still have to provide financial statements and data to GMAC, whose representatives will visit each location and talk to them about their financial position.

Once a company is approved as financially sound and meeting other Chevrolet criteria for admittance to its bailment pool, the financial portion of the program for that company will be administered by GMAC at the local level with local branches working directly with the body companies.

GMAC is expected to become involved in the retail and wholesale phases of this market.

Chevrolet officials have been meeting with various concerned groups to explain their program and allay any fears it may have engendered.

They met in Elkhart, Ind., with a select group of 15 conversion pool members, as well as the mayor of Elkhart and a congressman's aide, to explain what they are doing.

Since Elkhart is an RV town, just as Detroit is an automotive city, Chevrolet officials were also interviewed about their program on local television.

And they are tentatively scheduled to meet with representatives of Georgia conversion companies in Detroit later this week to explain how converters in that state can get into the Chevrolet program if they meet the guidelines for admission.

Rivals watch Chevy plan, but no followers yet

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Fears like those recently expressed by a northeast Georgia state legislator that Chevrolet's new van conversion program could cost some 1,250 conversion-related jobs in the state appear to be unfounded.

Chevrolet officials have already reassured 21 Georgia converters they are all being considered for admission to its consignment pools.

And Chevrolet's major competitors have expressed no inclination to duplicate its program, although they will obviously be tracking its outcome carefully.

Recently, Georgia State Sen. Don Johnson, D-Royston, took note of Chevrolet's plan to sell its van bodies only to converters that belong to its bailment companies. He said Ford and Dodge might follow suit and that northeast Georgia's van conversion business and employment would suffer.

But Ford and Dodge officials expressed no intentions to do what Chevrolet is doing. Even GMC has not committed to any changes in its van conversion program.

In order to follow Chevrolet, Ford would have to open its consignment pool system to a lot of additional companies, said Jerome Mittma , Ford Division recreation vehicle sales manager.

"We feel our lineup of 60 van conversion companies in the consignment pool program is an efficient level of operation at the present time, and to go beyond that, we would start losing control over the process," Mittman added.

Jim Lynch, Chrysler manager of special vehicles, said, "We observed it (Chevrolet's program) and reviewed it and have not made any changes in what we're doing. We'll continue with business as usual.

"We totally understand what they are trying to achieve, and many of their objectives are sound. Our concern is for non-pool companies and how they will survive. We are not planning any changes for '89 in our method of distribution."

Lynch added that this year "retail demand is holding up, and there doesn't appear to be anything on the horizon that will pull it down. My biggest problem is getting vehicles to customers."

There's a potential for Chevrolet's competitors to pick up some spillover business as a result of its restricting chassis only to authorized consignment pool accounts.

Major converters obviously favor Chevrolet's program.

William Becker, vice president of marketing, advertising and consumer relations for Glaval in Elkhart, Ind., applauded Chevrolet's move. He called it a "dynamic step in terms of improving the products and the image generally of van conversions."

RV wholesale shipments reach 10-year high for May, 5 months

Wholesale shipments of RVs climbed to their highest level in 10 years during May and in the first five months of this year.

Shipments of 41,600 RVs during May were up 10.05 percent from a year earlier, according to the Recreation Vehicle Industry Association.

Five-month shipments of 189,600 RVs were up 5.10 percent from last year.

Seasonally adjusted, May shipments increased 5 percent over April's and represented shipments of more than 440,000 units on an annualized basis, RVIA said.

Similarly, year-to-date totals have climbed to a seasonally adjusted annual rate of 430,000.

Van-conversion shipments totaling 20,400 in May were up 10.87 percent from last year, according to RVIA. For the first five months of calendar 1988, van conversion shipments totaled 86,700 and were up 6.38 percent from 1987.

The May level of consumer confidence, as measured by the University of Michigan's Survey Research Center, was up to 94.8, the highest level in more than a year.

During May, the four domestic van manufacturers shipped 21,700 van chassis with the seat-delete option to converters, up from 20,700 a year earlier.

For the first five months, domestic manufacturers shipped 90,700 seat-delete vans to converters, slightly below the 92,600 shipped in the 1987 period.

There has been a general shortage of van product for converters to work on. The shortage has been in full-sized vans, which account for the bulk of conversions.

Manufacturers shipped 4,800 compact vans to converters in May, up from 3,700 a year earlier. During the January-May period, they shipped 21,800 compacts to the conversion community, up from 16,700 last year.

Manufacturer shipments of standard-sized vans totaled 16,900 in May, slightly below 17,000 a year earlier. For five months, manufacturers shipped 68,900 full-sized vans to converters, off from 75,900 in the 1987 period.

502,244: *Exhibit space for Louisville show exceeds a half-million square feet*

RESTON, Va. — A total of 502,244 net square feet of exhibit space has been assigned for the Recreation Vehicle Industry Association's 26th annual National RV Trade Show in Louisville, Ky.

The show is scheduled for Nov. 29-Dec. 2.

Suppliers and manufacturers were assigned space at the national show through a drawing held at RVIA headquarters here.

All 54,500 net square feet of supplier exhibit space was sold out and assigned, according to Steve Krivian, chairman of RVIA's Louisville show committee and director of corporate marketing services for Thor Industries Inc., Jackson Center, Ohio.

A total of 233 suppliers will exhibit at 545 booths. RVIA's show department will accept waiting-list applications accompanied by 50 percent deposits. That space will be assigned from cancellations or added exhibit space, Krivian said.

A total of 447,744 net square feet of exhibit space was assigned to 97 manufacturers.

Due to heavy response to the space offering mailed in January, RVIA allocated space to manufacturers based on the amount of their contribution to the total revenue RVIA received in fiscal 1987 from membership dues and the purchase of seals and manufacturer certificates of origin.

Non-RVIA members and new members were limited to 1,000 net square feet under this allocation system.

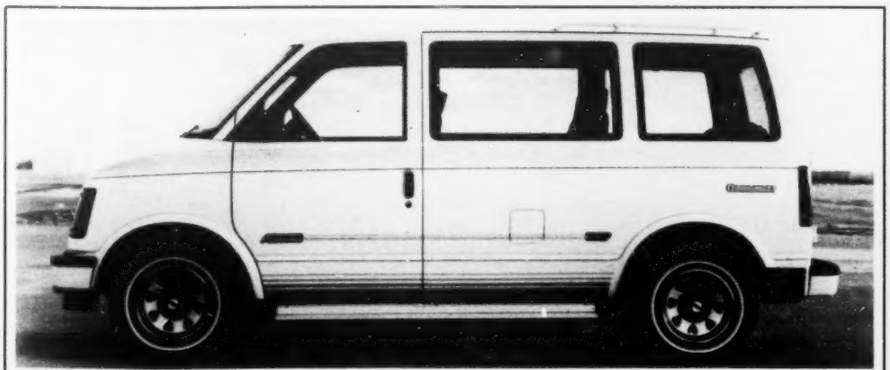
Approximately 6,000 net square feet of space is still available to manufacturers.

All exhibit space assignments were made through a lottery system established by RVIA.

Drawing first assignments among suppliers were: Fleming Sales Co., Elkhart, Ind., in the 11-plus booth category; Thetford Corp., Ann Arbor, Mich., in the 6-10 booth category; and Pull-Rite Towing Systems/Pulliam Enterprises Inc., Mishawaka, Ind., in the 1-5-booth category.

Drawing first assignment in the manufacturing category was Chateau Recreational Vehicles, Christiana, Pa.

The 1988 National RV Show, which will be held at the Kentucky Fair and Exposition Center in Louisville, is the RV industry's largest trade show. The show is expected to draw more than 12,000 RV dealers and industry officials. It is not open to the public.



Compliment introduces compact conversion
Compliment Vans, Camanche, Iowa, introduced this CS-7 M-van conversion for Chevrolet Astro and GMC Safari vans. Compliment said it seats seven people and stores a good deal of cargo, while offering a luxurious, comfortable ride. Compact van conversion shipments have been increasing, particularly with the general shortage of full-sized van chassis in the industry.

Car sales climb 16% in mid-July

All 7 domestic makers report gains as total reaches 217,941

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

With weaker incentives in force and a healthy short-term economic outlook, all seven domestic carmakers reported strong mid-July car sales. July 11-20 deliveries rose 16.29 percent over the corresponding year-ago period.

U.S. carmakers reported sales of 217,941 cars in the mid-month period compared with 187,410 last year. Two years ago, 177,679 cars were sold in mid-July. However, there was one less selling day in the 1987 and 1986 periods.

This year's mid-July daily selling rate averaged 24,216 units, which was 790 more than last year's 23,426. There were nine selling days this year and eight in 1987.

Mid-month domestic deliveries recovered from the July 1-10 period when the daily selling rate averaged 20,301 based on sales of 142,110 cars.

Each of the U.S. Big 3 automakers sold 10 to 24 percent more domestic cars in the mid-month period than they did last year when incentive bonanzas abounded.

Ford Motor Co. sold 13,352 or 23.97 percent more domestic cars in the second 10 days of July than it did last year. Ford Division delivered 3,050 more Taurus models and 2,781 more Tempos in the period.

With the aid of cut-rate car loans, Chrysler Motors delivered nearly 6,000 more cars in mid-July this year for a sales gain of 19.76 percent. Inducements and a greater supply of cars helped Chrysler sell nearly four times as many Omni/Horizon models as it did last year.

DOMESTIC SALES

	July 11-20, 1988	July 11-20, 1987
Eagle	1,209	675
Chrysler	7,214	8,370
Plymouth	8,745	6,477
Dodge	12,788	8,515
Chrysler Motors	29,956	24,037
Ford	48,758	38,553
Mercury	15,342	13,246
Lincoln	4,939	3,895
Ford Motor Co.	69,039	55,696
Buick	14,539	14,370

General Motors	106,791	96,746
Volkswagen		1,614
Honda	3,344	2,469
Nissan	3,376	2,984
Toyota	1,745	874
Mazda	690	—
U.S. Industry Total	217,941	187,410

General Motors sold 10.38 percent or 10,045 more cars in the July 11-20 period this year than it did a year ago. The recent infusion of dealer rebates at Cadillac helped increase deliveries by 41.76 percent. Eldorado sales rose 77 percent. Allante deliveries were up 111 percent to 173 units vs. 82 last year.

"The sales momentum this month has been sparked by Eldorado and our top-of the line Allante," Cadillac General Manager John O. Grettenberger, said. "The Allante has shown an upward sales trend for the third consecutive month."

Although his Eldorado and Allante sales are about even with year-ago deliveries, Ron Miller, owner of Miller Pontiac-Cadillac Corp., Rahway, N.J., said: "Generally, our sales are up. Our Sedan DeVille continues to be the best seller. It's about even with Fleetwood and Brougham."

Transplants Honda and Toyota had about the same numerical gain in U.S.-built car sales, but the percentages of increase were vastly different. Honda sold 875 more cars this year, up 16 percent. Toyota sold 871 more cars for a gain of 99.66 percent over last year.

New customer rebates that began July 6 helped Nissan's deliveries, which improved 13.14 percent or 392 units over the equivalent period in 1987. It was Nissan's first year-to-year increase since the May 1-10 period.

Mazda sold 690 units built at its Flat Rock, Mich., plant, up from 281 in the first 10 days of this month. At this time last year, Mazda was not producing cars in the United States.

Volkswagen, which permanently shut down its Westmoreland, Pa., plant July 21, stopped reporting sales of U.S.-built cars June 30. In 1987, the German company reported selling 1,614 U.S.-built cars in the July 11-20 period.

June car sales dip 9% in Canada

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Following a record-breaking May, Canadian car sales of 102,159 in June were down 8.9 percent from last year's 112,178.

Truck sales, while up 17 percent for the first half, were virtually unchanged for the month compared to June's results a year earlier.

General Motors and Ford posted almost identical June domestic-car sales losses with drops of 14.6 and 14.8 percent, respectively, while Chrysler managed a gain of 4.3 percent.

Importers suffered some significant sales losses when compared to the same period a year earlier. Jaguar had the largest decrease with sales down 45.8 percent from a year ago. Hyundai was next, down 36.7 percent. Others posting significant drops were Mazda, down 32.7 percent; Saab, down 22.2 percent; and Volkswagen, down 16.8 percent.

Suzuki led the import gainers with a 204.1 percent increase in sales over June 1987. Subaru was up 25.2 percent.

It is interesting to note that General Motors, thanks to its offshore partners, principally Suzuki, ranked third in import-car sales in June behind Toyota and Honda.

Volvo's sales of combined Canadian-built and imported cars dipped from 768 a year ago to 631 this June, a loss of 17.8 percent. That loss, however, was less than Volvo's six-month drop in sales of 27.8 percent, suggesting a possible turnaround in the company's fortunes.

In domestic truck sales, Chrysler was the big winner in June with a 32.0 percent gain, paced by its minivans.

Imported-truck sales softened significantly, with Toyota down 23.4 percent, Mazda down 22.9 percent and Nissan down 18.4 percent from a year ago. As in imported cars, however, Suzuki was up sharply. It gained 88.8 percent on a sales increase from 268 to 506.

Connecticut auction joins Mercedes-Benz sales net

Mercedes-Benz Credit Corp. has picked Connecticut-based Southern Auto Auction as its regional merchandising center for the New England states and New York for disposal of its off-lease and repossessed vehicles.

Previously, the cars had been sold by the Manheim Auction in Pennsylvania, but Mercedes said that an accumulation of mature leases and repossessed vehicles created a need for a New England auction. Manheim continues to service Mercedes-Benz Credit Corp. for the Pennsylvania region.

"It is an additional auction to dispose of vehicles," said a Mercedes-Benz spokeswoman. "We have nine centers around the country that dispose of vehicles."

Auctions are scheduled whenever the company accumulates about 30 or more cars. The auctions are open only to Mercedes-Benz dealers.

Larry Tribble, owner of Southern Auto Auction, said he expects that number to climb to 50 cars a month.

Southern Auto auction has six lanes and parking for 3,000 vehicles on 40 acres.

Anglo names Barnes

Jim Barnes has been named to the newly created corporate position of chief auctioneer for Anglo American Auto Auctions.

AUCTION BRIEFS

CHARLES THOMAS

Barnes will work with the company's 20 vehicle auction facilities to assess auctioneering talent and direct training programs to enhance the company's auctioneering standards.

"The principal connection between the company and our clients is through our auctioneers, and it is logical that we should concentrate on that aspect of our business to ensure that we have the best available talent performing this vital function," said Michael J. Richardson, president and chief executive of Anglo American Auto Auctions.

Barnes has 15 years' auctioneering experience and has worked within the Anglo organization in sales and marketing as well as being a circuit auctioneer.

EARNINGS

FROM PAGE 3

"We knew we were sacrificing short-term profits, but we did it to gain market share in this fiercely competitive environment," said Chrysler Chairman Lee A. Iacocca.

"We're going after a bigger base of loyal customers because that's what it takes to succeed over the long haul."

Iacocca said the strategy worked, and that Chrysler increased its U.S. market share more than Ford or GM.

"That's paid off for us in higher market share," he said, "but we're caught in a classic case of margin squeeze and we can't rely on that strategy forever."

The company also blamed higher raw material costs plus higher labor costs resulting from its new agreement with the UAW. In addition, Chrysler said first-half profits were reduced $150 million by plans to close certain Acustar manufacturing plants.

For the first six months of the year, Chrysler reported net income of $504.1 million ($2.27 a share) on sales of $16.16 billion, down from first-half earnings of $693.5 million ($3.22 a share) on sales of $12.44 billion in 1987.

At June 30, Chrysler's balance sheet showed net working capital — current assets less current liabilities — of $134.1 million, with cash reported at $340.4 million and marketable securities at $2.79 billion.

Worldwide factory sales of Chrysler vehicles totaled 707,593 in the second quarter, up 9.58 percent from the 645,717 reported by both Chrysler and AMC in the second quarter last year. First-half factory sales were up 3.33 percent to 1,341,885 from the combined Chrysler-AMC 1987 first-half total of 1,298,658.

Meanwhile, Chrysler Financial Corp. reported record earnings of $61 million, topping the previous record of $56 million set in the second quarter last year. First-half earnings of $126 million also were a record. The old record of $117 million also was set last year.

Ford Motor Co.

Ford reported record net income of $1.66 billion ($3.43 a share) on sales of $22.39 billion in the second quarter. One year earlier, Ford earned $1.50 billion ($2.90 a share) on sales of $19.50 billion.

For the first half of 1988, Ford reported net income of $3.29 billion ($6.74 a share) on sales of $43.13 billion. In the first half of 1987, its net income of $2.99 billion ($5.77 a share) came on sales of $37.64 billion.

The company said it earned a record $760 million outside the United States in the second quarter, a year-to-year improvement of $244 million.

"Our second-quarter earnings are a credit to the Ford team throughout the world," Chairman Donald E. Petersen and Vice Chairman Harold A. Poling said.

"The geographic diversity of our operations, as well as our many product and business lines, provided a broad base for our earnings," they said.

They said the biggest international gain was in European operations, which benefited from improved operating margins, higher industry volume and favorable changes in currency.

The company said that net income in the United States in the second quarter was $903 million, off $79 million from the same period of 1987.

"Continued improvements in car market share, industry volumes and manufacturing cost efficiencies, together with a lower tax rate, were more than offset by the higher cost of sales incentive programs, material and labor cost increases and costs to develop and introduce new products," the company said.

Ford said its Financial Services Group, which includes Ford Credit, First Nationwide, U.S. Leasing plus overseas credit affiliates, contributed 45 cents per share to earnings in the second quarter.

Ford Credit reported net income of $171.3 million in the second quarter, down from $192 million in the same period last year.

First-half Ford Credit net income was $371 million, off from $388.4 million last year. The company blamed the earnings decline on lower net interest margins and higher credit losses.

INDUSTRY PROFITS RISE

Europe proposes four-year freeze on Japanese imports

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Sales of Japanese cars in the European Economic Community would be capped at just over 9.5 percent of the market until 1993 — in essence a four-year import freeze — under a draft proposal being considered by the European Commission.

If adopted, existing bilateral restraints in several European countries on Japanese imports would be halted immediately.

The draft ties the Japanese to current import levels and is part of a broad group of auto industry proposals being formulated in advance of the planned 1992 unification of Europe's internal market.

The package includes restrictions on government aid to automakers. But it does not address a growing concern within the EC — the level of local content needed by transplant manufacturers to classify their vehicles as European-built.

The proposals are being prepared by three commission members with direct responsibility: Competition Commissioner Peter Sutherland, Industry Commissioner Karl-Heinz Narjes, and External Trade Commissioner Willy De Clerq.

The so-called auto industry "white paper" is due for formal consideration by the commission this fall. However, some observers in Brussels think the issue may be delayed until next year since Sutherland, Narjes and De Clerq are each expected to be replaced by their sponsor countries in January.

Varying forms of restrictions are currently imposed on the Japanese by France, Italy, Spain, the United Kingdom and Portugal. An immediate removal of restrictions could have a significant impact on the market picture in Europe.

For example, elimination of tight restrictions in Italy, where only 3,000 Japanese cars can be imported, could cut into Fiat's 60-percent hold on the domestic market. Fiat ranked No. 1 in European sales in the first half of 1988.

Removal of restrictions in France, where the Japanese are held to less than 2 percent, could affect Peugeot S.A. and Renault, which together account for about 65 percent of French sales.

Martin Parsons, a board member at Swiss-based Emil Frey Group, Toyota's French importer, said recently that Toyota sales in Japan could quickly increase from today's 20,000 to 100,000 if restrictions came off. That would hike the Japanese company's French share from under 1 percent to nearly 5 percent.

Analysts see further vulnerability for Fiat, Renault and Peugeot since most of their export sales go to European countries with Japanese restrictions.

"A controlled expansion of Japanese car sales in the four most restricted car markets (France, Italy, Spain and Portugal) could cost those manufacturers 240,000 units of lost production," according to a study on 1992 reforms to be released this week by the economic forecasting firm DRI-Europe.

A Fiat spokesman last week said the company remains confident it can combat the Japanese and noted that the Japanese presence in the Italian market is already much greater than the 2,548 passenger cars officially imported last year.

Accounting for both off-road vehicles not included in the bilateral agreement and gray-market imports from other EC countries, Japanese sales in Italy last year came to about 40,000 units, he said.

If frozen at current levels throughout the 12-nation bloc, Japanese volume would be held at just over one million units. Japanese manufacturers would have to agree with an EC-wide import ceiling and are expected to point out that last year no major European auto group operated in the red for the first time since the early 1970s.

Japan's Ministry for International Trade and Industry (MITI) recently announced that Common Market exports would be limited to 1.21 million cars and commercial vehicles in 1988, an increase of 3.5 percent over last year but a smaller rate of growth than in previous years.

DRI-Europe's report says that 1992 unification regulations won't have an extraordinary impact on overall Japanese volume in Europe.

"The unspoken bilateral negotiations and Japanese self-restraint must and will continue, not just in the transition phase up to the year 1992, but also afterwards," according to the report. "The number of Japanese cars sold in the EC will not change much. The questions are where they will be sold, how high their value is and who they will compete with."

The other major component of the EC draft is a tightening of restrictions on state aid, such as the British government's write-off of Rover Group debts to pave the way for sale of the state-owned company to British Aerospace.

The EC's proposal includes advance clearance of aid packages of a specified level — expected to be equal to about $10 million to $15 million — and denial of any form of operating aid.

Competition Commissioner Sutherland has been a stalwart of strict enforcement of government assistance to carmakers. Last year, the EC enforced the reduction of a regional aid package for a Daimler-Benz car assembly plant in West Germany and demanded a reduction in the United Kingdom's debt write-off for Leyland Vehicles during its acquisition of Daf Truck of the Netherlands. It is also investigating the price paid by Fiat in 1986 for then-government owned Alfa Romeo.

The commission has so far ruled out restrictions on minimum local content for cars assembled in the EC by Japanese or conceivably Korean companies — reportedly fearing conflicts with provisions of the General Agreement on Tariffs and Trade.

That issue has come to a head recently with French government resistance to the export of British-built Nissan Bluebirds to the European continent.

Nissan has said it will begin shipping Bluebird sedans from its plant in England in October. It expects to export 10,000 to the continent by the end of the year and 100,000 annually by 1992.

The dispute has pitted the British and French governments against one another. France contends that English-built Nissans should have at least 80 percent EC content to qualify as European-built and avoid its Japanese quota. Nissan claims 60-65 percent European content for the UK Bluebirds.

At present, European Community rules require only that the "last substantial manufacturing operation" be within the EC to qualify. The matter is being reviewed in Brussels, though officials have so far indicated that the English Bluebirds qualify for circulation within the community.

Both Renault and Peugeot strongly favor counting Nissans from Britain against the country's Japan-built limit.

LEMON LAW: *Conference of states developing model law*

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — John Woodcock, Connecticut state representative and "father" of its lemon laws, will lead the effort of the National Conference of State Legislatures to develop a model state lemon law.

Woodcock will be joined on the subcommittee by California Rep. Sally Tanner.

The conference decided to form the subcommittee last week during a meeting in Reno, Nev., that was attended by auto industry representatives.

Although the Motor Vehicle Manufacturers Association and the Automobile Importers of America have developed their own model lemon law, which they contend is pro-consumer, a number of consumer groups and state legislators claim it would take away consumer protection already found in some state laws.

Woodcock plans an open meeting at which auto representatives — both manufacturers and dealers — may be heard.

During the legislators' meeting in Reno, the Automotive Trade Association Executives gave Woodcock a letter stating their opposition to any federal pre-emption of state lemon laws and promising their help and cooperation to develop a model lemon law for states to adopt.

The trade association leaders also said they will file similar objections with the Federal Trade Commission over an industry petition asking for federal approval of arbitration programs that would pre-empt state lemon laws.

That petition was filed by MVMA (without General Motors' participation) and the Automobile Importers of America.

GM, also in a letter given to Woodcock, repeated its opposition to that petition, but also offered assistance to the National Conference of State Legislatures' draft of a model lemon law. The letter from David Collins of the GM general counsel's office asked that the private sector — not only car companies but state dealer associations — be allowed input.

He concluded that "it may be more realistic to create an exemplary procedure for generating a model change, than it is to expect a model bill to be produced under current time pressures."

PRODUCTION

Car output climbs over 4 million

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers built their four-millionth car of the year last Monday, 15 days behind 1987.

So far this year, 4,074,110 cars have been assembled, 5.77 percent below the 4,323,556 completed last year at this point.

Last week's scheduled car output of 76,751 dipped 12.84 percent from the prior week's 88,055 but rose 6.24 percent over the year-ago week's 72,245.

Ford Motor Co. out-built General Motors last week as several GM plants were idle for model changeover. Last week's targeted output was split this way: Ford, 50.33 percent; GM, 16.87 percent; Chrysler Motors, 10.42 percent; Honda of America Manufacturing Inc., 10.01 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 4.40 percent; New United Motor Manufacturing Inc., 4.23 percent; and Nissan Motor Manufacturing Co. U.S.A., 3.74 percent.

Truck production was scheduled at 67,000 units last week, 3.31 percent below the prior week's 69,291 and 6.08 percent below the year-ago week's 71,335.

Year-to-date, 2,403,453 trucks have been built, 8.11 percent more than the 2,223,177 assembled last year at this time.

The following GM plants remain idle for model changeover: Lansing, Mich.; Doraville, Ga.; Fairfax, Kan.; Orion Township, Mich.; Van Nuys, Calif.; Bowling Green, Ky.; and Framingham, Mass.

These GM facilities resumed output today: Janesville, Wis.; Linden, N.J.; Tarrytown, N.Y.; and Willow Run, Mich.

GM's Flint, Mich., and Wentzville, Mo., plants will resume output tomorrow.

Chrysler' Toledo, Ohio; Kenosha, Wis.; and Newark, Del., plants remain idle for model changeover.

Chrysler's Sterling Heights, Mich., and Belvidere, Ill., plants resumed production today after being closed for vacation and changeover.

Plants reopen; Canada rises

With several plants returning to work, last week's scheduled Canadian car and truck production increased over the total for the prior and year-ago weeks.

Output of 11,564 trucks was more than double the previous week's 5,118 and was 26.44 percent more than last year's 9,146.

Year-to-date, 532,150 units have been assembled, 10.58 percent more than the 481,230 completed last year at this time.

Automakers slated output of 9,155 cars last week, 68.17 percent more than the prior week's 5,444 and 18.14 percent more than the year-ago week's 7,749.

General Motors' Ste. Therese, Quebec; Oshawa, Ontario; and Scarborough, Ontario, plants remain idle for model changeover.

Chrysler's plant in Brampton, Ontario, and its two plants in Windsor, Ontario, resumed output last week.

Ford Motor Co. plants reopened last week after vacation.

Rail dispute has warning for autos

Just-in-time adds supply problems

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

As the nation's railroads downsize to become more competitive, an already downsized automotive industry could pay the price along its supply tracks.

That prospect came to light last week after a Chicago & North Western strike was triggered by the firing of almost half the railroad's brakemen. Congress and the president put out the brushfire — temporarily — but it brought into focus the vulnerability of downsized automakers now more dependent than ever on railroads and trucks for just-in-time component supplies.

And, if more of the nation's railroads try to match the Chicago & North Western's crew cutbacks, this could prove the first blow in a lengthy — and possibly harmful — labor-management conflict with the automotive industry suffering potentially strong reverberations.

With the automakers closely monitoring the situation, Congress put out last week's small brushfire by extending until Sept. 9 a cooling-off period and ending the brief Chicago & North Western walkout. President Reagan signed the legislation last Thursday.

The strike began when Chicago & North Western fired approximately 1,100 of its 2,600 brakemen. The move was part of the railroad's plan to cut freight crews to two, which would set an industry standard that most likely would be adopted by other railroads.

Stempel: GM warranties widen; suppliers must keep prices in check

GM tightens suppliers rein

Auto giant checks closely before granting price hike

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

TRAVERSE CITY, Mich. — General Motors' suppliers aren't being allowed to raise prices without their operations first going under powerful new GM microscopes.

It will only be after the supplier and GM squeeze the supplier's cost structure as tight as they can that prices will be allowed to move higher, said GM President Robert C. Stempel.

Stempel's remarks came at a University of Michigan seminar on automotive management here, and most in the audience were with supplier firms.

Stempel used an anecdote about one company that met a 30 percent higher material cost with a bottom-line effect of about 10 percent. The vendor told GM it needed to boost prices as a result.

"Working together, we found that one of the things driving the costs was transportation of the material and how it was being prepared," Stempel said. "Working together, we got at the root of the problem. It wasn't just the material in that case, it was some of the additional value-added work. We then agreed on a fair price."

Stempel said some commodity prices have been rising — copper, aluminum, steel and even steel scrap. He said GM's move to fewer suppliers has created higher volumes that offset higher prices.

"We've been making a market and, for many suppliers, that has provided a volume base. We think part of what we've been doing is coming off our bottom line. Part of what has been coming off our bottom line to keep that volume going needs to be shared with the supplier community," Stempel said.

He said many suppliers recognize the costs involved for the vehicle makers in keeping retail sales volume high.

Suppliers here said GM has not permitted materials cost pass-throughs in four years.

GM dealers hail change in warranty

By Edward Lapham and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors dealers praised the automaker's change in 1989 warranty coverage, saying it is a statement of the company's confidence in the quality of its products.

GM announced last week that its "Bumper to Bumper Plus" warranty program will cover everything but routine maintenance and tires for three years or 50,000 miles on most 1989 cars and trucks.

Exceptions are Cadillac models, which keep their four-year/50,000-mile coverage, and the Cadillac Allante with its seven-year/100,000-mile coverage.

Under the new program, GM will pay all warranty costs for the first year or first 12,000 miles, after which it will pay everything but a $100 deductible charged to the customer for each warranty claim.

The new warranty is broader in coverage but is for a shorter period of time than previous coverage. GM's previous six-year/60,000-mile coverage on the powertrain is eliminated for the 1989 model year.

Although most GM dealers contacted by Automotive News were enthusiastic about the new coverage, some expressed concern that competitors, particularly Chrysler Motors with its seven-year/70,000-mile coverage, will be perceived by the public as having a better offering

Chrysler sources said the company has discussed shorter but more comprehensive warranty coverage as part of its routine monitoring of developing market trends. The discussions were prompted by Chrysler market research indicating that customers increasingly prefer bumper-to-bumper coverage, sources said.

Nevertheless, GM's announcement seemed to take the competition by surprise. Also addressing the Traverse City, Mich., auto conference at which GM President Robert Stempel announced the new warranty were Bennett E. Bidwell, Chrysler Motors president of product and marketing, and Harold A. Poling, Ford Motor Co. vice chairman, both of whom said they were studying the move.

A Ford source said there were no immediate plans

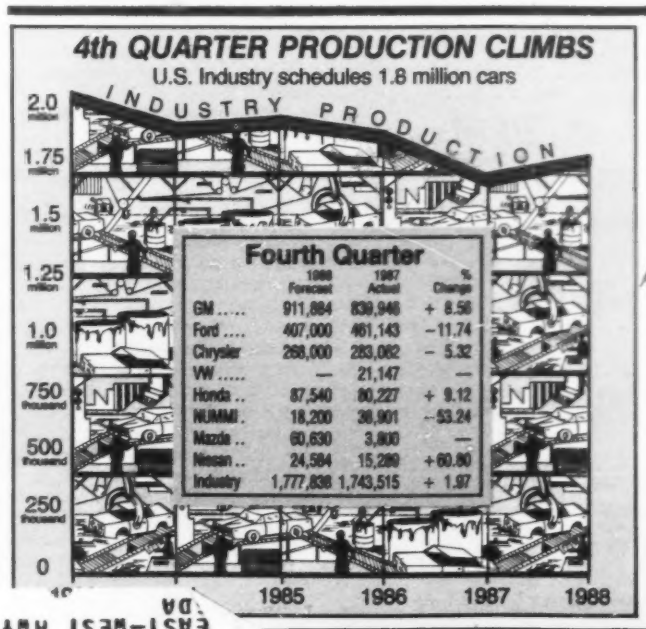
Big 3 petition for joint study of composites

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors, Ford Motor Co. and Chrysler Motors are asking the federal government to sanction a joint study of polymer-based composites for automotive uses without the threat of violating antitrust laws.

"There is not really a unified data base on composites," said Carl Johnson, principal research engineer for Ford. "We need to know what happens to composites in the environment. We have to crash them — there is just not enough known about them."

Industry sources have said for weeks that the Big 3 were planning their first jo



GM schedules output hike in fight for market share

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

General Motors plans an aggressive fourth-quarter production schedule, apparently in an effort to gain market share from its two domestic competitors, whose fourth-quarter schedules fall short of last year's because of extensive model changeovers.

According to the companies' forecasts, 1,777,838 cars are projected to be built in the United States during the fourth quarter, 1.97 percent more than the 1,743,515 built in the comparable period of 1987.

If carmakers stick to their latest production schedules for both the third and fourth quarters, the 1988 calendar year total should end up around 7,013,000 — slightly below last year's final count of 7,094,992 cars.

GM expects to build 911,884 cars in the fourth quarter, 8.56 percent more than the 839,946 assembled in last year's fourth quarter.

Auto analyst Mike Luckey of Luckey Consulting Group Inc., Cresskill, N.J., said he is just a bit concerned that sales may taper off a little in October and early November due to the anticipated industrywide 3- to 4-percent price increases, and that companies may try to launch their new models with very modest incentive support. Consumers may balk at the

TV strike won't hurt '89 intros

Bigger emphasis on sports shows

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Programming changes on the nation's television networks this fall, caused by striking television and film writers, are not expected to dampen new-model launches.

Advertising sources say heavy purchases of sports programming by the nation's domestic automakers will give those advertisers a good audience share. General Motors, for instance, has purchased all of the automotive spots during telecasts of the Summer Olympic Games in September.

GM, Ford Motor Co. and Chrysler Motors have made other sports purchases including the World Series and ABC Monday Night Football. Traditionally, automakers have used major fall television programs to introduce their advertising campaigns for the new model year.

GM will try a single national roll out for the 1989 model year instead of a staggered introductions, as it did last year. Ford is planning to introduce several of its models at different dates during the fall and early winter.

All GM divisions are planning to launch their models Sept 29. Last year, Chevrolet introduced its vehicles Sept. 24 and the other GM divisions followed on Oct. 1.

Several midyear introductions are planned at GM, as well. Chevrolet will introduce its Geo Prizm (formerly Chevrolet Nova) in the first quarter of 1989. The Corvette ZR1 will be launched in late winter to early spring, depending on production schedules.

The Chevrolet GM10 sedan, called Lumina, will arrive in late spring as a 1990 model. Dealer sources say Chevrolet's short-box, extended-cab C/K pickup will be available in spring.

New models available on Sept. 29 for Chevrolet include a slightly restyled Suburban, Corsica hatchback and the Corsica LTZ.

Buick will introduce a more luxurious version of its Park Avenue, called the Ultra, in the first quarter of 1989. Buick models available Sept. 29 include the reskinned Riviera and Century.

Pontiac will unveil the restyled 6000 and a new front-end treatment for the Grand Am on that date. Midyear introductions include a turbocharged version of the Grand Prix and a 20th anniversary edition Firebird Trans Am. Exact introduction dates are unavailable.

Cadillac, meanwhile, will offer restyled DeVille and Fleetwood models on Sept. 29, and Oldsmobile will have a restyled Cutlass Ciera.

Ford Motor Co. is planning an Oct. 6 launch for most of its carryover vehicles. The 1989 Aerostar bowed Aug. 1 and the 1989 Ranger and Bronco II will debut Nov. 25. Ford plans to introduce its redesigned Thunderbird and Cougar models Dec. 26, the same lucky date that launched the hot-selling Lincoln Continental in 1987 and Taurus/Sable in 1986.

Lincoln-Mercury will introduce its 1989 Scorpio, XR4Ti and Continental models Dec. 1. A spokesman said the later introduction for the two West German-built Merkur models is due to transportation considerations.

Chrysler said it has not finalized its fall launch date, although Oct. 10 has been discussed as a possible date. The Mitsubishi-built Eagle Summit will be introduced at Jeep-Eagle dealerships in late September or early October, though models have been arriving at dealerships this month.

Chrysler's TC by Maserati, which has been delayed several times, is slated to debut in November.

Each GM division is expected to receive a portion of GM's advertising time during the Summer Olympic Games. Though Buick is the official car of the 1988 Olympic Games and Oldsmobile is the official car of the U.S. Olympic Track and Field Team, Chevrolet will receive the most advertising time.

One informed network source said upfront purchases of prime television time by domestic automakers have risen for the fall season.

MVMA shift: sport-utility is a truck

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Domestic vehicle manufacturers have reversed themselves and now want imported sport-utility vehicles classified as trucks only, apparently because they believe Japan's quotas on car exports will end next year.

The Motor Vehicle Manufacturers Association is about to file comments with the U.S. Customs Service saying the regulations should be changed so sport-utility vehicles cannot be imported as cars and as a result must be subject to a 25 percent tariff.

Under pressure from the Big 3 and Rep. John Dingell, D-Mich., chairman of the House Energy and Commerce Committee, Customs is reconsidering vehicle classification regulations to designate the vehicles as either cars or trucks. Currently, they can be imported under either category.

Until now, MVMA and Dingell have said sport-utility vehicles should be classified as cars, subject to the Japanese car-export quota.

A Washington lobbyist for a domestic automaker said U.S. companies now believe the Japanese will fail to meet their sales quotas under this year's restrictions.

"Classifying sport-utility vehicles as cars would be meaningless in that context," he said. "We believe Japan's export curbs could go away next March 31. If that happens, we want the sport-utilities subject to the 25 percent truck tariff."

Trade lawyers for the import industry want current Customs Service regulations to remain in effect and are somewhat surprised by MVMA's new position.

An association letter to lawmakers also confirms the change. It says, "Based on all conventional definitions used by industry and government, these vehicles are trucks and should be consistently classified as such by the U.S. Customs Service. The loopholes in existing regulations, which allow importers to switch classification of the vehicle at will from a truck to passenger car simply by inserting a rear seat, should be stopped."

Customs' comment period on the changes closes this week.

Roberts formerly served as GM's vice president in charge of personnel administration and development

Navistar lures GM VP

Roberts will direct truck operations

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The General Motors' executive who oversaw the elimination of 40,000 salaried jobs and the establishment of performance-based pay for white-collar workers takes control of truck operations at Navistar International Transportation Corp. today.

Roy S. Roberts, formerly GM vice president in charge of personnel administration and development, was named last week to the newly created position of vice president and general manager of truck operations at Chicago-based Navistar. He assumes responsibility for the engineering, manufacturing and marketing of International medium- and heavy-duty trucks.

Navistar Chairman Neil A. Springer said Roberts brings to the newly created job extensive experience in the industry, particularly in manufacturing management, quality assurance and human resources.

Roberts' appointment comes at a time when Navistar is negotiating with the UAW for a concessionary contract at its Indianapolis engine plant.

Workers recently rejected the contract, which they say cuts pay and benefits by three dollars an hour. However, negotiators quickly returned to the bargaining table when Navistar said it would not invest $150 million in the plant and would move diesel engine assembly elsewhere, jeopardizing 2,000 jobs.

Navistar had planned to make capital improvements in the plant

Audi settlement returns to court

By Helen Kahn
SENIOR CORRESPONDENT

Cook County (Chicago) Circuit Judge Thomas Rakowski will hear objections from consumer and safety groups when he rules on Audi's proposed settlement of a class action suit over loss of resale value stemming from unintended-acceleration allegations.

A hearing is scheduled for Thursday.

Audi has offered rebates ranging from $300 to $2,000 to 345,000 persons who bought Audi 5000 models between 1978 and 1986. The rebates must be used toward the purchase of another Audi.

Rakowski is new to the case. Cook County Circuit Judge Harold A. Siegan, who initially accepted the settlement, withdrew July 19. Rakowski presided over a July 26 hearing on the matter.

When Siegan started the approval process last June, he cited personal ties to a partner in one of the plaintiffs' law firms and said he would have to remove himself from the case if he had to make any "judicial determination."

Siegan evidently did not expect the settlement to be challenged and when objections were raised by the Audi Victims Network, the Center for Auto Safety and the New York Public Interest Research Group, he stepped down and offered to vacate his initial approval.

However, the three law firms representing the class — Holstein, Mack & Dupree; Lawrence Walner & Associates; and Lisco & Field — as well as Audi's law firm, persuaded Rakowski to let the initial determination stand until the Aug. 11 hearing, since part of that ruling was the certification of the class.

At Thursday's hearing, lawyers for the consumer and safety groups will urge that the settlement be rejected and will charge the four law firms with collusion in reaching it.

Jerold S. Solovy of Audi's firm, Jenner & Block, said the company has spent more than $200,000 to notify the owners, while to date, 800 have objected to the settlement and 1,500 have opted out of the agreement. Noting that only 1,500 have declined the settlement, an Audi spokesman said, "Clearly, when 99.5 percent of the Audi owners approve, we have to conclude the settlement is fair."

Another point that might be clarified Thursday is language about the rights of those who have claims under warranty or under state lemon laws.

During the July 26 hearing, attorneys for the Audi Victims Network contended that any claims before May 5, 1988, are eliminated. Solovy said that was never the company's intention and if that is indeed in the proposal, then the language may have to be changed.

Washington attorneys Mark Steinbach and Stephen Nassau, representing the Audi Victims Network, contend their clients never should have been put in the position of objecting or opting out of the settlement since the terms of the agreement apply only to those who purchase another Audi. The proposed settlement, they say, is "collusive, unfair, inadequate and unreasonable" and should be rejected.

Class members accepting the settlement would give up litigation rights except for personal injury claims. The Audi spokesman said that if approved, the settlement will put an end to this type of litigation and, as a result, protect the resale value of the car.

Mexico City	0.82
Cairo, Egypt	0.58
Caracas, Venezuela	0.16
New York**	1.11
Atlanta	1.16

All prices are for full-serve regular expressed in U.S. dollars per gallon, and are based on June 1988 foreign exchange rates.

*Price based on self-service super-leaded (full-service regular unavailable).

**U.S. prices based on full-service unleaded (full-service regular unavailable).

GASOLINE

In Venezuela, it's just 16¢ a gallon

ROCHESTER, Wis. — It's not uncommon for drivers to go a bit out of their way to save a few pennies on gasoline. They might even go to another town or another state.

But to be fully frugal about fuel, one would have to head to Caracas, Venezuela, where gas is only 16 cents a gallon.

That is the lowest price to be found anywhere for regular full-service gasoline, according to Runzheimer International, a management consulting firm that collects gasoline prices worldwide.

The most expensive gas is found in Abidjan, Cote d'Ivoire (Ivory Coast), at $4.24 a gallon. A gasoline-buying spree in Tokyo, the most overall expensive city in the world, will also be costly — $4.13 a gallon.

Those attending the Summer Olympics in Seoul, South Korea, will be paying $2.67 a gallon. And, in the Soviet Union, Moscow averages $2.95 a gallon, but only self-serve super-leaded can be found.

Ford houses gorillas

ATLANTA — Ford Motor Co. has donated more than $1 million to the Ford African Rain Forest at Zoo Atlanta. The exhibit will house several gorilla families in a natural setting.

AUCTION DATES

Chrysler Motors

Aug. 9 — Dallas Auto Auction, Grand Prairie, Texas; Greensboro Auto Auction, Greensboro, N.C.; Riverside Auto Auction, Riverside, Calif.; Portland Auto Auction, Portland, Ore.; and Arena Auto Auction, Chicago

Aug. 10 — Columbus Fair Auto Auction, Obetz, Ohio; A.D.E. of Birmingham, Birmingham, Ala.; Hatfield Auto Auction, Hatfield, Pa.; and Southern Auto Auction, Warehouse Point, Conn.

Aug. 11 — Fredericksburg Auto Auction, Fredericksburg, Va.; Indianapolis Auto Auction, Indianapolis; Omaha Auto Auction, Omaha, Neb.; and Southwest Auto Auction, Phoenix, Ariz.

Aug. 12 — St. Louis Auto Auction, Bridgeton, Mo.

Aug. 16 — Florida Auto Auction of Orlando, Ocoee, Fla.; Hatfield Auto Auction, Hatfield, Pa.; American Auto Auction, Walpole, Mass.; Nashville Auto Auction, Nashville, Tenn.; Denver Auto Auction, Aurora, Colo.; Golden Gate Auto Auction, Fremont, Calif.; and South Seattle Auto Auction, Kent, Wash.

Aug. 17 — Butler Auto Auction, Gibsonia, Pa., and Minneapolis Auto Auction, Plymouth, Minn.

Aug. 18 — Manheim Auto Auction, Manheim, Pa.; Aptco Auto Auction, Taylor, Mich.; Metro Auto Auction of Kansas City, Lee's Summit, Mo.; Clanton's Auto Auction, Darlington, S.C.; Ark-La-Tex Auto Auction, Shreveport, La.; Salt Lake Auto Auction, Salt Lake City; and Northway Exchange, Clifton Park, N.Y.

Aug. 23 — Dallas Auto Auction, Grand Prairie, Texas; Hatfield Auto Auction, Hatfield, Pa.; Greensboro Auto Auction, Greensboro, N.C.; Riverside Auto Auction, Riverside, Calif ; and Arena Auto Auction, Chicago

Aug. 24 — Columbus Fair Auto Auction, Obetz, Ohio; A.D.E. of Birmingham, Birmingham, Ala.; and Southern Auto Auction, Warehouse Point, Conn.

Aug. 25 — Fredericksburg Auto Auction, Fredericksburg, Va.; Indianapolis Auto Auction, Indianapolis; Southwest Auto Auction, Phoenix, Ariz.; and Omaha Auto Auction, Omaha, Neb.

Aug. 26 — St. Louis Auto Auction, Bridgeton, Mo.

Aug. 30 — Florida Auto Auction of Orlando, Ocoee, Fla.; Hatfield Auto Auction, Hatfield, Pa.; American Auto Auction, Walpole, Mass.; Nashville Auto Auction, Nashville, Tenn.; Denver Auto Auction, Aurora, Colo.; Golden Gate Auto Auction, Fremont, Calif.; and South Seattle Auto Auction, Kent, Wash.

Aug. 31 — Butler Auto Auction, Gibsonia, Pa., and Minneapolis Auto Auction, Plymouth, Minn.

Ford Motor Co.

Aug. 9 — South Seattle Auto Auction, Kent, Wash.

Aug. 10 — Atlanta Auto Auction, Red Oak, Ga., and Wednesday Auto Auction, Obetz, Ohio

Aug. 11 — Dallas Auto Auction, Grand Prairie, Texas, and Minneapolis Auto Auction, Plymouth, Minn.

Aug. 16 — Harrisonburg Auto Auction, Harrisonburg, Va.

Aug. 17 — Concord Auto Auction, Acton, Mass., Aptco Auto Auction, Taylor, Mich.; and Lakeland Auto Auction, Lakeland, Fla.

Aug. 18 — Baltimore-Washington Auto Exchange, Baltimore; Denver Auto Auction, Aurora, Colo.; Texas Hobby Auto Auction, Houston; Southwest Auto Auction, Chandler, Ariz.; Skyline Auto Exchange, Fairfield, N.J.; and 166 Auto Auction, Springfield, Mo.

Aug. 24 — Northway Auto Auction, Clifton Park, N.Y.; Albuquerque Auto Auction, Albuquerque, N.M.; Clanton's Auto Auction, Darlington, S.C.; Mississippi Auto Auction, Hattiesburg, Miss.; and Southern California Auto Auction, Fontana, Calif.

Aug. 25 — Greater Chicago Auto Auction, Chicago, and St. Louis Auto Auction, Bridgeton, Mo.

Aug. 30 — Bay Cities Auto Auction Inc., Hayward, Calif.

Aug. 31 — Metro Auto Auction of Kansas City, Lee's Summit, Mo., and Lakeland Auto Auction, Lakeland, Fla.

General Motors

Aug. 9 — Harrisonburg Auto Auction, Harrisonburg, Va.; Florida Auto Auction of Orlando, Ocoee, Fla.; A.D.E. of Birmingham, Moody, Ala.; and Manheim Auto Auction, Manheim, Pa.

Aug. 10 — Indianapolis Auto Auction, Indianapolis; Metro Auto Auction of Kansas City, Lee's Summit, Mo.; Minneapolis Northstar Auto Auction, Shakopee, Minn.; and Golden Gate Auto Auction, Fremont, Calif.

Aug. 11 — Butler Auto Auction, Gibsonia, Pa.; Denver Auto Auction, Aurora, Colo.; Aptco Auto Auction, Taylor, Mich.; Nashville Auto Auction, Nashville, Tenn.; Southwest Auto Auction, Phoenix, Ariz.; and Big H Auto Auction, Houston

Aug. 16 — Southern Auto Auction, East Windsor, Conn.; Dallas Auto Auction, Grand Prairie, Texas; and South Seattle Auto Auction, Kent, Wash.

Aug. 17 — Atlanta Auto Auction, Atlanta; Clanton's Auto Auction, Darlington, S.C.; Mississippi Auto Auction, Hattiesburg, Miss.; Omaha Auto Auction, Omaha, Neb.; and Riverside Auto Auction, Riverside, Calif.

Aug. 18 — Arena Auto Auction, Chicago; Ohio Auto Auction, Grove City, Ohio; and St. Louis Auto Auction, Bridgeton, Mo.

Aug. 23 — A.D.E. of Birmingham, Moody, Ala.; Florida Auto Auction of Orlando, Ocoee, Fla.; and National Auto Dealer Exchange, Bordentown, N.J.

Florida auction tops $49 million at 16th anniversary sale

Florida Auto Auction of Orlando's July anniversary sale — No. 16 for the auction — broke last year's sales record for a one-day sale by consigning 7,523 units and selling 4,864, or 65 percent.

Placed bumper to bumper, the consigned vehicles would stretch 17.1 miles, said Joe Greco, manager of the auction. Last year's sale had 6,026 units consigned and 4,095 sold.

This year's gross sales topped $49 million, about $8 million more than in 1987.

Greco said 785 dealers from 37 states attended the sale to purchase vehicles and 481 dealers consigned vehicles. Of them, 112 franchised new-car dealers and 141 used-car dealers were registered for the first time during the 12-hour sale.

Chrysler and General Motors participated in closed sales during the day and sold all 684 vehicles offered. Total gross sales volume for the two manufacturers' sales exceeded $14 million.

More than 2,500 vehicles were reconditioned during the 16 days prior to the sale, and about 3,100 titles were processed. Florida Auto Auction is one of 21 auctions owned by Atlanta-based Manheim Auctions.

AUCTION BRIEFS

CHARLES THOMAS

NAAA sights peak throng

Record attendance is expected at the National Auto Auction Association's annual convention, which will be held Oct. 6-9 at the Atlanta Marriott Marquis in Atlanta.

"This is the 50th anniversary of the auto auction industry and we are expecting a record crowd," said Bernard Hart, executive secretary of the association.

Speakers include Douglas Edwards, CBS newscaster, and Atlanta Mayor Andrew Young, who will deliver the keynote address on Oct. 7.

Southern States expands

Southern States Vehicle Auction, Newnan, Ga., is clearing land on the north and south ends of its 64-acre site in preparation for a $1.3 million reconditioning and paint facility that is scheduled for completion in late September.

Carl Miskotten, vice president of truck services for Anglo American Truck Auctions, said the facility will improve business with customers like General Motors Acceptance Corp., Ford Motor Credit and Chrysler Credit.

"We have an on-premises vehicle reconditioning center and will add a paint and body shop," he said.

Southern States Vehicle Auction, a subsidiary of Anglo American Truck Auctions, sells heavy commercial trucks consigned to it by manufacturers, leasing companies and commercial fleets. Buyers include dealers, wholesalers and end-users.

Sellers pay the auction a fee to enter trucks for sale and another fee when the truck is sold. The buyers pay a fee to the auction for each truck purchased.

Southern States also offers fee-based services such as transporting vehicles to and from auctions and reconditioning. The auction's clients include Freightliner, Gelco, Mercedes-Benz Credit, U-Haul, PH&H and Hertz-Penske.

Stationary truck auctions are new to the industry. Prior to the stationary auction, sellers of used heavy trucks relied on traveling auction companies, manufacturer and leasing-company used-truck centers, and direct contact with end-users, wholesalers and dealers.

Operations like Southern States schedule sales on a weekly basis in the same facility.

Miskotten, founder of Southern States, developed the idea of opening a truck auction about five years ago. "At that time, there were plenty of auto auctions, but no stationary truck auctions where buyers and sellers could get together and trade trucks," he said.

So, with partner Chuck Frauhiger, he opened Fort Wayne Vehicle Auction Inc. in Indiana in April 1984 and Southern States in October 1986. Both auctions were purchased by Anglo American in July 1987.

Southern States has a staff of 15 supported by 20 mechanical and reconditioning specialists. Each month, about 400 heavy trucks and 2,000 cars move through the auction's four selling lanes. The sale attracts an average of 300 dealers.

ServNet adds 2 auctions

Two independent auto auctions — Auto Dealers Exchange of Indianapolis and Auto Dealers Exchange of Birmingham, Ala. — have joined ServNet, the recently formed independent auction network.

The addition of the two auctions brings ServNet's membership to 10. There are more than 120 independent auctions in the country, but not all of them are eligible for membership in ServNet and that has caused ill feelings within the National Auto Auction Association.

Bernard Hart, executive secretary of NAAA, has described ServNet as a tinderbox because it is an "invitational thing that has caused unrest and is like forming a separate association just for the independents."

Yet the independent auction owners, threatened by the economies of scale offered by the chains, defend it. About 60 auctions are owned by the chains, which include Anglo American Auto Auctions, GE Capital Auto Auctions and Manheim Auctions.

"ServNet was formed as a cooperative marketing network of independent auctions, the idea being that a group of independents banding together might advertise on a level competitive with the large corporate chains," said Larry F. Brasher, ServNet president.

He said some independent auctions are excluded from joining ServNet "because of legal restrictions as well as the practicalities of operating such a network."

Brasher said ServNet was formed with a maximum membership potential of 20 to 30 auctions.

"While we feel that ServNet auctions must share certain quality standards and full-service capabilities in order to preserve the integrity of our promotional efforts, we do not in any way mean to imply than an independent auction not in ServNet is unable to meet our criteria," he said. "There are many high-caliber independent auctions that have chosen not to join."

He added that some independent operations might be excluded because an existing ServNet auction already serves the same area.

Alexis Jacob, ServNet vice president, said the organization's aim is to promote the concept of independent ownership and operation.

"We want to increase visibility of the independent auctions and stress the advantages of personal service," she said.

For a franchise fee, members can display the ServNet trademark. Auction prospects are judged on their commitment to quality service, orientation to fleet business, geographical location, full-service capabilities and National Auto Auction Association membership.

Acura retains first-place ranking in Power's CSI; industry score up

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

For the second time in its two years in the U.S. market, Honda of America's Acura Division has received J.D. Power and Associates' highest consumer satisfaction index rating of any high-volume car make.

Mercedes-Benz was second in this year's survey, up from a third-place finish in 1987.

J.D. Power and Associates, an Agoura Hills, Calif., research firm, said Acura captured first place again because of strong technical improvements in its cars. However, Acura's higher volume in 1988 caused more strain on dealer resources, and its scores for customer handling by the dealers declined slightly.

The product quality, or vehicle repair and reliability, score and the dealer servicing, or customer handling, score were averaged to give the overall CSI score. In the 1988 survey, 25,230 owners of 1987 cars returned mail survey forms in April and May 1988.

The most significant finding in this year's survey was the rise in the average CSI score for all nameplates, from 104 points in 1987 to 108 points. Power said the rise indicates that consumers are generally more satisfied with the vehicles they purchased in the 1987 model year and that traditionally low performers are improving.

"As this trend continues, worldwide parity in product quality among all automakers is expected to emerge," the study said.

As a group, European manufacturers showed the biggest gains in their average scores. They compiled an average score of 110, up from 102 in 1987. The average score for the Europeans was 106 in 1986.

Volvo made the biggest gain in its ranking between 1987 and 1988 as it moved from 19th to eighth place among all manufacturers. Power attributed Volvo's position change to an increase in product quality.

Audi also made a significant move, from 16th to a ninth-place tie.

Domestic makers also showed large gains in the average CSI group score. The domestics' average score is 102 in 1988, up from 98 in 1987 and 94 in 1986.

Chrysler Motors, including its Dodge and Chrysler-Plymouth divisions, received the highest CSI index score of any of the Big 3 domestic makers. Its overall index score was 106; it received 106 for customer handling and 105 for vehicle repair and reliability.

Jeep-Eagle was not included in the Chrysler Motors numbers since Chrysler Corp. bought American Motors late in the 1987 model year.

General Motors, including all five of its car divisions, was second among the Big 3 with an overall CSI score of 103. It received a score of 110 for customer handling and a score of 101 for vehicle repair and reliability.

Ford Motor Co. was third with an overall score of 96. It scored 96 for customer handling and 99 for vehicle repair and reliability.

Lincoln moved from 12th place last year to sixth in the 1988 survey due to technical improvements in its vehicles. Both the Town Car and the Continental received substantially higher index scores in 1988.

Buick also made big strides, moving from 20th position to 15th. Power said Buick's improved ranking was largely due to "extremely favorable dealer service evaluations." However, product quality showed only moderate gains.

"If Buick could bring product reliability in line with its commendable service evaluations, it certainly would have an opportunity to move farther up the index," said the Power study.

Cadillac moved from seventh place to fourth. Cadillac's customer handling score of 137 was the third highest in the industry and was largely due to high ratings for dealer service.

The Japanese carmakers, which had the highest CSI scores as a group, also showed gains. They compiled an average score of 122 in the 1988 survey, up from 119 in both 1987 and 1986.

Honda, Acura's sister car division, slipped from second place in the 1987 survey to third place this year survey because of substantial improvements by Mercedes-Benz.

Said Power: "Again, Honda didn't get worse. Mercedes-Benz got better." Honda saw improvements in its vehicle repair and reliability score (132 vs. 127) but a decrease in its customer-handling score (125 vs. 132).

Toyota slipped from fourth place to fifth. Power attributed that to a decline in its technical reliability score (121 vs. 139) and only moderate improvement in customer handling (115 vs. 108).

Mazda and Subaru also declined, mainly because of customer handling (service) problems at the dealerships, Power said.

Visual checks cut catalyst altering

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — The EPA's newly released vehicle tampering survey reveals that states and localities that include visual checks with their inspection programs reduce the incidences of catalytic-converter tampering and fuel switching.

Some state and local agencies use inspection/maintenance programs that include a check of tailpipe emissions at idle. Other agencies use anti-tampering programs that require a visual inspection of both the fuel and catalytic converter. Some agencies use a combination of both programs.

The EPA survey found that tampering occurred in approximately 32 percent of the vehicles surveyed in areas with no programs. That compared with 20 percent in geographic areas that had inspection/maintenance programs; 18 percent in areas where there was an anti-tampering program; and 16 percent in locales that had both programs.

EPA Chief Lee M. Thomas labeled the results important, especially in areas failing to meet ozone and carbon monoxide air-quality levels. He also said the results were encouraging, proving that anti-tampering programs work.

At present, there are 42 anti-tampering programs operating in 22 states, covering about 25 percent of the nation's light-duty-vehicle fleet. Those programs range widely from random pullovers on highways (covering only 1 percent of the fleet) to annual inspections covering entire fleets in a geographic area.

Since the 1987 survey was meant to test effectiveness of local programs, it was not a true sample of the nation's fleet, EPA pointed out.

For example, 91 percent of the sample came from 14 of the 15 areas having inspection/maintenance and/or anti-tampering programs; however, only 40 percent of the nation's vehicles are subject to those programs. EPA said that even that heavily weighted sample still showed a 19 percent tampering rate.

EPA also found that 14 percent of the vehicles in the survey that are required to use unleaded fuel were using leaded fuel.

The EPA said that while leaded gasoline may cost less at the pump, its use in vehicles with catalytic converters causes higher emissions and more frequent repairs and tuneups. It also accelerates engine deterioration.

In addition to known health problems created and aggravated by higher emissions, misfueling or tampering with the emission system dramatically increases the amount of dirty air.

Normally, vehicle emissions account for nearly 60 percent of the total carbon monoxide and 40 percent of airborne lead. But tampering with the converter or using leaded fuel can increase hydrocarbon emissions by some 500 percent and carbon monoxide by about 400 percent, the agency said. Tampering with the air pump can raise hydrocarbon emissions up to 200 percent and carbon monoxide up to 800 percent.

EPA enforcement teams inspect car dealerships, auto repair facilities, muffler shops and other businesses to determine if they tamper with emission systems. A maximum fine of $10,000 per vehicle can be levied against manufacturers and dealerships, while commercial repair shops and fleet operators are subject to a maximum penalty of $2,500.

After the 1987 survey, the EPA proposed $475,000 in fines against muffler shops, car dealerships and independent repair shops. Of the 43 businesses and almost 400 violations cited, four were new-car dealers, receiving fines ranging from $5,000 to $25,000.

GM unites advanced engineering

New center will place Project Trilby ideas into future models

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

General Motors is moving toward combining all of its advanced vehicle engineering into one activity, beginning with the establishment of a new systems engineering center.

The consolidated operation will include all the advanced technology of the corporation, combining the car divisions, the two car groups, advanced engineering and research, said GM President Robert Stempel.

The systems engineering center is charged with putting to use ideas developed by Project Trilby in the design of new vehicles and coordinating advanced engineering for all of GM's various operations.

Arvin F. Mueller, GM vice president recently appointed as group director of engineering for the Chevrolet-Pontiac-Canada Group, will oversee the center. Mueller reports to Robert Schultz, GM vice president and group executive for C-P-C.

GM's Project Trilby looks at the traditional definition and design of vehicles. It will continue as a separate project. However, ideas developed by Trilby will now move from research into engineering centers, where cars for the near future are being developed. Those ideas will help reduce vehicle development time, improve quality and reduce costs, GM said.

Some of the ideas have already been used in advanced engineering. The establishment of the center formalizes the way the ideas are put to work.

The new systems engineering organization will consist of the systems engineering center, based within C-P-C advanced engineering operations, and five satellite operations at sites not yet made public. The center will oversee the satellite locations that will be established at Buick-Oldsmobile-Cadillac Group's Flint automotive division and Lansing automotive division, Cadillac, the truck and bus group and C-P-C vehicle engineering.

"You know, the suppliers are right: They have about eight different groups to contact (within GM)."

— STEMPEL

Staffing will come from those organizations and Trilby. The center will employ 150 people, with the satellites being staffed with another 200 people. The center will also be supported by a team of systems engineers from Hughes Aircraft.

Lauren L. Bowler, currently chief engineering for the Corsica/Beretta platform, has been named center director.

Speaking of the advanced engineering change, Stempel said: "The combined function will include Hughes activities and is an outgrowth of the reorganization."

Stempel called the reorganization "dynamic" and said it is still being tweaked as more people become involved in its fulfillment.

"At first, only 40 or 50 people were really involved, but now as the entire corporation gets into it, we are tweaking it, fine tuning it," he said.

"You know, the suppliers are right: They have about eight different groups to contact (within GM)," Stempel said. "Why shouldn't we organize that centrally, so that when a Bosch comes in to see us they know they've seen General Motors, period."

Automotive News Staff Reporters Michelle Krebs and Edward Lapham contributed to this report.

NHTSA beefs up odometer rules

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA's regulations implementing new mileage disclosure requirements for used vehicles are expected to cause minor headaches for fleet administrators, leasing companies, auto auctions, car dealerships and state motor vehicle departments.

But the National Automobile Dealers Association said the rules look good for the industry overall.

The dealer group and a coalition of auto industry groups have been monitoring NHTSA's work on the odometer rules for more than a year. Last week, NHTSA issued its final rules.

"Based on discussions I've had with NHTSA officials, the rules appear to address most of industry's concerns," said Douglas Greenhaus, NADA senior attorney for regulatory affairs. "The rules appear to allow the flexibility buyers and sellers need, while remaining strict enough to accomplish the purposes of the act."

Announcing the new mileage disclosure rules last week, NHTSA Administrator Diane Steed said the regulations are intended to "protect consumers by providing an official paper trail of odometer readings that may be checked by car owners and law enforcement officials to determine whether the odometer has been turned back." She estimates that odometer fraud costs consumers more than $3 billion annually.

Key parts of the regulations:

- Motor-vehicle titles issued by state governments after April 29, 1989, must be printed by a secure process that will permit the easy detection of counterfeiting and alterations.
- Titles must include mileage readings and a space for the buyer to disclose the mileage when the car is resold.
- Sellers must disclose the odometer reading when transferring the title. If the title does not have a space for disclosure, the information must be included on a separate odometer statement that is secure and supplied by the state. Eventually, separate odometer statements will be issued only when a new car is sold or if a car was not titled before.
- Dealers, distributors, leasing companies and auto auctions must keep detailed records of titles and the odometer reading at the time of the sale for at least five years after a vehicle is sold.
- Persons leasing vehicles must disclose mileage to the leasing company at the end of the lease period. Leasing companies are required to advise customers of that responsibility.

"Because the titling and disclosure provisions will result in changes in many state motor-vehicle titling laws and forms, we are adopting a flexible position on implementing this rule," Steed said. "The rule will not take effect until April 1989, and we have provided for state-by-state extensions if they are needed."

Greenhaus said the auto industry has supported tougher rules against odometer fraud, but many groups have been concerned about administrative and liability issues associated with the law. He said that from a paperwork point-of-view, the rules are fairly close to current law. Vehicle sellers are currently required to keep odometer records for four years, he said.

Auto auctions and leasing companies may object to the record-keeping requirements, but "the more sophisticated operations probably keep these records anyway," Greenhaus said.

John Fitch, Washington representative for the American Automotive Leasing Association, said his group was concerned that NHTSA would require vehicle titles to be present at the time of the sale. That would have caused real problems for used fleet vehicle sales, he said, adding, "NHTSA obviously listened to our concerns and made substantive changes in the proposed regulations."

Greenhaus also supported NHTSA's decision not to require titles at the sale location, but said NADA still has at least one concern.

Based on preliminary information from NHTSA, Greenhaus said the vehicle seller must still physically write the odometer reading on the title. That could present a problem for car dealers, who often take trade-ins from owners who do not possess the title, Greenhaus said, since those documents are held by a bank or finance company pending final payment on a car loan.

Greenhaus said that situation would mean a seller would have to return to the dealership several days after the sale to make an odometer disclosure.

"I am not sure what we will do about it, although we could ask NHTSA to take a second look at it," he said.

OBITUARIES

George B. Morris Jr.

DETROIT — George B. Morris Jr., 71, a retired General Motors vice president, died Aug. 2. As head of the industrial relations staff, he directed GM's national bargaining group in union negotiations.

Mr. Morris served in GM labor relations posts for 39 years. He joined the then Fisher Body Division in 1941 and moved to the corporate staff in 1948. He was named manager of the labor relations staff in 1966 and became director of that staff in 1968. He was elected industrial relations vice president in 1971 and retired in 1980.

Nathan Simon

EDWARDSVILLE, Pa. — Nathan Simon, former owner of Simon's Motor Sales (Chrysler-Plymouth), Mocanaqua, Pa., died July 17. He opened a Maxwell dealership in 1923 and became a Chrysler dealer in 1924. He retired in 1972.

Inventories decline for U.S. autos

August stockpile is 7-month low

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

The Aug. 1 stockpile of U.S.-built cars was the leanest in seven months. In spite of slightly lower sales in July, a stronger daily selling rate whittled down domestic inventories.

Last August's domestic inventory was also a seven-month low. This summer, lower stocks can be attributed to plant closings for model changeovers, vacation time and lower calendar-year production numbers.

Inventories of unsold domestic cars totaled 1,406,740 on Aug. 1, representing a 58-day supply. That was 15.42 percent below the previous month's stockpile of 1,663,109 cars, equivalent to a 60-day supply.

Stocks were also 15.15 percent or 251,234 units slimmer than on Aug. 1, 1987 when there were 1,657,974 unsold cars on hand, representing a much heavier 71-day supply.

Four of the seven domestic manufacturers started August with lower days-supply numbers than on July 1.

They shared the Aug. 1 domestic inventory this way: General Motors, 52.38 percent; Ford Motor Co., 28.42 percent; Chrysler Motors, 16.31 percent; Nissan, 1.33 percent; Honda, 0.95 percent; Toyota, 0.31 percent; and Mazda, 0.30 percent.

On July 1, the split was: GM, 51.24 percent; Ford, 29.05 percent; Chrysler, 15.33 percent; Volkswagen, 1.39 percent; Nissan, 1.32 percent; Honda, 1.13 percent; Toyota, 0.44 percent; Mazda, 0.10 percent.

GM's stocks on Aug. 1 dropped 13.53 percent from its July 1 inventory but represented a 64-day supply, up from 63 days on July 1. Chevrolet continued to lack Corsica/Beretta models, and Cadillac reduced its stocks and equivalent days' supply to 70 days versus 117 days a month earlier. However, Buick's Reatta inventory grew and was equivalent to a 160-day supply.

Ford's inventory was 17.24 percent slimmer than on July 1 and was equivalent to a 55-day supply versus 58 days on July 1. In terms of days' supply, Ford's leanest inventories belonged to Lincoln Continental and Ford Probe. Taurus stocks also were down.

Chrysler's stocks were 9.99 percent lower than a month earlier but represented a 68-day supply of cars compared with a 67-day supply a month earlier.

Transplants' inventories were lower. Honda had 28.68 percent fewer U.S.-made cars in stock than it did on July 1, representing 11 days' worth of cars, and Nissan's stocks were reduced by 14.95 percent and were equivalent to a 46-day supply.

Toyota's inventory of U.S.-made cars was 40.01 percent below the previous month's total and was equal to 17-days' worth. Mazda boosted its stocks of MX-6 models by 136.66 percent to a 34-day supply compared with 16 days' worth last month.

ROBERTS

FROM PAGE 3

to build a new 7.3-liter diesel engine for Ford Motor Co. Navistar has a contract to build the engines for Ford through the year 2000.

In addition, Navistar established a holding company structure more than a year ago to pave the way for its diversification away from truck manufacturing and into less cyclical markets, such as the service sector. To date, Navistar has not diversified. However, Roberts' appointment to head truck operations will allow top Navistar executives to pursue diversification opportunities.

Navistar also has been rumored to be examining possible joint ventures in heavy trucks or divestiture of the 7.3-liter diesel engine operations. Reports that Navistar was exploring both options with Ford surfaced in April at the American Truck Dealers convention, yet no deals have been announced.

Roberts' departure leaves GM without a black vice president. Roberts was GM's second black vice president; Otis Smith was the first and served as legal counsel until his retirement in the early 1980s.

Roberts' departure also comes just over a month after his close associate, Elmer W. Johnson, resigned as GM executive vice president.

Johnson had spotted Roberts and asked plant employees about him while on a tour of GM's North Tarrytown, N.Y., plant. Shortly after the tour, in April 1987, Roberts was promoted to vice president, skipping several traditional rungs of the corporate ladder.

In December 1985, Roberts was named plant manager of the Chevrolet-Pontiac-Canada Group's assembly plant in North Tarrytown N.Y., about 20 miles north of New York City. He sent each of the plant's 5,000 employees a Christmas card and attempted to shake hands with every employee.

He is credited with turning around union-management relations at the plant and keeping the plant open by landing the job of manufacturing GM's plastic-bodied all-purpose van, which will be sold through Chevrolet and Pontiac in the 1990 model year.

Roberts and Johnson shared similar philosophies, including compensation based on performance. Both also believe salaried employees should be promoted to jobs for which they are suited, regardless of the traditional corporate ladder.

Roberts, a former GM vice president, joins Navistar today.

Johnson, reportedly frustrated with GM's bureaucracy, returned in June to his Chicago law firm, Kirkland & Ellis, where he had earned a reputation as a legal counselor to companies in crisis. Among the companies Johnson advised was International Harvester Co., which became Navistar when the financially ailing company sold off its agricultural operations in 1984.

Born in Magnolia, Ark., Roberts was one of 10 children. His mother died when he was two years old and his father held down two jobs.

After high school, Roberts got an assembly-line job at Lear Siegler Inc.'s guidance systems plant in Grand Rapids, Mich. He was a member of the UAW.

While he worked at the plant, he commuted 120 miles, three days a week to earn his undergraduate business degree at Western Michigan University in Kalamazoo, Mich.

He joined GM in 1977 as a salaried employee-in-training at the former Diesel Equipment Division in Grand Rapids, where he worked his way up to plant manager. He was transferred to Rochester, N.Y., as Rochester Products' Eastern operations manager and was later named manufacturing manager for aftermarket, diesel, emission and valve train products at Rochester Products.

In addition to his undergraduate degree, Roberts completed the program for management development at Harvard University. He also attended the international advanced general management program in Vevey, Switzerland, in 1985.

In a statement, GM Chairman Roger B. Smith said: "Roy Roberts has been a valued executive and an outstanding contributor in every assignment throughout his GM career. We wish him the best in the new position at Navistar."

No replacement for Roberts has been announced by GM.

Navistar officials said Roberts had been wooed since April with the help of an executive search firm. They declined to reveal his salary but said it is in line with other Navistar executives who, according to proxy statements, earn $300,000 to $400,000 a year in salary. In addition, Roberts will receive a bonus of not more than $400,000 for those benefits he forfeited by leaving GM.

FORECAST

FROM PAGE 1

resulting increases in transaction prices, he said.

However, the way sales are currently running, Luckey doesn't think the production schedules will be adjusted too much during the next couple of months.

GM is getting a little more realistic in its forecasting, he said. In recent years, production forecasts by the auto giant have been blatantly optimistic but have been trimmed back as each quarter progressed.

Ronald Glantz, analyst with Montgomery Securities, San Francisco, said he does not see any significant sales declines on the domestic front, and he estimated that the calendar year car-sales total will be about 10.7 million.

Considering the current production schedules, GM will end the year with about a 70-day supply when 68 is considered to be the norm for year-end, he said.

Ford Motor Co. will be shy of product, Glantz predicted.

Ford's fourth-quarter output forecast of 407,000 U.S.-made cars is 11.74 percent below the 461,143 built in the same period of 1987.

Ford attributes its decrease to the loss of Cougar and Thunderbird production at its Lorain, Ohio, plant, which will not be up to full line speeds in the fourth quarter. Output will be halted this month at Lorain until early October for changeover to all-new models.

Production of Thunderbird and Cougar accounted for almost 73,000 units during last year's fourth quarter.

Chrysler Motors has scheduled fourth-quarter auto output at 268,000, 5.32 percent below the 283,062 built in the same three months last year.

A contributing factor to Chrysler's decrease: The Newark, Del., plant — a previously high-volume plant producing K-cars — will be be on a slow acceleration curve starting in October for the new Plymouth Acclaim and Dodge Spirit.

Honda of America Manufacturing Inc. projects fourth-quarter production at 87,540, 9.12 percent more than the 80,227 built during the same time last year.

MARKET SHARES, JULY 1988

	Total Sales	Pct. of Total
SUBCOMPACT	87,598	10.19
COMPACT	165,512	19.24
INTERMEDIATE	245,150	28.50
STANDARD	99,902	11.62
SPECIALITY	4,384	0.51
IMPORT	257,509	29.94
TOTAL	860,055	100.00

New United Motor Manufacturing Inc. is expected to assemble about 18,200 units during the fourth quarter, down 53.21 percent from the 38,901 built in the comparable period of 1987.

NUMMI's decrease, like Chrysler's and Ford's, is due to model changeover and slow startup. Its Fremont, Calif., plant is slated to close for a couple of weeks in September.

Nissan Motor Manufacturing Co. U.S.A. expects to build 24,584 cars in the fourth quarter, 60.80 percent more than the 15,289 completed during last year's fourth quarter when it was slowly accelerating production after changeover at the Smyrna, Tenn., plant.

Mazda Motor Manufacturing (U.S.A.) Corp. scheduled 60,630 cars to be produced during the fourth quarter compared with 3,800 in 1987. Mazda didn't begin building cars in the United States until last September.

Because of a strong third-quarter production schedule, GM dealers will have more new models in their showrooms for the Sept. 29 launch of the 1989 model year than on any introduction day in recent years.

Automakers revised their third-quarter forecasts slightly. Scheduled output of 1,501,612 U.S. cars is 12.07 percent above the 1,339,859 built in the third quarter of 1987.

GM added about 10,000 units to what it originally projected; Ford added 6,000, and Chrysler cut 5,000 from its forecast.

Pontiac has told dealers that they will have more 1989 models in their hands by launch than at any time since 1979. Buick also has warned dealers to clear out 1988 inventory because 1989 models will be arriving in large numbers as early as mid-August.

Some GM dealers said last week that they were beginning to take delivery on 1989 models, though GM has yet to announce prices on them. GM has told dealers they will receive prices by Aug. 15. Dealers and analysts speculate that GM prices will be about 3 percent higher than 1988 prices.

Automotive News Staff Reporter Michelle Krebs contributed to this report.

RAILROAD

FROM PAGE 1

Automakers, whose just-in-time delivery schedules could be shattered by a widespread rail walkout, are hoping the fires won't be rekindled in the months ahead if the Chicago & North Western wins the manpower cuts it wants and other railroads predictably go for the same prize.

According to an industry source, that may provoke the strikes and threats of strikes that plagued the industry in the late 1950s and 1960s, when railroads began to demand cuts in crew sizes.

Legislation forcing a compromise in the Chicago & North Western dispute could be enacted at the end of the current cooling-off period. Chicago & North Western has, in fact, already agreed to a compromise recommended by a presidential emergency board that would cut crews from four to three workers.

But further legislation in the thorny matter of crew sizes might prove merely a stopgap measure.

A Chicago and North Western spokesman said that current demands for cuts in crew sizes are increasingly warranted because of new technology.

He said the line's demands are "the leading edge" in the industry's thrust to cut manpower.

The signing of the bill last week came a few hours after brakemen walked off the job.

Sources said GM and other manufacturers had contacted the office of House Energy and Commerce Chairman John Dingell, D-Mich., expressing concern about the effects of the threatened walkout.

Most earlier railroad strikes were not prolonged and caused only delays in production, industry spokesmen say.

But in October 1978, just before the resolution of a two-month walkout against Norfork & Western Railway Co., which spread nationwide, Ford Motor Vice Chairman Philip Caldwell told the U.S. secretary of transportation that "decisions have been made to reduce production at 10 assembly plants," which would have resulted in a layoff of 100,000 workers.

GM said at that time that if the strike continued, it would have to shut down most of its assembly plants within several days.

And that was before just-in-time was instituted. Industry sources say that the effect of railroad strikes today — however brief — is uncertain.

Charles Hopkins, chairman of the National Railway Labor Conference, said there have never been any "seriously prolonged railroad strikes" since World War II because the government has always intervened.

A veteran Chrysler Motors spokesman said, "I can't remember the auto industry ever being crippled by a railroad strike."

But Hopkins added, "With just-in-time (inventory), it's a little different world. But I think a railroad would manage a strike situation or work with a shipper in advance."

During the brief Chicago & North Western strike last Thursday, managers manned the trains and service was not disrupted, according to the company spokesman. The walkout began and ended Thursday morning. The fired brakemen were reinstated.

A GM spokesman said that though just-in-time is "highly dependent on the trucking industry," delays caused by railroad strikes could be more serious with the new inventory system.

Ironically, the truckers — who would provide backup during a railroad strike — are also engaged in a cooling-off period, having decided last week to go back to the negotiating table rather than strike. The Teamster car haulers rejected their new contract with national trucking firms.

A spokesman for the Association of American Railroads said, "The just-in-time process has reduced some inbound parts traffic to assembly plants, but a substantial amount of parts is still moved by boxcar."

He said that railroads transport a little over half of finished autos to distribution points, where truckers pick them up and haul them to dealers.

A Ford Motor Co. spokeswoman said that Chicago & North Western transports vehicles from three Ford plants: Chicago (Taurus-Sable); St. Louis (Aerostar); and Kansas City (Tempo, Topaz and light trucks).

In the event of a strike, she said, they would be rerouted to another railroad.

Chicago & North Western also transports parts to GM's Janesville, Wis., plant and carries Chevrolet Cavaliers and Chevrolet and GMC light trucks from the plant. It also carries components part of the way to the Van Nuys, Calif., plant.

The Chicago-based railroad also carries vehicles from Chrysler Motors' Kenosha, Wis., plant (Fifth Avenue, Diplomat, Gran Fury, Omni, Horizon) and Belvidere, Ill., plant (New Yorker, Dynasty).

A Chrysler spokeswoman said the company had made contingency plans in the event of a strike.

Mich. motorsports park shoots for 1989 opening

ASH TOWNSHIP, Mich. — A 300-acre motorsports park could be open for business by the end of 1989 if local approval is given. Plans call for the $11 million facility to be home to a 1.8-mile road course and a dragstrip with seating for 40,000 spectators.

The facility, called Michigan Motorplex, is 26 miles south of Detroit. The dragstrip will be available for sanctioned racing events; the road course is being built only for testing purposes.

The track will be owned by Billy Meyer, president of both Meyer Motorsports and the International Hot Rod Association, who also owns the Texas Motorplex in Ennis, Texas.

July new-car deliveries down 6%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Sweltering heat and reduced manufacturers' incentives took the edge off July's new-car sales.

July deliveries dropped 6.06 percent, although the daily selling rate was stronger than last year's. The selling rate averaged 24,102 units a day this year compared with 23,501 in July 1987 when there was one less selling day.

Combined sales of U.S.-built and imported cars in July were 860,055 compared with last July's 915,498.

Although four of the seven domestic automakers reported gains in July, domestic-car sales dipped 1.39 percent, or 8,489 units, to 602,546 from 611,035 in 1987. However, last July was bolstered by plenty of factory incentives.

Import-car sales last month dropped 15.42 percent to 257,509 from 304,463 a year ago. Big losers included Audi, BMW, Saab, Hyundai and Yugo.

The Big 3 U.S.-based automakers increased their share of the U.S. car market in July. With their captives, they took 67.98 percent of total car sales compared with 65.61 percent in July 1987.

General Motors' share including captives dipped to 35.18 percent this year from 35.67 percent last July. Ford Motor Co. boosted its share to 21.99 percent from 19.96 percent. Chrysler Motors' share with captives rose to 10.81 percent vs. 9.98 percent in 1987.

Foreign carmakers took 32.09 percent compared to 34.39 percent in July 1987. Japanese carmakers held 24.50 percent of the market last month vs. 23.19 percent in July 1987. The Europeans' share dropped to 5.41 percent from 7.87 percent, and the Korean share declined to 2.11 percent from 3.33.

Transplants Honda and Toyota, along with Ford Motor Co. and Chrysler Motors, reported gains for the month in domestic-car sales.

Ford's domestic sales stepped up 1.65 percent in July. Chrysler sold 9.28 percent more domestic cars than it did a year ago.

GM's domestic-car sales fell 6.52 percent from last year.

Honda's sales of U.S.-built cars rose 10.80 percent over July 1987, and Toyota's U.S.-built-car sales were nearly twice as high. In spite of increased incentives, Nissan's sales of U.S.-built cars were off 7.26 percent. Mazda, which was not producing cars here last year, sold 3,023 MX-6 models built at its Flat Rock, Mich., plant.

Volkswagen stopped reporting sales of domestic cars last month when it closed its U.S. plant.

Toyota and Honda fared the best with their imports. Toyota was up 11.73 percent and Honda Acura deliveries rose 14.45 percent.

The European car companies were the hardest hit in year-to-year sales comparisons. Audi's sales slid 63.88 percent. Saab sales fell 26.04 percent, but Volvo's were down only 1.55 percent for the month compared to last July.

Hyundai sold 40.40 percent fewer Excels in July this year.

Domestic-car sales for July 21-30 dropped 5.88 percent.

PRODUCTION

July output dives during changeover

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. production of cars and trucks for July dipped considerably from June's output due to downtime at several plants for model changeover and vacation.

July's auto production of 367,431 was 49.66 percent below the preceding month's 729,941 but 3.50 percent more than the year-ago month's 355,015, which was also affected by plant closings for changeover and vacation.

Last week's targeted car output totaled 77,900, 7.39 percent more than the previous week's 72,541 and 11.19 percent more than the year-ago week's 70,060.

Companies split last week's estimated output as follows: Ford Motor Co., 36.97 percent; General Motors, 32.16 percent; Honda of America Manufacturing Inc., 9.86 percent; Chrysler Motors, 7.57 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 5.59 percent; New United Motor Manufacturing Inc., 4.17 percent; and Nissan Motor Manufacturing Co. U.S.A., 3.68 percent.

Truck output for July totaled 239,863 units, 36.06 percent below June's 375,164 and 12.98 percent below last year's 275,655.

The following GM plants remain idle for changeover: Orion Township, Mich.; Detroit-Hamtramck; Doraville, Ga.; Van Nuys, Calif.; Bowling Green, Ky.; and Framingham, Mass.

These GM plants resumed output today after being closed for model changeover: Lordstown, Ohio; Lansing, Mich., (Reatta Craft Center); and Fairfax, Kan.

GM's Flint, Mich., truck plant remains closed until Aug. 15 for changeover. Ford's Lorain, Ohio, car plant shut down today for model changeover. It will be down until early October.

Chrysler's Sterling Heights, Mich., plant closed today for model changeover. It will reopen the week of Aug. 15.

Canada feels the pinch, too

July's car production in Canada totaled 35,923, down 68.38 percent from June's 113,621, due to the large number of plants closed for model changeover and vacation. Last month's car output dipped slightly (0.67 percent) from the year-ago month's 36,165.

Last week's scheduled car output of 9,148 dipped 4.48 percent from the prior week's 9,577 but was far above the year-ago week's 1,387, which was also affected by changeover and vacation.

Truck production for July of 34,647 fell 60.67 percent from June's 88,082 and 4.79 percent from the year-ago month's 36,389.

Estimated truck output of 11,141 units last week was 29.95 percent more than the previous week's 8,573 but was slightly below (0.34 percent) the year-ago week's 11,179.

General Motors' Scarborough, Ontario, and Ste. Therese, Quebec, plants remain idle for changeover.

Volvo's plant in Halifax, Nova Scotia, shut down last week for vacation. It will reopen Aug. 22.

Ethylene a study in pricing

Cost up 120%; suppliers periled

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Skyrocketing raw material prices and auto industry procrastination on passing through increased costs have many suppliers caught in a vise that's squeezing the life out of their businesses.

The situation is particularly severe among suppliers of ethylene, a petroleum-based chemical building block, now in short supply, used for seat foam, headliners and other interior trim items.

Facing a 120 percent cost increase, many smaller ethylene suppliers are risking their businesses by supplying an industry whose purchasing practices often delay pass-along price increases up to a year.

"The system doesn't allow for price increases that quickly. The margin is so low on the product, as with all products in the auto business, that no one can afford the increases," said one supplier source.

These suppliers say their own supplies of raw materials are jeopardized when they are unable to pay for continuous shipments.

But not only has ethylene's cost more than doubled, there is no shortage of customers. If the auto industry doesn't pass on the increased costs in a timely manner — that is, soon after prices are hiked — the suppliers of ethylene-based raw materials say the industry's ethylene supply will be diverted to non-automotive customers who can pay on time.

"We don't sell directly to the auto companies . . . but I have heard that the auto companies are reluctant to accept pass-through

Inflation fever on rise

Materials costs plague makers, suppliers

By Michelle Krebs
AUTOMOTIVE NEW STAFF REPORTER

DETROIT — Inflation, after five years of dormancy, is rearing its ugly head, causing auto manufacturers and suppliers great consternation.

Sharply higher prices for raw materials used in making vehicles and components are part of the reason for higher prices on 1989-model vehicles. But already taking a beating on the front line are the supplier companies that have been unable to pass along raw materials costs to the Big 3.

Big 3 sticker prices for 1989 are expected to increase about 3 percent, although new-car transaction prices recorded by the U.S. Bureau of Labor show car prices have stayed flat through the last 12 months.

Automotive executives will cite higher materials costs, along with increased labor costs and government-mandated safety features, to justify their car price increases to federal government officials, who are intensely concerned with a resurgence of inflation. Federal officials occasionally meet with auto executives to discuss car prices.

The Federal Reserve Board became so concerned with inflation that last week it unexpectedly raised its discount rate — the rate at which it loans money to financial institutions — to 6.5 percent, from 6.0 percent, in an effort to head inflation off at the pass. The higher discount rate will force up bank lending rates and will slow economic growth that fuels inflation, the board hopes.

Despite the model-year price increases, carmakers say they cannot raise prices enough to fully recover higher materials costs because of intense competition.

Chrysler Motors and General Motors have told auto analysts that they will be able to recover only 50 percent of the increase in costs, some analysts doubt they can recover even that much and predict the actual figure may be closer to 40 percent.

Analysts say the same pressure exists for the Japanese companies with plants in North America. However, they continue to produce cars at lower cost than the Big 3.

Chrysler plant in Detroit may build 'Liberty'

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER
Copyright, 1988, Automotive News

HIGHLAND PARK, Mich. — Chrysler Motors is considering building at its new Jefferson Avenue assembly plant in Detroit a series of large cars for the 1990s designed by the company's closely guarded Liberty Project.

Chrysler has not given final approval to the plan, but Chrysler sources said the company is considering building the vehicles, code-named LH, at the planned $1 billion plant under construction in Detroit.

Chrysler has characterized the Liberty Project as a think-tank to develop new concepts in design, manufacturing and technology — but no particular car model.

Liberty has, however, been instrumental in generating the LH series — the first car family Chrysler has developed from a platform other than the K since 1980. It will include a sedan, coupe and luxury version. As Liberty passes along the LH project to development engineers, it will take on other future products.

"The cars are closer in size to the C-bodies (Chrysler New Yorker/Dodge Dynasty) than the A-bodies (Dodge Spirit/Plymouth Acclaim)," said a company source about the LH series. "Think of them as a better H-body (Chrysler LeBaron GTS/Dodge Lancer).

"They are more than a family sedan and less than a Euro sedan," said the source.

However, the source added that it is possible the European influence may be strengthened by Chrysler Motors' new president of operations, Robert A. Lutz, who served with BMW and Ford in Europe before coming to Chrysler.

The schedule calls for the sedan to debut in the 1993 model year, the coupe in 1994 and the luxury version in 1995. However, a company source said efforts are under way to move the timetable for each up one year.

Chrysler in December said that construction of the new Jefferson Avenue assembly plant was being delayed. Production is now scheduled to begin in 1991, a year later than initially anticipated.

Chrysler throughout the 1980s has relied on K-car platform derivatives for its car lineup. The strategy helped carry the company away from the brink of bankruptcy but it has also given rise to criticism, particularly in the motoring press, because of the platform's old design.

Lutz said in March that hybrid variations of the K-platform will continue well into the 1990s. At that time, he described the new platform under development as "a net additional, much larger, much more substantial platform."

By the time the new series debuts, Chrysler will have available its own 3.3-liter V-6 engine, which goes into production in Trenton, Mich., in 1989 for the 1990 model year. A company source said a 3.8-liter V-6 will be added for the 1991 model year.

Chrysler will also have available by the 1991 model year a turbocharged version of the V-6 engine that is imported from Mitsubishi, a

AL HOLBERT

Racer-dealer hunts new winning formula on track and for VW, Porsche, Audi

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WARRINGTON, Pa. — Al Holbert is used to winning.

With 49 victories, he is the winningest driver in the U.S. IMSA series.

He's competed in the grueling 24 Hours of LeMans and won three times.

Cars prepared under his direction as head of the Porsche factory's North American racing effort have dominated their classes.

As dealer, he holds franchises for what have been some of the hottest import makes around — Porsche, Audi and Volkswagen.

But times have changed.

In racing parlance, he is back in the turbulence, while others are breezing to victory.

He is grappling with the sliding retail fortunes of Porsche, Audi and VW while new makes like Hyundai and Acura have taken away both entry-level and prestige

Holbert: back in the turbulence

GM hike of 2.9% tops Chrysler's 2.3

By Michelle Krebs and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors said Friday that prices of its 1989 cars will increase an average of 2.9 percent over prices of comparably equipped 1988 models.

Automotive News estimates the 2.9 percent increase amounts to about $450 a car.

The announcement came one week after Chrysler Motors tentatively raised 1989 car prices 2.3 percent on a comparably equipped basis and 3.9 percent on a base-to-base basis.

GM, however, did not provide an average increase comparing base price to base price. Such comparisons generally are significantly higher than on a comparably equipped basis.

GM President Robert C. Stempel said in a state-

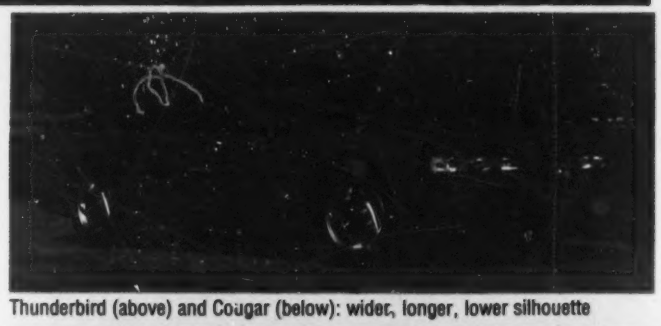
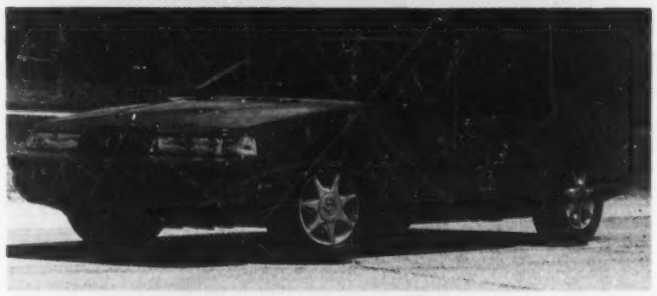
Thunderbird, Cougar get full redesign

Aero look carried bit farther for '89



Thunderbird (above) and Cougar (below): wider, longer, lower silhouette



THUNDERBIRD/COUGAR FOR 1989

	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (Pounds)
Thunderbird	113.0	198.7	72.7	52.7	3,542
Cougar	113.0	198.7	72.7	52.7	3,553

The 1989 Ford Thunderbird and Mercury Cougar are new from the ground up.

Ford's and Mercury's luxury sport coupes carry sleek new aerodynamic lines, giving both cars a considerably wider, longer and lower silhouette. But the stylists' lines play tricks with the eye: Though the wheelbase on both models is boosted nearly three-quarters of a foot, to 113.0 inches, Thunderbird's overall length is shaved 3.2 inches, and Cougar's nearly 2. And the cars' roofline is merely an inch closer to the road.

The hot news for performance buffs is the long-awaited supercharged, intercooled V-6. The 3.8-liter engine is standard on Cougar's XR-7 and a new T-bird model, the Super Coupe.

Under the skin, all 1989 Thunderbirds and Cougars share a new rear-wheel-drive platform incorporating advances in chassis dynamics, the automaker says. The changes include separate front and rear subframes, a new short- and long-arm front suspension and a new independent rear suspension.

The new exterior design allows for greater interior space: Rear hip room, for example, is 7.1 inches wider than the 1988 Thunderbird coupe, and rear shoulder space is up nearly 4 inches.

Both cars are scheduled to bow after Christmas.

THUNDERBIRD: T-bird's sleek new styling is even more aerodynamic than its 1983 design, which laid the groundwork for Ford's well accepted "aero look." Wind-cheating features include a faster windshield angle, a lower nose and lower profile aero headlamps.

Compared with the 1988 coupe, front/rear overhang was sliced more than a foot while length was clipped 3.4 inches. Front and rear tread width have grown 3.3 inches and 1.7 inches, respectively.

T-bird's Super Coupe replaces last year's Turbo Coupe. The car's new supercharged, intercooled 3.8-liter V-6 produces 210 horsepower at 4,000 rpms and 315 pounds-feet of torque at 2,600 rpm. Ford says the V-6 design provides smoother performance and that the belt-driven supercharger eliminates turbo lag.

The Super Coupe has four-wheel disc brakes, anti-lock brake system, a suspension directed by computer for automatic ride control, electronic speed-sensitive power steering, and P225/60VR performance tires on 16x7-inch aluminum wheels.

The 1989 Thunderbird also is offered in standard and LX versions. The standard model's equipment list has been lengthened: Reclining bucket seats, new analog instrumentation, full-length console, power windows and larger 15-inch wheels are on each model.

Air conditioning remains standard on all models, and, for the first time, anti-lock brakes are offered across the line. Ford's 3.8-liter V-6 is standard on the LX and standard model.

COUGAR: Cougar continues to be available in two series — LS and XR-7. The models share some new features such as electronic variable-assist power steering, motorized front-seat shoulder belts, rear-seat heat ducts and rear-seat shoulder/lap belts.

The Cougar LS is equipped with a 3.8-liter V-6 engine and four-speed automatic transmission with overdrive. The engine on both the Cougar and T-bird is upgraded to include roller tappets and the addition of a sequential feature to the multiport electronic fuel injection system. The engine puts out 140 hp at 3,800 rpm; torque is rated at 215 pounds-feet at 2,400 rpm.

The Cougar LS interior includes individual reclining bucket seats and a full console with floor shift, as well as a redesigned electronic instrument cluster with fuel/distance computer.

The Cougar XR-7 features the same powerful 3.8-liter supercharged V-6 that sits in the Thunderbird Super Coupe, teamed to a choice of a five-speed manual or four-speed automatic. Also standard are four-wheel disc brakes with anti-lock system, an automatic suspension system and 16-inch aluminum wheels. Anti-lock braking is optional on the LS.

GM challenges U.S. on 2 pacts it lost

WASHINGTON — General Motors, pursuing a strategy of increased defense and government contracts, is playing hardball with the bid process in challenging awards to two rivals.

So far, the stance has met with some success.

Last week, the U.S. Postal Service told a U.S. Senate subcommittee it is revising its contract with Ross Perot's new company in order to open a larger portion of it to competitive bidding.

And a challenge by GM's Hughes Aircraft Co. unit has temporarily halted the award of a $3.6 billion Federal Aviation Administration contract to International Business Machines Corp. The multi-billion dollar contract with the FAA is for a new air traffic control system.

Postmaster General Anthony Frank told a Senate subcommittee last week that awarding the contract to Perot Systems Corp. without competitive bidding was a mistake "that I hope is not too late to rectify."

Perot Systems Corp. in June was given a $500,000 contract to make the Postal Service more efficient. A second phase of the contract would have involved implementing suggestions with profits based on any savings realized by the service.

The contract came under fire from several senators after Electronic Data Systems Corp., the company Perot founded and sold to GM, filed a complaint against the Postal Service with the General Services Administration's Board of Contract Appeals.

The complaint charges that the contract was awarded on a no-bid basis. The board agreed, ruling the contract was awarded illegally and therefore void.

The board said that Perot Systems and the Postal Service knew or should have known the award of the contract without competitive bidding was in violation of the law and Postal Service procurement regulations.

Meanwhile, Hughes has appealed to the same board, charging that IBM was given unfair advantages in bidding for the new air traffic control system.

The GM unit charges that IBM was allowed to undercut Hughes' bid in part because the government let IBM specify used computers, while Hughes had to agree to use new models.

Transportation Secretary James Burnely told a group of reporters last week that he was "perplexed" by the Hughes decision, since he says GM Chairman Roger B. Smith had called him to say the company wouldn't contest the award.

However, Burnely added that he wasn't "surprised" by the move because "it is their right to appeal."

A Hughes spokesman said the firm initially decided against an appeal, but switched positions after learning more details of the IBM award.

In its challenge, Hughes also accused IBM, which supplies computer hardware to Hughes, of inflating its subcontract prices by millions of dollars over the prices it quoted FAA for the same equipment. The contract to IBM was automatically suspended when Hughes' protest was filed.

At a hearing last week, an administrative law judge said the suspension should continue and Hughes' arguments should be heard. The board has 45 days to rule on the case.

The contract for the Advanced Automation System would be the largest award in IBM's history and the largest given by the FAA. Hughes had estimated that the contract could be worth up to $10 billion over a 20-year period.

In the Perot contract matter, the Postal Service had taken the matter to the U.S. Court of Appeals, arguing that the GSA board has no jurisdiction over the service's procurement. A ruling is expected Thursday.

If the court sides with the Postal Service, Frank said he will still negotiate changes in the contract, although Perot Systems would be allowed to complete the first phase of the contract.

However, the second phase, if approved by the Postal Service, would be put out for bid, and Perot Systems would not be allowed to bid.

GM cuts design time to 3 years

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

SAN FRANCISCO — General Motors says it has found a new way of developing products in as little as three years instead of the usual five years from first design rendering to Job One.

Gary W. Dickinson, vice president in charge of the technical staffs group, told an SAE meeting here that GM's Four-Phase Process is "a disciplined, systematic approach to determining what a customer really wants, then translating it into a product that meets those requirements quickly and more cost-effectively than in the past."

He said the four-phase product development process is part of a company-wide technology planning and integration program aimed at bringing the marketing divisions together with engineering and research staffs to make sure resources are used effectively.

"The objective is to set up as series of decision checkpoints to ensure that all units' activities are in tune with customer requirements. The first phase of the process involves the least amount of money but sets the parameters for everything to follow," he said.

"We establish what the product's specifications should be and what it should look like. If there is disagreement, or if the mission of the product itself is vague, we can go back to the drawing board without having expended a lot of resources.

"The second phase involves all the detailed design and engineering work and the production of running prototypes. Again, we have the option of canceling or making modifications without having committed huge amounts of time and money to the project," he said.

"If the project is still a 'go' after this phase, we proceed to tooling up the manufacturing network in the third phase and to volume production in the fourth phase. This kind of rigorous methodology is necessary in the auto industry today because technology and the product itself continue to grow more sophisticated and complex," he told SAE members.

GM's Four-Phase Process was developed with the help of Hughes Aircraft Corp. and has been in play at GM for several years.

The meeting was devoted to technical sessions and panel presentations on future transportation technology. Many in the audience were representing the supply community, and Dickinson said suppliers will play important roles in the trimming of concept-to-production time. That role will include development of new componentry with participation in product planning early in a project.

"Just as important as the new technology and systems are the people who have to use them," he said. He urged his audience to encourage young people to become scientists and engineers.

Dickinson described several programs with that goal in which his company is a participant.

The University of Michigan and Purdue University are participating in an unusual program to enable engineers to pursue degrees without having to leave the GM Technical Center in Warren, Mich.

Powerless dealer rings up sales

On the night of Aug. 1, the power went out at City Chevrolet in Charlotte, N.C., after the main power line was inexplicably burned in half.

The next morning, the dealership staff arrived to find no lights, no power for the hoists in the service bays and — perhaps most important — no telephones, a situation in which conducting business would be next to impossible.

But a solution was found. Ten portable phones were located, along with nine cars with cellular phones. Salesman just stood in line to contact customers, using the phones.

The service department was closed. But customers were notified by the portable phones — and not a temper flared.

One salesman even managed to sell three cars that day, much better than average, causing him to comment, "If the power comes back on, I might just go cut that wire again."

— Wes Raynal

BELTS

Injury claims high despite state laws

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The insurance industry's Highway Loss Data Institute has reported that mandatory seat-belt-use laws adopted by many states do not appear to be lowering the frequency of injury claims reported to insurers.

The Highway Loss Data Institute is part of the Insurance Institute for Highway Safety.

After studying injury claims from eight states with mandatory belt-use laws, the Highway Loss Data Institute said, "Although there is evidence from several studies that state seat-belt laws have reduced the frequency of serious and fatal injuries by about 5 to 10 percent, the present study found no clear-cut evidence of comparable reductions in personal injury protection coverage claims in recent model cars tested."

The study explained, "There are several possible explanations for this apparently ambiguous result: Belts are much less effective in preventing relatively minor injuries than serious and fatal injuries, and most insurance claims are for relatively minor, but expensive, injuries."

Only relatively simple before-and-after comparisons were used, and normal year-to-year fluctuations could easily mask the relatively small reductions expected from the observed increases in belt use following the belt laws, the report said.

The study also reported that "belt use in relatively new cars is known to be higher than in older cars so that the actual increases in usage due to the laws in new cars may be much smaller than in the overall population of vehicles."

Lower injury claims were recorded in Michigan, Connecticut and New Jersey following enactment of mandatory belt-use laws, but injury claims either remained constant or increased in New York, Texas, Florida, Kansas and Maryland, the institute said.

In a related report, the Highway Loss Data Institute said the average-loss payment per vehicle accident claim increased 4 percent for 1988 over 1987 models and the claim frequency increased 1 percent. The figures represent an increase of approximately $9 in the average-loss payment per insured vehicle year.

Vehicles heading the list for lowest average-loss payments, using the institute's classifications, were the Toyota Tercel for small two-door models; Ford Escort, small four-door models; Mercury Cougar, mid-sized two-door models; Chevrolet Celebrity, mid-sized four-door models; Ford Taurus, mid-sized wagons; Lincoln Mark VII, mid-sized sport models; Chevrolet Caprice, large models; Chevrolet Astro, large wagons; and Cadillac DeVille, luxury models.

U.S. court knocks out challenge to EPA gray-market regulation

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A challenge to EPA's gray-market-car regulation by Anderson Shipping Co. and 10 other custom brokers and modifiers has been thrown out by the U.S. Court of Appeals for the District of Columbia.

Anderson Shipping argued that EPA's creation of an independent commercial importer to import and certify gray-market cars was illegal because it conflicts with the Treasury Department's regulations designating customs brokers.

The court held that Treasury created its broker as an importer of record for tariff laws whereas EPA created its independent commercial importer to maintain clean-air standards. Besides, said the court, a customs broker could always also become an independent commercial importer. But in any case, the court maintained that EPA broke no law.

Ben Jackson, counsel for the Automobile Importers Compliance Association, labeled the suit "frivolous and ill-advised" and told the association's members not to join the suit when it was filed in 1987.

Judge David Sentelle, in a sharply worded unanimous opinion, apparently agreed since he described the suit as a "shotgun" attack aimed "randomly" but whose "pellets" inflicted no mortal wound on the EPA final gray-market regulations published in September 1987.

The court also rejected Anderson Shipping's argument that import vehicles were discriminated against by EPA's gray-market rules and therefore violated the General Agreement on Tariffs and Trade.

The court said the issue was not properly raised before the court since it had not been disputed at EPA's administrative hearings. In addition, the court held that customs brokers had no standing to sue since only countries could raise questions before GATT.

UAW delays controversial vote

Last-minute postponement seen as ploy to pressure delegates

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The UAW has won a last-minute postponement — time to put added pressure on delegates — in the rerun election for director of Region 5.

A federal judge ordered the rerun after finding the UAW illegally tried to influence a 1986 election. The new election, scheduled for Aug. 11, has been postponed until Sept. 2.

In one example of alleged union pressure, a delegate from Texas said he was offered a UAW job in Detroit so he wouldn't be around to cast one of his plant's votes in the controversial election.

Observers and participants in the two-year struggle for control of the eight-state, 80,000-member region say the delay will really heat up the battle for delegates.

About 160 delegates are involved. Some had already left for the convention site in Tulsa, Okla., when the election was postponed last Tuesday, and all are technically pledged to one side or the other.

But time will tell.

The delegates will cast their votes either for dissident Jerry Tucker or international union-backed incumbent Kenneth Worley. Tucker's platform calls for a more aggressive stance against management and a "new direction" for the union.

Tucker forces, which claimed 360 votes last Monday vs. 316 they counted in the Worley camp, say the delay will give the UAW more time to try to swing delegates to Worley. Each of the 160 delegates casts one or more votes, based on the number of UAW members in their plants.

Tucker forces see the postponement as a sign the UAW believes Tucker has enough pledged delegate support to win the election — and seriously undermine union policy.

The rescheduled Sept. 2 convention also will be held in Tulsa. Most delegates for the government-monitored vote were elected by their locals in June.

At the end of July, a Tucker delegate, Dave Perdue, former president of UAW Local 276 at the Chevrolet-Pontiac-Canada Group's plant in Arlington, Texas, said he was "offered a job on the public relations staff at (UAW's) Solidarity House in Detroit."

"The hitch was, I had to leave ASAP — within two weeks, which means I wouldn't have been able to go to the convention and cast my vote," he said.

Perdue said the offer came through an official of his local. "He was well schooled in what he was doing. He took me into a private room, with no witnesses. But he couldn't tell me how much the job paid or whom I could talk to in Detroit," Perdue said.

"My response was I had a job to do: I was elected to go to the convention and vote for Tucker.

"I doubt I'll hear about that job again," said Perdue, who has a journalism degree and has been editor of the local's paper and vice president of the UAW local press association.

"Funny," he said. "I've been involved with the press for a long time. Now they're suddenly interested in me."

Perdue said he thought that the official who approached him, who lacked prior officer experience, "was being used so as not to implicate them (the international union)."

Frank Joyce, UAW assistant director of public relations, said, "That sounds absurd. We know nothing about this."

The local official could not be reached for comment.

Suzie Cox, a Tucker delegate from the C-P-C Group's assembly plant in Oklahoma City, said the experience of being a delegate has been "flat-out nerve-wracking, beginning with Anaheim."

The 1986 election, which Tucker lost by a fraction of a vote, was held in Anaheim, Calif. Cox and three other members of her local were Tucker delegates there. She said that UAW international representatives "hauled us into a room and ran down a list of reasons why we should vote for Worley."

Cox said, "When the UAW tries to lean on you, they make real subtle threats about not servicing your local."

She said that in the recent rerun election, the nine delegates from her local ran as a solid pro-Tucker slate and thus were not approached by the UAW.

Cox said that with the extra time before the convention, she and other Tucker delegates might try to swing over two small locals in Oklahoma City that are "solidly for Worley. We had a meeting and decided we might handbill the plant or something."

The UAW said it requested the postponement of the convention in Tulsa to permit two locals to rerun their delegate elections. The locals had been advised by the Labor Department that their delegates had been disqualified because of election improprieties.

Bob McCoy, a Worley delegate from one of those locals — 710 in Kansas City — said he doesn't expect to be approached by Tucker forces "because I've been solidly pledged to Worley."

McCoy, president of Local 710, said he would try to win over Tucker delegates in his local "by sitting down and talking with them about the true facts, based on the record of service received through the incumbent director."

McCoy said that service from the UAW International's representatives is all-important at his amalgamated local, "which has no master agreement to protect us, like the big GM locals do." The local got that kind of servicing under Worley, he said.

But, McCoy said, "People are pretty well entrenched in their positions. I don't really know if the extra time will help."

Twelve of the 14 votes at the locals where the Labor Department found improprieties were held by Worley delegates.

According to a source in the Labor Department, the law allows both sides to try to swing delegates, providing there are no threats of reprisals or violence. That would mean the UAW may legally make promises to delegates of staff positions or other benefits, he said.

But the practice is controversial. Arthur Fox, an attorney with Ralph Nader's Public Citizen Litigation Group, said, "The law says no union funds may be used to promote a candidacy. A very credible argument can be made that offering a job as payment for support in an election is unlawful.

Herman Benson, president of the Association for Union Democracy, said the issue is "a shadow land," in that reprisals may be implicit in promises made to delegates.

"One thing is certain in this gray area," Benson said, "and that's the advantages all incur to the incumbent. He's got the plums to offer."

Though the delegates ran at their locals as pro-Tucker or pro-Worley delegates, they are not bound to either candidate when they cast their votes at the convention.

The hearing in which the UAW requested a postponement of the convention was announced at noon last Tuesday, only 2½ hours before it got under way in U.S. District Judge Lawrence P. Zatkoff's courtroom in Detroit.

Joseph Yablonski, Tucker's attorney, said he objected to the "inadequate notice" he was given about the hearing. Yablonski was vacationing with his family in South Carolina. As a result, he said, "Our side was not represented."

Union may put heat on GM Tech Center

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

This summer's heat may prove particularly uncomfortable at the General Motors Technical Center in Warren, Mich., as a walkout of maintenance workers looms.

About 350 workers in the facilities section of UAW Local 160 are set to strike at 10 a.m. Thursday if they have not reached agreement on a local contract. The workers maintain the heating and ventilation equipment at the Technical Center as well as the grounds.

Pete Kelly, president of Local 160, said that subcontracting issues have not been resolved. He said he had "no trouble" getting authorization from UAW Vice President Donald Ephlin to send the corporation a five-day strike notification letter.

Kelly said a walkout Thursday would present special problems because the ventilation system at the Tech Center has been "under great stress" this summer and has already caused problems for maintenance crews.

A GM spokesman said, "Negotiations are continuing, and we hope an agreement will be reached."

The facilities section struck for 12 days in 1986 over GM's subcontracting the unit's work, but the practice continues, Kelly said.

Two other units without local contracts joined in the 1986 strike, which eventually involved 650 workers. But that scenario will not be repeated since nine of Local 160's 11 units have already signed new local agreements. Another unit, Chevrolet-Pontiac-Canada engineering, is on the verge of an agreement, Kelly said.

Most local agreements at GM and Ford Motor Co. were reached after the national contracts were signed last fall.

Kelly said that subcontracting remains "an enormous problem" throughout the Tech Center.

Import dip cuts July sales total

Light domestics up 2% for month

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light-duty truck sales in the United States during July fell off their record-setting pace because of the continuing decline in the import side of the market.

Overall, industry sales of 416,469 light-duty vehicles were down only 7,148 units, or 1.69 percent, from July 1987. However, sales in the import segment, totaling 63,187, were off 14,942 units, or 19.12 percent, from a year ago. Domestic sales were 353,282, up 7,794 units or 2.26 percent.

For the January-July period, sales of 2,943,853 light trucks led last year's 2,766,141, the previous record.

Overall, domestic manufacturers continued to increase both their sales and market share, though the effects of thinning inventories in some product lines took their toll on Ford Motor Co. and Chrysler Motors.

Ford's 121,289 retail deliveries last month were off 2.0 percent from like 1987. Year-to-date for the January-July period, Ford's sales of 888,215 light-duty vehicles were up 6.53 percent over 1987.

Similarly, Chrysler's sales of 66,872 for the month were off 2.10 percent from a year earlier. On a year-to-date basis, Chrysler's 484,110 sales were up 14.71 percent over last year.

Chevrolet, with sales up 2.97 percent for the month and 15.79 percent for the seven-month period, continued to make a strong comeback. Its July sales, totaling 112,499, were within 8,790 units of Ford, whereas a year ago it trailed Ford by 14,547 units.

Full-sized pickups have, of course, been the major driving force at both companies, and they were up again in July.

Ford and Chevy combined sold 660,573 full-sized pickups during the first seven months of this year, 104,452 more than last year.

GMC, with a strong 16.50 percent gain on sales of 32,159 trucks in July, has also been scoring big gains with its Sierra line. July sales of that model, up 29.13 percent over last year, helped GMC to a gain of nearly 20,000 units in the full-sized pickup segment for the seven-month period: 86,265 units vs. 66,499 a year earlier.

GMC's overall year-to-date sales of 213,301 light duties were up 18.47 percent from last year.

Jeep continued to tear up the market. Its July sales of 20,463 trucks were up 23.92 percent; its 144,567 sales for the seven months were up 22.48 percent.

Truck surge means gold for aftermarket

By Mary Klein
SPECIAL CORRESPONDENT

CHICAGO — Sales of light trucks will continue to grow into the 1990s, creating a booming market for accessories and parts.

That is the prediction of three experts who spoke at the Automotive Parts and Accessories Association show here.

Judith Broseker, managing director of market research for the association, said light trucks could account for nearly half of new-vehicle sales by the next decade, up from one-third currently.

That will fuel demand for light-truck accessories and equipment.

"A General Battery study indicates that 82 percent of light-truck owners plan to buy some accessory or equipment for their trucks within the year," she said.

The most popular items are heavy-duty shocks, off-road tires and wheels, driving/fog lights, heavy-duty springs, lift kits, roll bars, grille guards, exhaust headers and electric winches.

The average buyer of those trucks and accessories is a 36-year-old male with an income of $34,500 and some college education. He uses his truck as the primary household vehicle, Broseker said.

The average minivan owner fits the description of a typical station wagon owner — a married man with a median household income of $45,400 who uses the minivan to drive to and from work.

Those owners tend to buy functional accessories such as floor mats, fog lights, security devices and stereo equipment, Broseker said.

In contrast, owners of sport-utility vehicles have a profile similar to luxury-car owners. They are predominantly men with an average household income of $79,000 and they drive their vehicles for fun.

Sport-utility owners often purchase such items as pinstriping, extra lights, fancy seat covers and stereo sound systems.

While the demand for accessories and parts for new light trucks is growing, it is just the tip of the sales iceberg, said James Pedranti, senior vice president of Sparkomatic Corp., Milford, Pa.

As those light trucks age, "We are creating a used-truck market that doesn't really exist today," he said.

In the near future, young buyers who cannot afford a new light truck will find a wide variety of used models. Buyers of used light trucks constitute a prime aftermarket group, Broseker said.

"Research has shown that vehicles in the 3-to-10-year-old age group tend to receive more attention in terms of repairs, accessorizing and customizing than newer or older vehicles," she said.

In 1987, there were about 27 million light trucks in the 3-to 10-year-old age category, comprising 59 percent of the light-truck population.

Over the next few years, an average of 2.5 million light trucks will be added to that group each year, she predicted.

Pedranti said that, in the future, the pickup truck aftermarket might become larger than the car market and that truck accessories will be used on cars.

The light-truck market also is booming in Canada, said Al Smitko, merchandise manager for Canadian Tire Corp.

Canada now has 2.5 million trucks registered, comprising 22.4 percent of all registered vehicles. Between 1983 and 1986, truck registrations grew 43.3 percent, compared with 25 percent for cars.

The fastest-selling light-truck accessories in Canadian Tire stores are truck bed mats and liners, followed by truck boxes, tailgate protectors, running boards and custom wheels, Smitko said.

He urged accessory retailers to keep a full inventory of products because "our customers demand convenience and service and usually will not wait to receive merchandise." The temperament of those people favors the accessories and parts business.

The buyers have "a high degree of one-upmanship, to see who can keep up with the latest trends or products on the market," Smitko concluded.

Light-truck makers increase emphasis on 'work' models

Look for competition in the commercial end of the light-truck market to heat up this fall as manufacturers tout the work-related capabilities of their pickups and vans more strongly.

Chevrolet will make an unprecedented pitch for commercial business, beginning with its Sept. 13-16 national dealer convention where it will devote a significant portion of its show to that market.

"Our attempt to control a portion of the commercial market is something we haven't done before," said Bill Ames, Chevrolet manager of truck merchandising.

Chevrolet has some "very aggressive advertising/merchandising programs" planned for its commercial vehicles and also has been working with the National Truck Equipment Association to improve the adaptability of its trucks for special-purpose work bodies.

The other major players in the commercial end of the light truck market are GMC, Ford, Dodge, Toyota and Nissan.

All will introduce new or improved products for commercial use this fall, and all have varying aspirations for improving what already is a growing part of their sales.

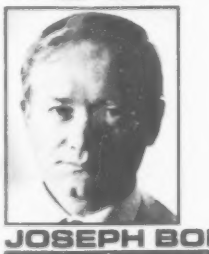
Each of the major manufacturers lays claim to some special forte in that market.

Ford, for example, has its strong lineup of multiport fuel-injected engines, including two of the industry's largest units, a 7.5-liter gas and a 7.3-liter diesel light-truck engine.

Chrysler will get a big boost from its new Cummins turbodiesel, being offered in three-quarter and one-ton pickups, and the fuel injection of its remaining V-8s. It also has some other new commercial truck models.

Toyota has a one-ton pickup and cab-chassis models, already sporting the largest gross vehicle weights on the import side, which will get more power this fall.

TRUCKING TRENDS



JOSEPH BOHN

Among importers, Toyota has the most complete line of commercial model trucks.

However, Nissan plans to build on the cost/price advantage it has in assembling its pickups in the United States. It will also offer expanded availability of its V-6 engine.

General Motors, of course, has the broadest range of light trucks and is fully competitive in that market. One of its unique claims is having the largest 4.3-liter V-6 in a compact pickup or van. Availability of that engine is being expanded this fall.

Taken in total, commercial trucks account for about one-quarter of the industry's light-truck sales. The fleet market accounts for about 15 percent of that market and non-fleet sales for roughly another 10 percent, according to Ames.

Full-sized vans and three-quarter-ton and one-ton pickups tend to be the most commercially oriented of the models in the light-truck field.

However, a lot of smaller pickups and minivans are being used for service businesses. Service businesses have, of course, been the fastest-growing segment of the U.S. economy.

There are indications that the important commercial segment is also drawing the attention of additional importers that haven't been very active in it. There are at least a couple of other new models from other importers due this fall that will appeal to this market.

Generally, importers have been hampered by the 25 percent duty on their light pickup trucks.

On the van side, their products have sold well enough as passenger models that they really haven't had to draw too strong a bead on the commercial market.

That will change, though, as more new small vans are launched and extra production capacity is added in the industry to create more competition in what has essentially been a seller's market.

The industry hasn't been able to determine the upper limits of small-van demand, but it is apt to do so in the 1989 model year.

Suzuki, bank sign pact on retail loans

BREA, Calif. — American Suzuki Motor Corp.'s automotive division and Security Pacific Auto Finance of Security Pacific Bank have signed an agreement to provide financing to retail buyers of Suzuki products.

The basic non-recourse simple interest program has been launched under the Suzuki Financial Services banner for all new 1988 and 1989 automotive products. Financing includes dealer invoice plus tax, license, value-added options, credit life and extended warranty.

Security Pacific Bank is licensed to provide retail financing in all 50 states through the 21 offices of its finance subsidiary. New vehicles will be financed for terms of 36, 48 or 60 months.

"The new financing program is intended to help increase retail sales," said John Dorsey, Suzuki sales director. "The company is working to have financing opportunities readily available for our customers at competitive rates."

Dennis D. Lamont, president of Security Pacific Auto Finance, said additional services will be introduced to complement the retail financing program, including wholesale flooring, capital and construction loans.

Navistar renews Indianapolis plan

CHICAGO — Navistar International Transportation Corp. said it will go ahead with a $150 million capital improvement program at its Indianapolis engine plant after union workers approved a package of concessions.

Members of UAW Local 98 originally had voted down the contract, saying it would cost them $3 an hour in pay and benefits.

Following the first vote, Navistar announced it would not invest the $150 million in the plant and would move diesel engine assembly elsewhere, jeopardizing 2,000 jobs. That announcement put union and company negotiators back at the bargaining table.

The capital improvements will be in preparation for production of the next-generation diesel engine, beginning in 1990. Navistar has a contract with Ford Motor Co. for the engine through the year 2000.

PPG seat-belt program wins NHTSA award

PITTSBURGH — PPG Industries has received the NHTSA Public Service Award recognizing the company's campaign to increase safety-belt use among employees and the public.

The company said that since initiating a buckle up program in 1985, belt-use among the firm's U.S. employees has risen from 12 percent to 75 percent.

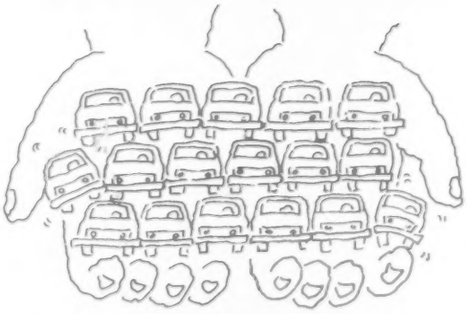
AUCTION OWNERS: REACH THE "BIG" FLEETS



ADVERTISE IN THE AUCTION DIRECTORY
Automotive News

Fleets mean big money for your auction, and the Automotive News Auction Directory puts you in touch with the "big" fleet decisionmakers.

Fleet owners, operators and administrators rely on Automotive News for timely coverage of the news affecting their industry—and ultimately their decisions. They read the Auction Directory to find the right place to sell their large fleets.

Automotive News extends your ad to 75,000 readers in 70 countries. A readership that includes nearly all of the top 100 fleet administrators.

Put the Auction Directory to work for you. Advertise your auction's fleet-related services, selling capacity, special promotions and traffic drawing power. And don't forget the high impact of color and display advertising, both available in the Auction Directory.

Call Marie Hingst, Auction Directory Manager at (313) 446-6065 to place your ad.

"Sell The Big Sellers".

AIADA says free-trade pact would cut U.S.-Japan friction

WASHINGTON — The American International Automobile Dealers Association believes the United States and Japan could reduce trade friction by entering into a free-trade agreement similar to that reached between the United States and Canada.

Testifying during an International Trade Commission hearing on the possible benefits of a free-trade agreement with Japan, AIADA President Robert McElwaine, said, "The possibility of a U.S.-Japan free-trade agreement warrants greater respect and consideration than it is presently receiving."

McElwaine expressed the belief that a U.S.-Japan free-trade agreement eliminating tariff and non-tariff barriers — such as the Japanese voluntary restraints on automobile exports to the United States and the 25 percent U.S. tariff on light-duty trucks — would "lead to a decline in the U.S. deficit and would help ameliorate the large trade imbalance between the U.S. and Japan."

Domestic vehicle manufacturers, who have repeatedly supported the continuation of Japanese restraints on passenger-car exports and protective tariffs for the U.S. light truck market, were not represented at the ITC hearing.

The Senate Finance Committee asked the International Trade Commission to study the benefits and drawbacks of a possible free-trade agreement with Japan, but the commission's study is for informational purposes only.

The United States and Japan are not formally discussing a free-trade agreement, although a number of U.S. officials have speculated that a free-trade agreement might be beneficial for both countries.

Inventory of imports at '88 low

But slower sales hike days' supply

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Despite a 15 percent falloff in July deliveries, foreign carmakers reported the leanest import-car stocks of the calendar year on Aug. 1. The total, however, was equivalent to a 61-day supply, compared to a 58-day supply on July 1.

Inventories of Japanese cars were slightly slimmer, while German automakers reported fatter stocks at the beginning of August, compared with the previous month.

Inventories of unsold imported cars totaled 631,517 on Aug. 1, which was only 3,180 units heavier than last year's 628,337. The year-ago total represented a 54-day supply.

Stocks were 2,626 units lower than a month ago. On July 1, there were 634,143 unsold imported cars, representing a 58-day supply.

The domestic-car stockpile, which was reported in Automotive News last week, totaled 1,406,740, representing a 58-day supply. Combined stocks of unsold domestic and imported cars totaled 2,038,257 units, equal to a 60-day supply. A 60-day supply is considered desirable, according to manufacturers and dealers.

August opened with a reduced supply of imported trucks. The total was 183,988 units, a 68-day supply, compared with 193,290 on July 1, an 81-day stockpile. On Aug. 1, 1987, truck inventories totaled 218,013, a 66-day supply.

There was a slight dip in the number of imported cars and trucks on Aug. 1 at ports of entry, in transit within the United States and at dealerships. Combined import vehicle stocks totaled 815,505 cars and trucks, a 63-day supply compared with last month's 827,433, a 66-day supply. A year ago, there were 846,350 cars and trucks, equal to a 57-day supply.

The Big 3 started August with combined domestic and import car stocks representing supplies of 57 to 77 days. The three major Japanese firms with transplant operations here — Toyota, Nissan and Honda — had combined stocks equivalent to 13- to 82-day supplies of cars.

They shared combined inventories as follows: General Motors, 38.78 percent; Ford Motor Co., 21.29 percent; Chrysler Motors, 14.02 percent; Nissan, 5.99 percent; Toyota, 2.15 percent; and Honda, 1.32 percent.

The Aug. 1 inventory share by country was: Japan, 62.90 percent; Germany, 14.57 percent; and other countries, 22.53 percent.

Japanese carmakers had a 17-day supply of cars on Aug. 1.

Isuzu's stocks were reduced, although its unsold cars represented a sluggish 134-day supply on Aug. 1. Nissan's inventory of unsold cars represented a 95-day supply, although stocks were down 5.27 percent.

Sharing the lowest inventories were Toyota with 8.32 percent fewer cars and a 17-day supply, and Honda, which had more unsold cars than it did a month ago but a lower 14-day supply.

*—includes domestic vehicles.

Confirming the low Japanese inventory numbers was Jerry Schiele, owner of Elmhurst Imports and Westlake Import Motors, Elmhurst, Ill.

"The biggest problem for us is to get more product," he said. "Sales have been excellent. Toyota car sales are up 65 percent and trucks are up 95 percent — quite simply because we had more cars. Saab, Subaru and Peugeot are winding down. We've sold out of Subaru."

German carmakers carried over a fifth, or 22.70 percent, more cars on Aug. 1 than on July 1. Audi's stocks were up 12.30 percent and were equal to a swollen 198-day supply. Volkswagen's inventory bulged 50.87 percent above the prior month's and was equivalent to a 121-day supply.

Other foreign-based carmakers reduced inventories. Hyundai had 4.36 percent fewer cars in stock, although its days' supply increased to 45 days, from 32 days on July 1. Yugo decreased its stocks by 17.60 percent and reduced its days' supply by half, to 105 days' worth of unsold cars compared with 227 in the previous month.

A few dealers acknowledged the short Japanese stocks and fat German car inventories. "We have a 30-day supply of Mazdas. We usually keep a 60-day supply. However, we've got a year's worth of Audis and Volkswagens. June and July were slow but August has been brisk," said Harvey Gray, sales manager, Continental Imports, Joplin, Mo.

"Sales are still soft. But since the rebate program, we're seeing improvement," said a Massachusetts Nissan dealer. "We're off about 25 units a month and have a 50-day supply. We like to keep a 45-day supply."

Imported truck stockpiles declined 4.81 percent, from an 81-day supply in July to a 68-day supply at the beginning of August.

Suzuki had 20.15 percent more vehicles in stock on Aug. 1, but due to stronger July sales, its average days' supply was whittled down to 75 days, compared with 187 days at the beginning of July.

PRICES

FROM PAGE 1

ment that prices were increased this year to partially recover higher materials, labor and manufacturing costs.

Price changes for comparably equipped models range from none on the Pontiac LeMans and Cadillac Allante to increases of up to $1,000 on the Cadillac DeVille, which has been redesigned for the 1989 model year. The largest percentage increase is for the Pontiac Safari station wagon at 6.6 percent. GM's high-volume A-cars (Chevy Celebrity, Pontiac 6000, Olds Cutlass Ciera and Buick Century) will see an average price increase of 3.5 percent.

GM continues the pricing strategy it adopted in the 1988 model year. That strategy virtually eliminates bare-bones models and makes standard the equipment that customers order most often. Other makers also employ that technique.

In the 1989 model year, for example, air conditioning will become standard on the Pontiac Firebird Formula and Trans Am, Chevrolet Caprice sedan and the GM10 cars — the Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal. GM said that 99 percent of the buyers of those models purchase air conditioning as optional equipment.

The base price of the Pontiac Grand Prix for 1989 is $13,899, an 11 percent, or $1,360 increase over the 1988 base price of $12,539. Air conditioning and rear shoulder belts are standard for 1989. GM said the Grand Prix will be 3 percent, or $405, more than a comparably equipped 1988 model.

The base price of the 1989 Chevrolet Corsica notchback sedan is $9,985, up from the 1988 base price of $9,555. With upgraded tires and rear shoulder belts (standard for 1989), the same Corsica would have been $9,642 in 1988, GM said.

GM will continue its strategy of grouping options in packages on most of its models and offering the buyer a discount for purchasing the options in a package instead of ordering them individually. GM has said option packages make both car-ordering and manufacturing easier and more efficient. GM said savings from manufacturing efficiencies can be passed along to buyers.

The best discounts on option packages for 1989 are on the Chevrolet Camaro and Pontiac Firebird. GM said that a Camaro RS equipped with the most popular options, which in 1989 have been packaged into a group, will cost $12,227 this year compared with $12,922 last year.

Stempel said a comparison of introductory prices of new 1989 models and year-end prices for comparably equipped 1988 models shows an average increase of only 1.7 percent due to option package discounts. Aggressive incentives have also been in place throughout much of the 1988 model year.

The 1989 tentative car pricing at Chrysler includes all models except the Plymouth Laser coupe and Plymouth Acclaim and Dodge Spirit sedans, which will debut in January 1989.

Firm 1989 prices are expected to be announced by early October.

Chrysler's most significant pricing actions in 1989 affected the Chrysler New Yorker and Dodge Dynasty luxury sedans and the America compacts and subcompacts. Specifically, the Dodge Dynasty LE carries the largest increase — 11.2 percent compared to base prices in 1988 and 4.4 percent on a comparably equipped basis. The tentative 1989 retail price of the Dynasty LE is $13,595.

Omar Matt, manager of Chrysler's pricing and competitive analysis, said the increase reflects the addition of a V-6 engine and four-speed automatic transaxle as standard equipment in 1989.

"There were large equipment changes made standard," Matt said. "In addition, we believe the vehicle at the time it came out was underpriced."

Chrysler is leaving unchanged, however, the retail prices of the Chrysler New Yorker and New Yorker Landau which are tentatively set at $17,416 and $19,509, respectively. The prices remain unchanged even though Chrysler is adding as standard its new four-speed automatic transaxles. The models previously carried a three-speed.

"This is a direct attempt to gain market share," Matt said.

Significantly, the 1989 model year pricing indicates that Chrysler has had to reverse its strategy in pricing its America series — the Dodge Omni/Plymouth Horizon America models and the Dodge Aries/Plymouth Reliant America models.

Tentative prices increased $500 on each of the America models in 1989.

When the subcompacts were introduced in 1986, Chrysler heralded its approach of packaging equipment to streamline model offerings and reduce prices. Aries and Reliant prices, for example, were cut by more than $1,300 when introduced as America models. However, the company now admits the tactic backfired because customers continued to expect financing incentives.

"We took major downpricing action on those vehicles when they were introduced," Matt said. "We thought the magnitude of those reductions and the inclusion of standard equipment would prevent us from having to incentivize those vehicles. Unfortunately, we could not do that in this competitive environment. We had pretty well cut our margins down to the bare bones, so when you have to incentivize it really hurts."

The Omni/Horizon subcompacts will tentatively increase 8.3 percent to $6,495 in 1989 and the Aries/Reliant compacts 7.1 percent to $7,495.

"Basically, our strategy is to still try to be the low-pricer out there but to try to get back a little bit in margins with the understanding that the market expects incentives," Matt said.

Chrysler said that it has absorbed and has not passed on to customers — at least directly — the cost of installing air bags as standard equipment on six 1989 models: Dodge Daytona and Diplomat, Chrysler LeBaron coupe and convertible and Fifth Avenue and Plymouth Gran Fury.

Chrysler also said dealer discounts in 1989 will continue at 1988 levels.

Chrysler's price increases in 1989 follow three years during which company executives have maintained Chrysler has "underpriced the industry fairly significantly."

Chrysler said it raised prices an average of 1.7 percent overall on its 1988 models. But on a comparably equipped basis, it said it actually reduced prices by about 1 percent.

Matt also said that Jeep price increases for 1989 will be "in the three to four percent range."

However, the $8,995 price of the Jeep Wrangler S entry-level sport utility vehicle will remain unchanged in 1989, he said.

Matt said prices of Dodge Caravan and Plymouth Voyager minivans will increase "in the range of 3.5 percent" on a comparably-equipped basis in 1989. However, base versions will rise only 2 to 2.5 percent on a comparably equipped basis, he said.

On a base price-to-base price basis, Caravan/Voyager is tentatively rising 3.9 percent to $11,312, the SE edition 3.9 percent to $12,039 and the LE edition 3.8 percent to $13,987.

The Grand Caravan/Grand Voyager price is tentatively rising on a base-to-base basis 4.4 percent in the SE version to $13,061 and 5.5 percent in the LE version to $16,362.

LIBERTY

FROM PAGE 1

source said.

"It's going to be the highest-tech machine they can afford to put together," said an industry source familiar with the project. "It will get everything technology can bring it."

The LH series is now moving out of the jurisdiction of the Liberty Project. Chrysler has called Liberty its most advanced product development program for testing new approaches to design, production, technology, quality and cost management.

"Liberty is a methodology," said a company source. "Liberty now goes on to the next project."

G. Glenn Gardner, chairman of Diamond-Star Motors, said representatives from that Chrysler-Mitsubishi joint venture are meeting monthly with staffers from Liberty and Chrysler's manufacturing staff. Diamond-Star, Normal, Ill., is viewed by Chrysler as a manufacturing testbed.

"The new Jefferson North plant in Detroit and the new cars coming that will go into that plant will reflect a lot of the things that we learned at Diamond-Star," Gardner said.

However, another high-ranking Chrysler source said putting the LH platform in the Jefferson plant is still tentative.

"About a year and half ago, we started regular meetings with the staff of Chrysler Executive Vice President for Manufacturing Richard E. Dauch," Gardner said. "Then about three months later, we started meetings with Liberty at Chrysler. We have monthly meetings with those areas. One month we go there. One month they come here."

He continued: "There are a lot of unique features in the way Diamond-Star puts cars together. We are looking at it in the next new car that Chrysler puts together.

"Liberty is Chrysler's effort to make sure that a vehicle is designed to fit the plant and the process that it goes in, rather than bending the process to make the vehicle.

"The car design and the plant have got to be a marriage. Before, we sort of had a shotgun wedding. The Liberty and the Jefferson North project . . . when those two go together, it is indeed a marriage, and the two have blended themselves into a facility to turn out a product.

"The facility and the design and engineering of the product are married together in a way that is most productive and provides the best quality that they know how to produce," Gardner said.

Car output highest in four weeks

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production totaled 98,658, the highest weekly output in four weeks as plants continued to resume output after downtime for model changeover.

Scheduled production of cars last week was 19.08 percent more than the prior week's 82,853 and 24.86 percent more than the year-ago week's 79,015.

The year-ago week's output was also affected by downtime for changeover.

Companies split last week's estimated production as follows: General Motors, 45.32 percent; Ford Motor Co., 31.10 percent; Honda of America Manufacturing Inc., 7.78 percent; Chrysler Motors, 5.17 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 4.41 percent; New United Motor Manufacturing Inc., 3.29 percent; and Nissan Motor Manufacturing Co. U.S.A., 2.93 percent.

Truckmakers scheduled 70,335 units last week. The total was 9.31 percent more than the previous week's 64,346 and 5.87 percent more than the year-ago week's 66,436.

GM will build its 370,168th Pontiac Fiero tomorrow at its Pontiac, Mich., plant and then shut down the plant permanently due to sluggish sales of the sports car. A total of 2,063 workers will lose their jobs.

Slow sales are also affecting GM's Oldsmobile Cutlass Supreme built at the Doraville, Ga., plant. Workers were originally told that they would be temporarily laid off for changeover from July 18 until Aug. 1; however, the plant did not reopen until today. There was a 143-day supply of the new GM10 model on Aug. 1.

GM's Detroit-Hamtramck plant remains idle for model changeover until Aug. 24. Its Van Nuys, Calif., plant reopened today and its Framingham, Mass., facility is slated to resume output Thursday.

Ford's Lorain, Ohio, plant remains closed until early October for model changeover.

Chrysler's Sterling Heights, Mich., plant resumed output today after being down for changeover.

Canada doubles car production

Canadian car production was targeted at 14,023 units last week, more than double the prior week's 6,162 and almost four times the year-ago week's 3,729. Line speeds are accelerating after shutdowns for changeover.

The previous week's and year-ago week's builds were affected by downtime for changeover and vacations.

Truck output was slated at 12,106 last week, 53.18 percent more than the prior week's 7,903 but 8.46 percent below the year-ago week's 13,225.

General Motors' Oshawa, Ontario, car plant resumed output last week after being idle for model changeover.

Volvo's plant in Halifax, Nova Scotia, plant remains closed until Aug. 22 for vacation.

DUKAKIS

He's unknown to industry, and he may crack the whip

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

When the brother of Massachusetts Gov. Michael Dukakis died in a hit-and-run accident in 1972, the family blamed it on a drunken driver.

The death of Stelion Dukakis, although like thousands of others that occur every year, personalized forever the importance Democratic presidential candidate Michael Dukakis places on auto safety. And it could be of special significance to the nation's automakers if Dukakis becomes president.

"It was a hard blow and created in Michael a deep emotional attachment to the issue of highway safety," said Massachusetts High-

BUSH

Automakers comfortable with 'friend' of 8 years

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

Vice President George Bush chaired the presidential commission that recommended abolishing fuel economy standards.

That shows where he stands on regulation — a position that indicates the Republican candidate will continue to make deregulation and free trade the guiding principles of U.S. economic policy if he is elected president of the United States.

Bush advisers say those two general policies — deregulation and free trade — have made possible six years of low inflation and high employment, and have indirectly created one of the healthiest peri-

see BUSH, page 69

ELECTION 88

The 1988 race for the presidency begins in earnest today. Beyond the rhetoric, here's how Democratic nominee Michael Dukakis and Republican nominee George Bush are likely to behave on issues critical to the automotive industry.

Bricklin charts auto comeback as megadealer

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Copyright, 1988, Automotive News

Irrepressible auto promoter Malcolm Bricklin is courting Wall Street in an effort to raise $1 billion through the sale of junk bonds to buy a chain of automobile dealerships.

With that kind of financial reserve, Bricklin could acquire roughly 100 dealerships, each with annual sales of about $50 million, according to a source familiar with Bricklin's plans.

New York-based Drexel Burnham Lambert, pioneer in the junk bond market, was mentioned by several sources close to Bricklin as the most likely candidate to handle the bond sales.

"We don't discuss transaction that may or not be in the works," said a Drexel Burnham Lambert spokesman.

"Yes, I am talking to people," said Bricklin from his Colorado ranch. He sold Bricklin Industries' interest in Global Motors, the parent company of Yugo America and Proton America, to a private investment group in April for an estimated $40 million.

"It is very premature at this point, but it involves a large number of dealerships, financing with an interesting twist and several ex-associates," he said.

When asked if the deal involved the sale of $1 billion in junk bonds, Bricklin said, "Yes, that is step one."

He said a financial plan will be in place within 30 days to include an announcement of the venture.

Long-time associate Michael Sanyour, a principal in the invest-

Bricklin: the sale of $1 billion in junk bonds "is step one."

ment banking firm of Philadelphia-based CMS Companies, is a key player in Bricklin's venture.

"We are working on a little project," he said. "It's in the gestation stage of developing the concept."

Sanyour, who was an executive at both Volkswagen of America and Subaru of America in the late 1960s and early 1970s, said Bricklin is "raising money to buy dealerships, but beyond that, it is too early to talk about it."

Bricklin and Sanyour declined to name any of the dealerships or chains they may purchase.

Daniel J. McClory, managing director of Auto Equities Group in Newport Beach, Calif., said he has

FERRARI: *Carbuilder, racer was last of breed*

By David Burgess-Wise
SPECIAL CORRESPONDENT

Enzo Ferrari was the last of a breed that included the likes of Bentley, Ford, Bugatti, Lancia, Delage, Voisin. They created marques that became automotive legends while their progenitors and namesakes remained in command.

When he died Aug. 14 at the age of 90, Ferrari brought to a close an automotive era. Though his name was synonymous with racing and performance cars, Ferrari was no designer. Nor, in his earlier career, was he any more than a modestly successful racing driver, yet his Scuderia Ferrari's victories were legendary.

Ferrari's secret was always to surround himself with the very best drivers and designers and imbue them with his enthusiasm for motor sport. It was an enthusiasm that, paradoxically, had long been conducted seemingly by remote control, for it was many years ago that Ferrari last appeared at a race track to watch one of his cars in action.

Even Ferrari's prancing horse trademark is a paradox. While it would nowadays be difficult to

Dealer takes novel step toward public ownership

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — A Long Island dealer has formed a limited partnership that could become one of the largest publicly owned dealership groups in the United States.

The private offering seeking investors in Sunrise Auto Partners L.P., a Nissan-Toyota-Mitsubishi-Dodge combine owned by dealer John Branham, has been placed by Smith Barney, Harris Upham & Co.

It is selling partnership units in Sunrise Auto Partners for $90,000 each and half-units for $45,000, hoping to raise between $34 million and $60 million.

A Smith Barney official did not want to comment or even have the company's name associated with the deal, saying that such information could jeopardize the offering.

Documents describing the sale say that if $34 million isn't raised by Sept. 30 and an option extending the deadline to Dec. 30 isn't exercised, the offering will be withdrawn.

A brochure outlining the deal says the partnership will use the proceeds to buy the dealerships,

Ford target: 16% of '89 car sales

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division expects to add to its growing share of the U.S. market in the upcoming model year.

Ford predicted it will climb to 16.0 percent of the U.S. car market during the 1989 model run, said dealers who attended Ford's 1989 preview in Boston. In July, it held 15.3 percent, and it has 15.1 percent for the year.

The division is aiming to reach 30.5 percent of the truck market compared to 29.1 percent during July and 30.2 percent for 1988. Capacity constraints will limit potential on the truck side, although the company's shortage of automatic transmissions is expected to ease.

Overall, the division is expecting another 15 million sales year in 1989, about the same as the current year, dealers said.

Ford will make a new advertising push for Festiva. Dealers were shown television spots that promote the subcompact along with Ford's 6-year/60,000-mile powertrain warranty. The division is looking for 77,000 Festiva sales in the 1989 model year.

One theme of the show was performance. In addition to the new Thunderbird Super Coupe, Ford is adding a high-performance version of the Taurus, the 220-horsepower SHO. Scheduled output is 23,000 units, reported one dealer.

Ford will equip about half of all Mustangs with its 5-liter V-8 this year, compared with about a third in 1988. Starting this year, the Mustang LX version is available with the V-8.

In addition to the 1989 lineup, Ford also displayed a seven-passenger concept vehicle, which one dealer described as a cross between an Aerostar and a Taurus wagon.

Dealers interviewed were universally excited by the looks of the Thunderbird, which goes on sale after Christmas.

They also took note of the fact that the two-day presentation was divided into equal parts, one focusing on cars and the other on trucks. That was taken as a sign that Ford will give the truck side the attention it deserves as contributor of half the division's sales.

The last of the Fieros are hauled away after GM idled the plant last week

Son of Fiero in court

Canada firm says Magna backed out

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — While General Motors was closing the doors on its Pontiac Fiero plant last week, a legal battle was ensuing over a soured joint venture to buy the plant.

AcquisiCorp Capital Ltd., formerly Echo Mountain Resources Ltd., of Vancouver, British Columbia, said in a statement released through the Vancouver Stock Exchange that it will sue Canadian auto parts maker, Magna International Inc., and its auto body parts subsidiary, Cosma International, for breach of contract.

AcquisiCorp claims its subsidiary, Enterra Motor Cars Ltd., had a contract with Magna to jointly pursue the purchase of the now-idle Fiero plant and that Magna reneged on the deal.

The plan was to produce a series of car models using the Fiero's space frame chassis upon which plastic body panels are hung. Enterra produced a car using the two-seater Fiero as a base.

AcquisiCorp President John Parks said the company has instructed its Toronto legal counsel to proceed with the suit. Parks said in a statement that the company expects its losses from the deal to exceed $20 million.

Magna Vice Chairman James McAlpine said the company had not been notified of the legal action and only knew about it from reading Canadian newspapers.

In a prepared statement, McAlpine said: "Both Cosma and Magna deny they are in breach of any obligation or fiduciary duties alleged to be owed to AcquisiCorp or its subsidiary, Enterra Motor Cars Ltd."

GM said it has no plans to sell the plant and has no future product planned for the plant. However, sources say a number of proposals from outside companies have been made to GM regarding future plans for the plant.

Meanwhile, the Pontiac plant produced its final Fiero — No. 370,168 — last Tuesday morning. Two workers at the plant won the last two cars at a drawing held at a recent plant picnic.

GM announced in March that it would end production of the sporty Fiero by the end of the 1988 model year and idle the plant which had produced the Fiero for five years.

The car and the manufacturing methods used in its construction were considered revolutionary. It was the first to use composite plastic body panels on a steel space frame. That method will be used in the production of GM's new all-purpose van, due out in the 1990 model year.

GM cited sagging sales due to increased competition in the two-seater segment and consumer preference for larger, roomier cars.

About 1,400 assembly workers, as well as a couple hundred workers from components operations associated with the Fiero, have been indefinitely laid off.

GMC overhauls conversion policy

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

General Motors continues to shake up the recreational vehicle industry and many of its own dealers with new restrictions on the distribution of chassis.

GMC Truck last week notified its dealers that, effective with 1989 models, they can no longer wholesale upfitter package vans and Suburbans to non-consignment-pool conversion companies.

GMC dealers can still order units for non-pool companies, but they have to retain title to the vehicles during their conversion, get them back and retail them to final customers.

That precludes non-pool converters from selling the units to RV or other non-GMC retail outlets.

Duncan Brodie, GMC general sales manager, said that while the new program differs from Chevrolet's, its effect — to retain control over product — will be the same.

Chevrolet's program, which started the industrywide shakeup affecting thousands of converters and dealers, completely prohibits dealers from ordering conversion chassis for non-pool companies. All its units have to go through pool accounts.

"The whole problem that Chevrolet faced was the fact that non-bailment companies were selling the chassis to other retail outlets, and those retail outlets were selling them to the end user," he said.

GMC, in addressing the problem, had to consider the geographic spread and location of its dealerships. Since many of its dealers are in outlying areas where it is necessary to work with smaller non-pool companies, officials considered it expeditious to let them retain those relationships, Brodie said.

GMC, in setting up a simpler, more flexible program than Chevrolet, may have also been trying to avoid some of the extra headaches and expense of administering such a program.

Chevrolet is being forced, for example, to greatly expand its original 64-company pool system to accommodate dealer and customer orders.

Don Cuzzocrea, chairman of the Recreation Vehicle Industry Association and chairman of Starcraft Corp., said the Chevrolet program will benefit "small guys because they'll be signing a lot more pool accounts."

He said the best way to get a pool account is to join the RVIA which has been working to control the quality of conversions built by member companies.

Brodie said that, for the time being at least, GMC is not using General Motors Acceptance Corp. to administer the financial end of its program as Chevrolet did. However, he said that is still being studied and he didn't preclude it from happening in the future. For Chevrolet, GMAC is providing wholesale and retail financing of the units, as well as financially qualifying van-pool candidates.

Of 2,400 GMC dealers, about 1,000 are involved in the van conversion business, Brodie said.

GMC has 60 bailment pool companies. It has no plans to expand that to any significant degree.

Brodie said dealer violations of the new policy "are easily traceable, and we will get back into his allocation and take whatever steps are necessary to preclude him" from selling chassis outright to converters.

Penalties might include cutting a dealer's chassis allocation, charging back to him any discounts or allowances relating to conversion options or programs or canceling "ship-through (to converter) codes on non-complying units," he said.

Meanwhile, Chevrolet has been sending teams to every consignment pool applicant to inspect the size, operating methods, security and other aspects of his business, said Bob Wolf, owner of Advanced Creations in Romulus, Mich.

Advanced Creations is typical of many companies that likely wouldn't have had a chance to get into Chevrolet's closed pool system but which stand a good chance now.

Wolf said some of the new Chevrolet requirements include having 2,000 square feet of production facility for every 100 vehicles, 400 square feet of storage space for each conversion and converting a minimum of 300 units yearly.

One Texas-sized Chevy dealer to buy another

By Laura Clark and Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTERS

Jim Johnson, Chevrolet's single largest dealer for retail sales in 1987, is negotiating to sell his giant Richardson, Texas, Chevrolet dealership to Mark Eddins, owner of Friendly Chevrolet, Dallas.

Eddins, Chevrolet's second-largest dealer in combined fleet and retail sales in 1987, anticipated reaching a preliminary buyout agreement by the end of last week.

After they reach a preliminary agreement, the parties still have to go through it point-by-point to settle on a final agreement. And General Motors has to approve the deal which, Eddins said, could take a "few days to a few months."

Johnson has Chevrolet stores in both Richardson and Austin, Texas. However, Eddins is negotiating the purchase of only the Richardson store.

"We are not buying the (Johnson) corporation," Eddins said, because it had "too many contingent liabilities."

Johnson's Richardson dealership was the ninth largest Chevrolet dealership in total unit volume sales in 1987, according to the Automotive News Sales Giants compilation.

If Eddins prevails, he could control about 20 percent of the new-car and light-truck market in Dallas County.

The county's records show 147,630 new cars and trucks registered in 1987. Those numbers include both retail and fleet sales for new cars and light, medium and heavy-duty trucks, but exclude fleet vehicles sold by Dallas County dealers and registered in another county.

Friendly Chevrolet sold 20,543 retail and fleet vehicles in 1987, including 2,490 retail units and 18,053 fleet units. It was the largest single Chevrolet dealership in the Dallas area in 1987 for combined retail and fleet units.

Jim Johnson Chevrolet sold 9,317 retail and fleet vehicles in 1987, including 7,748 retail units and 1,569 fleet units. It was the second largest Chevrolet dealership in the Dallas area in 1987 for combined retail and fleet sales.

Eddins plans to operate Friendly and the Jim Johnson dealerships "completely independently with no collusion of policies."

"That's something we're making sure of, to ensure our ability to get approved by the manufacturer. We will not run two stores out of the same operation. They would be completely competitive and completely autonomous," said Eddins, who added that he could control 40 percent of Chevrolet sales in Dallas County with Friendly and the Johnson dealership.

Texas has been hard hit by the slump in oil prices the past few years, and industry sources said the impact has been felt by most dealers.

Johnson's Richardson store reported sales of $170.4 million in 1987, down 16.47 percent from $204 million in 1986. Eddins estimated Johnson's sales to be in the $200 million to $250 million range this year. The dealership is also expected to sell 9,000 units this year.

Friendly Chevrolet sales totaled $258.3 million in 1987, up 75.06 percent from 1986.

Eddins said that, despite problems in the Texas economy, "We've been profitable. The strong get stronger. You have to take advantage of opportunities."

Chevrolet declined comment on the dealers' negotiations.

Johnson worked at Friendly Chevrolet for approximately eight years and served as general sales manager. He left in March 1984 to purchase Frank Late Chevrolet (now Johnson's Richardson store). The Dallas Morning News reported that Johnson bought the Late dealership with partner John Toole, but Toole later left the dealership. Johnson could not be reached for comment.

Gulf Stream's big year reflects industry pattern

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

ELKHART, Ind. — Gulf Stream Coach Inc., Nappanee, Ind., a diversified RV manufacturer, is in many ways reflective of the good year that most RV companies are having.

Jim Shay, chairman of Gulf Stream, sees demand for van conversions, motor homes and other RVs continuing to improve in 1989 — provided the government doesn't choke it off with continued hikes in interest rates.

Gulf Stream is expanding production capacity to accommodate projected sales increases for its Conquest and Monogram van conversion operations, travel trailers and other RVs.

Conquest has pool accounts with Ford, Chevrolet and GMC and also converts Dodge chassis that it buys from dealers. Monogram has pool accounts with Chevrolet and GMC.

Gulf Stream completed construction of a new 90,000-square-foot facility in Nappanee about a month ago, into which it is moving some of the products previously built at an 80,000-square-foot facility in that city.

The freed-up space in the smaller of the two plants will be used for expanded production of Conquest vans and Conquest travel trailers.

A new 20,000-square-foot facility still under production at Goshen will be used to produce Conquest mini motor homes.

Monogram, Shay added, still has enough unused capacity in its own plant to enable it to expand without requiring additional facilities.

Together, the two van conversion operations have been producing about 22 units a day. The plan for 1989 is to get each into the 20-unit-a-day production range for combined sales of 6,000 to 8,000, Shay said.

Shay said that Conquest and Monogram both had "exceptional growth," which he credited in large part to their general managers.

Like many other converters, the company's ability to sell van conversions this year has been limited only by its ability to obtain raw chassis to work on.

Shay isn't sure how much Conquest and Monogram will benefit from having Chevrolet pool accounts at a time when Chevrolet is shifting all its van distribution through consignment pools.

"There are stories it will help us in availability. If it turns out that way — I don't know," Shay said.

In a general sense, he said he felt Chevrolet's perspective on the conversion market was different from that of many converters.

"They (Chevrolet) deal with a tremendous number of entrepreneurs — their own dealers as well as the conversion companies," Shay said. "I think they look at us (converters) more as service companies than as manufacturers. The van conversion is only a small part of the cost of the finished vehicle. We're really there to enhance the market. They have to look at the overall picture."

He said he would like to see General Motors Acceptance Corp. become more involved not only in the wholesale but also the retail end of converted products, working more with RV dealers as it does with GM's own automotive dealer group.

In addition to van conversions, the company's Class A and Class C motor home business has been very strong.

"Our trailer division is coming on strong. And the (South Bend RV) show has been fabulous for us," Shay added.

The Class A market rebounded strongly from a minor setback following last October's stock market plunge.

Full Class C demand has still to be determined, Shay added.

"Nobody knows how good the Class C market is because nobody can get enough Class C's to meet the demand," he concluded.

Shipments increase for June, year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale RV shipments increased in June and continued their strong lead over last year for the first six months of calendar 1988.

Industry shipments ran at a seasonally adjusted annual rate of 430,000 units in the first half of the year, according to the Recreation Vehicle Manufacturers Association.

In June, RV manufacturers shipped 38,200 units to their dealers, up 11.05 percent from 34,400 a year earlier.

For the first half, they shipped 227,800 units, up 6.05 percent from 214,800 a year earlier.

Following a record-setting May, wholesale van conversion shipments continued at a strong 17,900-unit level in June, up 7.83 percent from 16,600 a year earlier.

For six months, van conversion shipments totaled 104,600 and were up 6.63 percent from 98,100 a year earlier.

Source: Recreation Vehicle Industry Association.

Shipments of raw van chassis with the seat-delete option by Detroit manufacturers to RV customizers declined in June, however, portending a downturn in shipments of customized vans from converters to their dealers.

Generally, the falloff was due to lack of product availability. General Motors, Ford and Chrysler began running out of chassis products for converters in June.

Detroit manufacturers shipped 13,600 vans with the seat-delete option to converters in June, down 29.90 percent from 19,400 a year earlier.

Among Detroit's June shipments to converters were 12,400 full-sized vans, 18.42 percent fewer than the 15,200 of a year earlier.

Also included in the June tally were 1,200 compact vans, 71.43 percent fewer than the 4,200 of a year earlier.

Meanwhile, the Index of Consumer Sentiment was virtually unchanged in June from the previous month. It remains near the all-time high, RVIA said.

Consumers have become more concerned with rising prices and the effects of rising interest rates. Still, favorable buying attitudes have been maintained for vehicle purchases, according to RVIA.

Consumer intentions to purchase a RV moved up to 8.40 percent in June from 7.10 percent the previous month, RVIA said, reflecting continued optimism.

GMAC stirs no panic at ITT Commercial

RV TRENDS

JOSEPH BOHN

General Motors Acceptance Corp. will become more heavily involved in both wholesale and retail RV financing as a result of changes made by Chevrolet in its distribution of van chassis.

GMAC's involvement poses some additional competition to local banks involved in van conversion financing.

But other financial institutions like ITT Commercial Finance Corp., St. Louis, continue to see solid opportunities in regular RV dealer floorplanning.

ITT Commercial Finance Corp. provides inventory financing, or floorplanning, for a variety of RV companies' dealers in North America.

The company works in conjunction with RV manufacturers themselves, said Joseph Odgers, ITT's vice president of marketing.

Under a typical arrangement, eligible RV dealers order inventory from manufacturers that ship them the products and invoice the floorplan company. The finance company then pays the manufacturer according to pre-set terms. Finally, inventory is recorded by the floorplan company, according to serial number, and serves as collateral.

In most cases, through the finance company, manufacturers help to support their dealers by contributing to the floorplan arrangement.

Generally, the arrangement allows dealers to reach optimum inventory levels at little cost, provides a higher line of credit and frees their bank credit lines.

It allows dealers to take advantage of manufacturers' special and volume discounts.

Some RV manufacturers also provide discounts to ITT, which it passes along in the form of free floorplanning for a period of time.

Generally, ITT's portfolio of RV financing, amounting to several hundred million dollars, isn't huge, Odgers added, but it does represent a significant portion of the company's overall financing activity.

TraTech recovers

TraTech, whose main van conversion plant in Clarkston, Mich., was destroyed by fire Aug. 3, expects to resume full production today.

A company spokesperson said TraTech had temporarily moved to a new plant in Lake Orion, Mich., while its old plant in Clarkston was being rebuilt.

Vixen heads for profit

Product revised; RV dealers stressed

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

A revitalized Vixen Motor Co. will reap its first profit by the end of September after adopting an "if you can't beat 'em, join 'em" marketing approach.

Vixen did an about-face this year, converting its erstwhile quasi motor home into a true-blue RV unit with all the traditional amenities of running hot water, microwave cooking, etc.

It also hired a true-blue RV marketer, Richard Mines, as director of sales and marketing. He was formerly national sales manager of Thor Industries' Establishment brand motor homes and, prior to that, was sales manager for Champion Motor Homes.

Vixen has also changed its distribution emphasis to RV dealers, rather than auto dealers, though Mines insists, "We're not walking away from the car dealer.

"If there's an auto dealer today with a separate RV staff — not necessarily a separate facility — I want him," Mines said. "He just has to have some concentration on RVs, some specialized salespeople — even if it's one person. Our project is to train the dealers; we've got to make them profitable."

"By my own experience, RVs have a different sales cycle than cars, and you really have to have a salesperson dedicated to that," added Robert Gillow, owner of Action Oldsmobile in Livonia, Mich., and chairman of Vixen Motor Co.

Mines said Vixen still has those car dealers who maintained their loyalty to the company during its crisis. It retained about 15 of its former 35 car dealers.

"They would be the first to agree that we need an expanded network, particularly on the service side, and that such a network will help their own sales," he said.

Thus, the company is going after the RV dealer "as our primary marketing arm," Mines said.

The Vixen product, in addition to now being a self-contained living unit, now features full standup height and General Motors' 3800 V-6 engine and automatic transmission.

The new powertrain gave it entry into the California market where 25 percent of all RVs are sold. Its previous BMW-supplied diesel engine couldn't pass that state's emission standards.

Vixen has already sold all its production capability through the end of September, and "that's why we know we're going to have a cash profit," Mines said.

Gillow said the profit would be modest.

"On a monthly basis, you're not going to make a million dollars. But, obviously, as our production level grows, so will our profits. Within a year, the company will have some substantial numbers in earnings," Gillow added.

Vixen must produce about 30 motor homes a month to be profitable.

It has built 54 of them since resuming production this spring and has retailed about two-thirds of those units, according to Mines.

It currently has 48 pre-sold dealer orders in-house, and is now taking orders for October. The company anticipates building 460 motor homes during the next 12 months.

As part of its revival, the company recalled 75 of its former 170 production workers.

Vixen's new motor home features redesign, standup room

Truck sales dip for July, but 7-month total tops '87

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Total U.S. truck sales, including light, medium and heavy models, declined 1.28 percent in July but maintained their record-setting pace for the year.

July sales of 443,210 were down slightly from 448,951 a year earlier.

The seven-month total of 3,132,254 sales continued to hold a comfortable lead of 6.63 percent over last year's 2,937,558, the previous high.

Light-duty Class 1-3 sales, totaling 415,113 in July, were off 2.10 percent from 424,022 a year earlier, according to manufacturers' reports.

Medium-duty Class 4-7 sales, totaling 15,527 in July, were up 16.74 percent from 13,300 a year earlier, according to the Motor Vehicle Manufacturers Association.

Heavy Class 8 truck sales of 12,570 were up 8.09 percent from 11,629 a year earlier, MVMA said.

Seven-month light-truck sales of 2,936,693 were up 5.93 percent from 2,772,371 a year ago.

Seven-month medium sales of 111,252 were up from 89,593 a year earlier.

And, seven-month Class 8 sales of 84,309 were up from 75,594 in like 1987.

In Class 8, Mack, Navistar and Volvo GM gained momentum in July, while Ford, Freightliner, Kenworth and Peterbilt fell off from their earlier pace.

Volvo GM's July retail sales of 1,313 were up 59.15 percent from the 825 Volvo-only (excluding GMC) sales of a year ago. Its seven-month total of 8,612 was up 40.79 percent from 6,117 (Volvo-only) sales last year.

Navistar, with 2,698 Class 8 deliveries in July, had a strong 26.67 percent gain over last year's 2,130 total. For seven months, its Class 8 sales of 19,602 were up 18.38 percent from 16,559 a year ago.

Mack's 1,978 Class 8 sales in July were up 15.00 percent from 1,720 a year ago. Its seven-month 12,292 Class 8 sales were up 10.88 percent from 11,086 last year.

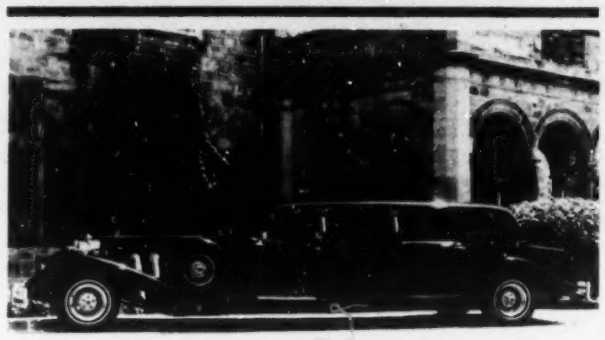
Ohio to provide Ford training cash

COLUMBUS, Ohio — Ford Motor Co.'s Lorain assembly plant will receive a $202,335 grant from the Ohio Industrial Training Program to train employees to launch its 1989 models.

About 2,456 workers will be trained to build 1989 Ford Thunderbirds and Mercury Cougars at the plant.

The grant will go toward training hourly employees to work with new equipment such as an automated system that bolts the engine to the chassis.

Ford has invested $230 million for expansion and modernization of the Lorain plant and another $90 million to modernize the nearby Walton Hills, Ohio, stamping plant as part of the Thunderbird/Cougar program.



Excalibur Grand Limousine
Excalibur Automobile Corp., Milwaukee, took the wraps off its new limo at a recent Excalibur owners' rally. The company says the 204-inch-wheelbase limo will be the "only domestically produced vehicle designed and built solely as a limousine and not a modified sedan." Six will be available by Christmas, according to Excalibur.

EDS and B-O-C Group sign 5-year fixed-price contract

DALLAS — Electronic Data Systems Corp. has signed a five-year, fixed-price agreement with General Motors' Buick-Oldsmobile-Cadillac Group.

Under the agreement, EDS will provide information processing, engineering and development support, plant floor automation and communications services for B-O-C's 26 plants and business locations throughout the United States.

EDS, GM's computer services subsidiary, also will provide training, marketing and distribution support as well as systems planning for B-O-C. EDS said the contract also includes provisions for "new initiatives and innovative joint EDS and B-O-C efforts that will meet short- and long-term B-O-C business objectives."

With the B-O-C contract completed, EDS has contracts covering all of GM's major operations, including all of GM's North American vehicle-making operations. EDS previously negotiated similar multi-year, fixed-price contracts with GM's truck and bus group, the Chevrolet-Pontiac-Canada Group and General Motors Acceptance Corp. as well as some component operations.

The fixed-price contracts were a major bone of contention between GM and EDS founder H. Ross Perot. The dispute between GM and Perot culminated in the controversial $750 million buyout of Perot and his top lieutenants by the automaker.

WHEELWAYS

LEASING INSURANCE— WHEELWAYS IS THE BUSINESS EDGE YOUR OPERATION DESERVES

As a leasing company you are challenged by many unparalleled business risks. Wheelways Insurance and Financial Services is a recognized innovator in designing and underwriting insurance programs and products for the automobile leasing industry. With the coverage you need and the individualized attention you deserve, Wheelways leads the way in providing cost and time effective features with every program. We eliminate costly finance charges by offering twelve monthly, interest-free payments. Reduce your premium by accumulating insurance credits based on your business's individual loss experience. All customer and vehicle information is maintained and controlled within our data resource bank. With service minded offices nationwide, you receive individualized attention from local Wheelways representatives. Experience Wheelways dedication, dependability and security — the business edge your operation deserves.

Sales rise 4% in early August; extra day helps

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Early-August sales of domestic cars rose 3.97 percent from the year-ago period. There was one more selling day this year.

Deliveries for Aug. 1-10 totaled 177,145, an increase of 6,763 units over the 170,382 sold in the comparable period of 1987.

The daily-selling rate slipped by 1,615 units or 7.58 percent to 19,683 vs. the year-ago average rate of 21,298. There were nine selling days this year compared with eight in the 1987 period.

General Motors was the only domestic maker to report a decrease. GM sales of 86,676 dipped 5.36 percent below the 91,582 sold in 1987.

Chrysler's sales increased by almost 7,000 cars with the extra selling day this year. Chrysler reported 24,167 cars sold, 37.56 percent more than the 17,568 units delivered during the 1987 period.

Ford's sales of 52,239 rose 5.74 percent above the 49,402 reported for Aug. 1-10, 1987.

Honda's domestic sales increased 13.18 percent to 9,531 vs. 8,421 last year.

Toyota reported sales of 862 U.S.-built cars for the Aug. 1-10 period, 51.76 percent more than the 568 units sold in the same period last year.

Nissan's deliveries were up 34.90 percent over 1987. Nissan sold 2,961 units in the early-August period compared with 2,195 last year.

Mazda sold 709 cars in this year's 10-day span. It was not producing cars in the United States at this time last year.

COVER STORY

The outlook for dealer profits

NADA says dealership profitability, optimism remain strong

New-vehicle sales in the United States, after reaching a record 16.3 million units in 1986, fell 7 percent in 1987 to 15.2 million units.

Despite that, total dealership dollar sales last year rose to a high of $267 billion, according to the 1988 edition of *NADA Data*, the National Automobile Dealers Association's annual compilation of economic facts about the retail auto industry.

Statistics are based on U.S. Department of Commerce figures and NADA research and data bases.

Because of last year's 7-percent drop in new-vehicle sales and only moderate price hikes, the average dealership, for the first time in seven years, reported virtually no increase in total dollar sales ($10,653,719 in 1987 vs. $10,585,313 in 1986).

According to NADA, dealers were able to maintain their total dollar sales pace last year because of significant boosts in the used-vehicle and service and parts departments.

NADA figures indicate, however, that only the service and parts department was able to record an increase in actual volume of work performed. Used unit sales decreased a slight 0.4 percent for the average dealership, while the number of repair orders written rose 2.4 percent.

In 1987, dealership gross as a percent of sales increased sharply, but that was primarily because of the changing mix of sales between departments, according to NADA.

In the new-vehicle department, gross as a percent of sales continued to slide, reflecting the long-term trend of dealerships to become increasingly large businesses operating on increasingly thin margins.

Some representative major expenses for the average dealership in 1987 were as follows, according to NADA: total payroll, $865,000; advertising, $139,600; rent and equivalent, $117,000; floor plan interest, $69,300.

Last year's decline in new-vehicle sales pulled dealership profits below the 2-percent level for the first time since 1982. In constant dollar terms, profits for the average dealership fell in excess of 15 percent, according to NADA.

Nevertheless, dealership profitability as measured by return on equity remained healthy, especially considering the cost of money.

According to NADA, deducting the average yield on one-year Treasury bills from the dealer's net profit before tax as a percent of net worth shows that in 1980 the average dealer had a negative return, while in 1987 this measure of profitability remained above 20 percent.

Meantime, NADA data covering January-May of 1988 show European-import dealerships have seen new-vehicle operations profit fall 28 percent, with gross on a per-vehicle basis down $400 from the year-earlier period.

Japanese-make dealerships fared slightly better. Through January-May 1988, grosses of these dealerships dropped by 13 percent, and operating profit was only one-third of the average month for 1987.

In contrast, the average domestic-make dealership increased new-vehicle gross by 13 percent in January-May.

According to NADA, through the first five months of this year, the average domestic-make dealership generated more total dealership profit than the average import dealership.

Notes NADA: "A sampling of June (1988) financial results provides no hope for an imminent turnaround for the import dealerships. Their total net profit for the month is down 30 percent compared to their year-to-date average. The domestic dealerships also show a decline, but a much smaller one: 5 percent."

Total new-truck sales reached a record 4.9 million units in 1987 as just about all classes enjoyed an upswing. An impressive 9.1 percent gain in medium- and heavy-truck sales significantly improved the financial posture of the average truck dealership in 1987.

According to NADA's American Truck Dealers division, total dollar sales for the average dealership rose 21 percent to $16.4 million. Profits also grew, with average gross up 10 percent and net profit up 22 percent.

Truck dealerships relied greatly on their service and parts operations in 1987. While accounting for just 27 percent of total dealership dollar sales, service and parts contributed 71 percent of total dealership profits last year.

For the past 11 years, NADA's Industry Analysis Division has conducted a quarterly survey of the profit expectations of new-car and truck dealers for the succeeding 12 months. Survey results have closely matched dealers' actual profit experience and have also served as a barometer of national economic trends.

During 1987 the NADA optimism index rose from a level of 108 to 125. Although considerably less than its previous peak of 180, the current level of dealer optimism indicates dealers expect new-vehicle sales to remain relatively strong in 1988.

Meantime, the total dealership count in the U.S. for the past three years has remained relatively constant as the loss of smaller domestic points was offset by dealerships created to handle new import lines.

Although the dealership count has remained steady, the dealer principal count continued to drop. NADA says the nation's 25,000 dealerships are owned by 17,000 dealer principals. Prior to the significant trend to chain dealerships in 1979, an estimated 28,850 dealerships were controlled by 25,100 principals, according to NADA.

Franchised new-car and truck dealers in 1987 spent $3.5 billion on advertising, 11 percent more than in 1986. Ad expenditures as a percent of total sales, which averaged 0.8 percent during 1960 to 1979, has exceeded 1.1 percent in each of the last three years, and in 1987 reached a record 1.3 percent.

Large-volume dealerships, which typically operate in very competitive metro markets, are the major contributors to overall boosts in ad spending.

According to NADA, dealerships selling over 750 new units in 1987 spent nearly 1.4 percent of total dollar sales on advertising. In contrast, dealerships selling less than 150 units annually spent 0.83 percent of total sales on ads in 1987.

Automakers' captive finance firms in 1987 offered fewer and less generous interest buydown programs. Consequently, the average finance rate at banks fell.

Another result of more modest buydown programs was that loan maturities resumed their rise. NADA says that in 1987 the average finance company auto loan was for 53.5 months. By the second quarter of 1988 the average maturity was above 56 months.

During the past decade, more than 134 million new vehicles have been sold. However, the number of vehicles in operation climbed by only 37 million units, according to NADA. The 97-million-units difference is what the industry terms "scrappage."

Along with higher scrappage levels, the growth of vehicles in operation has continued to slow. Due to lower household formation rates, NADA notes, the stock of vehicles in operation is expected to show only modest growth in the years ahead. ■

Deficit in auto trade declines 13% for May

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — An 18 percent jump in auto exports combined with an 8 percent drop in imports helped narrow the U.S. automotive trade deficit sharply in May, resuming a string of improving trade numbers.

The trade deficit declined 13.8 percent in May compared with the year-ago period.

Exports of passenger cars totaled 75,899 vehicles with an estimated value of $789.6 million in May. Light-truck exports for the month were 19,084 vehicles with an estimated value of $197.7 million.

Passenger-car exports to Japan were up 171.5 percent and exports to Canada increased 10 percent. Exports to other countries increased by 4,383 units.

Trade numbers from the U.S. Commerce Department show a trade deficit for passenger cars and light trucks of $3.557 billion for May. Total car and truck exports had a value of $987.4 million during the month, while car and truck imports were valued at $4.544 billion. The automotive trade deficit for May 1987 was $4.128 billion.

There were 450,974 finished vehicles imported to the United States in May 1988, compared with 512,963 vehicles in May of last year.

Japan was down for the month in both the quantity and value of car and light-truck shipments.

Japanese car imports dropped 22.1 percent for the month and the value of the shipments fell 17.6 percent. Japanese truck imports were off 40.5 percent and their value was down 37.5 percent.

Japan shipped 170,281 cars to the U.S. in May, down from 218,641 one year ago. Truck shipments were 45,633 units, down from 76,693 units one year ago.

West Germany, Sweden, the United Kingdom, Italy and France all shipped fewer cars to the United States in May 1988 than in May 1987, continuing a year-long trend.

German shipments were off 52.4 percent and Sweden's were down 6.6 percent. Imports from the United Kingdom were off 54.4 percent.

The number of passenger cars imported from South Korea in May declined 6.5 percent from the year-ago period as the result of labor unrest.

Yugoslavia's exports to the United States fell 52.1 percent for the month, after rising in April.

Imports from Mexico were 14,184 vehicles, up from 12,606 last year.

Auto spending on TV ads moves ahead 14% for first half

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The nation's automakers and their dealers spent an estimated $1.35 billion on television advertising in the first six months of this year, an increase of 14.40 percent over $1.18 billion in the first half of 1987.

According to the Television Bureau of Advertising, factories and their dealer associations spent $1.16 billion on network, spot and syndicated television advertising spots during the first half of 1988, up 16.47 percent from $996 million during the same period in 1987.

Individual dealer advertising for the six-month period totaled $191.3 million, up 4.36 percent from $183.3 million in the year-ago period.

Spending numbers are analyzed by the bureau each quarter from Broadcast Advertisers Reports.

Richard O'Donnell, Television Bureau of Advertising vice president in charge of automotive marketing, said strong advertising support of sports programming by automakers during the first half of the year and continued growth of factory-dealer advertising in market-by-market spots contributed to the increase.

"Network figures reflected the sports buys during the first half of the year; we had the Super Bowl, the Winter Olympic Games and the (college and professional) basketball championships," O'Donnell said.

Network television ads — factory-sponsored only — accounted for $571.1 million or 49.2 percent of the total television spending by automakers and dealer associations. Network spending by the automakers during the first half was 23.35 percent higher than the $463 million spent by those makers in that category in the year-ago period.

Chrysler purchased three-quarters of the automotive advertising on the telecasts of the Winter Olympic Games. Ford Motor Co. purchased the other quarter of the automotive spots. General Motors divisions sponsored several of the basketball championship telecasts.

Spot television, or market-by-market ads, accounted for $585.5 million or 43.33 percent of the total television expenditures by automakers and dealers in the first half of 1988. Spot expenditures by the nation's automakers and dealer associations for the first half were up 9.93 percent from $532.6 million in the year earlier period.

"Spot television should be up 10 percent for the year; it's a continuation of the regional marketing process and dealer marketing group (dealer association) contributions," O'Donnell said.

GM and its dealer associations topped all other automakers and their dealers in total television spending during the first half of 1988. GM and its dealer associations spent $306.4 million in television during the January-June period, up 32.07 percent from $232 million during the first six months of 1987. Advertising for GM's non-automotive subsidiaries, such as General Motors Acceptance Corp., were not included in the total.

Chrysler Corp. and its dealer associations were second to GM in television spending in the first half of 1988. They spent $174.9 million in television, up 22.91 percent from $142.3 million in the year-ago period.

Eagle, Dodge and Chrysler ranked 14th, 15th and 16th among the largest television advertisers by nameplate. Eagle spent $27.5 million on television in the first half of the year, up 99.28 percent from $13.8 million last year.

Ford Motor was third among automakers in television spending. Ford spent $168.5 million in the first half of 1988, up 10.56 percent from $152.4 million during the year-ago period.

Ford Division was the top adver-

NOTES: Expenditures for television commercials advertising two nameplates or vehicle types have been divided between the two brands. Expenditures include leasing.
Broadcast Advertisers Reports identifies some automotive television expenditures as "autos and trucks," "various autos," "general promotion," etc. Unless they are clearly attributable to a brand, they are not included in the above, or in the truck data following, but are included in the company totals. In the January/June 1988 period, these expenditures were as follows: Chrysler Corp. $25,544,300; Ford Motor Co. $13,702,700; General Motors $1,782,100; Nissan $1,387,000; Toyota $1,614,500.
*Spot TV includes national syndication advertising.

tiser among individual nameplates for the period. The division spent $72.6 million on television for the first six months of 1988, up 29.87 from $55.9 million in the year-ago period. The division launched its new Ford Probe in the spring and had a heavy television schedule.

Pontiac was second among nameplates with $65.1 million in the first half, up 45.64 percent from $44.7 million last year. Introduction of the Grand Prix, its GM10 car, swelled the total.

Chevrolet was the third largest spender on television advertising time among individual nameplates during the period. The division spent $64.7 million for television ads during the first half of 1988, up 10.22 percent from $58.7 million during the year-ago period.

Toyota Motor Sales U.S.A. was the top spender in television advertising among the importers in the first six months of 1988. Toyota spent $84.3 million on television ads for the 1988 period, up 19.41 percent from $70.6 million in 1987.

In the new truck, van and sport-utility category, Chevrolet outspent all other nameplates in television advertising for the first six months of 1988.

Chevy spent $43.2 million during the period, up 53.19 percent from $28.2 million during the first six months of 1987. Chevrolet ran a heavy schedule of television ads comparing its trucks to Ford trucks.

LEGAL BRIEFS

Case against dealer proceeds in Maryland

BALTIMORE — Maryland's Montgomery County has cleared its first legal hurdle in pursuing a major case against an auto dealer accused of "unconscionable" trade practices and is seeking to use the case as an example to other businesses using similar tactics.

The county has charged Dennis Spencer and his two Maryland dealerships, Astro Chevrolet and Metro Ford, with 13 counts of deceptive practices involving pricing, warranties, equipment, repairs and selling used cars as new.

Spencer also owns S&R Chevrolet-Oldsmobile, Imperial Dodge and Chrysler and M&M Pontiac in Virginia.

Attorneys for Spencer challenged the county's jurisdiction, declaring that Maryland's motor-vehicle law covering the use, licensing and sale of motor vehicles pre-empts the county from acting under the state's consumer protection law. They also argued the county could not ask for punitive damages.

But county Circuit Judge Calvin R. Sanders ruled against the dealer on both motions.

The decision on the county's jurisdiction and especially the one on punitive damages has relevance for other states with similar laws.

While Spencer's lawyers argue that the motor-vehicle law, by providing regulations on sales and advertising practices, bans local laws or enforcement, the county maintains that the state consumer protection law is a public general law that pre-empts the state vehicle rules.

The county also has taken the position that the state Legislature intended to allow local bodies to regulate sale and advertising of motor vehicles. In fact, county attorneys argued, the intent is to encourage counties to adopt stringent regulations that may go beyond the state's rules as long as they are not in conflict.

Montgomery County's position was backed by Maryland's Motor Vehicle Administration and the state's Consumer Protection Division.

In the matter of punitive damages — a subject that has been a subject of dealer litigation in several states — Sanders said the county was wrong in believing it to be covered under "other appropriate forms of relief" in the law, but added if the county prevails on the charges, then punitive damages would be appropriate as part of consumer redress.

— Helen Kahn

Cadillac zone manager wins age-bias suit

DETROIT — General Motors has lost an age-discrimination suit brought by a former Cadillac zone manager who was forced out of his job as part of the automaker's efforts to shrink its white-collar ranks.

A federal court jury here ruled that GM must rehire Richard E. Bramblett, 61, in an equivalent job. GM also must pay him for the wages he missed since he was forced to retire March 1, 1987. GM said Bramblett will be given an undetermined executive position with Cadillac in Detroit.

GM may have to pay further damages in the equal employment opportunity case; the federal judge handling the case has yet to decide that issue.

Bramblett, now of Savannah, Ga., had been a GM employee for 31 years. When GM announced it was cutting 25 percent of its salaried ranks and consolidating zones as part of the move, Bramblett was given the option of early retirement or a demotion.

Mecham store vandal will pay restitution

PHOENIX, Ariz. — Vernon Bradley Jordan, 21, who was convicted of vandalizing a Pontiac dealership in Glendale, Ariz., formerly owned by the then Arizona Gov. Evan Mecham, has been sentenced to three years' probation and ordered to pay $14,307 in restitution.

He was sentenced by Judge Frank Galati of Maricopa County Superior Court.

Jordan, whose father worked at the dealership, was arrested there last February by Glendale police following a break-in and vandalism that included broken windows and damage to 10 cars.

Jordan was ordered to pay Mecham in $200 monthly installments.

It was revealed in court by an adult probation officer in a presentence report that Jordan insists that he hardly remembers the vandalism incident but blames his actions on depression and use of marijuana.

U.S. jury charges five with odometer rollbacks

PHILADELPHIA — A federal grand jury has returned an indictment charging five persons with violating federal laws relating to the resetting and altering of odometers on automobiles.

Edward S.G. Dennis Jr., U.S. attorney for the Eastern district of Pennsylvania, said those charged are James DePaul of Abington, Pa.; James Coupe of Warminster, Pa.; Scott Tochterman of Ferndale, Pa.; William Seymour of Bradenton, Fla.; and Gregory Smith of Chicopee, Mass.

According to the indictment, the defendants conspired from 1982 through 1984 to defraud the public by rolling back odometers on high-mileage used cars and altering the mileage readings on the titles to the cars to conceal the rollbacks. The cars are alleged to have been sold at their false low-mileage readings by Warminster Motors and DePaul Ford, both located in Ottsville, Pa.

All of the defendants are charged with conspiracy to transport in interstate commerce falsely made and altered securities — that is, the titles to the automobiles.

In addition, all of the defendants except Tochterman are charged with 14 counts (Tochterman is charged with 8 counts) of interstate transportation and aiding and abetting the interstate transportation of falsely made and altered securities.

All of the defendants except Tochterman are charged with 11 counts (Tochterman is charged with six counts) of falsely certifying, and aiding and abetting the false certification of, odometer readings.

If convicted on all counts, the various defendants face the following maximum penalties: DePaul, 156 years imprisonment, $700,000 fine; Coupe, 156 years, $700,000 fine; Seymour, 156 years, $700,000 fine; Tochterman, 91 years, $390,000 fine; and Smith, 156 years, $700,000 fine.

Ex-partner charges dealer with fraud

TAMPA, Fla. — A jury trial has been scheduled for the week of Dec. 5 to hear deliberations on fraud charges brought against Frank Morsani of Albany Motorcars, a BMW/Mercedes-Benz dealership in Albany, Ga., by former partner Patrick Brun-Wibaux.

Brun-Wibaux has charged Morsani — who owns several new-car dealerships — and an accountant with fraudulent schemes that Brun-Wibaux claims resulted in a misrepresentation of the financial worth of Albany Motorcars at the time of transfer of ownership to Brun-Wibaux (Automotive News, Aug. 3 and Oct. 26, 1987).

According to court records, both parties were ordered to complete discovery by Oct. 17. A pre-trial conference is slated for Nov. 1.

GM buys share of Sunraycer ally

AeroVironment a specialist in environmental management

MONROVIA, Calif. — General Motors has purchased 15 percent of AeroVironment Inc., one of the companies that helped GM build its solar-powered Sunraycer car.

AeroVironment, headquartered in Monrovia, is a privately held engineering consulting and manufacturing company built on the technology of fluid motion. Its primary fields are environmental management, alternative energy and low-energy vehicles.

Dr. Paul MacCready, AeroVironment chairman, said the funds from GM's investment will help the company expand to other business areas.

AeroVironment helped GM with the program management, systems engineering and the design and construction of the Sunraycer, which was last year's winner of the cross-continental race in Australia for solar-powered vehicles.

AeroVironment has been a leading firm in environmental consulting, engineering and research services in air quality and hazardous waste management. The firm has expertise in visibility impairment and air toxics.

An acoustic sounder made by AeroVironment measures winds aloft by a Doppler echo effect. It has been used in air environmental work in the United States and many other countries. A newer version has potential application in wind energy, helicopter landings and detection of wind shear at airports. Other AeroVironment products include remotely piloted surveillance aircraft.

Strata Technologies Inc. is a wholly owned subsidiary focusing on ground and water hazardous waste measurement and advanced techniques in remediation.

GM did not disclose the amount it paid for its 15-percent stake in AeroVironment. The automaker will hold a seat on the company's board of directors as a result of its investment.

DEALING WITH DEALERS

Mayberry is 25
Eldon Mayberry, left, Mayberry Lincoln-Mercury, North Hollywood, Calif., receives his silver dealer award from Roger G. Jolicoeur, Lincoln-Mercury's Los Angeles district sales manager.

BEGINNINGS

Richard L. Morris has signed with Chevrolet for Dick Morris Chevrolet-Cadillac Inc., Norfolk, Neb.

W.E. Stokes has broken ground in Augusta, Ga., for Acura of Augusta.

Thomas J. Ercolani has signed with Chevrolet for Thomas Chevrolet Inc., Media, Pa.

Lawrence E. Wilson III has signed with Chevrolet for L.E. Wilson Chevrolet Inc., Mansfield, Mass.

TRANSITIONS

The West Virginia Automobile & Truck Dealers Association has elected new officers for 1988-1989. They are: **Marvin Ware**, Marvin Ware Chevrolet, Kingwood, president; **Michael Ratz**, Logan Motor Sales, Logan, vice president; **Alan Chenoweth**, Chenoweth Ford, Clarksburg, secretary; and **Joe Holland**, Joe Holland Chevrolet, South Charleston, treasurer.

Three more dealerships are planning to move to the Scottsdale Auto Mall, Scottsdale, Ariz. **Scottsdale Subaru** plans to open there next month. **Powell Mazda** is scheduled to move there in March 1989. The final dealership will be a new Infiniti store to be opened by **Bertie Poll** and **Mike Helms. Powell Volvo** and **Ed Moses Chrysler-Plymouth** are already operating in the mall.

Emmitt Mitchell will move Mitchell Oldsmobile from Kansas City, Mo., to a new 27,000-square-foot dealership in Olathe, Kan. The new dealership, expected to be completed next year, will also carry the Cadillac line and will be named Mitchell Olsmobile-Cadillac.

Larry Lange [illegible] a new location for his Plano, Texas, Jaguar dealership. The new 40,000-square-foot facilty has a black-and-white granite showroom that is framed by a barrel-vaulted porte-cochere. Inside there is a special car-delivery room with a marble floor, mahogany paneling, full-service bar and a clothing and accessory boutique. Lange Jaguar also features a computer reservations system and deli for service customers.

CITIZENSHIP

The **Greater St. Louis Automotive Association** has pledged $250,000 to the St. Louis Economic Development Campaign over a five-year period. "By attracting new business and jobs to the St. Louis region the economic development campaign is making an important contribution to the area's growth," said **Richard Huey**, immediate past president of the automotive group and president of Carlson Oldsmobile in Frontenac. "The drive will have a favorable 'bottom-line' impact on businesses throughout the St. Louis area, including automobile dealers. The new jobs generated by the campaign represent a growth opportunity for automobile dealers and all companies in the St. Louis metropolitan area." Moreover, Huey noted, the pledge underscores St. Louis' standing as one of the nation's top automotive centers. According to Dee A. Joyne, chairman of the economic development campaign, the automotive association is one of three leadership contributors. The campaign, which receives support from 250 area businesses and organizations, has raised 75 percent of its $6 million goal.

The **Winchester (Va.) New Car Dealers Association** has presented two "resusci-Annie" CPR training maniquines to the local Red Cross.

ALSO OF INTEREST

Dick Huey, Carlson Oldsmobile, Frontenac, Mo., doesn't let grass grow under his feet. Huey is giving a free Toro mower with each Toronado he sells. In addition, Huey is giving free oil changes, filters and lube jobs at his Honda dealership in Overland, Mo., as long as the buyer owns the vehicle.

Gov. Gerald Baliles has appointed **Joseph Albert Falk**, owner of Little Joe's Autos in Chesapeake, to the Virginia Motor Vehicles Dealers' Advisory Board.

The **National Automobile Dealers Association** is offering the Automotive Customer Relations Directory, a consumer referral guide devoted exclusively to automotive problems. It lists more than 500 automotive-related customer assistance programs and is published annually by NADA consumer affairs. Its purpose is to aid AUTOCAP managers and others in resolving consumer automotive disputes.

NHTSA opens GM brake probe

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A variety of General Motors cars and trucks are being investigated by NHTSA for brake problems.

NHTSA said the models under investigation have been the subject of unusually high numbers of consumer complaints. The agency often begins preliminary defect investigations after receiving as few as two or three consumer complaints.

NHTSA's July defect report said the agency is conducting an engineering analysis of rear brake complaints involving 1982-88 E-, F- and P-body cars and 1988 C/K pickups. The car models include the Oldsmobile Toronado, Buick Riviera, Chevrolet Camaro, Pontiac Firebird and Pontiac Fiero.

Covering 1,737,989 vehicles, the investigation was prompted by 2,038 complaints, including reports of 118 accidents, 24 injuries and two deaths, NHTSA said.

GM's 1988 full-sized pickups, the C and K, are the subjects of an engineering analysis covering "poor brake performance." NHTSA said it has 434 complaints including reports of 36 accidents and six injuries. There are 457,196 trucks covered by that investigation, the safety agency said.

GM's 1987 and 1988 J-body cars, the Chevrolet Cavalier and Pontiac Sunbird, are also under investigation for "poor braking." The agency said it opened a preliminary investigation after receiving 12 complaints, including reports of five accidents and two injuries.

In other new investigations, NHTSA also announced it has begun a preliminary evaluation of 1988 Saab 9000 models for wiring harness chafing. The agency said it was investigating a dealer service bulletin on the problem covering 35,000 cars.

The 1986 Mitsubishi Montero is the subject of a preliminary investigation for seat suspension failure. The agency said it has two complaints. Approximately 100,000 vehicles are subject to the investigation.

NHTSA said GM recalled 8,328 1988 Buick Regals last month to correct a brake hose problem.

Ford Motor Co. announced two recalls covering the 1988 Lincoln Continental. The first involved 26,000 vehicles for possible fires resulting from a melting wiring harness shield, while the second covered 28,000 Continentals that may have an electrical problem affecting brake operation.

Land Rover recalled 4,704 1987-88 Range Rovers to remedy a potential fuel leak.

Honda recalled 279,821 1984-85 Civic models to fix potentially leaky fuel pumps.

GM recalled 33 1988 Chevrolet Cavalier and Pontiac Sunbird models to fix a windshield adhesion problem, NHTSA said.

NHTSA asks comments on side impact

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA announced last week it will accept comments on whether it should propose a safety standard improving side-impact protection for cars, light trucks, vans and multipurpose vehicles.

The agency also announced it will consider whether it should propose a safety standard strengthening door latches, window frames and windows.

In seeking the comments, NHTSA Administrator Diane Steed said the agency is fulfilling a promise to expand the process of advanced notice of proposed rulemaking allowing input before a proposed rule is written.

The proposals would set standards limiting occupant exposure to injuries sustained in side-impact collisions. NHTSA wants to know whether cars and light trucks should be required to pass instrumented tests measuring chest and hip injuries on dummies subjected to side-impact crashes.

Automakers are presently required to meet a side-door strength requirement, but the 1970 rule has been faulted for providing only minimal protection.

NHTSA also wants to know whether test criteria should be written to measure protection in side-impact collisions involving stationary objects such as trees or poles.

NHTSA said it is considering additional requirements for both passenger cars and light trucks that would require stronger door latches, window frames and window glass. A public notice said the agency is interested in providing greater protection to crash victims that can be ejected from their vehicles during a collision.

NHTSA said more than 25 percent of all fatalities in automobile crashes occur from occupant ejection and nearly 40 percent of deaths in light-truck collisions happen when occupants are thrown from the vehicle.

The agency said its proposals are advanced notices of proposed rulemakings, meaning there will probably be lengthy deliberations on these issues.

MEXICAN, N. AMERICAN CAR PRODUCTION

First-half auto production moves up 37% in Mexico

By Kathy Boyer and Stephen Downer
AUTOMOTIVE NEWS STAFF REPORTERS

Mexico's auto production for the first six months of this year increased substantially over the year-ago period. General Motors and Ford Motor Co. were the biggest contributors to the boost with increased output of GM Celebrity and Ford Tracer models.

Each of the five Mexican automakers posted a production increase in the January-June period. They built 172,785 cars, 37.45 percent more than the 125,703 assembled in 1987.

From a percentage standpoint, GM made the largest gain. It assembled 25,486 cars, more than three times the 7,187 it produced in the first six months of last year.

GM builds Cutlass Ciera, Century and Celebrity models in Mexico. The company turned out 17,077 Celebrity models for export to the United States compared with 2,380 for export in the 1987 period.

Ford's car output in Mexico for the first half was 50,291, up 68.97 percent from 29,763 during the same time last year.

Ford builds the Topaz, Cougar, Thunderbird, Taurus and Tracer models at its Mexican plants. Export production of 36,346 Tracers almost doubled last year's 18,341.

Chrysler completed 35,445 cars in the six-month span, 1.98 percent more than the 34,757 units assembled in 1987.

Unlike GM and Ford, Chrysler reduced the number of cars it exported to the United States. The Aries, Reliant, LeBaron J, Sundance and Shadow are built in Mexico for both markets. Chrysler also builds the New Yorker and Magnum for the Mexican market.

The company's export production totaled 14,403 cars in the first half, 43.63 percent below the 25,106 built for export in the first half of 1987.

Nissan built 32,127 cars in Mexico during the first six months of this year, 5.46 percent more than the 30,465 assembled last year.

The Sentra is built at Nissan's Mexican plant. Export production was 5,657 in the first half, 36.97 percent more than the 4,130 built for export in the 1987 period.

Volkswagen reported six-month output of 29,436 units, 25.09 percent more than last year.

VW assembles the Golf, Jetta, Beetle and Corsar in Mexico, all of which are exported. It built 382 cars for export this year compared with 61 last year.

Total North American car production for the first half was 4,521,932, 1.21 percent below the 4,577,290 completed in 1987.

Sweden split on Japanese curbs

Government units disagree on protection for Volvo and Saab

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — A proposal by the Swedish Foreign Ministry to negotiate restraints on Japanese imports has drawn criticism from another branch of the government.

Sweden's National Price and Cartel Office, a politically independent government agency, last week charged that restricting Japanese imports would result in higher prices for Swedish car buyers and inflation.

Nonetheless, Japanese carmakers have already reportedly promised to limit exports to Sweden.

Swedish officials took a strong stance earlier this month on behalf of the two indigenous carmakers, Volvo and Saab. Each has lost market share at home this year while the Japanese have gained sharply. Yet, the government proposal has met with surprise in some quarters because the Japanese are not direct competitors of the two Swedish companies.

Furthermore, Sweden, like West Germany, relies heavily on export sales and cannot risk being viewed protectionist for fear of starting a trade war. However, some see the move as an attempt to improve Volvo and Saab sales in Japan. Sweden and West Germany are the only car manufacturing nations in Europe with no form of Japanese restraints.

In a recent interview with Swedish Radio, Foreign Trade Ministry official Carl Johan Aberg warned against the Japanese using Sweden as a dumping ground. He charged that Japanese makers have focused on his country because other European nations have closed the door.

Imports from Japan increased 55 percent in the first half of 1988 to 49,800 units. Registrations totaled 43,938 through June, good for a 25 percent share of the market, up from 20.7 percent for the same period last year and 16 percent in 1985. Overall, car sales in Sweden have risen 9.3 percent this year.

According to a Tokyo newspaper report, the Japanese companies have, at the request of Japan's Ministry of International Trade and Industry, agreed to hold exports to Sweden at 1987 levels, about 70,000 units. Swedish Government officials have confirmed that the Japanese have agreed to "follow the developments and avoid disruption of the Swedish market."

While price control officials in Sweden don't like the move, Peter Dupont, a Scandinavian specialist at Phillips & Drew in London, said the Swedish action is defensible.

"Given the dependence of the Swedish economy on Volvo and Saab, they can't afford to be too liberal," he said, adding that the decision to seek limits was not a surpise.

Dupont dismissed the argument advanced by some critics that Volvo and Saab don't compete with Japanese makes.

"Obviously, some sort of substitution goes on at the margin," he said. "The Japanese are edging up-market and plan to continue to do so. The Swedish are rightly concerned about that."

Sales of the intermediate-sized Mazda 626, the No. 2 Japanese car in Sweden, increased 108 percent in the first six months of 1988 to 5,938.

The two Swedish makers — already producing at capacity — were hurt earlier this year by a nationwide white-collar strike.

"The Swedish companies have their own problems this year," said Dupont. "They lost production because of the strike and have missed out somewhat on a buoyant market. Their market shares have come down with a bump. It is not totally surprising they want to take action."

PRODUCTION

Auto output moves past 100,000

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Weekly auto production continues to climb as it recovers from downtime at several plants for model changeover and vacations.

Last week's targeted output of 109,236 cars rose 11.74 percent from the prior week's 97,758 and was 5.76 percent above the year-ago week's 103,286.

So far this year, 4,359,747 cars have been assembled, 4.51 percent below the 4,565,769 completed last year at this point.

Companies split last week's scheduled production as follows: General Motors, 51.12 percent; Ford Motor Co., 28.13 percent; Honda of America Manufacturing Inc., 6.82 percent; Chrysler Motors, 4.49 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.98 percent; New United Motor Manufacturing Inc., 2.98 percent; and Nissan Motor Manufacturing Co. U.S.A., 2.48 percent.

Truck output was estimated at 73,837 units last week, 4.75 percent more than the previous week's 70,487 and 20.19 percent more than the year-ago week's total of 61,436.

Year-to-date, 2,610,093 trucks have been built, 7.77 percent more than the 2,421,917 assembled last year at this time.

GM's Doraville, Ga.; Van Nuys, Calif.; Framingham, Mass., and Flint, Mich. (truck), plants reopened last week after being shut down for model changeover. The Detroit-Hamtramck and Orion Township, Mich., plants will resume production this week.

Ford's Lorain, Ohio, plant remains closed for model changeover until early October.

Chrysler's Jefferson Avenue plant in Detroit remains closed for model changeover until Aug. 29.

All Ford plants are slated for daily overtime this week except Edison, N.J.; Wayne, Mich.; and Chicago.

Cars, trucks gain in Canada

Canadian automakers scheduled production of 17,810 cars last week, 46.68 percent more than the previous week's 12,142 and 2½ times the year-ago week's 6,971.

So far this year, 688,948 cars have been assembled, 42.90 percent more than the 482,127 built last year at this point.

Truck output was targeted at 19,085 units last week, 14.15 percent above the prior week's 16,719 and 19.72 percent more than the year-ago week's 15,941.

Year-to-date, 572,866 trucks have been built, 9.75 percent more than the 521,965 assembled last year at this time.

General Motors' Scarborough, Ontario, truck plant resumed production last week after a four-week shutdown for model changeover.

Chrysler's Bramalea, Ontario, plant reopened today. It had been idle since July 22 for vacation and model changeover.

Volvo's Halifax, Nova Scotia, plant resumed output today. The plant had been idle for two weeks for vacation.

Japanese rapped on black jobs

Transplant hiring called below par

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

ANN ARBOR, Mich. — A new study shows the three dominant Japanese transplant auto manufacturers have hired significantly fewer black workers than traditional domestic producers opening greenfield sites in the United States since 1980.

The research by two University of Michigan professors shows that the eight new U.S. facilities opened since 1980 — all General Motors plants — hired blacks in higher percentages than they constituted in the population around the plants.

In contrast, the study shows Mazda, Honda, Nissan and 51 Japanese auto parts manufacturers locating in the United States hired blacks in proportions substantially below their population ratios.

The Japanese automakers dispute the study and its conclusions.

The findings, to be presented at a University of Michigan Graduate School of Business conference on the internationalization of managers this week and to appear in the respected academic journal California Management Review this November, make some major assumptions, however. The study focuses only on race as a hiring issue and assumes equal skills and availability for work among blacks and whites.

But, even given its narrow focus, the study suggests a scathing pattern of avoiding black workers "in an industry that has traditionally supplied large opportunities to minority workers."

Even using GM's new, sprawling

Chrysler wins world acclaim

German study calls it healthiest automaker on planet

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — An unusual global analysis that places heavy emphasis on the financial strength of automotive competitors comes up with some surprising results.

It concludes Chrysler Corp. is the world's healthiest automaker, with Ford Motor Co. a solid No. 2. General Motors is well down the list.

The research, based on a formula measuring a company's financial strength, profitability and future prospects, is called "Capitalyse." The system attempts to objectively compare the relative well-being of automakers from around the world. Such systematic, comparative analysis of competitors provides the public with rare glimpses inside the companies and the industry they dominate.

"Capitalyse" was jointly developed by auditors in the Hamburg, West Germany, office of the Arthur Andersen accounting firm and the German financial monthly Capital, which published the results in its September edition.

Beyond the U.S. automakers, the study measures results at Daimler-Benz, BMW, Volkswagen, Fiat, Renault and Peugeot in Europe and Toyota, Honda and Nissan in Japan. Arthur Andersen does some accounting work for Fiat, Peugeot and Renault, and provides consulting services to the Big 3.

To the survey's creators, the American presence at the top of the list was no surprise.

"When you think of technology, you think of the Germans," said Karl-Heinz Seyfried, a journalist with Capital.

"But if you think of profitability, it is the Americans. The management looks more closely at it and as a consequence Chrysler and Ford are at the top."

Ironically, GM, which is often accused of looking more toward the bottom line than the future, was among the losers in the study, winding up 21.6 percent below the industry

Kansas deal fails in try to go public

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

The first U.S. plan to sell stock to the public in a group of new-car dealerships has failed, but most industry observers don't expect it to deter other dealers from attempting public ownership.

Steven Motors Inc., a Wichita, Kan., company owned by father-son car dealers Edward M. Steven and Michael E. Steven, reportedly fell far short of their goal of raising $2 million in a stock sale.

Proceeds from the sale were to be used to pay debts of the Stevens' other car companies and to buy assets from a Stevens' company that holds Rolls-Royce, Yugo, Bertone and Maserati franchises. The Stevens also had intended to acquire other franchises for the publicly held company, according to the prospectus.

However, the offering, which went into effect in February, expired Aug. 9 and was unsuccessful. The goal was to sell 20 million shares, and shares had an opening price of 10 cents. A minimum of 5 million shares had to be placed for the sale to be finalized.

Each share of stock was to include a warrant that gave investors the option of buying another share of stock for 25 cents. The warrants would have raised an additional $5 million.

Dale Roehrman, vice president of LSCO Securities Inc., the Wichita-based brokerage firm that was the underwriter, confirmed that the expiration date had passed and that the offering was unsuccessful. However, he declined to provide further details. The owners of the dealership did not return repeated phone calls.

Industry observers familiar with the Kansas offering who were contacted by Automotive News said they were not surprised by the failure of the deal. They said they believed the Kansas deal was flawed from the start.

They noted that the dealerships being offered had small sales volumes and that the offering overvalued the dealerships, making the package unattractive to investors. They also said the offering suffered because it was made available by a local brokerage firm on a limited, regional basis.

The stock was made available to investors in Kansas, Illinois, Colorado and Georgia.

Furthermore, the experts said, it was not clear

NEW DEAL: *Penske team molds new image for old-line Potamkin store*

By Diana T. Kurylko
SPECIAL CORRESPONDENT

NEW YORK — Impeccably dressed, Walter Czarnecki, executive vice president of Penske Corp., stood at the corner of 11th Avenue and 54th Street and took a long look at three different shades of beige, painted in blocks on the wall of a pre-World War II building.

Behind him was an interior designer waiting for his client to pick the color for the exterior of the new $6 million Penske Auto Center.

An unusual way for the second-in-command of a $2 billion conglomerate to spend his time. But that obsessive attention to detail has convinced outsiders that Penske Corp.'s workaholic executives are capable of performing miracles for Cadillac in Manhattan.

When Penske acquired the franchise last year from Victor Potamkin, the dealership also changed business philosophies. The next year will be a test of which approach works better in the retail automotive business — quality or quantity.

The implications extend far beyond Manhattan — although this clearly is a market where Cadillac wants its marque to make a strong mark. But beyond New York, the experiment will tell whether the traditional hard-sell business approach for luxury cars has been supplanted by a three-piece-suit, big business approach to merchandising.

As the experiment goes on, Potamkin is laughing all the way to the bank.

Potamkin, owner of what was once the nation's biggest Cadillac dealership, boasts that he broke Cadillac sales records "by offering people the best deal they could get anywhere.

Chrysler cuts Maserati link; TC survives

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors has apparently abandoned any plans it may have had to take over Maserati S.p.A. and has reduced its involvement with the Italian automaker to become merely the importer of the sporty convertible the two companies had been jointly developing.

The two companies have struggled to launch the $30,000 Chrysler TC by Maserati, which was initially expected to reach the market in early 1987 but which continues

The Teamwork and Technology show in New York marked Stempel's inauguration as GM's primary spokesman

Stempel brings cool hand to GM

Rookie president improves firm's image and boosts morale

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The stage was set for disaster.

General Motors had just kicked off its multimillion-dollar "Teamwork and Technology" extravaganza in the grand ballroom of New York City's Waldorf-Astoria. Following a splashy video show projected on a dramatic wall of television monitors, GM Chairman Roger B. Smith and President Robert C. Stempel opened the floor to questions.

An East Coast newspaperman fired the first shot. "This is all very impressive," he said, "but how come Chrysler can put a six-passenger car in the showroom for 7,000 bucks, and you can't?"

Smith listed the Japanese and Korean imports that GM markets under Chevy and Pontiac nameplates. The reporter interrupted; he meant domestically built vehicles.

Smith pointed out that GM, in the past, had offered the Chevrolet Chevette, now defunct, and Saturn was on its way. The reporter again interrupted; 'Now, sir,' he insisted.

Smith responded that GM's best competition against Chrysler's $7,000 America cars was a two-year-old Buick.

Reporters and GM executives alike groaned. The show, which had been designed to spread goodwill among GM dealers, stockholders and reporters, looked as if it were about to backfire.

Then Stempel took the stage. Smith handed off questions to Stempel; Stempel politely deferred to Smith. Stempel called upon reporters by first names. His demeanor was commanding yet humble, in contrast to a GM style some often saw as arrogant.

"We're not telling you our cars are good," he said. "We want people to visit their dealers. We want them to look at the cars, drive them and make their own decisions."

The remainder of the press conference ran smoothly, concluding on an optimistic note.

The show marked a turning point in Stempel's first year on the job and his inauguration as GM's primary spokesman.

For the first four months after his Sept. 1, 1987, appointment as GM president, Stempel was noticeably absent from the public limelight. He granted early interviews to groups of reporters, after which he informed them he was going underground. As he had said in previous GM jobs, he didn't want to talk about what he was going to do; he'd prefer to do it, then talk about it.

It's too early to say what, if anything, Stempel has actually accomplished in his first year as GM president. In a company the size of GM, one year is too little time to see evidence of one individual's influence.

Nevertheless, those inside GM and outside observers say Stempel has in his first year on the job given GM a much-needed boost in image, both within and outside of the company.

Stempel is sensitive about not upstaging his boss and declines questions about himself, instead talking about the company's teamwork. But GM insiders say Smith is relieved — if not delighted — to have a charismatic spokesman to whom he can pass off speaking engagements, a role in which Smith has never been completely comfortable.

GM dealers are significantly more optimistic about the automaker than they were a year ago, be it Stempel's influence or just the stemming of the sales decline.

New casting norm at Chrysler foundry

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

INDIANAPOLIS — Chrysler Motors has started up what is being billed as the most modern casting plant in the world.

In the foundry trade, they're calling it the Foundry of the Future.

For Chrysler, the Indianapolis factory represents another bold move into scientific manufacturing. It was a $50 million move made at considerable risk as the company swept aside outmoded work rules and brought a tired old plant up to date.

Chrysler has installed the modern impact casting process and initiated heavy use of high-tech computerized process control while keeping its employees — who have an average of 19 years of corporate service.

General Motors and Ford Motor Co. and others have cut back gray-iron foundry operations in recent years, and there have been some dramatic technology failures like Ford's Flat Rock, Mich., casting plant and Chrysler's own Huber foundry in Detroit, which have been closed.

Over the decades, said Richard E. Dauch, Chrysler Motors executive vice president — manufacturing, Chrysler had been able to keep the Indy plant competitive in terms of quality and piece cost.

However, recently, the pressure from offshore foundries and tightening workplace and environmental regulations have grown intense.

Dauch said the Indy plant was "a 40-year-old building with a 40-year-old process and 40-year-old habits in a gray-iron environment. What we had was not good process control, not good quality control, poor labor-management relationships and some generically dirty industrial conditions and inconsistent output.

"After a worldwide search, we found the technology right here in America, in Switzerland and in Germany.

"From that, in 1986, the local negotiated a new modern operating agreement and we're going through the training process with all of our people. We're getting results. That's the proof of the pudding, the bottom line," he said.

The $25 million impact caster is the foundry's main attraction for a visitor. Instead of packing sand in molds with slingers, the conventional way, impact casters pack sand down with the explosion of natural gas above it, or, as at Chrysler's facility, with a hefty blast of compressed air.

Ford is just launching an impact caster in Cleveland and Peugeot in France is using an impact system.

Those companies altered just parts of their operations to install the impact lines. Chrysler started from scratch and put in entirely new sand mixing operations.

"We still have one slinger running, but only on one shift, and we'll eliminate that sometime in the next 12 months," said Larry Mitchell, plant manager.

Dauch said, "We're probably going to be reducing the labor hours per unit by 40-50 percent.

"We're getting great cooperation because we told everybody they won't lose their jobs. We'll use attrition or a job bank so there is an incentive for people to contribute. They know the best job security they can get is to be competitive on quality, cost, delivery," Dauch said.

There were reports in the trade that Chrysler was going to move the Indy foundry's products to Mexico for low wage rates.

"Had we not made the commitment to Indianapolis, the plant would have closed and all the production would have gone somewhere," Dauch said. "It would be speculation for me to say where it would have gone. It could have been Brazil, Mexico, Japan or plants of other companies in America."

Melting capacity of the new plant is 50 tons per hour. Molding capacity is about 200 molds per hour, about the same as before but with enhanced quality.

With about 800 employees, the Indy foundry produces 80 percent of the cylinder blocks used in Chrysler vehicles, including the 3.9-liter, 5.2-liter and 5.9-liter V-blocks and the 2.2-liter, and 2.5-liter four-cylinder engine blocks.

"On top of the capital investment here is the very major investment of training our personnel," Dauch said.

Bankrupt Chevy superdeal regains license

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — A federal bankruptcy judge last week ordered the California Department of Motor Vehicles to restore the sales licenses of two Glendora, Calif., dealerships despite arguments by the department against the move.

On Aug. 6, the department had suspended the licenses of Grand Chevrolet and Grand Motors, an affiliated auto brokerage firm, for alleged illegal practices and failure to meet financial obligations.

The same week, the two firms and two affiliated finance companies, Grand Wilshire Finance and Grand Rizal, filed for protection from creditors under Chapter 11 of the U.S. Bankruptcy Code.

Emiliano "Jun" Reodica, who controlled the Grand companies before the bankruptcies, has apparently left the country. Reodica is a naturalized U.S. citizen who emigrated from the Philippines.

During earlier meetings with Grand lawyers, the Department of Motor Vehicles had refused to return the licenses until Irving Sulmeyer, the court-appointed trustee in the bankruptcy proceedings, replaced top management.

Alan Mateer, the department's chief counsel, told the hearing that its investigations showed "managers at virtually every level of the operation" were responsible for defrauding clients.

But Judge James Dooley said that since Sulmeyer has been put in charge of the businesses, he should have a chance to operate them with employees of his own choosing in an attempt to begin repaying creditors.

After the decision, Sulmeyer said he would try to work out an agreement with some of the Grand companies' major creditors, including General Motors Acceptance Corp., which owns most of the cars in the dealerships' inventory.

If that is possible, he said, the businesses could open about 10 days after the hearing. "At least we have a chance now," he said, adding, "that is all we wanted."

Grand Chevrolet, one of the top retail-unit Chevrolet dealerships in the United States, and affiliated firms headed by Reodica were fined $100,000 by the Department of Motor Vehicles in December 1987 for selling used cars as new and for failing to submit car registration information to the state in the specified time.

Reodica earlier this year was reappointed to the California New Motor Vehicle Board, which oversees the Department of Motor Vehicles, even though Gov. George Deukmejian knew that same department two months earlier had suspended the dealer for various violations of the state vehicle code.

Kevin Brett, Deukmejian's press secretary, said the governor knew of the fine when he considered Reodica's reappointment to the New Motor Vehicle Board in February. However, Brett said the governor was satisfied the problems had been corrected after he ordered Motor Vehicle Director Del Pierce to talk to Reodica.

Kevin Brett, Deukmejian's press secretary, said the governor knew of the fine when he considered Reodica's reappointment to the New Motor Vehicle Board in February. However, Brett said the governor was satisfied the problems had been corrected after he ordered Motor Vehicle Director Del Pierce to talk to Reodica.

Deukmejian, however, last week removed Reodica from board.

AROUND THE WORLD

Lex reports gains for first half; retail sales, Volvo deliveries up

LONDON — Lex Service PLC reported record first-half earnings, posting pretax profits of 35 million pounds ($58.8 million). The earnings reflect a 69 percent increase over 1987's level.

Trevor Chinn, Lex Service chairman, said the automotive distribution business had an operating profit of 33 million pounds ($55.4 million) during the first six months of this year, a 27 percent increase over 1987.

The company said Volvo Concessionaires, its Volvo distributorship in the United Kingdom, posted record sales for the period. The company sold 40,579 cars during the first six months of this year, an 11 percent increase over 1987.

Lex's retail car businesses, including companies acquired from Sears in April 1987, recorded a 21 percent sales increase over the January-June period of 1987. Those companies also achieved a 41 percent increase in profits, compared with a year earlier, the company said.

Lex is now the largest retailer of passenger cars and trucks in the United Kingdom.

Lex recently completed an agreement to invest approximately $13.5 million in a joint venture with Campbell Automotive Group, an auto retailer based in Southern California.

JAGUAR: *Weaker sales in U.S. triggers drive to trim workforce, hike productivity*

By Jake Lucas
SPECIAL CORRESPONDENT

LONDON — Jaguar faces a massive cost efficiency drive to restore profits eroded by adverse exchange rates and a weak U.S. market.

Sir John Egan, Jaguar's chairman, said the automaker intends to cut its workforce by 1,200 persons over the next three years through attrition.

Speaking about Jaguar's weakening U.S. sales, Egan said "it's strange, as there is no recession in the U.S. market. It is only in the luxury import sector.

"I think it is the market adjusting to the price increases we have all had to put in because of the exchange rates," he said.

Jaguar sold 1,539 cars last month, compared with 2,040 in July 1987. For the January-July period, 11,436 cars were sold, compared with 12,064 in 1987.

Egan said the profits of the Japanese manufacturers suffered over the past three years while they restructured their operations to cope with the strong yen, and now Jaguar would have to do the same. A 10-cent deterioration in the exchange rate wipes $35 million off the bottom line of Jaguar's profits, he said.

"I don't believe we have ever been cost effective and we have to improve to the level of our rivals. We have to undergo a big internal revolution in order to improve," he stressed. Productivity, which was stuck at four cars per man per year for some time, has now improved to 4.5 cars. Mercedes-Benz, however, achieves 6 cars per worker.

Problems in the U.S. market have forced Jaguar to look elsewhere. United Kingdom sales this year will exceed 14,000, more than double 1986. Sales in Japan rose to over 400 in 1987 and may hit 1,200 this year.

Canadian car sales on the mend

Following a drop of nearly 9 percent in June, Canadian auto sales recovered somewhat in July, though they remained 1.61 percent below the 1987 count.

As a result, the market regained some of the momentum of May's record performance and kept year-to-date figures virtually the same as in 1987.

July's domestic and import car sales totaled 83,001, compared with 84,365 a year earlier. The seven-month total was 644,078, down slightly from 1987's January-July mark of 644,223.

But while year-to-year sales leveled, there was a change in the domestic/import mix, tilting in favor of the domestic automakers. Helped along by incentives, sales of North American-built cars totaled 55,952, 8.46 percent ahead of last year, while imports slipped 17.48 percent to 27,049 units.

Chrysler led the domestic auto sales gainers in July with an 11.73 percent improvement, followed by Ford and General Motors with gains of 9.61 and 6.75 percent, respectively.

Among imported cars, Volkswagen declined 40.85 percent in July, about the same as Hyundai, whose sales dropped 40.31 percent. Nissan dipped 29.10 percent and Toyota 15.33 percent. Among luxury imports, Jaguar suffered a 57.58 percent sales loss while Saab was down 26.35 percent, compared with a year earlier.

GM was a surprise gainer with its Passport Division up 17.85 percent in July. The division has posted a 48.40 percent increase in year-to-date sales and now stands fourth in import sales.

Ford's year-to-date sales for car imports, on the other hand, dropped nearly 48.00 percent.

Truck sales continued strong, with sales of 38,687 domestics and imports in July, compared with 32,728 a year earlier. Overall, domestic and import truck sales were up 16.48 percent, year-to-date.

Domestic truck sales in July were led by Chrysler, whose minivan and Jeep models pushed it 61.12 percent ahead of a year ago.

GM's domestic truck sales in July were up 16.66 percent and Ford's rose 5.28 percent, which contributed to a 21.84 percent increase in total domestic truck sales, compared with last year.

Year-to-date, domestic truck sales were up 18.24 percent.

Among imported trucks, Mazda posted a 73.63 percent gain over a year ago while Nissan was down 32.61 percent and Toyota was down 18.62 percent. Suzuki, leveling out after several large gains, was virtually identical to July 1987's pace.

PUT YOURSELF IN AN EXCITING NEW PICK UP.

Introducing the new GFF-70. A 7,000 pound capacity lift for cars and light trucks. With features that will lighten your work load considerably.

To begin with, it has asymmetrical swing arms with rotated columns, which not only take up less bay space, but also position the vehicles away from the geometric center of the lift so doors can be more easily opened.

You get unobstructed floor space too, for transmission jacks and other equipment. Because the GFF-70 is a free floor lift. And it has optional height adaptors, too.

In short, we've got a great lift. With a great warranty, too. Five years on parts, labor and travel. So send us the coupon and find out more about it.

Gilbarco

Mail to: Dept. A, Gilbarco Inc., PO Box 22087, Greensboro, NC 27420 USA. 919/292-3011.

GM acknowledges U.S. probe of EDS, Hughes defense pacts

WASHINGTON — General Motors has filed a report with the Securities and Exchange Commission acknowledging that defense contracts held by two subsidiaries are being investigated by the U.S. Justice Department.

The SEC documents disclosing the information involving Electronic Data Systems Corp. and Hughes Aircraft Co. were filed in mid-August. The investigations have been reported in the press previously. The SEC requires publicly traded corporations to file a 10-Q report if the company faces any significant, potential liability.

An EDS spokesman said federal investigators are probing allegations that some companies may have used secret information supplied by consultants to win key contracts. EDS, he said, has been told by federal attorneys that neither it nor any employees are the target of the probe.

Meanwhile, a grand jury in Birmingham, Ala., is investigating charges that Hughes employees did not furnish the Defense Department with all of the information required by the federal government's truth in contracting law. The contract in question was awarded in 1983. A company spokesman said that neither Hughes nor any employee violated any provisions of the law.

House unit approves ATV refunds

WASHINGTON — Makers of all-terrain vehicles would be required to make refunds to consumers under a bill approved by the House Energy and Commerce Committee.

The bill, approved on a voice vote, is aimed at prodding the Consumer Product Safety Commission into a more activist stance. It also contains provisions that would make it easier for consumers and state officials to seek agency help on safety matters.

Critics have charged the commission with delaying action on ATVs and maintain that a commission consent decree with five ATV manufacturers did not go far enough because it did not contain a provision to recall the vehicles or offer refunds to consumers.

Those manufacturers — Honda, Suzuki, Yamaha, Kawasaki and Polaris — have agreed not to sell three-wheeled ATVs that do not meet court-ordered safety standards.

A companion bill is pending in the Senate.

Deadline nears for auto design contest

WYOMISSING, Pa. — Automobile Quarterly is taking entries for its second annual car design contest, with winners to be announced in its February 1989 issue. Entries must be original, unpublished drawings produced between April 1 and Sept. 1 and postmarked by Sept. 2.

Each design must project one of these five existing vehicles 10 years into the future: Honda CRX, Cadillac Brougham, Jaguar XJS, Jeep Wagoneer or Lamborghini Countach.

An independent panel of judges will select one winner in five categories in both the Open (19 years and over) and Scholastic (up to age 18) divisions. Open division winners will receive $250 cash awards; Scholastic winners will get $250 U.S. Savings Bonds.

For entry information, call Martha Teel, managing editor, Automobile Quarterly, (215) 375-5444.

Blue books are the last word on used-car, truck values

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

They are the Bibles of the automotive industry, used by financial institutions, insurance companies new- and used-car dealers and fleet and lease firms to price almost anything that flies, floats or rolls.

Their generic designation is "blue book" because none of their early publishers trademarked the name "blue book" when they began appearing more than 75 years ago.

Today, they are the industry's authority on thousands of used-car and truck values that affect the millions of consumers annually who buy used vehicles, lease new ones, need appraisals by insurance companies on wrecked vehicles or trade in old cars and trucks for new ones.

"Used-car guides provide a point from which two people agree to begin negotiating," said National Automobile Dealers Association Editorial Director James H. Lawrence.

Blue books are sold under titles like Red Book Official Used Car Valuations, Black Book Used Car Market Guide Weekly, Kelley Blue Book Official Guide, NADA Official Used Car Guide, Automotive Market Report and Galves Auto Price List.

Although most consumers are aware that they exist, as trade publications they are not widely circulated among the public.

Yet circulation figures for some are hefty — the NADA Official Used Car Guide boasts 402,000 subscribers and a median subscription price of $27.

Most of the publishers put out more than one price guide. NADA publishes seven on everything from old trucks to used motorcycles, boats and snowmobiles. Red Book publishes 10, including one on farm equipment and another on van conversions.

CIRCULATION	
NADA Official Used Car Guide	402,000
Kelley Blue Book Auto Market Report	80,000
Black Book Weekly	70,000
Red Book Official Used Car Valuations	62,000
Galves Auto Price List	12,000
Automobile Market Report	10,000

Lease guides that fix residual values on cars and trucks are relatively new to the industry. Black Book introduced its lease guide about a decade ago, and Kelley's has been out seven years.

The blue books are printed in a variety of shapes, sizes and colors. For example, an edition of Black Book fits snugly into the palm of the hand. A copy of NADA Used Car Trade-In Guide slides easily into a shirt pocket, while Automotive Market Report has the same dimensions as a sheet of typing paper.

Some price guides are published weekly, and others come out monthly, every eight weeks or six times a year.

Probably the only controversy among their publishers is whether the weekly guides contain more accurate values than the monthly or bimonthly guides. Those who publish the less-frequent books say theirs offer stability. Besides, they argue, vehicle prices do not fluctuate more than $25 or $50 from week to week.

Blue books provide a diversity of information including automobile body types, parts of vehicle identification numbers, weight, manufacturer's suggested retail price and insurance symbols.

Yet the most important figures they provide are suggested retail and wholesale values of used cars; values for average, clean and super-clean used cars; and the amounts banks and other lenders are willing to loan on them.

Methods of fixing values differ among these "Bibles of the automotive industry"

AUTOMOTIVE NEWS/JOE WILDSCHS

The lease guides are invaluable to leasing companies that project the trade-in value of a vehicle several years into the future to calculate the cost of new-car leases to customers today.

The guides offer different information depending on subscribers' needs. For example, Black Book Weekly provides dealers attending an auction with a quick reference of wholesale prices; it doesn't provide an average loan value for a vehicle.

And while NADA Official Used Car Guide provides wholesale and retail prices and average loan values, it doesn't provide vehicle weights.

Red Book Official Used Car Valuations, on the other hand, provides all of the above financial values and more, including weight, transmission type and VIN numbers. But it doesn't fit in a shirt pocket.

How are the values determined by the editors and reporters who work at the guides? Most confess the approach is less than scientific. Yet they deny there is any voodoo involved.

Methods of fixing values differ. They use prices gleaned from auto auctions and discussions with dealers and wholesalers in addition to keeping abreast of economic trends and — most important — experience.

RED BOOK: "Almost anybody who is in touch with the market can nail down a price on a vehicle within a few hundred dollars," said John F. Heffinger, publisher of Red Book.

Heffinger's family owned Red Book until 1968 when the Canadian conglomerate Maclean Hunter purchased the Chicago-based National Market Reports Inc., Red Book's parent company, from them.

Automobile Red Book, with a circulation of 62,000 and priced at $45 annually, claims the longest history among the blue books. A Chicago trade association launched it in 1911, according to Heffinger.

It provides values for cars manufactured beginning in 1981 through the present. Other guide books provide values for cars as old as six or seven years.

In 1983, the company saw a need for its Older Car Red Book, and today it tracks vehicles manufactured before 1981.

"We felt that with cars being financed for five to 10 years, the older cars do have value," said Heffinger. "In Illinois, the average age of vehicles in the state's fleet is 7.5 years. That is a half a year out of our (newer-car) book."

National Market Reports publishes three editions of the Automobile Red Book every six weeks (eight times annually) for three regions of the country: West Coast, East Coast and the Midwest.

Heffinger says editors and reporters arrive at values by studying several sources of news and information including Automotive News, other industry journals, competing guidebooks and reports from auctions and dealers.

"Automotive News editorial pages discuss what sells and what isn't selling," said Heffinger. "And the classified section tells us which vehicles are selling between dealers. If a car sells for $1,500 over invoice and the seller keeps the order card, then that vehicle is hot."

Red Book relies on sales reports collected from auctions to gain a feel for values among makes and models of different manufacturers.

"When General Motors came out with a Monte Carlo, it was targeted at a certain segment of the market where there is competition," Heffinger explained. "We want to see what the price relationships are between different cars in the same segment."

However, he cautioned that relying exclusively on sales reports from auctions can be misleading unless there is someone on site to gather the facts about vehicles that are crossing the auction block.

"Unless you are at the auctions and see the vehicles, you don't know what they are," he said. "Averaging sale prices of 15 Monte Carlos can result in a faulty value because their conditions vary."

Heffinger described price guides as falling into one of two categories: Reporting or projecting values. He described Red Book as a projector of automobile values.

"We all get good information that is essentially historical data," he explained. "Based on the information, we say here is where the car is for the time period on the cover of the book."

Red Book publishes its automobile value guide eight times annually.

Heffinger said values change less frequently than would be expected. And he said there is usually less than a $200 difference between regions.

"The biggest difference in car values is between highly competitive markets in urban areas and rural non-competitive markets," he said.

Red Book's largest subscriber base is the insurance industry, which uses the guide for evaluating total losses of vehicles involved in auto accidents.

Insurance companies that finance cars also use the book to establish how much to lend on vehicles. And Heffinger said Red Book is valuable to banks, credit unions and dealers for the same reason.

"Red Book's finance value is a mathematical calculation of 90 percent of wholesale value," he said. "Those norms are established by the banking industry."

It also provides several digits from a car's VIN number to identify the vehicle, as well as information on engine and transmission type, air conditioning, power steering, power brakes and factory advertised delivered prices.

Like other blue books, it also quotes values on popular options and equipment.

Until 1984, Red Book printed insurance symbols (and still does on vehicles manufactured prior to 1984) on which insurance companies predicated their base premiums. But a rift with the provider of the symbols halted the practice.

National Market Reports now offers an Electronic Red Book. Still in its infancy, the book has five customers — insurance companies — doing a volume of 800 to 1,000 value requests per month.

The company has considered adding a book on older heavy-duty trucks.

BLACK BOOK: Hearst Media Corp. purchased Georgia-based National Auto Research, publisher of Black Book, in 1979 from Atlanta-based Cox Communications, owner of Manheim Auctions.

The original owners launched Black Book Used Car Market Guide Weekly in 1955 as a guide to price ranges of vehicles sold at auctions. The company now has seven vehicle market guides and publishes two other books, the Vehicle Identification Guide and Import Car Fact Book.

Black Book Weekly has about 70,000 subscribers. Editor Johnny Gilbert described it as a price guide that contains 3,655 vehicle descriptions.

BOOKS

FROM PAGE 28

"Our bread-and-butter customers are dealers who do business at auctions," said Gilbert. "A dealer keeps it in his shirt pocket and refers to it when buying or selling a vehicle."

Representatives of financial institutions who rarely leave their offices to attend auto auctions also use the market guide.

National Auto Research employees attend auto auctions nationwide. They report on sale price, vehicle condition, mileage and how clean a vehicle is.

"When the information arrives at the office, we assemble and study it," said Gilbert. "We then make a decision on whether there has been any movement in the market. If the prices on a vehicle are higher than the figure in the Black Book Weekly, then we will raise it."

He said editors do not simply average prices they receive from the company's 50 reporters nationwide. The weather, supply of vehicles at an auction and other factors play a role in determining values.

Black Book Weekly has four regional editions and four categories of vehicles: An extra-clean vehicle shows no wear and has low mileage; a clean car has a few more miles and minimal wear; an average car shows wear, has high mileage and may need new tires; and rough is any vehicle below that standard.

The company publishes wholesale values of vehicles while its sister publication, Black Book Monthly, publishes retail values.

"Loans are 90 percent of clean wholesale," said Gilbert. "Weight and other facts about the car provided by other blue books are not critical to us or our subscribers."

According to Gilbert, Black Book differs from many other market guides because reporters are on site at auctions, appraising vehicles. Even though there are four editions, Gilbert said differences in values across the country are minimal.

"Our primary purpose is to report accurate and timely information to keep the industry's new- and used-car dealers on top of the market," said Gene McDonald, president and publisher.

NADA GUIDES: The NADA Official Used Car Guide is by far the industry leader, with nine regional editions. A majority of subscribers to the monthly publication are dealers and members of the financial community.

Editorial Director James H. Lawrence said NADA launched the guide in 1933 as "NADA's approach to represent all dealers without bias."

Since then, it has grown every year, he said, and NADA has spent a bundle in market research.

Values in the book are based on 15,000 transactions during a 30-day period that include auction and new- and used-car dealer sales reports.

"We receive auction reports and enter that into data banks, along with thousands of dealer sales," said Lawrence. "Then the computer sorts the data. The values in the guide reflect the data."

Average trade-in value listed in the NADA book is the same as wholesale in other books. Loan value is based on 90 percent of average trade-in. Other market data includes average retail price and average loans.

Lawrence said the NADA guide provides subscribers with timely and reasonably accurate market data in addition to a guide to VINs, mileage tables, pictures of models (in special editions four times annually) and a variety of miscellaneous data useful in determining values.

Although Lawrence said there is a trend toward offering electronic values — NADA offers one — he is soft on the future of such "books."

"I can't see the dealer going to an auction carrying a computer in his pocket," he said.

GALVES AUTO PRICE LIST: Harmon Leiman, editor of Galves Auto Price List, said his company began publishing its weekly price guide in 1956. He said 80 percent of the company's subscribers are Eastern seaboard new- and used-car dealers.

Leiman declined to reveal circulation, but industry sources estimate it at roughly 12,000.

The company publishes a weekly used-car market guide and a monthly import-car market guide. Plans to launch a light-truck guide and an older-car price list are under way.

"The truck book is in the offing," said Leiman. "We see a need for it. We conducted a survey and were amazed at how many people wanted the information. There are a lot of old cars on the road and people want market data on them, too."

He said the truck book will include values on vans, utility vehicles, Suburbans and pickups within one ton.

Galves has been in the used-car wholesale business for six decades in New York. The company's core business is buying and selling vehicles wholesale.

Prices in the book are predicated on those sales in addition to input from dealers. Leiman said the company also studies auction reports to research trends and prices.

Generally, Galves publishes lower prices on vehicles than other guide books because wholesalers use it to purchase vehicles.

"We are a buying book specializing in the wholesale market," said Leiman. "Auctions report sales but our prices are established before the sale — they reflect the base wholesale market.

"We don't bother with a lot of symbols and other data," he said. "We are a simplified service for dealers who want to know what the wholesale market is for the Eastern United States."

He said the company publishes the import guide monthly because those prices are relatively stable and there are fewer imports sold.

AUTOMOTIVE MARKET REPORT: Fleet and lease companies and dealers that serve them make up the majority of the 10,000 subscribers to Pennsylvania-based Automotive Market Report.

Started in 1951 by a used-car dealer, the weekly magazine-sized guide reports prices paid for vehicles at auctions.

"We report what has happened instead of projections," said Clyde Hillwig, publisher.

He said automakers base their "guaranteed value programs" on prices in his guide. In the 1960s, Ford launched a marketing strategy to gain a share of the fleet and lease market from Chevrolet, he said.

"Chevrolet had the bulk of the fleet and lease business," said Hillwig. "Ford asked fleet and lease companies to buy their vehicles, telling them they would pay the difference in value between a Ford and a Chevrolet at the end of the lease.

"They continue to base prices for their guaranteed value programs to daily rental companies on the magazine's clean category," he said.

AMR collects weekly sales reports from auctions, then serves up the information in two forms: A recap of prices by region and the actual prices paid for vehicles at auctions.

Hillwig said 14,000 prices are emptied into AMR computers to obtain the value of all clean cars in the order of their price. Median prices on makes and models are selected from the clean category and compared to prices in the previous week's issue to show price increases or declines by zone.

Hillwig said the publication is basically a used-car price guide. Loan value is based on 90 percent of the clean category.

AMR alternates publication of a domestic guide with a foreign-car guide. The guides are biweekly so the company is not behind the market, Hillwig said. If the magazine were produced monthly, the prices would be projections, he said.

"We try to keep people up to date on the current value of cars," he said. "If our subscribers are selling their vehicles to a wholesaler, then they base their prices on Automotive Market Report."

Customers who sell cars to auctions base their prices on a percentage of the AMR clean category, he said.

Hillwig said some leasing companies have an arrangement with auctions whereby they receive 100 percent of the AMR clean category price averaged over a month.

Fleet and lease companies also use the magazine to rate auctions.

KELLEY BLUE BOOK: California-based Kelley Blue Book serves mainly the West Coast, yet the company has 80,000 subscribers nationwide.

"Kelley Blue Book is primarily for car dealers and finance companies, but a lot of the subscriptions are to insurance companies," said Robert Kelley, publisher.

Launched in 1926, the price guide is published six times per year. Kelley said values vary from 2 to 5 percent from one publication to the next.

"There is not an exact price that a used car is worth," he said. "It's not like the stock market. Publishing the book every two months gives the marketplace more stability."

Kelley produces several books including a mobile home guide, motor home guide, a motorcycle guide and its Official Guide for Older Cars.

Values for cars are based on auction reports and opinions of Kelley Blue Book staff members after meetings with dealers and personal contacts with used-car managers.

"Our book gives the used-car manager guidance in appraising his cars," said Kelley.

The guide provides VIN, weight, original list price, wholesale and retail value on used cars and trucks, both domestic and foreign.

Wholesale and retail values are based on clean vehicles fully reconditioned and ready for resale with acceptable mileage.

Kelley Blue Book also has an electronic version of its printed book in addition to an electronic inventory and appraisal service providing current book prices for wholesale and retail market value.

DEPRECIATION: *Makers may gain or lose as U.S. reviews practices*

WASHINGTON — The way the auto industry is allowed to depreciate production equipment could change as a result of a study undertaken last week by the U.S. Treasury Department. The study — to be completed a year from now — holds the potential for millions of dollars in tax savings or tax losses for automakers.

The Tax Reform Act of 1986 requires the Treasury to study the depreciation practices of a variety of industries to determine if tax rules covering the "useful life" of depreciable assets are accurate.

Tax experts from the auto industry and the auto parts industry met with Treasury Department officials last week to discuss how the study of the auto industry will be conducted. Lowell Dworin, the department's director of depreciation analysis, said his staff will design a questionnaire as the first step in the inquiry and is seeking industry input for the survey.

Treasury's final report will attempt to gauge how quickly automakers' productive assets wear out and whether they retain value once they are scrapped or sold, Dworin said. The Treasury will use the study to recommend how quickly automakers should be allowed to write off the cost of production investments. Dworin indicated depreciation periods could be lengthened or shortened as a result of the study.

Software links Manheim and customer

Manheim Auctions will dispose of 50,000 lease vehicles for the Pennsylvania-based LeMans Group in an agreement that involved the development of computer software to link the two companies.

"This will provide clients of the Lemans Group with an additional service," said Michael Moumousis, vice president of marketing for the auction chain. "It will reduce the time it takes to bring a lease out of service and to the auctions."

The Lemans Group provides computer software and management services to banks and other financial institutions for the management and accounting of leasing portfolios.

Its computer software offers invoicing, payment processing, management of sales and property taxes, accounting, data entry and tracking of residual value claims.

The agreement with Manheim will enable the company's clients to select vehicles for sale on the computer and transmit the data to Manheim overnight. After the sale, information on LeMans' computers will be updated by the auction company.

LeMans expects an increase in the number of financial institutions that will enter the consumer leasing market as a result of tax reform.

It took the companies a year to develop the software and link their computer systems. "The LeMans Group had the lease portfolio and Manheim had the auctions," said Moumousis. "We developed the software together."

Manheim expects a 20 percent recycling of vehicles annually.

AUCTION BRIEFS

CHARLES THOMAS

Leasing firm picks Anglo

American Auto Leasing Corp. of Warminster, Pa., has selected Nashville-based Anglo American Auto Auctions to remarket 200 of its fleet cars in 1988 and 800 in 1989.

"Because we are primarily a regional company, our volume is moderate but our fleet is spread across the country," said Ken Peacock, fleet disposal manager for American Auto Leasing.

Anglo has conducted auctions for the company's vehicles in Arizona, California, Florida, Georgia, Illinois and Michigan.

"We are finding that small to mid-sized leasing companies such as American Auto Leasing place great value on our regional auctions and our reconditioning services," said Dennis Thee, vice president of marketing for Anglo American Auto Auctions.

"As these companies grow and their fleet disposal needs increase, an agreement with Anglo American means they will not have to hire additional staff to handle the load," he said.

Auction expands

State Line Auto Auction Inc. of Waverly, N.Y., opened its fourth auction lane recently. Founded in 1981, State Line has experienced rapid growth with a current weekly consignment of 600 vehicles.

The auction has 28 acres of parking and a 16,000-square-foot facility. In addition to dealer consignments, the company has Ford Credit and several leasing companies as customers for its Friday auction. Facilities include a reconditioning center and transportation service. It is a member of ServNet.

AUCTION DATES

Chrysler Motors

Aug. 30 — Florida Auto Auction of Orlando, Ocoee, Fla.; Hatfield Auto Auction, Hatfield, Pa.; American Auto Auction, Walpole, Mass.; Nashville Auto Auction, Nashville, Tenn.; Denver Auto Auction, Aurora, Colo.; Golden Gate Auto Auction, Fremont, Calif.; and South Seattle Auto Auction, Kent, Wash.

STUDY

FROM PAGE 1

average — primarily due to insufficient profitability. The worst score went to Nissan which, according to the formula, is the sickest of the dozen companies evaluated.

The new analytical approach leads to different conclusions than might be drawn by just comparing the companies' financial data.

Toyota, for example, appears to have the largest financial muscle of the dozen carmakers analyzed because of its cash position. But Toyota's overall ranking suffers because the formula gives the automaker a low score on future prospects because of its sales growth rate and investment as a percentage of sales.

On the other hand, Chrysler shows the least liquidity of the 12 — as measured by the formula — but is well set for the future, the study says.

"Capitalyse" differs from other systems by trying to overcome oddities in national accounting rules and laws in comparing international competitors. The data was pulled from annual reports over the last four years.

The scores are based on a priority-weighted compilation of three basic factors: financial structure, profitability and "prospects." Profitability, which is deemed most important, is weighted by a factor of five. Future prospects and financial strength are assigned factors of four and three, respectively.

The financial structure score is based on analysis of three criteria: capital, liquidity and cash flow as a percentage of debt.

The profitability score is derived from yield on sales, owned capital and total capital. Future prospects are based on the rate of sales growth over the last four years; sales as a percentage of inventory and marketing costs; and investments as a percentage of sales.

Chrysler finished number one in "prospects," Ford ranked first in profitability, and Toyota was tops in financial strength.

According to the magazine: "Ford and Chrysler are in almost all respects so markedly ahead of the industry averages they they leave all of their competitors far behind."

Chrysler's high ranking of 45.7 percent above the average of the 12 resulted from a combination of healthy prospects and its high relative profitability.

Honda ranked just over the industry average despite a measure of financial strength and a good record of profitability. It did poorly in the prospects analysis because recent sales growth rate, inventory/marketing costs and investment levels were judged below average.

Four makers came out below average in the overall scoring: GM, VW, Renault and Nissan.

GM stood just above average in the financial structure category d spite registering a minus result in cash flow as a percentage of capital.

But the world's largest carmaker was well below the 12-company standard in profitability — reflecting earnings as a percentage of sales and capital. GM's prospects also looked sour under scrutiny. The reason: poor sales growth and low sales as a percentage of inventory/marketing costs.

Even lower was VW, Europe's sales leader for the past three years. VW's big problem is its low margins — something the company is trying to address by cutting costs and improving sales mix.

Chrysler scored 73.8 percent over the industry average in the tabulation of "prospects" — the best single score in any of the three main categories.

It ranked second only to Fiat in volume growth rate; second to BMW in sales as a proportion of inventory and marketing costs; and first in investment as a proportion of sales.

Chrysler finished just below the 12-company average in the assessment of financial structure. Its weakest point is the lowest liquidity rating of all manufacturers compared.

"It doesn't mean Chrysler has problems paying," said Seyfried. "This compares Chrysler with 11 other very successful auto manufacturers."

Ford finished second at 39.8 percent above industry average. It's greatest strength is profitability, finishing tops in the category with the best pretax earnings ratio last year and second best over the past four years.

Ford has the second-strongest financial structure after Toyota, and is rated well ahead of the industry average in the "prospects" category.

Third-place Daimler-Benz finished 20.3 percent above industry average, scoring best on its record of profitability.

Though the company doesn't break out its passenger-car earnings, many analysts believe it had been the world's most profitable carmaker up until the dollar plunge.

Toyota placed fourth in the standings and rated far and away as the financially strongest automaker. The German auditors pegged it No. 1 in owned capital as a percentage of overall capital, liquidity and capital as a percentage of debt.

But like the two other Japanese makers, Toyota was assessed a below-average ranking for "prospects," falling below the industry average in sales growth rate and investment as a percentage of sales.

Renault pulled out of the red last year, but its staggering debt structure left it in 11th place among the dozen companies. Its financial structure and profitability rated the worst of the 12, even though its prospects score was higher than GM and Honda.

Nissan earned last place by doing poorly in all three categories. Its biggest downfall is a shaky outlook for the future.

The analysis judged Nissan far below the industry average in investment as a percentage of sales, and in its record of sales growth.

But the results in no way suggest Nissan is about to go under, says Seyfried.

"When you are starting a system there are things you can't really explain," he said. "Nissan earns money and nobody expects it to go bankrupt."

TRANSPLANT

FROM PAGE 1

plants as the basis for comparison, the results show the Japanese to be significantly worse in black hiring — 13 percentage points worse for the 51 Japanese auto parts plants studied, 14 points worse for Nissan in Tennessee, 16.5 points worse for Honda in Ohio and 23.7 points worse for Mazda in Michigan.

The research, however, falls short of lauding the American manufacturers, suggesting that high levels of black hirings in greenfield plants were in part a result of worker recall rights under UAW contracts. And, in its conclusions, the study says newer American auto plants can be expected to follow the Japanese lead and limit the number of blacks in their workforces.

The researchers, sociologist Robert E. Cole and urban geographer-sociologist Donald R. Deskins Jr., suggest that Japanese manufacturers systematically located their U.S. plants in rural areas with "very low black populations" in comparison to developed industrial areas that were the traditional centers of American manufacturing.

But their study adjusted for those factors and compared the percentages of blacks within 26-mile commuting distances of the plants with the percentages of blacks hired at the plants. Those comparisons found substantial differences between new domestic plants and the Japanese transplants.

BLACK WORKER HIRING BY JAPANESE TRANSPLANTS

	A Blacks within commuting distance of plants (%)	B Blacks employed in plants (%)	C A-B difference
GM-U.S. greenfield sites	16.6	25.4	+ 8.8
51 Japanese auto parts plants	12.6	8.4	– 4.2
Nissan	19.3	14.0	– 5.3
Honda	10.5	2.8	– 7.7
Mazda	29.0	14.1	–14.9

The findings come less than two weeks after Michio Watanabe, leader of Japan's ruling political party, made derogatory statements about blacks, reviving the memory of similar comments made by Japan's previous prime minister, Yasuhiro Nakasone. Earlier this month, current Prime Minister Noboru Takeshita apologized to the Congressional Black Caucus for the Watanabe statement.

Spokesmen for Mazda, Nissan and Honda either dispute the findings or deny that they indicate discrimination.

A Honda spokesman said that the company has had an agreement with local Ohio community leaders in Union and Logan counties to hire locally. "Commuting radius has nothing to do with the way we planned to build in the community," he said.

Bucky Kahl, Nissan director of human resources, said that Nissan chose to locate in Smyrna after "a careful search. The company was looking for a talented and dedicated workforce, easy access to suppliers, access to markets and a supportive business climate."

Kahl said that in the standard metropolitan statistical area designated by the Equal Employment Opportunity Commission as potentially supplying the Smyrna workforce, blacks represent 8-9 percent.

But he said Nissan chose to include Nashville in the selection area, which changed the percentage of available blacks to 17.2 percent. Of the production workers, who are recruited locally, 16.9 percent are black, he said.

When salaried workers, who are recruited nationally, are included, the total black workforce at Nissan is 14.4 percent, the spokesman said.

A Mazda spokesman said, "Currently, the total black population at Mazda is 14 percent — well within the guidelines indicated by the standard metropolitan statistical area, but a little below what we'd like it to be."

The spokesman said Mazda would like to hire more blacks in skilled trades but they are not available in the labor pool.

The Mazda spokesman said, however, that the company is "far exceeding its objectives in hiring black officials and managers. We're way above the EEOC guidelines."

An EEOC spokesman said that using standard metropolitan statistical areas is only one step and that "the appropriate labor pool for each plant is a case by case decision."

Cole said EEOC guidelines are often based on "the experience of firms in the local labor market" and that EEOC laborshed guidelines are not satisfactory. Hence, he used another method — a "gravity model" — to determine the laborshed for the plants studied. Cole's study focused on the population living within an average 26-mile commute of the auto plants.

Though they constitute about 11 percent of the U.S. labor force, blacks made up about 17.2 percent of the workforce in the Big 3 in 1984, the study says.

The authors wrote that if the auto industry fails to continue to provide opportunities for blacks, the result will be a polarization of American society and a burgeoning of the permanent underclass.

Their study showed that the percentage of black workers at greenfield sites — 25.4 percent — is actually higher than the percentage of blacks in the commuting area, 16.6 percent. But the authors suggest that disparity will disappear as workers retire and new employees are hired locally.

The greenfield plants studied were GM plants built since 1980: Detroit-Hamtramck; Fort Wayne, Ind.; Fairfax, Kan.; Wentzville, Mo.; Lake Orion, Mich.; Shreveport, La.; Oklahoma City; and Saturn in Spring Hill, Tenn.

Also studied were seven Japanese assembly plants, focusing on the three with full workforces at the time of the study: Mazda Motor Manufacturing (U.S.A.) Corp. in Flat Rock, Mich.; Nissan Motor Manufacturing Co. U.S.A., in Smyrna, Tenn.; and Honda of America Manufacturing Inc. in Marysville, Ohio.

The study also considered 51 Japanese auto parts plants.

The authors said they assumed that all the whites and blacks in the laborshed were "equally available" to work at the plants. But Cole said that — in reality — fewer white workers would choose to apply for a job at an auto plant, based on other opportunities available.

The study also looked at 21 Big 3 plants built before 1980 and 31 plants that had been extensively modernized since 1980.

The percentage of blacks within the 26-mile commuting distance was highest at Big 3 traditional plants — 19.8 percent — and lowest at the Japanese assembly plants — 12.8 percent — with the greenfield sites coming in at 16 percent.

The authors pointed out that in a county with 50,000 available workers, "The GM greenfield sites at 16 percent may be viewed as 'only' 3.2 (percentage points) above the 12.8 percent of the Japanese OEM plants. But that represents a 25 percent higher potential black employment . . . an extra 1,600 potential black jobs. For an assembly plant employing 5,000 workers, that would mean an extra 160 expected black jobs."

New Montero a key to Mitsubishi dealer rise

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CORONADO, Calif. — Mitsubishi Motor Sales of America will use the new Montero four-door sport-utility vehicle to fuel greater growth in its dealer network.

Richard D. Recchia, executive vice president and chief operating officer, projects annual sales of the new 1989 model at 12,000 units, with two-door versions accounting for an additional 5,000. Four-door V-6 Monteros will carry price tags ranging from $17,099 to $18,389, while two-door models are priced from $12,299 to $15,399.

The new models go on sale Sept. 5.

"We believe that instead of buying a four-door sedan, many prospects will decide to 'stand-out from the crowd' by purchasing a four-door/four-wheel-drive vehicle that reflects his or her distinctiveness, as well as adventurous spirit," Recchia said.

"Based on the profile of buyers in this market and based on the fact that our principal competition will be the Jeep Cherokee and the Isuzu Trooper, we anticipate that the median age of our buyers will be 37 years with relatively high demographic characteristics, with 75 percent of our buyers being male, 60 percent college graduates and 85 percent married," he said.

Recchia: "We believe that instead of buying a four-door sedan, many prospects will decide to 'stand-out from the crowd' by purchasing a four-door/four-wheel-drive vehicle that reflects his or her distinctiveness, as well as adventurous spirit."

The introduction of Montero, along with the earlier debuts of Galant and Mirage and the anticipated launch of the Eclipse from Diamond-Star Motors Corp. in January, has created a renaissance in terms of Mitsubishi product offerings in the United States, Recchia said.

"Accordingly, because of the strength of our product offering and because of the availability of additional volume from Diamond-Star, Mitsubishi is now in the process of a major expansion of our dealer network," Recchia said.

Mitsubishi now has 193 full-line dealers and 14 truck-only outlets. Plans call for 235 dealers by the end of 1988 and 350 by the close of 1989, with most of the new points opened in the Midwest and Northeast.

"Then in 1990, as Diamond-Star reaches full capacity, MMSA will add an additional 50 dealers, ending the 1990 calendar year with a total of 400 dealers in 130 markets," he said.

"Our total sales volume for cars and trucks during that period is forecast to be approximately 200,000 units for 1989 and over 240,000 units for 1990."

Recchia said the company is constructing new regional offices in Orlando, Fla., and Dallas that will complement the current regional facilities in Bridgeport, N.J., and Los Angeles.

He said the firm also is finalizing plans for the opening of a fifth region. It will be headquartered in Chicago and will be in operation in January. A parts depot under construction in Atlanta is scheduled to be open next spring.

Dull days: Car sales decline 19%

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Lacking the stimulus of last year's incentives, this year's mid-August domestic car sales declined almost 19 percent.

Deliveries for Aug. 11-20 totaled 190,445 cars, 18.86 percent below the 234,719 sold during the year-ago period.

The daily selling rate fell to 21,161 from 26,080 last year. There were nine selling days in both periods.

Four of the U.S. automakers reported decreases for the mid-August period, while sales rose for two transplant companies.

General Motors' sales of 88,394 cars dipped 30.34 percent from the 126,887 delivered in the Aug. 11-20 period of 1987.

Ford Motor Co.'s sales dropped 10.05 percent to 60,184 vs. 66,907 last year.

Chrysler Motors' sales were almost unchanged at 25,985 cars, 0.82 percent below the 26,200 sold in the comparable nine days of 1987.

Nissan reported 4,182 cars sold in mid-August, 4.52 percent below the year-earlier period's 4,380.

Honda sales jumped 22.39 percent to 9,256 units vs. 7,563 last year.

Toyota posted an increase of 20.29 percent. Its car sales of 1,429 compared with 1,188 during mid-August 1987.

Mazda sold 1,015 cars in this year's 10-day span. The company had not begun producing cars in the United States during the comparable period of 1987.

Belt use is 43%, NHTSA study finds

WASHINGTON — Safety belt use by drivers has reached a record high 43 percent.

Secretary of Transportation James Burnely said NHTSA studies in 19 U.S. cities found that 43.4 percent of drivers are now wearing safety belts. In 1982, before NHTSA began a nationwide campaign to encourage belt use and state adoption of mandatory belt-use laws, 11 percent of drivers used safety belts.

Burnley said, "Among front-seat passenger-vehicle occupants (passenger cars, light trucks and vans), safety belts saved about 4,000 lives in 1987. From 1983 through 1987, safety belts have saved nearly 11,000 lives — 6,900 due to belt-use laws."

Rusty Jones Dealers:
salvage and improve your aftermarket profits with the world original

PROFESSIONAL Waxoyl ADVANCED TECHNOLOGY CORROSION PROTECTION

since 1939, maintaining its car-life $2000-insured transferable warranty.

As announced in its Aug. 1 bulletin to all its dealers, and as reported in USA today and in the Wall Street Journal of Aug. 2, Rusty Jones "will no longer extend any warranties...related to Rusty Jones products, including anti-rust, gloss, fabric, vinyl/leather, and sound treatments...such products are being sold 'as is'."

Chief reason for this decision "was the introduction in January 1987 of limited six and seven year rust preventive warranties on virtually all domestic automobiles."

Smart dealers everywhere are profiting by wising up car buyers to the fine-print facts on the 6/60-7/70 warranties: that the 6-7 year provision covers only "outer-body perforation," merely ONE year for other rust...that the 6/60-7/70 warranties stop when inner-body rust often starts, at only ONE year.

COMPARE! *WAXOYL* leads the field with its $2000-insured warranty against in-out-under rust as well as outer-body rust...for the life of the car...transferable to new owners...backed by one of the world's largest insurance groups.

PLUS A.I. offers unprecedented dealer aftermarket profits from four additional services never before available as a total WARRANTED car preservation package: *GLAZE-GARD* Paint Sealant... *FAB-GARD PLUS* Upholstery Protector, now fortified with Dupont TEFLON...*UNDER-GARD* Under-Body Protector/Sound Deadener...*NU-GARD* Vinyl/Leather Preservative.

PRODUCTION

Car output climbs 13% to 123,797

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production of 123,797 increased 13.36 percent over the prior week's 109,208 and was 5.61 percent more than the year-ago week's 117,220.

So far this year, 4,483,516 cars have been built, 4.70 percent less than the 4,704,707 completed last year at this point.

Last week's scheduled auto production was shared as follows: General Motors, 53.60 percent; Ford Motor Co., 23.34 percent; Chrysler Motors, 8.56 percent; Honda of America Manufacturing Inc., 6.04 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.51 percent; New United Motor Manufacturing Inc., 2.63 percent; Nissan Motor Manufacturing Co. U.S.A., 2.32 percent.

Truckmakers scheduled output of 78,728 units last week, 5.98 percent more than the previous week's 74,289 and 21.41 percent more than the year-ago week's 64,844.

Year-to-date, 2,689,273 trucks have been assembled, 8.60 percent more than the 2,476,345 built last year at this time.

GM's Detroit-Hamtramck and Orion Township, Mich., plants reopened last week after being shut down for model changeover.

Chrysler's Jefferson Avenue plant in Detroit resumed output today after being idle for model changeover.

As reported earlier, Ford's Lorain, Ohio, plant remains idle for changeover to the new Thunderbird and Cougar models. The plant is slated to resume output in early October.

Chrysler's Newark, Del., facility remains closed for model changeover until mid-October.

GM slated overtime last Saturday at Buick City in Flint, Mich., and at Wilmington, Del.

Ford's Edison, N.J., plant was slated for overtime last Saturday.

Daily overtime is scheduled this week at all Ford plants except Lorain and Edison.

Chrysler's St. Louis and Toledo, Ohio, plants were slated for overtime last Saturday.

Canadian cars move up 25%

Canadian automakers scheduled production of 20,818 cars last week, 25.70 percent more than the prior week's 16,562 and 67.00 percent more than the year-ago week's 12,466.

The year-ago week's output was affected by downtime for model changeover.

So far this year, 708,518 cars have been assembled, 43.64 percent more than the 493,261 built last year at this point.

Targeted truck output of 20,002 last week increased 6.15 percent over the previous week's 18,843 and was 29.58 percent more than the year-ago week's 15,436.

Year-to-date, 592,626 trucks have been built, 10.47 percent more than the 536,462 completed last year at this time.

Volvo's plant in Halifax, Nova Scotia, resumed output today. †The plant had been idle for vacation.

Daewoo chief won't bend knee to GM

His moves ruffle Detroit's feathers

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Free-wheeling Daewoo Group Chairman Kim Woo-Choong has struck a deal to sell his Opel-based cars to Czechoslovakia and is also courting the Hungarians. In the process, he may be charting a course through stormy waters with his partner, General Motors.

While trying to open the Eastern Bloc to his cars, Kim has also floated the idea of taking the company public, has fought GM on using an Australian-sourced 2-liter engine in export versions of the LeMans and has lost market share at home to rivals Kia and Hyundai, who are introducing new models at a faster rate.

Although officials from both companies paint a rosy picture of the Daewoo-GM relationship, strains are beginning to surface as the Korean conglomerate tries to flex its muscles at home and abroad.

GM finds itself in an unusual position with Kim. As head of one of Korea's largest conglomerates, or chaebol, as they are called, his relationship with the U.S. automaker is confined to joint ownership of the Daewoo Motor unit.

That hasn't put a damper on Kim's auto activities. Earlier this year, he signed a joint-venture arrangement with Suzuki, another GM partner, through the parent company, Daewoo Corp., to produce minicars and minivans in Korea.

And he has been traveling the globe making other deals as well.

The Czechs reportedly have accepted Kim's offer to buy 7,000 LeMans units starting early next year. GM officials in Europe said they are aware of the deal and that

Reuss: GM is considering a three-crew, two-shift approach at plants producing hot-selling models

GM hopes to make its point

Reuss maps program to hike car-truck market share

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors expects to improve its car and truck market shares by at least one percentage point in the 1989 model year as industry sales reach 15 million for the fifth year in a row.

"I think we're going to have another good year," said Lloyd Reuss, GM executive vice president in charge of North American automotive operations. "You hear a lot of people talking about a recession, but I don't see one coming during the 1989 model year."

Reuss said GM expects to gain a percentage point of market share in cars and one to 1½ points in trucks in 1989.

All but four of GM's remaining assembly plants will be running on double shifts under the company's aggressive production schedules for 1989, and its truck plants are scheduled at or near capacity for the year, he said.

GM has no immediate plan to convert any car plants to truck production, though that is included in future contingency plans, he said.

Instead, the company will look for ways to boost truck capacity within existing facilities, mainly through productivity improvements.

Reuss said GM is considering for the future a three-crew, two-shift approach at plants producing hot-selling models, similar to one it has pioneered in Europe.

"It is an approach whose time has come," Reuss said, though he said it is unlikely it will be implemented in 1989. "We can't afford to have these big facilities not utilized at a high percentage of the time."

He predicted 1989-model-year car sales will be about 10 million units and trucks will be at least 5 million units. That would be slightly less than in the 1988 model year, which will probably surpass the 15-million mark, Reuss said.

Reuss predicted GM's car market share will reach 38 percent in 1989, compared to the 37 percent it is achieving for this calendar year and the 36 percent for the current model year.

Meanwhile, GM has gained 2.3 percentage points' penetration in light trucks in the 1988 model year. GM's truck share has been running at about 32½ percent.

Reuss said GM's production schedules are extremely aggressive, particularly in the fourth quarter of 1988. Production schedules for the rest of the 1989 model year are expected to be equally as aggressive, he said.

10-deal chain owes millions; in bankruptcy

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

CAMDEN, N.J. — A New Jersey dealer with 10 outlets has filed for bankruptcy as General Motors' financial arm has pressed for payment of $26 million and accused the dealer of selling $2.5 million worth of cars out of trust.

Richard T. Pepe of Vineland, N.J., and his wife, Virginia, who owns four of the dealerships, have filed for protection from creditors citing more than $50 million in liabilities against $54 million in assets.

Most of the debts are owed to lenders who floor-planned vehicles for the chain.

Affidavits submitted by General Motors Acceptance Corp. officials say the Pepes have total obligations of $26,903,746.47 and charge that two checks for about $900,000 were returned due to insufficient funds.

GMAC accused the Pepes of selling more than $2.5 million worth of cars out of trust without remitting the proceeds, court records said.

Other multimillion-dollar creditors include Midlantic National Bank in Pennsauken, N.J., and Chrysler Credit Corp.

The filing comes at a time when other large dealers are facing growing financial pressures.

The Pepes "have depleted all working capital and have no reasonable prospect of obtaining working capital to continue and, for all intents and purposes, they are insolvent," the GMAC affidavits said.

Pepe is one of New Jersey's largest dealers, with annual sales estimated at more than 10,000 vehicles, said Charles E. Walton, president of the 760-member New Jersey Automobile Dealers Association.

"The whole retail community is sad and disappointed to ever see a deficiency like this. It doesn't do the industry any good," Walton said.

"As a trade group, we're hoping Mr. Pepe can work out a reorganization plan that will satisfy his lenders, and we'll help any way we can," he said.

GMAC officials declined to comment on the case.

And Janise Kohnke, a spokeswoman for Richard Pepes' management company, Brookfield Management, said Pepe has been advised not to comment by his attorney, Kenneth Pagliughi.

The Pepes own 10 stores, all of which are in New Jersey. They include Pepe Olds-Pontiac-GMC

Tucker wins bitter 2-year fight for top post in UAW Region 5

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

TULSA, Okla. — Dissident UAW leader Jerry Tucker, who wants the union to take a tougher stand against corporations and mount more aggressive organizing drives, has won a powerful position in the UAW — the directorship of Region 5.

His victory spotlights an even wider gap between what management and top UAW international leadership say is their "new spirit of cooperation" and the way that many

Tucker wants the union to take a tougher stand against corporations

Board changes bring new era at Toyota

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — On paper, the latest reshuffling of Toyota Motor Corp.'s board of directors looks like the usual biannual affair. However, the subtle changes this time pave the way for a new generation to take over Japan's largest automaker.

Board members outside the Toyoda family are required to step down when they reach 65 as a way of bringing in new blood. The recent changes do, indeed, reduce the average age of the directors from 57.8 to 55.7 years. While the difference is only two years, it represents a change of generations.

The Old Guard that led the company in its march to dominance in the Japanese market is leaving.

Autoworking Olympian

Workers at General Motors' press metal plant in Pontiac, Mich., took time for a send-off celebration for fellow worker Gary Morgan, who is heading for the Summer Olympics in Seoul, South Korea, this month.Morgan, 28, is considered an Olympic medal contender in racewalking. He won the 20-kilometer race at the Olympic trials in July. From 6 a.m. to 2:30 p.m. daily, Morgan is an electrician at the plant, where he has worked for 10 years. After work, he heads for the park to work out for two hours or more. He walks 8-12 miles daily at seven to eight minutes per mile. Ironically, Morgan's coach of the past two years, Frank Alongi, works for Ford Motor Co. Alongi, a production development engineer, was an Olympic runner in 1948 and 1952 for Italy and coached two fellow runners to gold medals.Morgan said making the top 10 among the 40 to 50 Olympic competitors is a realistic goal. But with hot weather, he feels he has a shot at a medal. He has been racewalking for eight years, finishing ninth at the world championships in Rome last year and 16th in the 1984 Olympic trials.

'89 CAFE up, but how high?

NHTSA: At least 0.5-mpg hike set

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Automakers know they are in for at least a 0.5 mpg increase in the fuel economy standards for the 1989 model year. How much more beyond that, however, will be decided at a NHTSA hearing next week.

The agency said it will set the limit between 26.5 and 27.5 mpg, the first increase in corporate average fuel economy since the agency rolled the standard back to 26.0 mpg in 1986.

If Transportation Secretary James Burnley and Vice President George Bush had their way, the standard would be abolished altogether.

Where NHTSA finally decides to set the limit could determine whether or not some makers will be liable for millions of dollars in penalties, and whether they can even afford to offer certain models.

Yet, General Motors and the Automobile Importers of America, which have petitioned NHTSA to keep the law at 26 mpg or lower, are confident NHTSA will set a 1989 CAFE standard that keeps them both out of trouble.

Congress set CAFE at 27.5 mpg beginning with the 1985 model year, but it allows NHTSA to set a standard that is "feasible." Using that authority, NHTSA rolled back the standard to 26.0 mpg for the 1986-88 model years.

Under the law, an automaker must pay $5 for each car it manufactures for each tenth-of-a-mile it falls short of the standard.

"In our case that would be $20 million if we fell one-tenth of a mile per gallon short," said Mark Kemmer in GM's Washington office. "If we are off by half a mile per gallon, we are talking $100 million. That's not going to happen because GM will not be put in a position of willful unlawful conduct," he said.

Kemmer said GM will tell NHTSA a CAFE standard higher than 26.5 mpg may force the automaker to curtail the production of some large cars and high-performance engines, or it could result in the company increasing its foreign sourcing.

Big 3, NADA, UAW fill politicians' coffers

By Laura Mait
SPECIAL CORRESPONDENT

WASHINGTON — As the Republican and Democratic parties enter the final stretch of the 1988 election campaign, contributions from automobile manufacturers and dealers favor Republican candidates.

Midyear Federal Election Commission records on political action committee contributions show dealers and manufacturers together donated $782,280 to Republicans vs. $621,612 to Democrats.

Meanwhile, true to tradition, the UAW outspent total dealer and industry donations to Republicans by donating $782,500 to Democratic candidates.

Although auto dealers gave more to Republicans, some key Democrats were also beneficiaries of dealer largesse. Both the National Automobile Dealers Association and the Auto Dealers and Drivers for Free Trade had given about $468,000 to candidates as of July. A good deal more money will undoubtedly be spent before the votes are counted this fall.

NADA's Dealers Election Action Committee split its money between 166 Republicans and 123 Democrats, with Republicans getting $275,250.

One of its largest contributions, $6,000, went to the campaign of vice presidential candidate Sen. Lloyd Bentsen, D-Texas, who also chairs the Senate Finance Committee.

The Auto Dealers and Drivers for Free Trade PAC favored Republicans even more by donating $322,550 to 187 Republicans while assisting just 89 Democrats.

Rep. Dan Rostenkowski, D-Ill., chairman of the House Ways and Means Committee, netted the largest of the group's donations with $7,500. His committee and the Senate Finance Committee played the leading roles in passing this year's omnibus trade bill.

Sen. Daniel Inouye, D-Hawaii, a possible successor to Senate majority leader Robert Byrd, D-W Va., received $7,000 from that PAC.

The committee also pumped $5,000 into the campaign of Sen. Robert Dole, R-Kan., for his unsuccessful quest for the Republican presidential nomination.

Manufacturers gave money a little more evenhandedly, although the gave slightly more to Republicans than to Democrats.

The Civil Involvement Program/General Motors contributed $66,680 to 104 Republican candidates as opposed to $54,533 given to 75 Democrats.

One of its largest donations, $3,500, went to Sen. John Danforth, R-Mo., the tireless advocate of increased vehicle safety.

Both Ford and Chrysler gave more to Democrats than to Republicans. The Ford Motor Co. Civic Action Fund gave $54,450 to 85 Republicans and $61,283 to 84 Democrats.

Ford also gave generously to Danforth, donating $5,000. In addition, the company joined the Auto Dealers and Drivers for Free Trade in its support of Rostenkowski, giving $4,000.

Chrysler Corp.'s Political Support Committee also favored the Democrats. Under the leadership of Chairman Lee Iacocca, who supports items on the Democratic agenda such as mandatory health care, fuel economy requirements and tougher trade policies, the company gave $148,083 to 164 Democrats and just $63,350 to 83 Republicans.

Its most vigorous support went to Danforth with $8,000, followed by Sen. Donald Riegle, D-Mich., a member of the Commerce and Finance committees, who received $7,100, and Bentsen with $6,000.

The UAW outspent all dealer and manufacturer donations to Republican candidates by giving $782,500 to Democrats.

The union gave $5,000 apiece to every Democratic presidential candidate except Sen. Joseph Biden of Delaware and former Sen. Gary Hart of Colorado. The party's eventual nominee, Michael Dukakis, however, declined all PAC money, including the $5,000 offered by the UAW.

It also donated $15,000 to both Rep. Jim Chapman, D-Texas, and Rep. Robert Clement, D-Tenn., and gave $10,000 apiece to the Senate campaigns of Sen. Jeff Bingaman, D-N.M.; Rep. Wayne Dowdy, D-Miss.; and Democrats Richard Licht of Rhode Island; Leo McCarthy of California and John Wickes of Indiana.

The UAW contributed $10,000 to the House campaigns of Rep. John Bryant, D-Texas; Rep. Alphonso Michael Espy, D-Miss.; Rep. Martin Frost, D-Texas; Rep. Richard Gephardt, D-Mo.; Rep. James Hayes, D-La.; Rep. Dennis Hertel, D-Mich.; Rep. Peter Kostmayer, D-Pa.; Rep. Nancy Pelosi, D-Calif.; Rep. Louise Slaughter, D-N.Y.; and Democratic candidates Phillip Cryts of Missouri and Douglas Stephens of Illinois.

GM affiliate sets up dealer tv programming

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors dealers who are subscribers of Automotive Satellite Television Network will have a programming choice in January when the automaker launches its own dealership training programs over the GM Dealer Satellite Network.

The new series is a televised version of GM University of Automotive Retailing, and will include sessions on sales, service and parts management.

Electronic Data Systems, a subsidiary of GM, has a 30-percent interest in ASTN, with rights to market ASTN to GM dealers and televise its own programs of importance to them.

ASTN and the GM network share rooftop satellite dishes and other cable equipment. "GM talks to its dealers over the system," said ASTN president Michael Smart. "I have no problem with GM presenting programs that are of interest to its dealers. GMAC has done it."

Marketing Educational Services, formed in 1969 as a part of the General Motors Institute's continuing education department, was acquired by the Troy, Mich.-based Sandy Corp. last year. It will use GM, EDS and Sandy Corp. photographic facilities to create the programs and link them to a satellite of another GM subsidiary, Hughes Electronics Corp., for distribution to dealers.

Smart said the agreement with EDS prohibits GM from offering programs competitive to ASTN. He was unaware of the kinds of educational sessions that Marketing Educational Services will offer dealers but conceded there could be a conflict.

"I'm not concerned as long as the programs are complementary and not competitive," he said. "The key is whether it is GM-specific. I would have a problem if the programs were something dealers of other manufacturers wanted to see."

Marketing Educational Services and EDS spokesmen said the sessions are indeed tailored specifically to GM dealers.

ASTN, now two years old, offers generic programs useful to all dealers and special programs for automotive companies. It has 3,600 dealer subscribers, charging them $4,620 annually.

GM's television network has 1,900 GM dealers, who will be asked to pay $2,340 annually for the Marketing Educational Services sessions.

Robert J. Bennett, vice president of Sandy Corp. and president of Marketing Educational Services, said the educational segments will be interspersed with interviews of GM executives and news that affects GM dealers.

Bennett said the programs may be televised simultaneously with programs offered by ASTN. He said the network will offer 12 sessions per month. GM will televise a promotional pilot video for the series Sept. 6-8.

AUCTION DATES

Chrysler Motors

Sept. 6 — Dallas Auto Auction, Grand Prairie, Texas; Arena Auto Auction, Chicago; Greensboro Auto Auction, Greensboro, N.C.; Portland Auto Auction, Portland, Ore.; Riverside Auto Auction, Riverside, Calif.; and Hatfield Auto Auction, Hatfield, Pa.

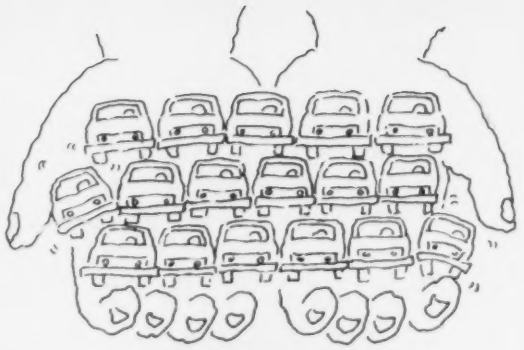
AUCTION OWNERS: REACH THE "BIG" FLEETS



ADVERTISE IN THE AUCTION DIRECTORY
Automotive News

Fleets mean big money for your auction, and the Automotive News Auction Directory puts you in touch with the "big" fleet decisionmakers.

Fleet owners, operators and administrators rely on Automotive News for timely coverage of the news affecting their industry — and ultimately their decisions. They read the Auction Directory to find the right place to sell their large fleets.

Automotive News extends your ad to 75,000 readers in 70 countries. A readership that includes nearly all of the top 100 fleet administrators.

Put the Auction Directory to work for you. Advertise your auction's fleet-related services, selling capacity, special promotions and traffic drawing power. And don't forget the high impact of color and display advertising, both available in the Auction Directory.

Call Marie Hingst, Auction Directory Manager at (313) 446-6065 to place your ad.

Shutdowns wane; auto output up

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

With almost all plants back in action after shutdowns for model changeover and vacations, scheduled car and truck output last week was the highest since downtime began seven weeks ago.

Domestic auto production was targeted at 133,737 cars last week, 6.47 percent more than the prior week's 125,606 and 6.27 percent more than the year-ago week's 125,852.

So far this year, 4,619,062 cars have been built, 4.28 percent less than the 4,825,408 completed last year at this point.

Companies split last week's scheduled output as follows: General Motors, 52.09 percent; Ford Motor Co., 22.99 percent; Chrysler Motors, 12.11 percent; Honda of America Manufacturing Inc., 5.47 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.25 percent; Nissan Motor Manufacturing Co. U.S.A., 2.15 percent; and New United Motor Manufacturing Inc., 1.94 percent.

Last week's estimated truck production of 77,407 rose 1.25 percent over the previous week's 76,455 and increased 14.59 percent over the year-ago week's 67,550.

Year-to-date, 2,764,407 trucks have been assembled, 8.03 percent more than the 2,559,043 built last year at this time.

Ford's Lorain, Ohio, plant remains idle until early October for model changeover.

Ford scheduled overtime next Saturday at its truck plant in Lorain.

All car and truck plants are closed today for the Labor Day holiday.

Week's totals rise in Canada

Last week's scheduled Canadian auto production totaled 19,041, which is 2.80 percent more than the prior week's 18,523 and 34.40 percent more than the year-ago week's 14,167.

The year-ago week's car and truck output was affected by shutdowns for model changeover.

So far this year, 725,264 cars have been built, 42.08 percent more than the 510,479 completed last year at this point.

Truckmakers targeted 18,570 units to be assembled last week, 3.89 percent more than the previous week's 17,875 and 26.63 percent more than the year-ago week's 14,665.

Year-to-date, 609,069 trucks have been produced, 10.10 percent more than the 553,188 assembled last year at this time.

Workers walked off the job Aug. 26 at Volvo's Halifax, Nova Scotia, plant over wages and other considerations.

Friday that negotiations were still under way and that this is the first strike in the history of Volvo's Canadian operations.

General Motors' Oshawa (No. 1), Ontario, plant remains idle until January for model changeover. When the plant reopens, it will assemble the new GM-10 Chevrolet Lumina.

Danger lurks in Taiwan's auto boom

Market too small to feed all players

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TAIPEI, Taiwan — Eu Cha Wen works at the San Yang Industries assembly plant, installing weatherstripping on the Republic of China's version of the Honda Civic.

In his early 20s and not long out of school, he makes $700 a month (about $3.20 an hour). Not many years ago, workers like Eu would be more likely to own a San Yang motorcycle than a San Yang Civic.

But with the cost of a Civic under a year's pay thanks to higher wages, increased foreign competition and manufacturing efficiencies, cars are not so far out of reach, especially considering the phenomenal 35 percent personal savings rate of the average Taiwanese.

Taiwan's middle class has discovered the auto. With more than half the island's 19.5 million population already licensed to drive and seven million motorcycles and motorbikes already on the roads, demand for cars is skyrocketing.

Imported auto sales may triple this year and capture 40 percent of Taiwan's total new-car market, but local manufacturers still expect double-digit growth in domestic sales of about 200,000 units.

Even the virtual evaporation of Taiwan's budding whole-car export industry has not dented the enthusiasm of domestic manufacturers. There has been a 30 percent appreciation of the New Taiwan dollar against the U.S. dollar.

Lane: Olds will do an exclusive model only if it has significant volume

Olds' split personality

Division wants cars to attract all ages

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

BRIGHTON, Mich. — Oldsmobile is attempting to do what some General Motors insiders and Oldsmobile dealers say may be impossible — keep 11 million loyal customers while luring young new ones.

Last week Oldsmobile showed off its 1989 products and unveiled an expensive ad campaign targeted at both "the younger, more contemporary buyer" and "the established, older Oldsmobile owner."

But will it work?

Can a single car division sell a futuristic Cutlass Supreme to a 35-year-old woman and a stretched, traditionally styled Toronado to a businessman in his mid-50s?

Oldsmobile's top executives publicly say it can be done, but within the division, the debate continues. And the debate appears to be impacting product plans.

Oldsmobile recently scrapped plans for the Silhouette, a futuristic-looking, four-passenger vehicle built off of the GM10 platform but smaller than Oldsmobile's version, the Cutlass Supreme.

The move has sent Oldsmobile back to the drawing board in search of a model exclusive to the division. However, an exclusive model no longer appears to be at

Ford, Nissan choose Ohio for joint van plant

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. and Nissan Motor Co. are expected to announce today that they will share production of a front-wheel-drive passenger van to be built by Ford in Avon Lake, Ohio.

Ford Executive Vice President Philip E. Benton Jr. was scheduled to make an announcement at 8 a.m. in Ford's Ohio Truck Works plant in Avon Lake, near Cleveland. Nissan President Yutaka Kume will make a similar announcement at about the same time in Tokyo. Ohio Gov. Richard Celeste was expected to join him.

Although the automakers declined to give details in advance of today's announcement, industry and union sources familiar with the project provided information. Job One is planned for Oct. 1, 1991.

Bodies for the medium-size van will be built in a new plant at the Avon Lake site. The vehicles will then be assembled in the plant that currently builds bodies for Ford's Econoline and Club Wagon vans, sources said.

The project also will include a new body shop for the Econoline/Club Wagon, which will continue to be shipped to Lorain, Ohio, for final assembly. A new paint shop in Avon Lake will serve both the Econoline/Club Wagon and Nissan-Ford van. Total investment will be about $2 billion, according to a union source.

Today's announcements will cap a 17-month study on the venture. Plans call for the van to be sold through Nissan and Lincoln-Mercury dealerships in the United States. It will be the first U.S. vehicle-sharing arrangement between the two countries' respective No. 2 automakers and will add another link to the growing ties between them.

The van will be larger than a Aerostar minivan but smaller than the Econoline, union sources said. A four-wheel-drive version may be offered later, a union source said.

While the joint venture van is a new vehicle for Lincoln-Mercury, auto analyst George Peterson, president of California-based AutoPacific Group and a former employee of both Nissan and Ford, says it is a replacement for Nissan's current rear-wheel-drive van. When Nissan introduced that vehicle two years ago, it said the van was an interim model.

Peterson said that Ford insisted on the front-drive configuration and concluded that was the reason why the U.S. automaker went with Nissan on the project rather than Mazda, which is set to introduce its own rear-drive van, known as the MPV, this fall.

He also expects the new model to be one of the first major projects

OLYMPIC GOLD: *Rivals steal some of Buick's glitter*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

What is the official car of the U.S. Olympic team? Though Buick paid $2.25 million to obtain that status, other carmakers — including another General Motors division — will bask in the Olympic spotlight, too.

Automakers such as Hyundai Motor America, American Isuzu Motors and some GM divisions are using their sponsorship of the telecasts of the Summer Olympic Games on NBC to link themselves to the games without paying for the much-coveted official vehicle status.

For example, ads being run by Hyundai, Isuzu and Chevrolet all use logos with Olympic rings and the NBC peacock symbol while promoting themselves as "proud sponsor of the 1988 Summer Olympic Games on NBC." The rings and logo are remarkably similar to the logo used by Buick and Jeep, the official truck/sport-utility vehicle of the U.S. Olympic team. The official logo has the USA symbol at the top of the rings.

"It does tend to diminish the effectiveness of the official car status," said Jay W. Qualman Jr., Buick general director of advertising. "Most people have trouble differentiating the two."

He added: "Other GM divisions asked us if they could (use the NBC/Olympics logo) and we told them they could. But it's still disappointing to pay all this money and see other people using the (NBC/Olympics) logo," Qualman said.

Buick was the official car of the games in 1984 and was faced with similar promotions from competitors, including Ford and Nissan.

Leon Rosen, American Isuzu manager of national marketing services, said the official Olympic sponsorship is not worth the cost, and the NBC television sponsorship gives the importer the same prestige for a lower price.

"The cost of the official Olympic sponsorship was not worth it. We got to use the rings. We're not bashful about it, we'll go

States challenge Chevy, GMC ad fee

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The legality of Chevrolet and GMC Truck's new mandatory advertising charges on dealer invoice is being challenged in two Midwestern states, and a dealer association source says more states could follow suit this year.

The Ohio Automobile Dealers Association and three member dealers have filed what they hope will become a class-action lawsuit on behalf of 290 GMC Truck and Chevrolet dealers in Ohio over the division's one percent mandatory charge for advertising.

The suit, which was filed Sept. 8 in U.S. District Court in Columbus, Ohio, could take up to two months for class-action certification.

Meanwhile, Michigan Attorney General Frank J. Kelley told Chevrolet last month that the division's new mandatory advertising charge violates a 1981 Michigan law protecting dealers from such practices and the state would take "legal remedies"

GOAL SET

Campbell stresses dedication to job

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

FLINT, Mich. -- Lewis Campbell, one of General Motors' newest vice presidents, was curious about what made the world's great leaders great.

So he studied them — Winston Churchill, Dwight Eisenhower, Mohandas Gandhi, the Kennedys and others.

Surprisingly, he found they had little in common. The one common thread they did share was what Campbell describes as a "fanatical dedication" to a simple belief.

In his new job as manager of the Flint Automotive Division of the Buick-Oldsmobile-Cadillac Group, the 42-year-old manufacturing engineer wants to instill in the 28,000 employees who work for him a fanatical dedication to customer satisfaction.

AUTOMOTIVE NEWS/JOE WILSSENS

Campbell: quality and costs top his list of areas for continued improvement

Campbell attributes the success of the Chevrolet Corsica and Beretta program to that fanatical dedication.

Campbell was named a manufacturing manager of the Chevrolet-Pontiac-GM of Canada Group as the Corsica and Beretta were in the works. It was his first job involving automotive assembly.

GM's truck share rises, but cars slip

By Michelle Krebs and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors has gained on its competitors in the truck market but again has lost ground in car market share in the past six months, a slump that GM and analysts say is temporary.

For the first eight months of the calendar year, GM's share of the U.S. car market has eroded by a point to 36.49 percent, from 37.49 percent a year ago. Car share has been dropping month by month since February, and hit 33.99 percent in August, the lowest point since November 1987 when market share sunk to 32.70 percent after the Oct. 19, [illegible] Wall Street crash.

GM's age-[illegible]rivals, Ford Motor Co. and Ch[illegible]ler Motors, have gained car share at GM's expense. Ford's share has risen to 21.73 percent from 20.19 percent a year ago; Chrysler's share has edged up to 11.43 percent from 10.73 percent.

The Japanese makers also made fractional gains in the first eight months of the year, while the European luxury makes have lost nearly a point of car share.

But on a less glum note, GM's eight-month share of the total vehicle market is 35.84 percent, compared with 35.66 percent in 1987.

GM sold 191,437 more vehicles in the first eight months than it did in the year-ago period. More than three-fourths of the increased deliveries have come from GMC and Chevrolet trucks. GM's light-truck sales are up nearly 15 percent over year-ago levels, and GM's share of light trucks has risen nearly 3 points to 34.44 percent.

Ford and Chrysler showed only fractional increases in light-truck share, while the Japanese have lost more than 4 points of market share.

Despite GM's drop in car share, the automaker is expected to regain the ground it lost to close 1988 with a higher market share than it had at the end of 1987.

Auto analysts generally concur with Lloyd Reuss, GM executive vice president in charge of North American automotive operations, who recently predicted that GM would end 1988 with 37 percent of the car market.

The slip in car share is blamed, in part, to GM's slow launch of the GM10 series, particularly the Oldsmobile Cutlass Supreme, and the lack of a four-door, which debuts as a 1990 model. Sedans now make up nearly 70 percent of the car market, according to a study by auto analyst Maryann Keller of Furman Selz Mager & Dietz.

Keller said the lack of a four-door model is particularly damaging at this time of year when automakers are taking fleet orders, which generally are for sedans.

In addition, GM has cut back on rebates in recent months. Keller said GM appears to be testing the waters to see how much incentive it needs on cars as it waits to launch the new 1989s.

GM has yet to match Ford's latest corporate-wide round of incentives, which have been in place for two weeks. "GM appears to be trying to decide what the appropriate level of discount for underlying demand is," Keller said. "Maybe now they need bigger incentives than what they have had."

GM may be trying to launch its 1989 line without incentives as it did last year. However, Reuss said in a recent interview that he expects incentives to be in place throughout the 1989 model year.

GM also has kept its inventory in check during the summer. GM's days' supply of inventory has been

Complete monthly details, Page 24

running at about 60 to 65 during the summer, at a time of year when automakers are building inventory for the new model year launch.

Ann Knight, auto analyst for PaineWebber Inc., said GM has been caught in a "downward public perception spiral."

"I think what is going on is a round of negative press on the company. It's made people look at GM's cars more critically than they otherwise would have," she said.

Ron Glantz, auto analyst for Montgomery Securities, agreed: "GM's quality has improved quite a bit. It takes a couple of years for that information to spread. They do have the most aggressive product program, their new product is a lot better and there is residual loyalty to GM."

Further erosion in car market share, analysts caution, could be dangerous to GM in the long run.

"A company cannot afford to ignore the issue of market share loss," Keller said.

GM eyes parts link with Nissan

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — General Motors is contemplating a $20 million joint venture with a Nissan-owned subsidiary to manufacture air conditioner parts in Springfield, Tenn. However, the question of whether to do business with a non-union partner appears to be holding up the deal.

California-based Calsonic International, a unit of Calsonic Corp., Japan, has begun construction of a new 150,000-square-foot plant in Springfield, 30 miles north of Nashville. Calsonic Corp. is the newly adopted name for Nihon Radiator Co. of Tokyo, which has $1.6 billion in annual sales. Nissan Motor Co. Ltd. is the majority shareholder in the 50-year-old corporation.

If an agreement is reached, the joint venture would be a 50-50 partnership between the U.S. and Japanese manufacturers, according to Kentaro Arai, Calsonic International president and chief executive officer. Arau said the plant will serve GM's Saturn Corp. in nearby Spring Hill, Tenn.

A GM spokeswoman, meanwhile, said any discussion of a joint venture with Calsonic at this time is "purely speculative" and declined further comment. She also said the company has no current plans to use Calsonic as a Saturn supplier.

Calsonic and GM are already involved in a joint venture overseas. Calsonic-Harrison, a venture between the Japanese company and GM's Harrison Radiator Division, manufactures air conditioning compressors in Japan.

"GM has not decided if it will be a partner yet. There are many problems on their side," Arai noted. "But I hope it will come to be."

Arai said GM's decision to participate also appears to be hanging on profit issues within the corporation, as well as union relations.

Calsonic does not have UAW representation at its American plants. Calsonic officials believe GM is concerned that a joint venture with a non-union automotive company could create a problem with its labor relations.

Calsonic manufactures radiators, exhaust systems, heaters and air conditioning components in Shelbyville and McMinville, Tenn. The company also operates a metal stamping plant as a joint venture with Yorozu Manufacturing Corp., Japan.

The operations have principally supplied Nissan Motor Manufacturing Corp. U.S.A.'s car and truck production in Smyrna, 40 miles away.

While the UAW has so far been unsuccessful in its bid to organize Nissan's factory, GM has granted the union a prominent role in launching its Saturn plant nearby.

Arai said Calsonic's facility in Springfield will begin production of air conditioning components in June or July 1989. He said the facility would be "very technologically advanced," but did not offer specifics. Approximately 150 workers will be employed there, he added.

In the past five years, Calsonic has built three plants as part of a manufacturing hub in Shelbyville. It also persuaded Yorozu to build its joint-venture plant in Morrison, Tenn.; purchased a small country inn and restaurant in Tennessee; and financed a $2 million walking horse arena in Shelbyville.

Walbro boss beat raid, saved company town

By Edmund Fitzgerald
AUTOMOTIVE NEWS STAFF REPORTER

CASS CITY, Mich. — At a diner in Michigan's Thumb area, Walbro Chairman Bert Althaver knows everyone and everyone knows him.

"I wouldn't want to say this is a company town . . ." Althaver said. But across the room, his wife is having lunch. At another table, son Brian, an overseas manager for Walbro, is in the midst of a purchasing confab.

In this small town there are farms and there is Walbro. Many of the locals hold stock in Walbro, which is the town's largest employer — 450 of its 2,250 population. And nowadays, everyone can glad-hand Althaver.

But a year ago this month, Walbro was up to its neck in a hostile takeover attempt by a New York conglomerate. Rumors were that if the company were sold, it might also be moved.

Instead, this $110 million maker of automotive fuel systems and small-engine carburetors is sinking its roots deeper. Walbro recently signed to supply the fuel injection systems for Australia's Orbital Engine Co. in that company's two-stroke engine deal with Ford Motor Co. About 55 percent of Walbro's sales are automotive-related.

It was the company's versatility that made Walbro an attractive takeover target.

UIS Inc., New York City, is in the business of taking over businesses. Its 14 companies — half of them auto suppliers — top $500 million in annual revenues. UIS President Andrew Pietrini had said, "Walbro fits perfectly with our automotive group of companies."

Suffice it to say Althaver, 57, had other ideas. On Aug. 31, 1987, because its Walbro holdings had reached 5 percent, UIS was forced by U.S. Securities and Exchange Commission regulation to inform Walbro that it had been secretly buying up stock.

"It came out of the blue," Althaver said. "Their president called and said they were interested in buying two-thirds of our stock, and I said, 'No, thank you.' "

UIS tendered an offer to buy 60 percent of Walbro's 3.5 million outstanding shares at $27.25 per share.

Althaver wrote the stockholders and asked them to keep the faith. Many are Cass City locals who have been owners since Walbro's founding. When Althaver's father-in-law, Wally E. Walpole, opened the doors in 1954, working capital was in short supply and the townfolk anted up $25,000.

During the takeover attempt, Althaver said, "I had people coming up who said, 'I wish I could buy more stock, but I don't have the money.' "

One guy in town, who obviously did have the money, bought $100,000 worth of shares during the fight.

John Haire, owner of the Cass City Chronicle, said there was "a unanimity of support" for Walbro, and the town's stockholders signed pledges not to sell.

On the executive end, Althaver readied for a fight. He canceled vacation plans and took a crash course in corporate raids.

"I did nothing else for eight weeks," he said. Walbro hired a law firm that specializes in takeovers — Wachtell, Lipton, New York. "They do this kind of thing *every* day," Althaver said.

The outside appraisal came from Goldman Sachs, New York. It agreed that Walbro was

August sales trail '87 as imports sag

But 8-month total shows big gain

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light-truck sales in the United States during August fell just short of last year's monthly high, as weakness in the import segment continued to pull the overall industry level down.

Foreign-based manufacturers retailed 72,875 light trucks in August, down 15.43 percent from 86,172 a year ago.

Domestic manufacturers retailed 337,165 light duties, up 2.90 percent from 327,666 a year earlier.

The domestics' market share increased to 82.22 percent during the month, up from 79.18 percent a year earlier. The imports' share declined to 17.78 percent from 20.82 percent a year ago.

Overall, industry sales of 410,040 light-duty vehicles last month fell just short of the 413,838 for like 1987. However, sales of 3,353,893 light trucks for the first eight months of calendar 1988 continued to maintain a sizable lead over the 3,179,979 sold in the 1987 period, keeping the industry on course for another record year.

All domestic truck manufacturers except Dodge reported sales gains in August.

Jeep scored the highest monthly gain on sales of 20,898 units, up 33.27 percent from 15,681 a year earlier. Ford with 117,487 sales was up 2.50 percent from 114,622 a year ago.

Ford has been selling trucks at maximum capacity for most of the year and is currently running into a supply problem. It only has 30 to 45 days' supply in most of its lines, according to Edward E. Hagenlocker, and general manager of Ford truck operations.

Chevrolet's sales of 115,458 light duties during August were up 4.56 percent from 110,428 a year ago.

Chevrolet has substantially narrowed Ford's lead on a year-to-date basis from what it was at this time last year, but Chevrolet still trails Ford by 94,003 units.

Ford retailed 1,005,702 light trucks during the first eight months against 911,699 for Chevrolet.

Ford's eight-month total was up 6.05 percent from 948,358 last year, while Chevrolet's eight-month total was up 14.23 percent from 798,104 a year ago.

GMC continued to show strong gains with sales of 30,198 light trucks in August, up 5.83 percent from last year. Its eight-month total was 243,499, a 16.74 percent increase.

Chrysler Motors' August truck sales of 53,124 declined from 58,400 a year earlier. The company's eight-month sales of 537,234 light trucks still maintained a strong lead over 480,425 in the year earlier period. The figures include only Dodge and Plymouth trucks.

Chrysler, like Ford, has run into a supply problem on some vehicles like full-sized vans, which has adversely affected its sales.

Product, computers make news at Mack

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Mack Trucks has introduced a lighter version of its MR heavy-duty refuse truck, a new series of air-ride suspension systems and a long compound transmission with more versatile power-takeoff operation.

The company also has completed the first phase of its Macknet electronic distributor communications system.

The initial PC-based phase connects about 200 domestic Mack dealers to the company's world headquarters in Allentown, Pa. It permits distributors to prepare and submit warranty claims to the home office, check on the status of warranty claims, submit truck orders, use the company's truck locator service and track the status of new-truck orders.

Frank C. Marth, Mack's information manager, customer services, said the computer-based communications have improved the company's speed and accuracy in serving customers.

The second phase of the Macknet system will include a parts stock ordering capability that will link its dealer network with all five of its distribution centers.

Also, there will be a parts locator service that will enable a dealer to search instantly for parts needs through stocks at his regional distribution center and all Mack distribution locations as well. An emergency parts-ordering function also will be part of Phase II.

Other system enhancements in the future will include a computerized sales book, an electronic mail system and a life-cycle cost comparison program for customers' use.

The Macknet system was provided by General Electric Information Services.

On the product side, Mack's new MR version is 1,100 pounds lighter than previous comparably spec'd MR models without losing strength or integrity, according to officials.

The lighter model has front-axle capacities of up to 20,000 pounds and rear-axle capacities up to 44,000 pounds.

A new 20,000-pound taperleaf front suspension was specially designed to accommodate the static loads typical in front-loader refuse operations.

Mack displayed the new vehicle at Waste Expo in Washington with a big illustration indicating its 16,940-pound chassis weight. The vehicle was weighted with 10 gallons of fuel and no driver.

A number of light-weight aluminum components were used to achieve the vehicle's weight reduction. They include aluminum fuel tanks and air reservoirs, lighter-gauge cab roof and grille.

Mack's new taperleaf front spring arrangement is a big contributor to the weight reduction, along with the use of two, 925-ampere cold-cranking batteries in place of the standard four-battery arrangement.

Mack's new T2070 long compound transmission has four side-mounted PTO openings and permits both engine and gear-dependent PTO operation.

That allows the user to run the vehicle at the desired road speed, while operating the PTO-driven equipment at optimum speeds independent of vehicle speed.

The ability to drive the PTOs at either engine or gear-dependent speeds at the same time is useful to vehicle operators in the construction, refuse and other specialty markets, according to Jerry Hodel, Mack's manager of engineering sales.

"For example, an operator whose vehicle is equipped with this new transmission can simultaneously run a winch, lift a body and move the truck at desired speeds by using both end speed and any one of the forward or reverse gear ratios," Hodel said.

Mack calls its new series of lighter air-ride suspension systems the Air Leaf. They have a base weight of 841 pounds.

Officials said they have a stronger main support member that is 1⅞-inch thick at the axle attachment point for a 38,000-pound unit and 1⅝-inch thick for the 34,000-pound unit.

Case frame hangers are also used for added strength and, through the use of drop-in shims, torque rods can be adjusted and axles easily realigned if necessary.

The new suspensions are available in three capacities: 36,000 pounds, 40,000 pounds and 46,000 pounds. They also feature three spacings: 52-inch, 54-inch and 60-inch.

The Air Leaf suspensions are available on R, MH and RW models for use with the Mack 34,000-pound, 38,000-pound and 44,000-pound rear axles.

Orders for heavy trucks show increase of 23% for month

New orders for heavy trucks surged to their third highest level in 10 years during July.

The annualized rate of 205,000 was topped only by 211,000 in March 1979 and 238,000 in March 1984, according to David Healy, automotive analyst for Drexel Burnham Lambert.

July's orders were up 23 percent from July 1987 and lifted the three-month average of order rates to 171,000 from 163,000 the previous three months.

Healy said he doubts that July's booming order rate will be sustained.

"But it remains to be seen whether orders are shifting to a new higher level or whether July's surge was a fluke and the truck business will revert to its pattern of recent months," he said.

Healy said it was possible that more new trucks were being ordered partly because of the increased difficulty of shipping commodities by barge.

"Low river levels in this drought-affected summer also seem to be lifting truck traffic, so it's becoming difficult to sort out how much of the increase in the tonnage carried by truck is due to the strong economy and how much to stranded river barges," he added.

The American Trucking Associations' index of truck tonnage carried was up 14 percent year-to-year in June and 11 percent for the first half of 1988.

TRUCKING TRENDS

JOSEPH BOHN

In any event, strong traffic trends are a precursor of strong truck orders and sales.

Meanwhile, Healy revised his projection of medium-truck sales for 1988 due to weaker sales and orders.

He is now looking for 155,000 medium-truck sales for the year, down from an earlier projection of 159,000.

Healy said medium-truck sales in the first quarter, which ran at an annualized rate of 182,000, were distorted by some unusually large fleet orders, inflating his earlier expectations for the year.

Associates deal

Western Star Trucks Inc., Mississauga, Ontario, and Associates Commercial Corp. of Canada Ltd. signed an agreement whereby Associates will provide wholesale and retail financing to Western Star's Canadian dealers.

Western Star custom designs and manufactures Class 8 heavy trucks, retailed by more than 150 North American dealerships.

It also markets trucks to Australia and New Zealand through a licensing agreement and to other countries.

Oshkosh wins contract

Oshkosh Truck Corp., Oshkosh, Wis., was awarded a $97.9 million option to produce 584 trucks on an existing U.S. Army contract.

Production of the trucks will begin in May 1989 and run through October 1989.

Imports, domestics share 8% dip

By Philly Murths
AUTOMOTIVE NEWS STAFF REPORTER

A normal run of incentives could not boost August's deliveries of U.S.-built and imported cars to meet the year-ago total.

Combined sales of domestic and imported cars dropped 8.37 percent to 882,015, compared with last August's 962,621 deliveries, when there was an infusion of cut-rate financing plans and hefty rebates.

Domestic car sales without captives slid 8.25 percent, or 53,948 units, to 600,026 compared with last year's 653,974. Four of the seven domestic carmakers, Chrysler Motors, Honda, Toyota and Nissan, reported increases. Those carmakers reported domestic sales gains in the final 10-day sales period, too.

*—Volkswagen totals include U.S.-built models sold after June 30, 1988.

Sales charts compiled by Karen Delkowski

Import-car sales also fell 8.64 percent to 281,989, compared with 308,647 a year ago.

The Big 3's share of the U.S. car market declined in August. With their captives, they took 65.72 percent of the market, compared with 67.53 percent in August 1987.

General Motors' share including captives dropped 4.44 percentage points to 33.99 percent compared with 38.43 percent a year ago. Ford Motor Co. boosted its share 1.34 percentage points to 21.13 compared with 19.79 percent in 1987. Chrysler Motors' share with captives rose to 10.60 percent, compared with 9.31 percent in 1987.

Foreign carmakers took a 34.28 percent share compared with 32.48 percent in August 1987. Japanese carmakers held 25.44 percent compared with 23.46 percent last August. The Europeans' share slipped to 5.99 percent compared with 6.23 percent in 1987, and the Korean share inched up to 2.85 percent, from 2.79 percent.

For the month, Chrysler's domestic car sales rose 9.59 percent, while Ford's slipped 2.63 percent and GM's plummeted 17.69 percent.

Honda, Nissan and Toyota reported solid domestic gains. Honda delivered 12.59 percent more U.S.-built cars. Nissan was up 7.30 percent, and Toyota jumped 44.83 percent.

Mazda, which was not producing cars at its Flat Rock, Mich., plant, a year ago, reported sales of 3,232 U.S.-built cars in August.

Regarding imports, Honda's Acura Division had a 20.66 percent sales gain compared with last year, although deliveries of Honda's imported Civics and Accords fell 12.23 percent.

Audi's August sales rebounded and were 19.52 percent ahead of last year's comparable August sales.

Europe's July car sales slip 2.7%

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales took another dip in July, but are still running ahead of 1987's record pace.

The Fiat Group has strengthened its hold on first place ahead of the Volkswagen Group, the sales leader for the past three years.

For the second time since January 1987, sales in Europe declined in July. The previous lapse was in April of this year.

Sales of 1,010,000 for July were down 2.7 percent, according to 17-nation industry estimates compiled by Automotive News. But year-to-date sales of 7,853,400 were 4.3 percent ahead of 1987 despite predictions of a downturn early in the year.

The outlook for the rest of the year remains relatively bullish. The British statistical group Automotive Industry Data predicted recently that 1988 sales will reach 12.4 million in 17 European markets where a record 12.26 million cars sold last year.

The group anticipates a second-half slowdown but said that "no sharp dip is expected that could totally wipe out the strong advance of the first half."

Fiat Group clings to the No. 1 position on the strength of the still buoyant Italian market, where its share is 60 percent. Fiat and Alfa-Lancia sales totaled 1,236,700, a 15.7 share of the overall Western European market in the first seven months.

The Italian group was up 7.7 percent for the year and up 3.7 percent in July. Among Europe's Big 6 automakers, only Fiat and Peugeot S.A. showed gains for the month.

Second-place Volkswagen lost ground to Fiat during July. Combined seven-month sales for the Volkswagen, Audi and Seat brands were 1,156,200, good for 14.7 percent of the total market and 1.3 percent ahead of last year's pace.

But the VW Group dropped 8.7 percent in July alone largely because of an even bigger overall decline in the West German domestic market.

Peugeot S.A., Europe's fastest-growing full-line maker, has gained more than one percentage point in market share in the past 12 months and now holds 12.7 percent on sales of 1,000,400 through July. Combined Peugeot and Citroen sales were up 14.2 percent for the year and improved 3.8 percent in July, the biggest gain among Europe's volume manufacturers.

Ford followed in fourth place with sales of 875,300 through July, an 11.1 percent market share. General Motors was fifth with 10.6 percent on sales of 831,700. Renault was next with a 10.3 percent share and unit volume of 806,800.

With its new 5 and 7 series, BMW has shown the biggest advance among European specialty manufacturers this year. Sales for the West German maker rose 14.9 percent through July, and market share increased to 2.7 percent. In July, BMW passed Toyota to move into Europe's top 10 in year-to-date sales.

The Japanese market share in Europe has held steady at 10.9 percent in 1988 as combined volume has increased 3.3 percent. Nissan remained number one among Japanese makes with sales of 216,900 through seven months, a 2.8 percent share and a sales increase of 5.4 percent. Toyota, Mazda and Mitsubishi have all suffered declines in Europe during 1988.

Only West Germany was down among the major national markets. Germany was off 13.8 percent in July.

In line with forecasts, seven-month sales in West Germany, Europe's largest market, were down 3.2 percent to 1,711,500 units, while sales increased 8.3 percent in Italy, 6 percent in France, 10.1 percent in the United Kingdom and 14.1 percent in Spain.

There are signs that Spain's phenomenal two-year growth binge is slowing. July sales were flat when compared with the same month in 1987. However, analysts still expect Spanish sales, which totaled 649,400 through July, to soar well over one million units for the first time this year.

Volvo profits rise 9% for quarter

GOTHENBURG, Sweden — Volvo Group said its operating income in the second quarter of 1988 rose 9 percent to a record 2.18 billion kroner ($335.72 million).

Improved second-quarter results partially offset first-quarter setbacks that were caused by production losses resulting from a three-week strike by white-collar workers in January and February.

Operating income for the first six months of 1988 declined 11 percent to 3.267 billion kroner ($503.12 million). Sales for the first half rose 3.17 percent to 45.759 billion kroner ($7.05 billion).

The company estimated that the strike cut first-half earnings by 1.1 billion kroner ($170 million).

Volvo said first-half net income was 23.90 kroner ($3.68) per share, compared with 26.90 kroner ($4.14) per share in the first half of 1987.

The company said its truck business remains strong. It blamed a decline in car group results on decreased penetration in the U.S. market caused by exchange rate fluctuations.

Here are 2,000 reasons to attend FISITA '88

More than 2,000 automotive engineering leaders from around the world will gather at FISITA '88. Scheduled for Sept. 25 - 29 in Dearborn and Sept. 30 in Washington, D.C., this is the first time this prestigious event has been held in North America. FISITA '88, hosted by SAE, will offer nearly 200 technical presentations selected by an international jury, a 90-company exhibit, and an exciting array of social events.

A brief listing of the extensive activities planned includes opening addresses by Roger Smith and Raymond Levy, Chairmen and CEO's of GM and Renault respectively, and Tadashi Kume, President and CEO of Honda; a gala banquet at the Detroit Institute of Arts featuring jazz great Dizzy Gillespie; and a special reception at one of the nation's most exciting landmarks, the Air & Space Museum.

Opportunities to network with executive-level colleagues and learn about global automotive engineering developments make this a must-attend event.

For additional details please contact Raymond Champagne at SAE World Headquarters, 412/776-4841.

FISITA '88
September 25 - 30
Dearborn, Michigan • Washington, D.C., U.S.A.

FISITA is the Fédération Internationale des Sociétés d'Ingénieurs des Techniques de l'Automobile and includes 22 automotive engineering societies.

AUCTION DIRECTORY

TEXAS

San Antonio Auto Auction (div. of GECAA), 1500 Ackerman Rd., San Antonio, Texas 78219. Sale every Weds. Contact: Frank Post or Michael Milikien, 512-661-4200.

NADA unveils guidelines for ads

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Admitting that dealer advertising at times offends people, Jimmy Payton, president of the National Automobile Dealers Association, asked the group's 20,000-plus members to adhere to a set of association-developed ad guidelines.

Payton said the guidelines are needed because "some of our advertising offends people. Our research shows that consumers do find our advertising confusing, sometimes misleading, sometimes deceptive. The impression we give customers of our industry comes in part through our advertising."

In announcing the guidelines last week at NADA's Washington Conference, Payton said the move addresses concerns about the poor reputation car dealers have, even though most dealers as individuals are well-known and respected members of their communities.

The NADA recommendations cover availability of vehicles, what should be included in advertised prices, how advertised trade-in allowances should be presented, and how conditional offers should be made. The guidelines also discuss the use of retail terms, such as APR (annual percentage rate), invoice and rebate.

Payton said the advertising guidelines are based on work already done by various city and state dealer associations.

"We would suggest that if your state or local association does not have any guidelines for your members to follow — and you would like to set up a program to monitor dealer advertising — these guidelines can be of help to you," he said.

Payton cited several instances of dealers being fined for false advertising by state consumer protection agencies. "If we don't do a better job of regulating ourselves we are going to find there are folks who are going to do it for us."

Payton also unveiled a series of association advertisements that will run in USA Today, heralding the civic accomplishments of dealership employees across America.

He said the advertising campaign will expand if dealers contribute financially to the effort. NADA is asking its members to contribute $100 each. Vehicle manufacturers are also being asked to contribute, he said.

In commenting on Washington issues, Payton said the trade bill passed this year "doesn't do everything that we would have liked for it to have done," but added, "we have no main objection to the trade bill as every punitive clause is now hedged by a discretionary escape clause which makes the bill more palatable to us."

"On tax issues we have been successful in keeping the gas-guzzler tax out of the technical amendments bill, so we feel reasonably safe that the gas-guzzler tax is behind us for this year," Payton said. "It could have been devastating to parts of our business. There are many moderately priced vehicles including four-door sedans, station wagons and light-duty pickups, which may have been eliminated from the market place if the gas-guzzler tax had been put in place. NADA lobbied that issue very hard and has beaten it back for this year, but make no mistake — it will be back again," he said.

Payton said there are a host of mandated employee benefit issues looming on the horizon, including increased minimum wage, parental leave and mandatory health care. He said NADA would fight these.

"Again automobile dealers are not against health benefits, most of us already have health-benefit packages for our employees. We try to furnish them the very best packages that we can afford."

But, he said there is no need for government control over these benefits. "These measures are an example of unwarranted, unwanted and unneeded government intrusion into the relationship between you and your employees," Payton said.

"Hazardous waste is another matter that we have been concerned with this year. No matter who becomes president, environmental issues are a priority with the American people. We are going to have to do our part to help.

"That means that in the next Congress we are going to be hearing things about the disposal of waste oil, body shop chemicals and other materials, cleaning materials that we use in washing our cars; anything that affects the ground water and our environment. Our job is to step up to the responsibility to clean up our environment, but to oppose unrealistic or punitive regulations that could put us out of business and create joblessness in our communities," Payton said.

The association's chief counsel, William Newman, told the dealers that NADA has petitioned NHTSA for a second look at the agency's anti-tampering regulations for odometers. Newman said NADA wants NHTSA to allow dealers to exercise power of attorney for a vehicle seller, when the seller cannot be present to sign an odometer disclosure. Although NHTSA earlier rejected dealer arguments on this matter, NADA is preparing a cost/benefit analysis to show the financial harm the new regulations could cause dealers.

FORD-NISSAN

FROM PAGE 1

for Nissan Research & Development in Ann Arbor, Mich. Nissan Design International, located near San Diego, Calif., is said to have designed the vehicle.

Nissan, in addition to doing the design and engineering work, will also provide the tooling. But the assembly will be handled by Ford with no permanent Nissan staff on site.

No money will change hands, a union source said. Ford will "repay" Nissan for the design and tooling by giving it half the production.

With Ford producing a Japanese-developed vehicle in the United States, the project will apparently provide a new twist to the growing interdependence between U.S. and Asian automakers.

The Ford Probe, which is based on a Mazda platform, is built by Mazda along with the Mazda MX-6 in Flat Rock, Mich. Other U.S. assembly plants are owned jointly by domestic and Japanese companies — Toyota and General Motors in Fremont, Calif., and Chrysler Motors and Mitsubishi in Normal, Ill.

Ohio Truck currently employs about 1,370 workers. Ford has guaranteed at least 1,300 more new jobs by Job One, a union source said. The plant has no workers on layoff now and is hiring new help off the street.

Ford is said to be pushing for the team labor concept, where workers share tasks and job classifications are reduced. The local has agreed to discuss alternative production methods but has made no changes in its current contract, which expires in 1990.

Ford has also agreed to give the union a voice in the design of the new complex, particularly in such areas as cafeterias and locker rooms. Ford has also said it will build a technical training center on the site for skilled and semi-skilled tradesmen.

The company has also agreed to look into the possibility of providing health and welfare services, which may include day-care services and gymnasiums, union sources said.

In April 1987, the two companies said they would explore the potential for producing a vehicle together. The study moved to a second stage in February of this year. At the time Nissan said it had ruled out the possibility of building the van at its plant in Smyrna, Tenn.

A final decision had been expected this spring. But Ford recently said that questions about sourcing, profitability and other issues had postponed the conclusion.

In July, Ford exercised an option to to buy 108 acres adjacent to the Avon Lake plant.

The state of Ohio has offered a $22 million package for roads, sewers and other infrastructure improvements.

Neither company currently has a product in the fwd minivan segment. For Lincoln-Mercury, the project will also mean the entry of a truck-like vehicle to its lineup — products that have been the domain of Ford Division.

Both Ford and Nissan currently sell rear-drive compact vans — the Ford Aerostar and Nissan Van. With front-drive entries, they will enter an increasingly popular segment that has been dominated by Chrysler Motors' Dodge Caravan and Plymouth Voyager.

Sources have said that the vehicle will be powered by a 3-liter V-6 engine.

The announcement also marks another tie between Ford and Nissan, who have begun cooperating on a number of projects around the globe.

This year, Ford began selling a Ford-badged version of the Nissan Patrol, a light truck, in Australia. And Nissan dealers there recently started selling a version of Ford's Falcon pickup truck.

The companies have also talked about joining forces on a future car program in Australia, where a government restructuring plan has limited the number of models that can be sold.

In Europe, Ford and Nissan are looking into the possibility of jointly producing a utility vehicle. A decision is expected early next year.

For Ford, the Avon Lake plant will promise additional truck capacity at a time when the company has been straining to meet demand. Ford Division announced last week that it again expects to sell every truck it can build in the coming model year.

Ford has expanded truck-building capacity by more than 100,000 units since last year.

Automotive News Staff Reporter Louise Kertesz contributed to this story.

*Automotive News estimate.

Inventory lowest in 23 months

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The Sept. 1 stockpile of U.S.-built cars was the lowest in 23 months, despite August new-car sales that trailed year-ago totals by 8.25 percent.

Still, the industry's inventory of 1,315,919 unsold cars equaled a 59-day supply at the beginning of the month, very near the idealized target of a 60-day supply.

One month earlier, on Aug. 1, there were 1,406,740 domestic units in stock, a 58-day supply.

One year earlier, on Sept. 1, 1987, there were 1,436,835 units in stock, equal to a 57-day supply.

At the beginning of this month, Chrysler Motors, with a 61-day supply, accounted for 14.05 percent of the industry total, compared with 16.31 percent one month earlier.

Ford Motor Co., with a 57-day supply, accounted for 28.63 percent of the Sept. 1 total vs. 28.42 percent of the Aug. 1 total. General Motors, with a 67-day supply, accounted for 53.35 percent of the industry total on Sept. 1, compared with 52.39 percent on Aug. 1.

U.S.-built Honda models accounted for 1.29 percent of the stockpile on Sept. 1, vs. 0.95 percent one month earlier; Nissan had 1.94 percent vs. 1.33 percent; Toyota, 0.40 percent vs. 0.31 percent; and Mazda, 0.34 percent vs. 0.29 percent.

There were wide variances by market class on Sept. 1.

The largest days' supply of unsold automobiles was again the specialty class dominated by GM. The class, made up of Buick Reatta, Pontiac Fiero, Cadillac Allante and Chevrolet Corvette, stood at a 92-day supply on Sept. 1, up from an 87-day supply on Aug. 1.

The days' supply increased because of reduced daily selling rates in August as the number of units in stock for that class remained virtually unchanged from the month-earlier total.

Among the standard-sized models, there was a 67-day supply on Sept. 1 compared with a 63-day supply one month earlier. The unit total declined to 243,793 from 249,872 on Aug. 1.

However, the stock of unsold standard models accounted for 18.53 percent of total inventory on Sept. 1, compared with 17.76 percent one month earlier.

Tightest inventories at the beginning of the month were in the subcompact and compact classes.

Unsold subcompact cars remained in the shortest supply with a 44-day supply on Sept. 1 compared with a 45-day supply one month earlier. The industry total was 210,438 units, equal to 15.99 percent of all unsold cars, up slightly from 208,573 units which equaled 14.83 percent of all unsold domestic-made cars on Aug. 1.

The total number of unsold compact cars declined to 284,448 units on Sept. 1 from 312,600 on Aug. 1, equaling 21.62 percent of the inventory, and a 47-day supply.

Unsold intermediates equaled a 64-day supply on Sept. 1, virtually unchanged from the 63-day supply on August 1, although the unit total dropped to 562,209, or 42.72 percent of the industry total.

PRODUCTION

Truck output sets record for August

U.S. truck production for August totaled 334,266, the highest ever for that month. The total surpassed the previous August record of 299,363, set in 1987.

Last month's truck output was 39.36 percent more than July's 239,863.

Truckmakers scheduled production of 71,735 units last week, 9.82 percent below the previous week's 79,546 but 17.45 percent more than the year-ago week's 61,076.

Year-to-date, 2,838,281 trucks have been assembled, 8.39 percent more than the 2,618,603 completed last year at this point.

August car production of 498,043 was the highest for that month since 1984 when 557,060 cars were built.

The August total was 35.55 percent more than July's 367,431 and 20.57 percent more than the year-ago month's 413,076.

Last week's production schedule called for 118,235 cars, 13.55 percent below the prior week's 136,771 but 9.23 percent more than the year-ago week's 108,245.

So far this year, 4,740,331 cars have been built, 3.90 percent below the 4,932,743 assembled last year at this time.

Companies split last week's scheduled production as follows: General Motors, 50.88 percent; Ford Motor Co., 22.34 percent; Chrysler Motors, 13.79 percent; Honda of America Manufacturing Inc., 4.93 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.92 percent; New United Motor Manufacturing Inc., 2.20 percent; and Nissan Motor Manufacturing Co. U.S.A., 1.94 percent.

GM said it will close its Doraville, Ga., plant today for two weeks to change operating plans and job assignments. The plant assembles the Oldsmobile Cutlass Supreme, which had an 111-day inventory on Sept. 1.

Ford's Lorain, Ohio, plant is idle for model changeover until October. Ford slated overtime next Saturday at Wixom and Wayne, Mich.; and Kansas City, Mo.

Canada follows on record path

Canadian truckmakers set an August record with assembly of 72,029, surpassing the previous peak of 65,386 built in 1984.

August truck output was more than double July's 34,647, when several plants were idle for changeover, and was 34.84 percent more than the year-ago month's 53,417.

Last week's estimated truck production of 16,973 was 5.59 percent below the previous week's 17,978 but 23.48 percent more than the year-ago week's 13,745.

Car production for August of 64,996 was the highest for that month since the the 1985 total of 89,702.

Last month's car build was 80.93 percent more than July's 35,923 and more than double the year-ago month's 27,573 when several plants were closed for changeover.

Automakers scheduled production of 16,509 cars last week, 8.35 percent below the prior week's 18,013 but 34.99 percent more than the year-ago week's 12,230.

New system flies again for Ford

T-bird/Cougar adopt Taurus plan

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — In a repeat of the process they first employed for Taurus and Sable, Ford engineers developing the 1989 Cougar and Thunderbird identified which competitors in the specialty class do the best job in 357 design elements that customers can see, touch or feel.

When Ford designed Taurus and Sable, it compared some 400 design elements, ranging from the size and heft of the ignition key to ride and handling. It set goals for those cars against other vehicles determined to be "best-in-class."

The runaway sales success of Taurus/Sable led Ford to continue this process of comparing and improving on the seemingly minor details that may make the difference between a good and great car.

Similar approaches have gained favor at General Motors, with its highly publicized Mona Lisa program, and at Chrysler Motors, which calls its process the "slickness" program.

Ford's documents show that early in the design phase of the 1989 Thunderbird/Cougar, Ford was judging the 357 design elements of competitive cars determined to be "best in class." Ford engineers believe the new Thunderbird/Cougar will be better than those top competitors in more than 75 percent of these design elements.

The report is broken down into sections describing the effort needed to operate virtually every control, lever or panel that might be touched by the customer. It also describes man-and-machine interaction noticable by customers, and vehicle dynamics including ride, steering, handling, powertrain smoothness and driveability.

PARIS: *Makers take wraps, gloves off for market-share fight in Europe*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PARIS — Two major car launches at the Paris Auto Show next week could mark the start of European sales rankings being turned upside down and could offer a glimpse of what is in store for the United States.

And, on a larger scale, Paris and Britain's Birmingham show two weeks later will begin to take the wraps off European automakers' strategies to deal with post-1992 unification of the Common Market. That move is expected to make those manufacturers much tougher global competitors.

While General Motors and Renault have dropped to fifth and sixth place, respectively, among Europe's Big Six volume makers, they are clearly out to boost market share with crucial products debuting at Paris — the Renault 19 in the Volkswagen Golf/Fiat Tipo class and the Opel Vectra/Vauxhall Cavalier in the Ford Sierra/VW Passat segment.

Neither R-19 nor Vectra is pegged for North America at the moment. But other cars debuting at Paris or at the Birmingham show in mid-October are aimed directly at the United States.

They include Volkswagen Corrado, Audi's new V-8 and coupe, a revised Mercedes-Benz 190, BMW Motorsport's M-5, the special edition Jaguar XJR-S coupe and the new Aston Martin V-8. Citroen, whose U.S. plans are still uncertain, will have a new four-wheel-drive BX compact hatchback on its Paris stand.

The show will also focus world attention on the French auto giants Renault and Peugeot and their chief executives.

Life has changed for the two French carmakers since the last Paris gathering two years ago. Renault is out of the red, and Peugeot has improved its profitability and is gaining market share faster than any other volume manufacturer in Europe.

But Peugeot S.A. President Jacques Calvet and Renault Chairman Raymond Levy, the two men in the spotlight next week, will be pressed about such matters as the future of Renault's privatization drive under France's new socialist government and Calvet's unabashed target of making Peugeot No. 1 in both European sales and profits by the early 1990s.

Aside from giving their top executives a forum, the Paris show will also provide Renault and Peugeot an opportunity to show off their concept of the future.

Renault should turn heads with its Megane prototype, a slippery three-box show car with an 0.21 drag rating and 3-liter V-6 engine.

Chevy eases ad refunds to dealers

By Laura Clark and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

LAS VEGAS, Nev. — Chevrolet last week told its dealers that it will rescind a requirement that would have forced dealers to join advertising associations before qualifying for certain ad refunds.

The announcement came at the 1989 national dealer meeting, where Chevrolet also revealed that it will create a family of cars under the Lumina badge.

At the same time, Chevrolet General Manager Robert Burger said the division will be getting tough with dealers to improve their customer satisfaction index ratings and to boost market share in their individual areas. Burger said Chevrolet dealers have slid to fourth place among GM's five divisions for CSI. Burger blames dealers, in part, for the division's slip into second place, behind Ford Division in sales.

Chevrolet predicted it will sell 1.55 million cars in the 1989 model year compared with 1.32 million in 1988, plus 1.475 million 1989-model trucks compared with 1.513 million in the 1988 model year.

Chevrolet expects the Lumina family to be its highest-volume models in the 1990s. It will include sedan and coupe versions of the mid-sized GM10 as well as the plastic-bodied all-purpose van.

The vehicles are being branded together for cost-effectiveness of advertising and collectively should account for about 17 percent of all Chevrolet car sales, according to Michael Erdman, Chevrolet general marketing manager. However, they will not be sold under a separate franchise addendum, as is the new Chevy Geo line.

The Lumina sedan goes into production as a 1990 model very early in 1989, with a national introduction in May 1989. Chevrolet said it will build about 100,000 sedans by the following fall.

Early production models will go into daily rental fleets, a segment of the market that will be crucial to the success of the Lumina. The Lumina replaces Chevrolet's highest-volume fleet car, Celebrity.

The Lumina coupe and the Lumina van will be introduced nationally in the fall of 1989.

The division hopes that the Lumina models will attract buyers in the 30- to 47-year age range with annual household incomes of $43,000 and up. They will compete with the Ford Taurus.

Executives said that 80 percent, or about 4,000 of its 4,900 dealers, have signed up to sell its new Geo line of imports and cars built by the Toyota-General Motors joint venture.

Chrysler takes on GM

Conquest success triggers ad stinger

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Claiming that a sizable percentage of Chrysler New Yorker sedan sales are General Motors conquests, Chrysler Motors will launch a direct-mail campaign to more than one million owners of GM luxury and intermediate-sized cars in the 1989 model year and will take on GM by name in television advertising.

Chrysler claims that 35 percent of New Yorker sales are made to persons who replace a GM car with a New Yorker.

That rate influenced the company to create a television ad that specifically mentions GM. Chrysler has rarely used such head-on advertising in recent years.

Chrysler declined to provide additional details on the direct-mail campaign except to say the mailing will be made in mid-autumn.

Korean automakers take Olympic bows

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — As the games of the XXIV Olympiad get under way this week, the government is counting on the event to highlight the country's drive to join the industrialized nations of the world.

South Korea's auto industry is expected to take a large part of the spotlight, but the makers themselves are divided on how best to capitalize on the exposure afforded by the Games.

Daewoo is looking to the arrival of Soviet and East Bloc athletes as a means of opening possible trade ties with communist countries, while Kia is taking a more traditional approach in courting the international media. Hyundai, on the other hand, is content

GM President Robert Stempel described CAFE as "fundamentally a bad law" AUTOMOTIVE NEWS/JOE WILSSENS

Stempel: 4 GM plants periled if CAFE rises

By Geoff Sundstrom and Dutch Mann
AUTOMOTIVE NEWS STAFF REPORTERS

Maintaining that General Motors has used up all existing technology to meet federal fuel economy laws, the company's president said it would have to close assembly plants if the government continues to raise the standard.

"If we have used up all the technology to gain increased fuel economy . . . and can get only 26 miles per gallon, then there is a need for a change" in the law, Robert C. Stempel said last week. He scorned the current corporate average fuel economy standard as "fundamentally a bad law."

"We're not planning on closing anyplace. I would run until my back is against the wall before I would 'take her down,' " Stempel said of plant closings. But he added that if NHTSA raises the 1989 requirement to between 26.5 and 27.5 mpg from 1988's level of 26.0 mpg, as it said it would, then as many as four plants would be threatened.

Stempel made his remarks at the Detroit Economic Club the same day NHTSA held a hearing in Washington on setting 1989- and 1990-model-year CAFE levels.

The GM president said any plant producing large, rear-wheel-drive cars would be vulnerable as a result of higher CAFE laws. He named the firm's Arlington, Texas, plant as one of the four plants affected.

NHTSA is expected to set the new standard before the end of the month.

GM's Arlington plant, near Dallas-Fort Worth, employs 4,000 workers and assembles the Cadillac Brougham, Chevrolet Caprice and Oldsmobile and Chevrolet full-sized station wagons.

If GM does not meet the CAFE standard, it would have to pay penalties as high as $100 million, something the company has said it will not do.

Several environmental groups, the Center for Auto Safety and the Insurance Institute for Highway Safety testified in opposition to a rollback, saying lower CAFE standards would result in more air pollution and allow an increase in the production of dangerous high-performance automobiles.

GM discounted those arguments, however, and delivered to Transportation Secretary James Burnley 5,000 letters from Arlington plant workers, their families and suppliers supporting GM's position.

Richard Klimisch, GM executive director for environmental activities, told NHTSA that GM has not been able to sell enough U.S.-built small cars to boost its average fuel economy rating. He said GM believes it must offer larger engines and cars to regain market share.

Under questioning by NHTSA officials, Klimisch said plant closing is the only option left if the CAFE standard is not reduced. He said it is unlikely GM could raise the foreign content of its large cars in time to qualify for import status under the law for 1989.

The highest foreign content in any vehicle counted in GM's domestic fleet is 10 percent, Klimisch said.

The CAFE law requires companies to average the fuel economy of their domestic and import fleets separately. Vehicles are designated imports if they have a foreign content of 25 percent or more. GM says a change now in 1989 standards will not allow enough lead time to make the change through outsourcing.

Spokesmen for Ford Motor Co. said their company supports a rollback of the CAFE standard for 1989 and 1990 but didn't join GM's petition because it believes it can meet 27.5 mpg by using credits from previous years.

The Automobile Importers of America called for a rollback to 26 mpg. The group claimed many of its members find it impossible to meet the CAFE standard because they do not manufacture small, high-mpg cars.

Chrysler Corp. did not comment at the proceeding, but a Washington spokesman said the company is concerned about CAFE's future, especially if fuel prices remain at current levels and consumer demand for larger engines increases. Chrysler believes that imposition of a fuel tax is the best way to conserve energy, he said.

Three witnesses said the CAFE standards should be abolished because they tend to limit the availability of larger, safer cars.

Speaking for the anti-regulatory group, Competitive Enterprise Institute, chief counsel Sam Kazman said a CAFE standard of 26.5 mpg "will cause over 1,500 needless fatalities in the 1989 car fleet."

Barry Felrice, NHTSA associate administrator for rulemaking, indicated the agency is preparing a study on the safety impact of CAFE but did not say when it would be released.

'Hybrid' LeBaron sedan studied

Proposed Chrysler would borrow parts from A-, H-, J-bodies

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors is considering introducing late in the 1990 model year a new Chrysler LeBaron four-door sedan derived from the company's intermediate-size H-body platform.

The current H-body LeBaron five-door hatchback would be dropped at that time.

The new sedan is a "combined hybrid body" based on the H-body, utilizing "pieces of the H-body, A-body and J-body," said Joseph A. Campana, Chrysler Motors vice president of Chrysler-Plymouth marketing.

The H-bodies are the Chrysler LeBaron GTS and Dodge Lancer. The A-bodies are the Dodge Spirit and Plymouth Acclaim sedans being launched in January. The J-bodies are the Chrysler LeBaron coupe and convertible.

Campana said the new sedan will be more consistent with the luxury image being cultivated by the Chrysler brand.

"Upscale buyers prefer sedans to hatchbacks," Campana said.

The move would also benefit the Chrysler brand by allowing it to market a full line of sedans by the end of the 1990 model year.

Dropping the LeBaron hatchback from the Chrysler lineup will also further the company's brand differentiation by making the H-body Dodge Lancer exclusive to that division. If the sedan indeed joins the Chrysler lineup, the brand would have three distinct sedan models by the end of the 1990 model year.

Although its rear-wheel-drive M-body Chrysler Fifth Avenue is scheduled to go out of production at the end of 1988, Chrysler will market the C-body front-wheel-drive New Yorker and New Yorker Landau, introduced in the 1988 model year.

Expected to be introduced in the 1990 model year are the front-wheel-drive Y-body Chrysler Imperial, followed by the Y-body Chrysler Fifth Avenue. The Y-bodies are to be the flagship vehicles of the Chrysler fleet.

Engineering sources said the Y-body wheelbase is 109.3 inches, five inches greater than the C-body New Yorker on which it is based. The Y-sedans have a front, rear and roof distinct from the New Yorker Landau.

The addition of a sedan based on the intermediate-sized H-body would permit Chrysler dealers to target a range of sedan buyers. The H-body has a 103.1-inch wheelbase.

Dropping the LeBaron hatchback will further brand differentiation by making the H-body Dodge Lancer exclusive to that division.

Chrysler, in the 1989 model year, has pared down the offerings under the LeBaron nameplate. Dropped from the 1989 lineup are the LeBaron four-door notchback sedan and the LeBaron Town & Country wagon.

The LeBaron lineup now consists of the J-body coupe and convertible and H-body hatchback sedan. A performance version of the coupe/convertible is designated the GTC. Only the turbo sedan carries the GTS designation in 1989. Previously, all five-door hatchbacks carried the GTS name.

Campana also said Chrysler is seeking to increase its LeBaron convertible production capacity and anticipates selling 50,000 units in the 1989 model year.

MITCHELL: *Put GM in forefront of automotive styling*

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In the midst of the historic design and engineering project that resulted in General Motors downsizing its full-sized cars for 1977, GM Design Vice President William L. Mitchell wanted to make a point.

So he took an entourage of GM executives, including then-president Edward N. Cole, through a styling studio to view clay models.

When the group stopped to admire a particularly low, sleek effort, Mitchell decided to demonstrate the kind of restrictions he faced.

"Now show Mr. Cole what kind of extra space the engineers will need to fit in the air cleaner," Mitchell said, turning to a young staff member.

On cue, his associate produced a shoe box and plunked it down in the center of the hood, to the startled dismay of all.

"Bill Mitchell certainly had flair," recalled William T. Collins Jr., a Detroit-area engineering consultant who was GM's project manager for the downsizing effort. "And he certainly knew how to make a point."

Mitchell, who retired as GM design staff vice president in 1977 and whose work influenced worldwide automotive design for nearly half a century, died of congestive heart failure Sept. 12 in Royal Oak, Mich. He was 76.

It was during Mitchell's tenure that GM became the styling leader in the United States, first with cars like the Buick Riviera and the Pontiac Grand Prix, and later with the Cutlass Supreme and eventually the downsized B- and C-body full-size cars that bowed as 1977 models.

It also was under Mitchell's influence that the operation was renamed Design Staff in 1972, reflecting influence and responsibility more pervasive than just styling.

Import inventories fall to 1988 low point

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Combined import car and truck stocks on Sept. 1 fell to the slimmest level in 1988.

Unsold imported cars on Sept. 1 totaled 606,740, equivalent to a 58-day supply. That was comparable to the year-earlier count of 606,500, which represented an even leaner 50-day supply at a time when imports were selling faster.

Compared to a month ago, the Japanese share of unsold cars in this country grew a fraction of a point while European car makers reported nearly a percentage point drop in their share.

Imported-car stocks fell 24,777 units or 3.92 percent below the month-ago inventory of 631,517, representing a 61-day supply.

The domestic-car stockpile, reported by Automotive News last week, totaled 1,315,919, equivalent to a 59-day supply. Combined stocks of unsold domestic and imported cars totaled 1,922,659, representing a 59-day supply.

September opened with a much reduced supply of imported trucks, although the 56-day supply estimate was exactly the same as a year ago because of a much more sluggish sales pace. The Sept. 1 total was 159,522, which was 44,960 units or nearly 22 percent below the year-ago total of 204,482 trucks. Both years' import truck stockpiles were 56 days.

Combined imported vehicle stocks on Sept. 1 at ports of entry, in transit within the United States and at dealerships totaled 766,262, a 58-day supply versus last month's 815,505, a 63-day supply. A year ago there were 810,982 vehicles, or 52-days' worth.

Import car dealers agreed that inventory numbers were lean or just about on target.

"We're just about right with the closing for end of model year," said Joe Beam, sales manager, Moultrie Nissan, Albertville, Ala. "We have a 30-day supply. One reason inventories are lower is we are not taking the cars we did."

The Big 3 automakers began September with 73.35 percent of the combined domestic and import car stocks. The three major Japanese firms with transplant operations here — Toyota, Nissan and Honda — had 10.15 percent of unsold car stocks.

The six carmakers shared combined inventories as follows: General Motors, 39.17 percent; Ford Motor Co., 21.25 percent; Chrysler Motors, 12.93 percent; Nissan, 6.23 percent; Toyota, 2.18 percent; and Honda, 1.74 percent. All other foreign carmakers took 16.50 percent of combined car stocks.

The Sept. 1 import-car inventory share by country was: Japan, 60.41 percent; Germany, 16.93 percent; and others, 22.66 percent.

Japanese carmakers shared 52 days' worth of imported cars at August's daily selling rates on Sept. 1. That represented the same days-supply level as a year ago.

The slimmest import and domestic car inventories belonged to Honda with a 17-day supply and Toyota with 18 days' worth of imported and U.S.-built cars on Sept. 1. Nissan had a combined stock total representing 74 days' worth.

Japanese carmakers with reduced but high import stock levels included Chrysler's captive Mitsubishi line which still had a 130-day supply and Isuzu which reported a sluggish 103-day supply.

Fatter stocks were reported by Honda's Acura Division, which had 12.57 percent more cars for a 52-day supply on Sept. 1. Mazda's import unit count was slightly higher but at August's sales pace equalled a 46-day supply.

Nissan cut its import-car stocks by 8.82 percent to represent an 85-day supply of cars on Sept. 1 versus a 95-day supply a month ago.

German carmakers shared an 82-day supply of unsold cars on Sept. 1. Audi stocks were whittled from a 198-day supply last month to an 89-day supply on Sept. 1. BMW, Mercedes-Benz, Porsche and Volkswagen all reduced their inventory and days-supply numbers on Sept. 1. Of the Germans, only Ford's Merkur stocks grew significantly (44.68 percent) to equal a 105-day supply.

Foreign carmakers reporting thin stocks were Jaguar with a 26-day supply. Volvo's inventories were reduced by 30.80 percent to an equivalent of a 47-day supply from 69 days' worth on Aug. 1.

Auto trade deficit dips; June total 8.8% brighter

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks showed continued improvement in June, falling 8.8 percent, although the value of both imports and exports was lower than in June 1987.

The June drop in the automotive trade deficit followed a 13.8 percent drop in May. The trade balance improved because both the value and quantity of imports declined at a faster rate than exports. Export value declined 6.1 percent for the month, while import value fell 8.2 percent.

Trade numbers from the U.S. Commerce Department show a trade deficit for passenger cars and light trucks of $3.595 billion for June. Total car and truck exports had a value of $896.3 million during the month. Monthly car and truck imports were valued at $4.491 billion. The automotive trade deficit for June 1987 was $3.940 billion.

Passenger-car exports reached 68,801 vehicles with an estimated value of $726.9 million in June. Light-truck exports for the month were 16,911 vehicles with an estimated value of $169.4 million.

Passenger-car exports were up 495.4 percent to Japan, but dropped 27.4 percent to Canada. Total car exports declined 11.1 percent, to 68,801 vehicles.

On the import side, Japan recorded another downturn for the month in both the quantity and value of car and truck shipments. Only Brazil and Canada showed import growth in June.

Shipments declined from Mexico, West Germany, South Korea, Sweden, Yugoslavia, United Kingdom, Italy and France.

Total car and truck imports had a value of $4.491 billion in June, down 8.2 percent from $4.895 billion in June 1987. There were 433,562 finished vehicles imported to the United States in June, compared with 519,729 vehicles in June 1987.

Passenger-car imports reached 357,932 units for the month, with a value of $3.879 billion. Imports of light trucks totaled 75,630 units, with a value of $612.1 million. The value of imported trucks increased 14.7 percent in June, although shipments fell 10.5 percent.

Japanese-car imports dropped 24 percent for the month and the value of the shipments fell 19.8 percent. Japanese truck imports were off 29.8 percent and their value was down 28.8 percent. Japan shipped 167,077 cars to the United States in June, down from 219,856 cars one year earlier. Truck shipments totaled 46,025 units, down from 65,557 units one year ago.

West Germany, Sweden, United Kingdom, Italy and France all shipped fewer cars to the United States in June than in June 1987, continuing a year-long trend. Mexico also shipped fewer cars for the month but has been increasing shipments for most of the year.

South Korean shipments showed continued interruption from labor troubles, dropping 57.1 percent. German shipments were off 47.7 percent. Sweden's shipments were down 21.9 percent. French and Italian manufacturers — who already ship only a small number of cars — sent 71.7 percent and 60 percent fewer vehicles, respectively, to the United States for the month.

Imports from the United Kingdom were off 43.5 percent. Yugoslavia saw exports to the United States fall 83.8 percent for the month, after falling 52 percent in May. Imports from Mexico were 12,380 vehicles, down from 15,190 one year ago.

Canadian-car imports gained 36.3 percent for the month, to 121,302 units, and Brazil's imports totalled 3,198 units, up from 2,160 vehicles in June 1987.

Ford, college to help young entrepreneurs

TOLEDO, Ohio — The University of Toledo, Cimarron Express and Ford Motor Co. have teamed up to sponsor the Youth Entrepreneurship Program for Toledo-area minority students.

The program is designed to educate minority students in basic business disciplines and expose them to successful minority entrepreneurs.

Twenty-five Toledo high school students were selected from more than 150 applicants to participate in the eight-week program.

Cimarron Express, a minority-owned and operated transportation firm based in Genoa, Ohio, was established in 1984 and operates in 23 states. Cimarron is a major carrier of automotive parts for Ford.

Ferrari prices shooting up

A rare Ferrari 250 P — one of only five built and the only one known to exist — brought $2.75 million at the Monterey (Calif.) Sports Car Auction.

It took only seven minutes to sell the bright red, 12-cylinder Ferrari. The Ferrari won the 12-hour race at Sebring, Fla., in 1963.

"Ferrari prices are much stronger than a year ago, and I can't help but believe that the death of Enzo Ferrari has had something to do with it," said auction head Rick Cole.

The new owner of the vehicle is Mark Smith of the Old Philadelphia Motor Car Museum, who bought the historic auto from Harley Cluxton of Phoenix, Ariz.

Enzo Ferrari died in Italy at the age of 90 on Aug. 14, only five days before the Monterey auction.

GE builds in Florida

Construction is nearly complete on a new $1.2 million facility for St. Pete Auto Auction, a GE Capital Auto Auction based in Clearwater, Fla.

The eight-lane auction with 20 acres of paved parking will include a full-service reconditioning center, an expanded service counter and automated office systems.

The former facility, which is being converted to a reconditioning center, had four lanes. The additional lanes will double capacity to 1,000 vehicles at the weekly Thursday evening sale.

Ford prices climb 2.6% on '89 cars

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. has placed itself squarely between Chrysler Motors and General Motors in raising 1989 car prices an average of 2.6 percent over comparably equipped 1988 models.

GM's and Chrysler's increases, announced last month, amounted to 2.9 percent and 2.3 percent, respectively.

Ford's truck prices, meanwhile, will rise an average of 3.1 percent, the company said. As with the cars, the percentage has been adjusted to reflect improvements and equipment that has been made standard.

Ford's actual car sticker prices, however, will go up an average of 4.2 percent, according to Automotive News calculations.

In making its announcement last week, Ford also lifted prices on six car lines by an additional 1.5 percentage points over 1989 presale prices. Those lines — Ford Mustang and Crown Victoria; Mercury Grand Marquis; and Lincoln Town Car, Mark VII and Continental — have had some of the lowest inventories in Ford's lineup.

Their 1989 prices rose 3.3 percent when Ford issued a tentative price list in early August. Last week's action boosted final prices 4.8 percent above 1988 levels.

Customers who have already ordered one of those models will pay no more than the presale price, a Ford spokesman said. On the Mustang LX models, the one series where final prices were lower than the presale figures, customers will be refunded the difference, which amounts to less than 1 percent.

For 1989, the Continental Signature has the biggest price increase. It has gone up $1,966, to $29,910. Changes include the addition of driver- and passenger-side air bags as standard equipment.

At the other extreme, the Festiva L rose $104, or 1.9 percent. It is unchanged for 1989. At $5,699, it is Ford's only model under $6,000.

On a comparably equipped basis, Ford's price increases range from no change on the Mustang LX convertible to 5.3 percent on the Crown Victoria wagon, Ford said. Although the convertible is up $437, power windows and power locks have been made standard. The Crown Victoria standard wagon, meanwhile, is up $897 while undergoing little change.

Ford attributed the increases to higher costs for labor and materials.

Actual percentage increases on Ford's product lines are as follows. They are grouped according to Automotive News classifications.

Subcompacts: Ford Festiva, 2.64 percent; Escort, 2.87 percent. Mercury Tracer, 3.75 percent.

Compacts: Ford Tempo, 4.5 percent. Mercury Topaz, 4.2 percent. Merkur XR4Ti, 3.2 percent.

Intermediates: Ford Mustang, 3.75 percent; Taurus, 3.3 percent. Mercury Sable, 2.5 percent. Merkur Scorpio, 4.0 percent. Lincoln Continental, 7.3 percent; Mark VII, 4.51 percent;

Standard-sized: Ford Crown Victoria, 4.7 percent. Mercury Grand Marquis, 4.6 percent. Lincoln Town Car, 4.4 percent.

Overall, Ford has raised prices on 57 models an average of $586 per car, according to Automotive News calculations. The figure is not weighted to reflect varying sales volumes of each car.

The comparison doesn't include the Mustang LX 5.0-liter series, which is new for 1989, and the Ford Probe, which was introduced as a 1989 model last May. Probe prices were boosted for the second time since introduction. The newest round averages 1.9 percent.

Ford hasn't announced prices for its new Ford Thunderbird and Mercury Cougar models. Those cars will debut late this year.

Most of Ford's 1989 products will officially go on sale Oct. 6.

Ford Prices, 1989 vs. 1988

Following is a comparison of 1989 and 1988 Manufacturer's Suggested Retail Prices of Ford Motor Co. cars. The 1989 prices are introductory prices; the 1988 prices are those in effect at the end of the model year. No adjustments have been made for year-to-year equipment changes.

Nissan adds $400-plus to many cars

CARSON, Calif. — Nissan Motor Corp. in U.S.A. last week announced a price increase averaging $316, or 3.2 percent, on its 1989 cars and trucks, but that was only the beginning of the story.

Nissan declined to supply separate figures for the car and truck increases. Some trucks had moderate hikes, and many other pickups have been reduced for 1989. That means the car price boost was considerably higher than the $316 average for all vehicles.

Automotive News estimates that the Nissan cars priced last week went up an average of more than $400 over the final 1988 prices.

Several models in the Sentra, 240-SX and 300-ZX series went up $400 to $653, while the Pulsar series shows no change.

In the Sentra line, which is Nissan's best seller with about 40 percent of its U.S. sales, the base two-door sedan climbed only $150, to $6,849. A station wagon was unchanged, and the Sentra E four-door sedan was reduced $100.

However, other Sentra manual-transmission models were boosted $400 to $550, and cars with automatic transmission went up $45 in addition to that. The Sentra increases on individual models were as high as 5.6 percent.

Stanza sedans rose $350, and automatics went up that amount plus an extra $35.

The 240-SX series, which replaces the 200-SX, checked in with increases of $450 to $595 on comparable models. The 240-SX line starts at $12,999.

The 300-ZX sports cars received the largest bumps — $600 per model plus another $35 to $53 on cars with automatic transmission. The 300-ZX coupes are priced from $22,299.

Nissan's new Maxima models and its Pathfinder sport-utility vehicles will be priced later. They are scheduled to go on sale Oct. 31.

The base two-wheel-drive pickup truck was increased $150 and now is $7,399.

Other trucks are difficult to compare because of changes in model and series designations, but Nissan appears to have reduced prices on a number of 1989 pickups in an effort to stimulate sales, which were down 22.61 percent for the first eight months of this year.

Car-truck sales falter

Deliveries drop 9% for early September

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Early-September domestic-car and light-truck sales fell 8.95 percent from the year-ago period, primarily because of a 12.61 percent decline in sales of U.S.-built cars.

Only Honda and Nissan reported year-to-year car sales increases, although Ford and Chrysler Motors reported gains in domestic light-truck sales.

Combined domestic car and truck deliveries for Sept. 1-10 totaled 242,368, off 23,824 units from 266,192 a year ago.

The General Motors domestic car and truck total fell 16.52 percent; Ford car and truck sales declined 6.38 percent; and Chrysler car and truck sales were off 3.81 percent. Sales of U.S.-built Nissan cars and light trucks rose 51.34 percent.

Retail deliveries of U.S.-built new cars totaled 155,131 in early September vs. 177,512 last year.

The daily-selling rate in the Sept. 1-10 period was 19,391, off 2,798 cars, or 12.61 percent, from 22,189 last year. Both periods had eight selling days.

Honda sold 41.33 percent more U.S.-built cars in early September than it did last year. Nissan's U.S.-built-car sales were up 19.06 percent. However, Toyota's declined 41.77 percent.

GM's Sept. 1-10 new-car sales were 16,435 units or 18.05 percent below last year's early-September totals, and Ford's sales fell 11.56 percent. Chrysler Motors' retail deliveries were down 10.16 percent.

In the first 10 days of September, Mazda sold 506 cars produced at its Flat Rock, Mich., plant.

Sales of U.S.-built light trucks dipped 1.63 percent for Sept. 1-10. The total was 87,237 vs. 88,680 last year.

Nissan sold twice as many U.S.-built light trucks as it did a year ago. Ford and Chrysler sales rose slightly, while GM sales declined 12.80 percent.

Cafaro and his company move up to 95% of Avanti

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Developer J.J. Cafaro has purchased a 47.5 percent interest in New Avanti Motor Corp. from Michael Kelly, former president and co-owner.

Kelly had sold 47.5 percent of the luxury-car maker to Cafaro Co. of Youngstown a year ago for an estimated $1.5 million. J.J. Cafaro is executive vice president of that company.

Kelly had purchased the ailing auto firm in 1986 for $725,000 and moved it to Youngstown, Ohio, from South Bend, Ind., last year.

Cafaro declined to disclose the purchase price for the 47.5 percent he purchased from Kelly.

A statement said he will continue with Avanti while Kelly will leave the company to concentrate on the American distribution and sales of Puma, a Brazilian-built sports car that will be sold through Avanti dealerships. In July, a company official said Cafaro had relieved Kelly of management of New Avanti Motor so he could operate Puma Motors Corp., a subsidiary of Avanti.

"In recent months, it has become increasingly clear that the dual demands of the Avanti and Puma divisions were too much for any one person to handle," said Cafaro. Cafaro said the company expects to launch three new car lines in 12 months and to increase the number of Avanti dealers.

A company spokesman said Youngstown could be the site of a second assembly plant when Kelly begins bringing the Puma to the United States.

PRODUCTION

Truck output highest in 4 months

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic truck production of 89,230 was the highest since the week ended May 21, when 92,256 trucks were built.

The truckmakers' schedule last week was 25.12 percent higher than the prior week's 71,314 and 18.85 percent more than the year-ago week's 75,077.

Year-to-date, 2,927,090 units have been assembled, 8.82 percent more than the 2,689,745 completed last year at this point.

Car output was estimated at 145,467 units last week, 19.62 percent more than the previous week's 121,609 and 10.79 percent more than the year-ago week's 131,295.

So far this year, 4,889,172 cars have been built, 3.49 percent below the 5,065,847 assembled last year at this time.

Companies split last week's scheduled production as follows: General Motors, 51.21 percent; Ford Motor Co., 23.62 percent; Chrysler Motors, 14.68 percent; Honda of America Manufacturing Inc., 4.96 percent; Mazda Motor Manfacturing (U.S.A.) Corp., 3.27 percent; Nissan Motor Manfacturing Co. U.S.A., 1.97 percent; and New United Motor Manufacturing Inc., 0.29 percent.

NUMMI's plant in Fremont, Calif., closed last Tuesday for model changeover. When it reopens Sept. 26, it will build the 1989 Toyota Corolla sedan, and in November, the new 1989 Geo Prizm, which replaces the Chevrolet Nova.

GM's Doraville, Ga., plant remains closed until Sept. 26 for changes in operating plans.

Ford's Lorain, Ohio, plant will be idle until early October for model changeover.

Chrysler's Newark, Del., facility will be closed until mid-October for changeover.

GM slated overtime last Saturday at its Van Nuys, Calif.; Lordstown, Ohio; and Lansing, Mich., plants.

Canada climbs to 19,581 cars

Canadian auto output was scheduled at 19,581 units last week, 20.49 percent more than the prior week's 16,251 and 24.78 percent more than the year-ago week's 15,692.

So far this year, 760,068 cars have been built, 41.26 percent more than the 538,071 completed last year at this point.

Truckmakers estimated assembly of 20,193 units last week, 20.78 percent more than the previous week's 16,719 and almost double the year-ago week's 10,250, which was affected by a strike against Chrysler.

Year-to-date, 645,389 trucks have been built, 10.49 percent more than the 584,115 assembled last year at this time.

Workers at Volvo's Halifax, Nova Scotia, plant remained on strike last week over pensions, wages and union representation on the shop floor. The strike began Aug. 24. A company spokesman said negotiations are continuing.

GM kicks off lower-rate lease plan

SmartLease first divisionwide effort

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT -- A new volley in the incentive wars will be launched today, as General Motors begins its first corporate-wide uniform leasing program on all new 1988 and 1989 vehicles.

The low-rate lease program is supported by an intensive advertising campaign that began on last night's Olympics telecast.

The consumer leasing program represents yet another effort by GM to boost its long-suffering market share with a fast start to the new model year. The program also is a move to try to capture some of the growing retail leasing market, a market in which GM has not performed well of late.

The automaker's financing subsidiary, General Motors Acceptance Corp., kicks off the program, SmartLease by GMAC, today.

SmartLease is a streamlined lease agreement that provides the customer with the option of giving back the car after the 48-month term or buying it. The lease spells out the price the person leasing the car will have to pay to buy the car at the end of the lease — something Ford Motor Credit and other financial institutions have offered for years.

Previous GMAC leasing programs have simply said the purchase price will be the fair market value when the lease expires. SmartLease also will offer special incentives on selected new 1989 GM vehicles through Dec. 31.

For example, on a vehicle with a sticker price of $15,000 and a fixed price of $5,000 to buy the vehicle at the end of the 48-month term, the monthly lease payment would be $309.

LEASING: *Rebound seen as customers seek low monthly payments*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Two years ago, the number of retail auto leases written by the Big 3's financial arms plunged to the lowest point in the decade after more than five years of continuous growth.

Incentives and customer acceptance of 60-month financing had stunted retail leasing for General Motors Acceptance Corp., Ford Motor Credit Co. and Chrysler Credit Corp. while other financial institutions saw only modest gains in their portfolios.

But the pace of retail leasing has picked up this year, unencumbered by blockbuster interest-rate incentives. And it may get another year-end boost as GM enters the fray with a broadsword lease program this week.

Nevertheless, leasing has yet to be the merchandising tidal wave that some industry observers had predicted.

Best industry estimates put the entire lease market — for both fleets and retail — at only 14 percent of all cars delivered in 1987. And the personal-use lease segment accounted for less than 9 percent of 1987 deliveries, according to Richard H. Kline Jr., chairman of the automotive marketing department at Northwood Institute.

Meanwhile, the National Vehicle Leasing Association is predicting growth of about one percent a year in retail leasing. Bill Neremberg, executive director, predicted 1988 could be the year that retail leases top 1.1 million units.

"It's growing fast," he said. "Industry revenues for cars and trucks grew 240 percent between 1975 and 1986, from $15.7 billion to $53.4 billion."

Fueling customer interest in leasing is the gradual phasing out of federal income tax benefits for financing a car. This year, a car buyer may deduct 40 percent of the interest paid on an automobile, but that will drop to 20 percent in 1989, 10 percent in 1990 and zero in 1991.

"Leasing will become more attractive because the tax (break) will soon disappear for financing a car," said Stuart H. Angert, senior vice president — automotive marketing for Marine Midland Automotive Financial Corp.

Other industry officials agree that leasing is gaining ground, but they say the driving force is the difference in monthly payments between financing and leasing a car.

"The price alone is bringing leasing before the public," said Fred Winkler Jr., director of direct leasing for GMAC. "There is little or no downpayment, and the monthly payment is lower. Elimination of interest de-

GM seizes giant Chevy dealership

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Jim Johnson Chevrolet, the nation's largest retailer of Chevrolet vehicles in 1987, has been taken over by General Motors, to which the dealership owes millions of dollars, and is being investigated by the Texas Motor Vehicle Commission.

In addition, three Dallas-area newspapers have filed petitions in U.S. Bankruptcy Court, seeking to force the dealership into liquidation because they together are owed more than $238,000.

GM's financing subsidiary, General Motors Acceptance Corp., has assumed control of the giant Richardson, Texas, dealership and is operating it under the name of Patlan Chevrolet with an interim manager until a new dealer can be found to buy the dealership.

It is the second time in less than a year that GMAC has taken over a Dallas-area dealership. Jim Johnson Chevrolet is the fourth large dealership in recent months to encounter severe financial difficulties.

GMAC earlier this year took over Parkway Pontiac in Dallas until a new owner was found. In New Jersey, Richard T. Pepe, one of the state's largest dealers with 10 outlets, filed bankruptcy, owing $26 million to creditors including GMAC. And in Glendora, Calif., Grand Chevrolet, another of Chevrolet's top retailers, also filed bankruptcy.

Johnson

In Richardson, Texas, J.S. Kavanagh, GMAC branch manager, would not reveal the amount of GMAC's losses from Jim Johnson Chevrolet. He would only say that those losses will be "sizable."

Robert Starr, Chevrolet general sales and service manager, declined to discuss the details of the dealership except to say that big dealers can make big money, but when they lose, they also lose big. Starr said Chevrolet dealers in general are having their most profitable year in history.

Sources familiar with Jim Johnson Chevrolet operations estimated the dealership's debts in the $10 million to $15 million range.

Jim Johnson, former owner of Jim Johnson Chevrolet, is working at his Chevy dealership in Austin, Texas. Johnson did not respond to numerous telephone calls and a telefax from Automotive News. One

Japanese shape up UAW parts plant

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

TOLEDO, Ohio — When another Japanese auto parts plant comes to town, it's not big news anymore — in Ohio or in scores of other U.S. locations near auto assembly plants.

But the Japanese usually settle in greenfield sites far from union influence. When a major Japanese supplier buys an old auto parts plant with a UAW workforce — one so ornery it earned the label "little Jeep" — the industry's collective ears perk up.

That is the whole idea, as far as the UAW and northwest Ohio companies are concerned. They say the area could use an image boost, because the memory of a few highly publicized labor disputes hangs like a gritty cloud over the Toledo area.

When the Japanese rode into town and looked with favor on Mather Metals, an old forging operation, the UAW leadership in Region 2B — from Director Jack Sizemore to Plant Chairman Ken Zarecki — were quick to see the

Toyota's goal for Lexus far short of Acura sales

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — While Honda is counting on its Acura Division as another high-volume channel, Toyota says its upscale Lexus line has a more limited goal of cracking the true luxury-car market.

"Lexus is different from Acura at every level," said James C. Perkins, senior vice president, Lexus Division. Unlike Acura, Perkins said, Lexus will launch with two luxury models priced over $20,000 and will limit volume in order to maintain exclusivity.

"Acura has one entry-level luxury model in the Legend and a rebadged Honda Quint Integra that makes no pretense of belonging in the luxury market at all," he said. "In short, Lexus leapfrogs Acura and will offer the first true high-performance luxury sedan from Japan."

CAFE ruling may bring GM windfall

1985 guzzler fines might be erased

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Christmas came in September for many auto companies but especially for General Motors, as a federal appellate court reversed itself and reinstated EPA's adjustments used in determining corporate average fuel economy.

The windfall — which GM declined to quantify — appears to be enough to wipe out all of GM's potential civil penalties for failing to meet CAFE requirements. So, although GM has not said so, it may not need what it has requested from NHTSA: retroactive rollback of the 1985 CAFE standard and the lowering of the 1989 CAFE standard.

While GM may not need the rollbacks to come into compliance, it may still want them as a hedge against the future. Credits generated by such rollbacks can be carried forward as well as backward.

Although other automakers and importers don't have as many millions of dollars affected by the court decision, European importers who were subject to the CAFE fines of $5 per tenth of an mpg per car will either be home free or helped greatly.

Already, Aston Martin, Jaguar and Porsche have paid fines and Mercedes-Benz has refused to pay its civil penalties for the 1985 model year while it petitions for a retroactive rollback for both 1984 and 1985 models. In addition, Ford Motor Co. and other European makers have had to use some of their credits, and the court decision will negate some of those losses and perhaps allow them to build more cars with bigger engines.

But as important as the monetary issue is to the automakers, the court decision was perhaps more important to consumer groups because of the technical grounds upon which the reversal was made.

Cornish Hitchcock, attorney for Ralph Nader's Public Citizen and the independent Center for Auto Safety, said it was a devastating defeat for consumers because their

Mayhew brings a mix of enthusiasm and experience to his job as Ford's North American design chief

MAYHEW: *Ford designer points to interiors, trucks as next big breakthroughs*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Fred "Fritz" Mayhew, Ford Motor Co.'s North American design chief, has found an unlikely home for some of his art work: the 14th floor of the General Motors Building.

No, they aren't sleek, clay models of future Fords being scrutinized by GM executives. They are landscape paintings — a handful of them — that grace the halls on GM's executive floor.

Mayhew ranks himself as a painter of some renown on the local art scene, and GM art critics seem to agree. But his current job at Ford threatens that reputation because Mayhew now has little time or energy left for the canvas.

When Mayhew was named to succeed celebrated designer Jack Telnack 15 months ago, he was given a clear mission: Keep Ford on top of the automotive design world.

As with anyone who has big shoes to fill, the task won't be simple. For Mayhew, it won't be enough, either. He has also aimed Ford's design sights at breakthroughs on two other fronts: interiors and trucks.

With a head of gray and a bespectacled, boyish face, the 45-year-old Mayhew reflects a mix of enthusiasm and experience. And he is no stranger to the work that's been going on behind the closed doors of Ford's Dearborn design center.

He worked on the 1979 Mustang, the car that he credits with launching the design turnaround at Ford. Through a series of jobs, he also has had a hand in some notable successors to that effort — including the 1984 Tempo, 1986 Taurus, 1988 Continental and the 1989 Thunderbird.

His current job opened up last year when Donald Kopka, Ford's vice president for design, retired at age 60. Telnack replaced Kopka, and Mayhew stepped into Telnack's spot.

The move to the No. 2 position marked an obvious peak for Mayhew after a quarter century at Ford. And with Telnack just a few years his senior at age 50, Mayhew could well be in his present spot for some time.

Mayhew interviewed at GM and Ford after graduating from Carnegie Mellon University in 1963. Although trained as an industrial designer, he had become interested in automotive design while attending a GM-sponsored summer program. Mayhew picked Ford, in part because he was impressed by the work in process on the original Mustang at the time.

In recent years, the auto industry has relied more and more on the techniques of industrial design, a pursuit that stresses the blend of function and beauty in a product.

On interiors, though, Mayhew sees room for improvement. He disputes the industry's claim to good ergonomics. A friendly interior should pass a simple test, he says: A driver should be able to enter a strange car at night and operate it without having to fumble around for the controls.

Some designers outside the industry agree.

"The real arena of competition is going to be interiors," says Ron Hill, chairman of the industrial design department at the Art Center College of Design, Pasadena, Calif. "It's a much more difficult, multilayered task than exteriors. There's a lot of things that can be done to make them more exciting, more livable and safer."

Mayhew envisions a trend toward simplified ergonomics and a departure from some of the electronic clutter that is common today. There will be lighter, brighter colors on the inside. Controls that aren't used all the time won't be prominent.

"I think we'll see more innovative, creative forms in interiors — probably more sculptural, like our exteriors are," he says.

Today, no automaker has a clear lead in interior

Nissan introduces shop pact

Adesco in picture till suit is settled

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Nissan Motor Corp. in U.S.A. will launch its own extended service warranty program for Nissan dealers beginning Oct. 1, after its contract with Oklahoma-based Adesco Corp. expires.

But Adesco will continue to administer more than 500,000 existing warranties pending the outcome of a trial in U.S. District Court for the Central District of California, which is scheduled for January.

According to attorney Randy Huff, who represents Nissan in the lawsuit, the importer will pay claims on Adesco contracts presented by dealers but will be reimbursed by Adesco's insurers through Adesco.

"Adesco is still in the loop," he said. "Nissan is required by the insurance companies to submit its claims to Adesco for processing and then for payment, whether the claims are covered or not."

Any contracts written by Nissan after Oct. 1 will be administered and self-insured by the automaker.

Nissan sued Adesco and its affiliate, Oklahoma-based Minnehoma Insurance Co., in March, winning a temporary restraining order halting Adesco from terminating dealers in Florida and elsewhere from the program (Automotive News, March 28.)

The court will decide Nissan's right to administer the existing contracts and to replace Adesco subject to the consent of Adesco's insurers, Foremost Insurance Co., parent of Minnehoma, of Grand Rapids, Mich., and Republic Insurance Co. of Dallas.

A second issue involves the right of Nissan to administer those contracts as the insurer.

Adesco has sued several Nissan dealers in Florida, claiming incidents of fraud in their filing of claims for service and parts. The Florida lawsuits are pending.

Robert Stevens, national service contracts manager for Nissan, said it is Nissan's desire to administer

Big 3 raise 4th-quarter production estimates

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 recently beefed up their fourth-quarter U.S. production forecasts, boosting the industry estimate almost 8 percent above the fourth quarter of 1987.

The three companies added almost 105,000 cars to their original fourth-quarter schedules (Automotive News, Aug. 8). The Big 3 and the transplants now project that 1,881,800 cars will be built during the fourth quarter, 7.93 percent more than last year's 1,743,515.

General Motors added about 56,000 cars to its original forecast, bringing its updated fourth-quarter schedule to 967,900 units, 15.23 percent more than the actual build of 839,946 last year.

Auto analyst Mike Luckey of Luckey Consulting Group Inc., Cresskill, N.J., said GM's market share will have to improve over the next few months or the company will end up in excess of an 80-day supply of cars by year-end.

Luckey believes GM will stick to its schedule and possibly offer incentives by year-end rather than scale back its production. However, there may be some cutbacks in the first quarter of the new year, he said.

GM has already scheduled January output at 117,000 cars more than it built in January of this year.

Ford Motor Co. recently raised its fourth-quarter total by about 25,000 cars, bringing it to 432,000, 6.32 percent below the 461,143 built in the final three months of 1987.

Ford's decrease can be attributed to the loss of Cougar and Thunderbird output at its Lorain, Ohio, plant, which is idle until early October for 1989 model changeover and will not be up to full line speeds in the fourth quarter.

Chrysler Motors has added about 23,000 cars to its original fourth quarter forecast, for a new total of 291,000, 2.80 percent more than the 283,062 built in the fourth quarter of 1987.

The transplant companies made no revisions to their fourth-quarter schedules.

BUICK: *Reatta ragtop delayed, unfolds in 1990; Mertz sees Regal repeating 100,000 tally*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

BIRMINGHAM, Mich. — Buick has delayed its Reatta convertible for another year.

The two-seat convertible was to be introduced during the 1989 model year but now will debut in the 1990 model year. Buick officials said engineering work is continuing in an effort to make the convertible top as easy as possible to lower and raise.

Despite the lack of a convertible for 1989, Buick predicts Reatta sales will reach 7,000 to 8,000 units in its first full model year on the market. Buick dealers will have sold about 3,000 Reattas by the end of the 1988 model year, Buick officials said. As of Aug. 31, Buick had sold 2,337 Reattas. The car was introduced in January.

Buick General Manager Edward Mertz, speaking at the division's 1989 preview, said Reatta is capturing buyers who previously owned products from other makers. A third of the buyers trade in a non-General Motors product. Those sales are about evenly divided between former owners of competing domestic and import products. Mertz said dealers have taken in Porsches, Mercedes-Benz models and even a Rolls-Royce.

A third of the Reatta buyers trade in a GM product, and about half of that group trade in a Buick. A third do not trade in a car but add the Reatta to their household fleet.

As for other products, Mertz predicted that sales of the Regal coupe will total 100,000 units for 1989, about even with the 1988 model year, its first year of production.

The average age of a Regal buyer is 45, compared with an average age of 50 for those who owned the previous rear-wheel-drive Regal. The average annual income for a Regal buyer is about $46,000.

Mertz said the 1989 Riviera, which has been lengthened 11 inches and restyled in the tradition of Rivieras of the past, will have sales of about 18,000 to 20,000, about double the 1988 model-year total.

He said the division expects to boost its market share to 6 or 6.5 percent in the 1989 model year, up from 5.5 percent in the 1988 model year.

GM is predicting that industry car sales will be about 10 million units for the 1989 model year, which would mean 600,000 to 650,000 for Buick if it meets its market-share goal.

Domestic franchises gain favor

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

New-car dealers are more confident about their domestic-make franchises and less confident about their import franchises than they were late last year.

Truck dealers, riding the crest of strong sales, remain confident about the value of their franchises.

Those are two of the findings of a National Automobile Dealers Association dealer attitude survey.

The changing confidence levels also altered the ranking of most-valued new-car franchises.

In the most recent survey, conducted last May, dealers no longer ranked BMW, Jeep-Eagle or Suzuki among the 10 most valuable franchises. New entries in the 10 most-valued were Pontiac, Toyota and Mercedes-Benz.

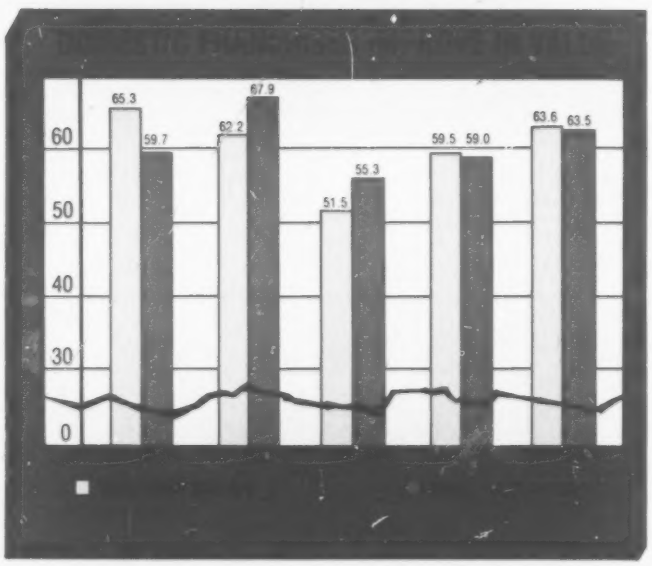
Although Acura, Honda, Hyundai and Mazda declined in perceived value, they remained among the 10 most valued franchises.

Dealers with European makes also were generally less confident of the value of their franchises.

Against the trend, however, were Mercedes-Benz dealers, who said the value of their franchise had increased.

The value index of a domestic franchise averaged 61.3 in the year-ago poll. It dropped to 59.7 in November 1987 and rose 5.6 points to 65.3 in May.

Asian franchises averaged 65.1 in May 1987 and rose to 67.9 in November 1987. In the most recent poll, the value of an Asian franchise dropped to 62.2.



The average perceived value of a European franchise has declined dramatically. In May 1987, the average rating was 63.6. Six months later, it was 55.3 and it declined further to a value index of 51.5 in May 1988.

Truck dealers remained confident about the value of their franchises. Last year, the average value was 63.5 and in the recent poll it was 63.6 points.

Freightliner ranked first on almost every survey question. Nearly 1,000 truck dealers responded to the survey.

The 13-question dealer survey is conducted twice a year and was first sent out in May 1985. Survey scores are based on three indexes: franchise value; the vehicle maker's product and service policies; and the "people" index, which monitors the makers' field staffs.

The highest domestic-based franchise scores belonged to Ford and Lincoln-Mercury. Ford's franchise value rating climbed 4.5 points and L-M's rose 4.0 points. All GM divisions received higher ratings in the recent poll.

Mazda's '89 forecast: 400,000 U.S. sales

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

NOVI, Mich. — Mazda Motors of America said it will increase its 1989 calendar-year new-car and truck sales in the United States to more than 400,000 units, in spite of a forecast for a softer new-car market and an average price hike of 2.7 percent on its carryover models.

George McCabe, deputy general manager, group sales vice president, said Mazda's car sales were up 35 percent through August. Eight-month sales of all Mazda vehicles, including trucks, rose from 222,805 last year to 243,026 this year, a gain of 9.1 percent, he said.

"We think we will surpass the 400,000-unit level in 1989, by holding steady with trucks (at approximately 100,000 units) and selling 14 percent more cars," McCabe told reporters at Mazda's new-model preview here.

Mazda's 1989 carryover lines — the 323, 626, MX-6 and 929 — will cost an average of $328.27 more than their comparably equipped 1988 counterparts. Prices for Mazda's two-wheel-drive trucks will go up 2.5 percent, or $213.

Prices of the carryovers range from $6,299 for the base 323 three-door hatchback to $21,920 for the top-of-the-line 929 four-door sedan. Prices of the RX-7, which will be marketed early in 1989, and trucks will be announced later.

Mazda's new MPV multipurpose vehicle, which will be classified a car, will carry base prices of $12,-909 for the five-passenger version and $13,759 for the seven-passenger with a manual transmission and four-cylinder engine. A two-passenger cargo MPV is priced at $10,989. Options include automatic transmission and a 3-liter V-6 engine.

The first-year sales target for the MPV, designed in Mazda's California studios, is 40,000 units, including 2,000 commercial vans and 4wd units scheduled to be imported next March.

Citing such economic realities as slower economic growth, a persistent federal deficit, dampened consumer purchasing power and a moderate rise in consumer prices, McCabe said, "We are predicting a softer market for new cars in 1989.

"We are forecasting a sales volume of 10.2 million cars and 4.7 million trucks, a 2.6 percent decline compared with 1988.

"To put it into words, 1989 is shaping up to be one tough, competitive year in the car business," McCabe said. "We at Mazda, however, look forward to the battle with confidence."

Mazda's four-wheel-steering system, offered only on the 626 GT sedan in 1988, will now be available only on the MX-6 GT sport coupe.

Because sales of the 626 have been on an upswing, McCabe said Mazda will begin production of the 626 at its Flat Rock, Mich., plant in the fall of 1989 "to give our dealers sufficient supply to meet demand."

At a press conference, Michinori Yamanouchi, managing director of the design division and general manager of the product planning and development division of Mazda Motor Corp., confirmed that Mazda is discussing with Ford Motor Co. the possibility of Mazda dealers selling Ford products in their Mazda dealerships. No decision has been made.

He said Mazda also is studying the possibility of opening a second, upscale brand network, as Toyota is doing with Lexus.

Yamanouchi said the Ford-Nissan joint venture to produce a multi-purpose vehicle will have no impact on Mazda's relationship with Ford.

"Mazda's development of a van started many years ago with the MPV," Yamanouchi said. "Our concept was in place when Ford began discussions with us. Our concept was different from Ford's concept and also different from its Aerostar. So we decided not to participate in a joint venture with Ford at that time."

In his presentation, Yoshinori Taura, Mazda Motors of America president, said several changes in the last two years have had a significant impact on the U.S. automotive industry.

"As a result, we, as well as our competitors, must learn to compete in new ways and with new skills," Taura said.

He said those changes include the weakened dollar; continued worldwide manufacturing overcapacity; near parity in the quality of domestic, Japanese and European products; emergence of Third World countries as low-cost producers; and the establishment of U.S. transplant operations by Japanese manufacturers.

August sales steady

Mediums rise sharply; others off a bit

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Manufacturers retailed a near record number of trucks in the United States during August, with the medium-duty models largely offsetting declines in the light- and heavy-truck segments.

Retail sales totaled 435,201 in August, 0.73 percent below 1987's 438,367, the record for the month.

The light-duty segment, including Classes 1-3, recorded 408,924 sales during the month, off 1.30 percent from 414,328 last year.

The medium-duty segment, including Classes 4-7, tallied 16,358 sales, up 20.70 percent from 13,553 a year earlier.

And the heavy Class 8 segment recorded 9,919 sales, off 5.59 percent from 10,506 in like 1987, the Motor Vehicle Manufacturers Association reported.

The month's downturn reflected some softening in a market that has otherwise been strong all year.

For eight months of calendar 1988, the industry retailed 3,567,464 trucks, up 5.74 percent from the year earlier's 3,373,925.

The light-duty segment recorded 3,345,626 sales, up 5.05 percent from 3,184,714 in like 1987.

The medium-duty segment recorded 127,610 sales, up 23.76 percent from a year earlier's 103,111.

And the heavy Class 8 segment had sales of 94,228, up 9.44 percent from 86,100 a year ago.

Class 4 — and specifically Ford's Super Duty chassis — has been the major force behind the medium-duty segment's sharp rise.

Class 4 had sales of 13,940 for eight months of 1988 compared to a scant 523 in like 1987.

Within Class 4, Ford's Super Duty accounted for 13,081 sales. The chassis was introduced in the fall of 1987 and has sold better than Ford expected.

Within the heavy segment, Freightliner and Kenworth fell from their earlier red-hot pace during August, while Ford, Mack and Navistar continued to show strong gains.

Freightliner's August sales of 1,098 were only about half the 2,201 in 1987, and Kenworth's 971 retail deliveries were down from 1,235.

Ford's 1,442 Class 8 deliveries, however, were up from 1,115 a year earlier. Mack's 1,916 Class 8 sales were up sharply from 1,369 last year. And Navistar's Class 8 sales of 2,651 showed a big gain over last year's 1,897.

Rockwell turns to systems

TROY, Mich. — To sustain its profitability, Rockwell International plans to produce and market complete driveline systems for trucks and also compete with General Motors' Allison Transmission Division in the automatic truck transmission market.

Arthur P. Ronan, president of Rockwell's automotive operations, forecast lower medium- and heavy-truck sales in the North American market in 1989.

Using Rockwell's fiscal year, which ends Sept. 30, as his time frame, he forecast 150,000 Class 8 truck sales in 1989, down from 165,000 to 167,000 in fiscal 1988.

He also foresaw 160,000 Class 6-7 truck sales in fiscal 1989, down from 170,000 to 172,000 in 1988.

Rockwell officials expect passenger-car sales to be "down slightly" in fiscal 1989.

Ronan said Rockwell's prices to original-equipment-makers are lower now than they were five years ago. OEMs are demanding more for less cost, he added.

Asked how Rockwell will continue to make a profit under those conditions, Ronan said it will supply systems, rather than single components.

He noted that none of the top three driveline-component suppliers (Rockwell, Dana and Eaton) currently makes all the parts for the truck driveline system.

He said Rockwell will get into the transmission and clutch business to augment its axles and brakes and will be able to sell complete driveline systems to the OEs. Rockwell will start selling clutches in January 1989, and transmissions about a year later.

He also said Rockwell intends to go after Allison by producing an automatic transmission, but he didn't say when.

Ronan said Rockwell's systems concept will proceed faster in the passenger-car market than in the truck market. He said Rockwell will supply a passenger-car front suspension system to Chrysler Motors, but didn't say when.

Noah's Freightliner
Freightliner Corp. donated this tractor to serve as "Noah's Ark" for the Smithsonian Institution's Biosphere II project. In recreating an ecosystem, the Smithsonian is moving some 700,000 pounds of soil and micro-organisms from Florida's Everglades to an enclosed dome in the Arizona desert. The horse and watchful policeman are not making the trip.

AROUND THE WORLD

Brazil sales, exports up in August

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Brazil's auto industry had a bumper month in August, with domestic sales climbing 3.7 over July's and exports jumping 61 percent in volume and 47 percent in value.

The results, reported by the auto industry association ANFAVEA, also reflect a 20 percent increase in production in August over July.

Andre Beer, the group's president, said there was nothing to complain about in the numbers. "I'm going to keep quiet," he said, but then noted that the dollar value of exports, which increased to $315.4 million from July's $213 million, did not keep pace with the rise in export volume. As a result, manufacturers' margins are being squeezed.

He blamed the disparity on an overvalued cruzado, which is eroding profit margins on overseas sales.

However, he said that the increase in export unit volume, which ended a three-month slide, was heartening news.

"We are now worrying about next year," Beer said, alluding to the exchange-rate situation.

Vehicle production in August topped 100,000 for the first time this year, totaling 105,171 units, compared to 87,308 in July. It was the industry's best production performance since October 1985. Sales to dealers also were up, totaling 72,056 units in August compared to 69,500 the previous month.

August sales were the highest since October 1986. Those sales, however, came at a price, according to a dealer association.

"Sales were up 15 to 20 percent last month because we were giving discounts," lamented Jose Edgard Pereira Barretto Filho, president of the Sao Paulo State Vehicle Retailers Union.

"Our net margin of 11 percent has been reduced to zero by discounting," added Francisco Caltabiano, another director of the dealer group. The discounts were given to reduce stocks from 20 to 10 days from the end of July to the end of August.

"It's a buyer's market right now," said Beer.

The industry's profit margins on domestic sales were squeezed by price controls for almost a decade beginning in 1978, and the industry is still suffering on its export operations because of an overvalued local currency. Thus, the manufacturers have little sympathy for dealers, many of whom reportedly made handsome profits from illegal markups two years ago at the height of the consumer boom unleashed by the Cruzado Plan price freeze.

The industry itself has only just emerged from price controls.

While inflation in the first eight months of the year totaled 300.72 percent, the country's four automakers (Volkswagen, General Motors, Ford and Fiat) upped their prices an average of 470 percent. Beer explained the difference by saying manufacturing costs have risen in excess of inflation this year.

In announcing the August figures, Beer signaled that ANFAVEA will not waste any more time asking the government to devalue the cruzado or compensate for the tight export situation some other way, at least not for the time being.

Australia's 1st vehicle heads for British rally

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — The first motor vehicle ever made in Australia will compete in this year's London-to-Brighton Run in England.

Work on the Shearer steam carriage began in 1893 and was completed in 1899. Virtually every component in the car was made by David Shearer and his brother, John, in the Shearer farm implement factory in South Australia.

David Shearer designed and built the vehicle without ever having seen a steam carriage. He made his own rack-and-pinion steering with pivoting stub axles and incorporated a full differential for the rear axle.

Shearer designed a horizontal, semi-flash water tube boiler to run at a pressure of 350 pounds per square inch. The vertical twin-cylinder engine developed 20 horsepower and was designed by J.A. Shearer, David's nephew.

A man of many talents, David Shearer was a skilled machinist and a recognized authority on metallurgy. In 1907, he built his own observatory and telescope and joined the British Astronomical Society.

Media motoring personality David Berthon, the organizer of the London-Brighton project, entered the Aussie steamer because "it is fitting that Australia's oldest car should participate internationally in our bicentennial year."

In all probability, the London-Brighton trip will be the Shearer's longest continuous run. The race, which will be held in November, is 60 miles long.

As far as is known, the longest previous trip took place in 1900 when David Shearer drove from his home town to Adelaide — a distance of 47 miles. The cruising speed is limited to 12 mph by the iron-clad wheels.

A large number of Australian-owned vehicles have taken part in the London-Brighton Run but this is the first attempt by an Australian-made vehicle.

Open-air 300-CE
A convertible version of the Mercedes-Benz 300-CE has been created by Coach Builders Ltd., High Springs, Fla. It features power-operated top, padded roof, color-coordinated headliner, structural reinforcement and padded top boot.

U.S. autos lead the way in Taiwan's import boom

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — Car imports to Taiwan tripled in the first six months of the year, but industry sources believe that rapid rate of increase cannot be sustained for the full year.

A total of 60,782 cars, worth $559 million, were imported in the first six months of the year, compared with last year's first-half imports of 19,991 vehicles, worth $171 million. The full-year estimate for imports is 120,000 units, compared with last year's record total of 48,275, indicating an increase of almost 150 percent.

U.S.cars led the list of imports in the first half.

Mao Jun-lun, a spokesman for the Taiwan Transportation Vehicle Manufacturers Association, said he expected the imports' market share to rise to 40 percent for the year, compared with last year's 22 percent, the current record.

The impressive hike in imports is due mainly to the rising level of prosperity in Taiwan and consequent higher amounts of disposable income in the hands of consumers.

Importers were given an added bonus this year when tariffs on imported cars were reduced to 42.5 percent from 55 percent. Nevertheless, prices of imported vehicles remain one-third higher than prices of comparable locally assembled models.

Taiwanese consumers are very keen on foreign cars; they view Taiwan-made vehicles as being of inferior quality. That impression was reinforced by the unsuccessful launch of Taiwan's first indigenously produced car, the Feeling, made by the country's largest motor manufacturer, Yue Loong. The Feeling 101 series was not a success and a re-launch is now in the pipeline.

The upmarket imported cars are particularly popular, and that explains the relatively high value of the imports relative to the number of vehicles imported.

After leading the imports for many years, West Germany has now been overtaken by the United States. The United States, which ranked fourth last year, shipped 18,403 cars to Taiwan in the first half of this year, compared with only 2,878 in the 1987 period.

Among the American imports were transplant-produced models like the Honda Accord. Direct imports of vehicles from Japan are banned, and it is likely that Japanese factories in the United States will be used more to circumvent the ban.

Large American cars also are starting to have an impact on the Taiwanese market. All major U.S. producers are beginning to take a serious look at Taiwan, with General Motors in the lead.

West Germany, headed by BMW and GM subsidiary Opel, remains a significant force in the market, having shipped 12,902 cars in the first half of the year, compared with 4,154 the previous year.

Other major players in the Taiwan market include Fiat, Spain's Seat, Rover Group, Saab and Volvo.

The Taiwan government has made it clear that despite a general intention to relax import duties, it will not ease the ban on Japanese imports. Although domestic producers are clearly unhappy with the importers' success, the government sees the import growth as a significant way of deflecting criticism of its trading policies.

Court to decide fate of Cerv I/II

Chevrolet hopes to cancel sale of Arkus-Duntov prototypes

An Oct. 3 hearing on the fate of Chevrolet's Cerv I and Cerv II experimental cars has been postponed by the U.S. District Court, Minneapolis. The Cerv I narrowly escaped the auction block at the annual Monterey (Calif.) Vintage Race and Sports Car Auction in August.

Chevrolet asked a Monterey County judge to block the sale of the prized Cerv I prototype, built in 1959, only hours before it was slated to cross the auction block.

The Cerv I and Cerv II — a prototype vehicle built in the early 1960s — were on display in California's nonprofit Briggs Cunningham Museum until it closed in 1986. The models changed hands twice — first going to a Florida museum and then, in 1987, to an investment partnership that had plans to auction one of the cars.

In a second suit, filed in federal court, Chevrolet has asked for the cancellation of the 1987 sale and the return of the vehicles to Miles Collier of Palm Beach, Fla., who obtained the cars for his Florida museum.

The planned sale of Cerv I at the annual Monterey auction was held up when Chevrolet presented to the Monterey (Calif.) Superior Court an affidavit signed by legendary Corvette engineer Zora Arkus-Duntov, alleging the sale would violate terms of the original gift.

Arkus-Duntov said Chevrolet gave the cars to Cunningham for the public to see and for designers, engineers and students to study.

Arkus-Duntov, who retired in 1975, had the cars built to test a wide range of advanced engine, tire, suspension and vehicle dynamics concepts.

Like the SS Corvette, another Arkus-Duntov creation now at the Indianapolis Motor Speedway, Chevrolet donated the two Cerv cars to a museum when their value as rolling test beds diminished.

The cars still bear the plaques attached at the time that stipulate they were donated for "educational purposes." Chevrolet continued to assist in the maintenance of the cars.

Cerv I is a mid-engine, single-seat, open-wheel car with inboard brakes and an independent rear suspension that was the prototype for the production suspension in the 1963 Corvette. The car also has a rubber fuel cell that was later adopted in Indy-car racing.

The car was a test bed for a wide range of engine concepts — from supercharging and turbocharging to port fuel-injection.

Cerv II is said to be the world's first mid-engined two seater with full-time four-wheel-drive and full-envelope bodywork. It was used to test high-torque automatic transmissions, low-profile tires and a variety of advanced suspension and powertrain concepts, including multi-valve cylinder heads.

CHARLES THOMAS

Anglo unit's new home

Auction Transport, a subsidiary of Anglo American Auto Auctions Inc., has opened its $1.2 million headquarters in Kansas City, Mo.

Company and government officials dedicated the building and grounds by driving a transport truck through the ceremonial ribbon.

Auction Transport carries used vehicles to and from Anglo American's 21 locations. The company has a fleet of 50 company-owned transport trucks and nine owner-operated transport trucks.

Michael J. Richardson, president and chief executive officer of Anglo American, said 25 transport trucks will be added by the end of 1989.

He said the transport fleet will soon increase to 100 vehicles.

Since Jan. 1, the company has transported 30,300 vehicles more than 3.4 million miles.

Austin auction opens

The Austin Auto Auction held its grand opening last week at its new quarters in Austin, Texas. The facility is located on five acres and has parking for 350 cars.

Owners of the independent auction are Tom Swanson, general manager; Bob Rose; and Don Callaway, who is the founder of Callaway's Cleburne Auction, Cleburne, Texas.

The dealer-only auction opened Aug. 3 with a night sale that attracted about 100 vehicles run on two lanes.

The sale rate has been about 40 percent of consignment, Swanson said.

Virginia auction debuts

Owners of the Harrisburg Auto Auction in Pennsylvania opened a second $1.1 million facility in King George, Va., last week.

Stan Hoynitski, president of Statod Enterprises, said he hopes to draw dealers from the Baltimore; Washington; and Richmond-Portsmouth-Norfolk, Va., areas to the new Virginia Auto Dealers Exchange.

"We chose this location recognizing the need to service dealers, fleet, daily rentals, factory and financial institutions in the area," said Hoynitski.

The auction opened with 400 vehicles running through four lanes.

The new auction is located on 50 acres and has a 20,000-square-foot facility. It has a reconditioning center and 23 acres of paved, fenced parking.

Hoynitski described the grand opening as successful, saying "there were a lot of lookers."

The Virginia Auto Dealers Exchange will hold Tuesday dealer auctions.

LEASING

FROM PAGE 1

duction and tax credits has not been a real driving force. Customers are very payment-oriented."

For a time, it seemed as though the lease market for the captive finance companies would go nowhere but up. Ford Credit wrote only 20,000 leases in 1981 and by 1985 the number had climbed to 200,000, said Cliff Damaska, retail lease manager. But then the slide began: In 1986, it wrote 165,000 leases, and the number fell to 120,000 in 1987.

Chrysler Credit and GMAC experienced the same kinds of declines. They blamed the falloff on widespread interest-rate incentives offered by automakers and the proliferation of 60-month loans that began gaining popularity in 1984.

"In our experience, special APR incentives clearly had an impact on retail leasing," said James J. Madden Jr., executive vice president of operations and marketing for Chrysler Credit.

Yet retail lease portfolios for the automakers as of June 30 were hefty. GMAC had 497,000 retail leases with a net asset value of $4.1 billion. Ford Credit had 450,000 retail leases, representing $5 billion in receivables, and Chrysler Credit had 153,000 retail leases in its portfolio, with a value of $1.5 billion.

Ford Credit expects to write upwards of 140,000 leases in 1988 compared to 120,000 last year, Damaska said.

GMAC has seen a gradual increase in retail leases throughout the model year.

GMAC will write 100,000 leases in 1988, up from 80,000 in 1987 but down substantially from the 1985 peak of 302,000 leases, said Winkler.

Other financial institutions with big auto lease portfolios — GE Capital Auto Lease, a unit of GE Capital Corp., and Marine Midland Automotive Financial Corp., a subsidiary of Marine Midland Bank — also experienced increases in leasing this year.

GE has 191,000 retail leases in its portfolio, followed by Marine Midland at 130,000. GE's leasing effort has increased annually, with the company writing 47,000 retail leases in 1985, 57,000 in 1986 and 58,000 last year.

Independents like GE Capital and Marine Midland are yet another reason that the number of leases had been falling for the automakers' captive finance companies.

"A lot of competitors entered the business," said GMAC's Winkler. "Half of the banks now in leasing weren't in it five years ago and a third of them weren't in it three years ago."

Each of the automakers plans intensive training programs for dealers and sales personnel this fall.

"The success of retail leasing is still in the hands of the dealer and the sales force," said Ford's Damaska. "Customers still are nervous about leasing and want to own their cars, but we predict long-term growth in this segment."

Retail leasing is the only growth segment in leasing. Fleet leasing by companies and rent-a-car agencies is at a standstill, say executives.

Although 48-month leases are standard, GMAC and Ford Credit promote shorter leases. For one thing, shorter leases make it easier to compute the residual values of cars when figuring monthly payments. But there are other reasons.

"From the manufacturer's standpoint, a short-term lease will bring the customer back into the market sooner," Winkler said.

Furthermore, many customers equate leasing with rental of a car and are disappointed when they learn they have to pay off their current lease before getting a new car.

"We want to develop a long-term relationship with customers that's satisfying for them," said Winkler.

Neremberg, of the leasing group, predicts a shakeout in the number of financial institutions offering leases. He said some of them overestimated the residual values of vehicles in their zeal to write leases and could lose money on their portfolios. Others agree.

For the dealer, retail leasing can mean higher profits, more closings, fewer bebacks, an opportunity to get a used car at the end of the lease and repeat business.

"There is less disclosure in a lease," said Angert, of Marine Midland. "The only thing a dealer discloses is the monthly payment. Profit opportunities are greater because the customer compares the monthly payment with the finance payment and doesn't focus on the discount."

And for customers, monthly payments are lower with leasing.

"A three-year lease will provide monthly payments in the same range as the payment for a five-year finance transaction," said Ford's Damaska.

Several importers have discovered that leases move expensive cars to buyers who may view monthly payments as too high.

A spokesman for Mercedes-Benz described as highly effective a program for the Mercedes 190-E, started in April through Mercedes-Benz Credit Corp. A Mercedes-Benz study found that without leasing programs, 27 percent of its customers would have gone to another make.

In the first three months of the year, leases accounted for roughly 15 percent of Mercedes-Benz Credit Corp.'s business. Since the launch of the special program for the 190-E, that has jumped to 45 percent.

Peugeot also launched a program in the spring, with California-based Security Pacific National Bank, and it has outpaced expectations, a spokeswoman said. The program is unique in that residual values of cars are supported by the automaker. Retail leasing at Peugeot had been almost nil. This year, 20 percent of deliveries are leases.

A spokesman for Volvo Cars of North America said that in 1987, the company's finance arm, Volvo Finance North America, wrote 8,000 leases. The company surpassed that number by August this year and expects to write 11,000 to 12,000 leases this year.

"We believe that 35 to 40 percent of all Volvos delivered are leased," he said.

SMARTLEASE

FROM PAGE 1

and car rentals, towing and road service reimbursements, a road atlas and other benefits.

GM dealers can elect not to offer the leasing program; there is no fee to participate. GMAC has been and will continue to conduct comprehensive training programs throughout the country for managers and sales staffs at GM dealerships.

GMAC would not say how much it is spending on advertising but said it would spend fairly substantial amounts.

"It is the largest advertising budget that we've ever had to promote a leasing program," a GMAC spokesman said.

SmartLease will be advertised throughout the Olympics. It will be promoted on network and cable television, network radio, national newspapers, numerous magazines and trade papers and in merchandising materials at the dealership.

The American Automotive Leasing Association has reported that leasing is now the fastest growing segment of the retail market for domestic vehicles. Yet, GMAC has not done well in leasing recently. As of June 30, GMAC had about 500,000 lease contracts outstanding, down from 575,000 a year earlier.

Edman said GMAC expects consumer leasing to expand in the next 10 years because leasing has the advantage over conventional financing of requiring low initial cost and the option of keeping or returning the vehicle. Leasing requires little or no downpayment, only a small security deposit, and monthly payments generally are lower on a lease than on a conventional loan.

However, if the vehicle is among the selected models covered by one of the special incentives, the lease payment would be $282, a savings of $27 a month or $1,296 over the 48 months of the lease.

For comparison, a $15,000 car, purchased with a downpayment of $3,000 on a four-year loan at 11.75 percent would require payments of $315 per month.

Vehicles covered under the special incentive introductory offer are: Chevrolet Corsica, Beretta, Celebrity and S-10 and C/K pickups; Pontiac Grand Am, Grand Prix and Bonneville; Oldsmobile Cutlass Calais, Cutlass Ciera, Cutlass Supreme and Toronado; Buick Skylark, Century, Regal, Riviera and Reatta; Cadillac Eldorado and Allante; and GMC S-15 and C/K pickups.

GMAC Chairman Jack Edman said in a statement that SmartLease was the result of cooperative efforts betweeen GMAC and the GM vehicle divisions to market a plan to help consumers lease new GM cars and trucks and to provide GM dealers with a program to acquire a larger portion of the growing leasing business.

"The name 'SmartLease' will provide a common identity to serve as the basis for all GM divisional and GMAC marketing efforts in the leasing field," Edman said.

Previously, GMAC offered consumer leasing but each division had different names and different terms. For instance, Buick had the Blue Chip lease and Oldsmobile had the Oldsmobile Alternative.

Customers leasing vehicles on the SmartLease plan will receive a free one-year membership in the GM Travel Plan, which entitles them to discounts on hotels, motels

SEIZE

FROM PAGE 1

of Johnson's attorneys, David Martin of the firm R. Jack Ayres Jr., Dallas, declined to comment, saying Johnson had not authorized him to speak to the media on Johnson's behalf.

Meanwhile, the Dallas Morning News, Dallas Times Herald and Plano (Texas) Star-Courier have filed a petition for the dealership to be liquidated under federal bankruptcy laws. The Morning News is owed $110,000, the Times Herald $119,000 and the Star-Courier $9,000 by the dealership, according to court documents.

No hearing has been set, and Johnson has not yet filed his response to the petitions.

At the same time, the Texas Motor Vehicle Commission is investigating Jim Johnson Chevrolet on charges of not paying off bank loans on vehicles traded in, not paying the sales tax on vehicles sold and not paying title transfer fees.

Though there have been no complaints concerning Johnson's Austin, Texas, dealership, the commission will hold a hearing in November on whether Johnson's license at the Austin store should be revoked in light of what has happened at the Richardson store.

Brett Bray, assistant director of the Texas Motor Vehicle Commission, said his agency has not yet determined how much Jim Johnson Chevrolet owes in sales taxes, payoffs on trade-ins and transfer fees, nor has it determined how many vehicles are involved.

Bray said the commission continues to receive consumer complaints daily regarding Jim Johnson Chevrolet. Jim Johnson Chevrolet's failure to pay off bank loans on trade-ins has been the source of the most serious consumer complaints, Bray said.

The commission charges that Johnson Chevrolet took in cars as trade-ins then failed to pay off the loans to the financial institutions. New-car buyers who traded in the vehicle believed the dealership paid off their loans but then received notices from the bank for missing a monthly payment. As a result, some customers are getting bad ratings on their consumer credit reports, Bray said.

In some instances, the loan payoffs are sizable, up to $43,000 on large motor homes, according to sources familiar with the dealership's operations.

In addition, Bray said some individuals who bought the cars that were traded in are having them repossessed for nonpayment on the outstanding loans taken out by the previous owners, Bray said.

Bray said it has not been decided what can be done for the consumers, short of the individuals filing suit against the dealership.

"In the process of talking with the various entities involved," Bray said, "we don't know what the answer is yet."

If the sales tax and the transfer fees are not paid, a car buyer cannot register a vehicle, Bray said. Title transfer fees in Texas amount to $55.80 on a new car and $12.50 on a used car. Sales tax on some motor homes that were sold by the dealership amounts to as much as $4,000.

And even in cases where the car buyers are willing to pay the sales tax and the transfer fees, they are having trouble registering the cars because of missing paperwork required by the motor vehicle commission.

A hearing regarding one customer who bought a car on which the previous loan was not paid off is set for October.

Allen Samuels, interim manager at Patlan Chevrolet, said taking care of customers with problems regarding payoffs on trade-ins, transfer fees and sales tax are top priority. He said the dealership has identified those customers affected; now it is a matter of who will pay.

GMAC, in the meantime, has sent letters to creditors of Jim Johnson Chevrolet and local dealers, some of whom say they are owed as much as $25,000 for parts. The letters state that GMAC has assumed control of the dealership but that it has not assumed its liabilities. Those owed money are referred in the letter to Johnson's Austin, Texas, dealership.

At the same time, GMAC is looking for a buyer of the Richardson dealership.

Mark Eddins, owner of Friendly Chevrolet in Dallas, had been negotiating with Jim Johnson to buy the store before GMAC assumed control. Eddins said he remains interested in buying the store.

If Eddins prevails in buying the Johnson store, he could control about 20 percent of the vehicle market in Dallas County. Friendly was the second-largest Chevrolet dealer in the country in fleet and retail sales in 1987 and the largest Chevy dealership in Dallas, according to the Automotive News Sales Giants.

Johnson Chevrolet in Richardson, Texas, was the nation's largest dealership in retail sales in 1987, ninth largest in retail and fleet volume and Dallas' second-largest Chevy dealership. Johnson sold 9,317 retail and fleet vehicles and had sales of $170.4 million in 1987.

Johnson had worked at Friendly Chevrolet for about eight years and worked his way up to general sales manager. He left in March 1984 to purchase the Richardson store, then known as Frank Late Chevrolet.

OBITUARIES

William Martin-Hurst

BRECON, Wales — William Martin-Hurst, managing director of Rover in the 1960s, was fatally injured in an auto accident Sept. 18. He was 85. He led the company during the introduction of the Rover 3-liter coupe, the Rover 2000 and 2000-TC, the six-cylinder Land Rover and the Range Rover. He obtained the rights to build the General Motors aluminum V-8 that had powered Buicks and Oldsmobiles in the 1960s. The engine was used in Rover and MG cars and is used today in the Land Rover, Ranger Rover and Morgan Plus 8.

Walter P. Chrysler Jr.

NORFOLK, Va. — Walter P. Chrysler Jr., 79, son of Chrysler Corp. founder Walter Chrysler, died Sept. 17. An avid art collector, the automotive heir also founded Chrysler's Air-Temp Division in 1934, which developed the first vehicle air-conditioning system.

William E. Bucher

COSTA MESA, Calif. — William E. Bucher, 56, parts vice president for American Isuzu Motors, died Sept. 13. After retiring as a lieutenant colonel in the U.S. Marine Corps in 1970, he joined Toyota Motor Sales U.S.A. and was national parts field operations manager when he moved to Isuzu in 1980. He became parts vice president this year.

Shoro Morita

NABARI CITY, Japan — Shoro Morita, president and general manager of Borg-Warner Automotive Kabushiki Kaisha, died Sept. 17. He played a key role in establishing the company, which supplies chain and wire cage cam clutches to Japanese automakers.

Clyde C. Darby Jr.

SARASOTA, Fla. — Clyde C. Darby Jr., 69, owner of Darby Buick in Sarasota, died June 3. He opened the dealership in 1954.

PRODUCTION

Milestones for truck, car output

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers built their three-millionth truck of the year last Friday, 23 days ahead of 1987.

Auto production reached five million last Thursday, but the milestone trailed 1987 by eight days.

Year-to-date, 3,014,151 trucks have been built, 8.85 percent more than the 2,769,072 completed last year at this point.

Truck output was scheduled at 86,767 units last week, 3.08 percent below the prior week's 89,524, which was the highest since the week ended May 21, when 92,256 trucks were built.

Last week's targeted truck production was 14.70 percent more than the year-ago week's 75,649.

Auto production for the year totals 5,035,938, which is 3.19 percent below the 5,201,809 completed last year at this point.

Last week's targeted car production of 146,940 was 1.13 percent more than the previous week's 145,293, and 6.66 percent more than the year-ago week's 137,765.

Companies split last week's estimated output as follows: General Motors, 51.67 percent; Ford Motor Co., 23.72 percent; Chrysler Motors, 13.78 percent; Honda of America Manufacturing Inc., 5.07 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.81 percent; and Nissan Motor Manufacturing Co. U.S.A., 1.95 percent.

NUMMI's Fremont, Calif., plant was closed last week for model changeover to the 1989 Toyota Corolla sedan and the new Chevrolet Geo Prizm, which is not expected to be built until November. Corolla output resumes today.

GM will close its Lansing, Mich., plant the week of Oct. 3 because of a parts shortage. About 4,000 workers will be temporarily laid off for the week. The plant assembles the Oldsmobile Cutlass Calais and Buick Skylark.

GM's Doraville, Ga., plant resumes output today. The plant has been idle for operating-plan and job-assignment changes.

Canada build steady for week

Canadian auto production was targeted at 20,697 cars last week, almost equal to the prior week's 20,701 but 29.74 percent more than the year-ago week's total of 15,953.

So far this year, Canadian carmakers have built 781,885 units, 40.74 percent more than the 555,547 completed at this time last year.

Last week's scheduled truck output of 21,555 was 1.10 percent more than the previous week's total of 21,320 and 15.45 percent more than the year-ago week's total of 18,670.

The year-to-date truck total is 668,071, 12.15 percent more than the 595,676 built at this point last year.

Workers at Volvo's Halifax, Nova Scotia, plant remained on strike last week. The issues are pensions, wages and union representation on the shop floor. The company said negotiations are continuing.

Optimism overflows at Paris show

Makers seek ways to crank up output

By Richard Johnzon
AUTOMOTIVE NEWS STAFF REPORTER

PARIS — After years of hand-wringing in Europe over excess auto capacity, last week's opening of the Paris Auto Show was filled with chief executives searching for ways to boost output in a buoyant market.

Predictions of a European industry downturn this year have not materialized, and a new wave of optimism about 1989 surfaced among company heads who gathered here.

While General Motors is closing plants in the United States, it is looking for new European capacity and considering reopening a mothballed Belgium factory, Automotive News learned.

Robert Eaton, General Motors — Europe's new president, said in an interview that a recently closed plant in Antwerp, Belgium, could be recommissioned.

Chrysler is interested in new Jeep capacity and is also looking to Europe for a joint-production deal. Talks are underway with Renault and possibly Fiat. It's known that Chrysler Motors Chairman Gerald Greenwald and Fiat Auto President Vittorio Ghidella huddled in a private suite above the floor of the show last week — one day after most of the world's press went home.

The day before, Chrysler Chairman Lee Iacocca acknowledged ongoing talks with Fiat.

"We've had lots of discussions with Fiat," Iacocca said. "Something may come of it and something may not, but I'm not prepared to discuss that today."

Talks between the two — over the past couple of years — are believed to have touched on everything from Alfa Romeo or Lancia distribution in the United States to distribution of Chrysler minivans in Italy by Fiat.

Meanwhile, Ford continues to push its capacity in Europe. Ford of Europe Chairman Alex Trotman said the company will build 100,000 to 150,000 more cars this year than last even though it suffered a 12-day strike in Great Britain last February.

Opel's 4wd Vectra, above, made its debut at the Paris Auto Show and drew keen interest from competitors. GM-Europe is counting on the new range to propel it past rival Ford. Meanwhile, the Japanese continued their trend of using major European shows to launch new models. Nissan used Paris to unveil its new Prairie/Axxess wagon, right.

CINDY LEWIS PHOTOS

French auto giants held much of the spotlight in Paris. Peugeot, which said it will increase annual production capacity more than 20 percent over the next four years, cited a first-half profit surge of 21 percent.

Renault Chairman Raymond Levy surprised the gathering by announcing that 1988 net earnings will increase 62 percent.

Ford and GM are staging their own profit race in 1988, after each surpassed $1 billion in European earnings last year.

Eaton said pretax profits will be higher than in 1987, when GM — Europe emerged from several years of red ink with a net profit of $1.25 billion. However, after-tax earnings could fall because of a bigger tax bill.

Ford also sounded optimistic.

"You have to assume ours wouldn't be too shabby," said Trotman, though he declined to be specific. Last year, Ford earned $1.07 billion in Europe, a 93 percent improvement over 1986.

Volkswagen and Fiat also released robust profit figures during the show. Fiat said pre-tax earnings increased 21 percent, thanks to strong auto and truck sales performances. VW said group net profits would rise at least 9 percent after a period of flat earnings.

The general good tidings for Europe's six high-volume manufacturers come in a year when business was supposed to be down. Virtually every European manufacturer predicted a sales drop of at least 4 percent to 5 percent for 1988. But sales are up by about the same amount.

"How did we get our 1988 predictions so wrong?" asked Peugoet Chairman Jacques Calvet. "The world economy shook off the stock market crash much more easily than expected, while government authorities and central banks reacted intelligently with international agreements and injections of liquidity."

GM's situation in Europe is typical.

3 makers say, 'Bring it back if not happy'

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors, Pontiac and Oldsmobile last week launched the industry's latest marketing trend: 30-day return policies for newly purchased vehicles.

Chevrolet, meanwhile, confirmed it is studying whether to implement an exchange plan similar to those offered by its sister divisions.

Executives at Chrysler and Pontiac indicated that their programs may be extended and widened.

Chrysler's and GM's programs include a liberal reimbursement provision for dealers.

Like the extended warranties announced throughout this year, the return policies are being touted by the automakers as buyer confidence builders rather than as replacements for entrenched finance incentives and rebates.

Yet industry observers say they are inexpensive alternatives to the current style of incentives. And there is evidence that the new programs will indeed be attractive to customers.

Pontiac and Oldsmobile, for example, cited customer research indicating that more than 85 percent of all households would be likely to consider a vehicle that offers a guaranteed exchange rather than incentives such as low financing or cash rebates.

And Chrysler is advertising its return programs extensively in both print and television in its two test markets — Washington and Denver.

The programs announced last week are of two types. Pontiac and Oldsmobile permit a buyer to return to the selling dealer a newly purchased vehicle and for full credit toward the purchase of any model of the same brand. Chrysler also has a trade-in program in Denver. But in Washington, Chrysler allows customers to return the vehicle and receive cash back.

Vehicles in each of the programs may be returned for any reason.

The Chrysler program, which began Sept. 21 and ends Nov. 20, covers all 1988 and 1989 Chrysler Motors cars and trucks, domestic and foreign-built. However, as noted, the programs are being tested in only two markets — Washington and Denver.

The Pontiac program, which began Sept. 29 and continues through Dec. 31, applies only to the 1989 Grand Prix, a GM10 vehicle. The Oldsmobile plan, which runs concurrently with Pontiac's, applies only to the 1989 Cutlass Supreme, also a GM10.

The Pontiac and Oldsmobile programs allow a buyer to return a vehicle within 30 days or 3,000 miles, whichever occurs first, and receive full credit toward

Auctions soar

'87 was record; '88 is better

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The gavel fell on 630,000 cars worth $3.9 billion at the nation's top 10 auto auctions in 1987, a record performance that topped the prior year by 15.60 percent in units and 14.71 percent in dollars. The 1986 totals were 545,000 cars valued at $3.4 billion.

Industry officials say a strong used-car market backed by factory program vehicles, an upturn in repossessions and increased fleet and lease business were responsible for the best sales year ever.

And the Big 3 auction chains — Manheim Auctions,

Big insurer selling service contracts

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Government Employees Insurance Corp. took the industry's first big step into the warranty business this summer when it began offering its 1.4 million policyholders an extended new-car warranty plan called Mechanical Breakdown Insurance.

If the plan is successful and is emulated by other auto insurance companies, the effects could be staggering. Dominance of the extended-warranty market by large, national insurance companies with low rates would deprive U.S. new-car dealers of hundreds of millions in annual income.

Westcott: "I was not a part of the problem, but I will be a part of the solution."

ASTN founder's dealership hit with charges by Texas

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The Texas Motor Vehicle Commission has filed charges of unlawful sales tactics against a dealership owned in part by Carl Westcott, founder of the Automotive Satellite Television Network.

The dealership is Courtesy Pontiac of Tyler, Texas.

The firm's license could be revoked or suspended if the state proves the charges. Fines and civil penalties also could be levied.

The commission accuses the dealership of using deceptive prices in its television ads, rigging payment schedules for financing cars, removing factory price stickers from vehicles and charging excessive title and license fees.

Westcott, reached at his Courtesy Pontiac office, said the suit filed by the commission resulted in the resignation of the dealership management in August and the appointment of new management.

An evidentiary hearing slated last week was postponed until lawyers representing the dealership take depositions from witnesses.

Westcott said he was an absentee owner who has now stepped forward to correct the situation.

"I have a financial interest in the dealership but have not been involved in its day-to-day operations," he said. "I was not a part of the problem, but I will be a part of the solution." Westcott is president of Texas-based Westcott Communications, parent of ASTN. General Motors' Electronic Data Systems Corp. also has a stake in the satellite network.

A self-described financial investor, Westcott is a partner in two other dealerships — in Los Angeles and Atlanta. He also is a partner in station KETK, the NBC affiliate in Jacksonville, Texas. Westcott purchased 50 percent of Courtesy Pontiac in 1972.

He launched ASTN two years ago to provide automotive-related news, training and educational programming. Some 3,700 dealers pay $4,620 annually for the service.

"The Motor Vehicle Commission has filed some charges that are set to be heard before an administrator," he said. "My attorneys say this is the proper forum to discuss these charges."

When asked if allegations of deception and fraud would chill ASTN's sales to dealers, who are signing up at a rate of about 150 per month, Westcott declined to answer. However, he said that he has taken an active role in monitoring the new management: "Whatever actions were taking place in the past will never happen again at Courtesy Pontiac."

Brett Bray, assistant director of the Texas Motor Vehicle Commission, led the investigation into Courtesy Pontiac's sales and marketing practices. He described them as unacceptable.

"It's a scheme that begins when a customer walks on the lot," he said. "High-pressure tactics are used to sell vehicles, and you can't buy a car for the price advertised on TV. It's very difficult to get out of the dealership without buying a vehicle at an inflated price."

Bray said Courtesy Pontiac allegedly violated the commission's advertising rules by offering Nissans and Pontiacs for below or the same as "factory invoice prices." The scheme allegedly also involved removal of the factory window sticker, or "Monroney label," from vehicles to confuse customers.

In what Texas Motor Vehicle Commission officials have called a "back to the future" scheme, customers allegedly were provided a computer printout showing a payment price and competitive interest rate offered by the manufacturer's financial arm.

Essentially, customers were shown a payment schedule for a four-year loan calculated on a three-year basis, making the payments appear higher than for a second financing plan at a higher interest rate computed for a four-year loan over a four-year period.

"The effect of this deceptive practice is to increase the finance income on the sale of a vehicle for Courtesy Pontiac," said Bray.

Megadealers face more troubles

10 Pepe points on block in N.J. to pay off debt

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

CAMDEN, N.J. — New Jersey megadealer Richard Pepe said he is selling his 10 dealerships to satisfy his creditors in U.S. Bankruptcy Court.

"I don't know of anybody who's not going to get their money. Unfortunately, we have to sell our assets to do it," Pepe said last week. In filing for protection from creditors in August, Pepe listed $50 million in liabilities against $54 million in assets.

"I'm very bitter. There's no question about it," he said. "Other dealers should find out what they could be facing."

Major creditors include General Motors Acceptance Corp., which says it's owed $27 million, Midatlantic National Bank in Pennsauken, N.J., and Chrysler Credit Corp.

Pepe said he and his wife, Virginia, who owns four of the dealerships, considered restructuring to remain in business, but decided the only way to pay everyone off was to sell.

One of New Jersey's largest dealers, Pepe said his stores sold 15,000 vehicles last year. He added that contracts to sell five dealerships have been signed and he has offers on three more.

Offers for the remaining two — Pepe Imports and VIP Motorcar Corp. in West Atlantic City — will be sought in a hearing set for Oct. 10. All the sales must be approved by Judge Judith Wizmur.

Meanwhile, New Jersey State Attorney General Cary Edwards is trying to intervene in the case on behalf of 46 customers who claim Pepe's dealerships failed to pay off loan balances on their trades. Edwards is seeking money to be set aside for the claims.

Kelton's cars repossessed; GMAC files suit in Vermont

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

General Motors Acceptance Corp. has repossessed the GM inventory of one of Vermont's largest dealer chains and has sued the dealer organization.

A Vermont newspaper reported Friday that the repossessions amounted to more than $7.2 million and involved four dealerships.

The suit charges Kelton Motors with a variety of deceptive practices, including selling cars out of trust and shuffling cars between dealerships to deceive auditors, the Rutland Herald reported, citing documents filed in U.S. District Court in Burlington.

In addition, Kelton repeatedly issued bad checks to GMAC and failed to meet a variety of contract obligations, the newspaper reported the court records as saying.

According to the dealer, Carl Kelton Sr., he and GMAC mutually agreed to the repossession. He has since agreed to sell one GM store and a Volkswagen franchise, both in St. Johnsbury.

Kelton owns a chain of auto and truck outlets in Vermont operating under the "Charlie Kelton's" name. He had represented four of GM's car division between two stores, in Rutland and St. Johnsbury, and GM trucks at two locations in White River Junction.

The financial troubles stem from non-payment of recourse retail loans by some big-ticket buyers, leaving the dealership responsible and short of cash, said his son, Carl Kelton Jr., general manager of the Kelton truck operation in White River Junction.

The court documents, however, mention the chain's rapid growth as the cause of the problems, the newspaper reported. Carl Kelton Jr., who declined to com-

Europe aims for 50% cut in auto jobs

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Renault Chairman Raymond H. Levy estimates that European auto industry employment will be cut in half by 1992, compared with 1985 and 1986 levels, while production will remain at the same level.

In a speech prepared for an assembly of engineers meeting here for the 1988 International Federation of Automobile Engineering Societies (FISITA) Congress, Levy predicted that the European auto industry will respond to increasing competition by shifting from a labor-intensive industry to an industry based on "gray matter." John B. Curcio, chairman of Renault's Mack Trucks unit, delivered the speech because Levy was unable to attend.

In the speech, he said European automakers will reduce the workforce by providing blue collar workers with more responsibility; introducing computer technology that will eliminate white collar jobs where the workers spend most of their time sorting data; using more outside suppliers; and shifting sub-assembly away from production lines.

In their respective speeches to the organization, Roger Smith, General Motors chairman and honorary general chairman of the conference, and Tadashi Kume, president of Honda Motor Co., predicted that advancing technology will not only affect the design of automobiles but also the lives of the people who develop, build and drive them.

They defined their views of "automotive systems technology" and predicted the results of its use — each from his own perspective.

AUTOMOTIVE NEWS JOE WILSSENS

Keynoters, from left, Smith, Curcio and Kume (with interpreter)

From Smith's North American perspective, systems technology will allow the United States to produce world competitive products without forcing people to accept a lower standard of living.

From his Asian perspective, based on a career with Honda, Kume said, "Honda is not pursuing technology for its own sake. Honda is really seeking harmony. Harmony between man and machine, harmony between the customer and the automobile we make."

In his address to FISITA, Smith said systems engineering begins by defining the customer's requirements and then brings together supply, design, manufacturing, service and other relevant disciplines from the start of a project through the sale of the product.

"By 1990-1991, customers will be seeing GM products that reflect the systems engineering that we're doing now," Smith said.

Kume said that in order for the system that designs and builds the automobile to be effective, it must reflect human characteristics. Honda calls the source of its employees' inspiration, the "challenging spirit."

"The challenging spirit . . . means giving permission to . . . try things that have not been tried before, even knowing you will make mistakes. Because mistakes are valuable and even essential to success. Through our mistakes, we learn," Kume said.

Many of the FISITA sessions were devoted to methods by which engineers can improve the quality of interaction between man and machine — through better product design for customers, and on the development side, with improved computers, machines and methods for designing and building automobiles.

For example, Anthony Yanik, senior project engineer on GM's Environmental Activities staff, told a FISITA session that automakers will need to study how people age in order to develop cars to meet the needs of America's aging driving population.

Such information will provide designers with a basis for making changes in controls, interior lighting and seating when attempting to design cars for the senior market.

FISITA is composed of 22 engineering groups worldwide.

Ford simplifies service on Thunderbird, Cougar

By Wes Raynal
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co.'s only all-new cars for 1989 — Thunderbird and Cougar — are the first application of Ford's approach to meeting serviceability challenges in the 1990s.

The changes on Thunderbird/Cougar include color coding some maintenance components for easier identification, elimination of some service functions and improved design.

Ford said improvements on the 1989 Thunderbird and Cougar will make service easier for technicians and customers.

"Our serviceability department is now working with design so we can catch potential serviceability problems in the earliest possible stages," said Donald R. Morgan, manager of Ford's car and light-truck serviceability activity.

On Thunderbird/Cougar, Ford has color-coded in yellow certain commonly used service points, including the secondary hood release latch, engine oil dipstick, engine oil fill cap, power steering reservoir cap, engine coolant cap and washer fluid cap.

Morgan said the color-coding will make it easier for both owner and technician to identify those items.

The two new cars also have a redesigned jack with a wider base. Ford said it requires less effort to operate. Also, tools are no longer required to remove the air filter cover or the headlamp bulbs.

Ford said it is no longer necessary to change the fluid in the Thunderbird/Cougar power steering system or the transmission — manual or automatic — or the transmission linkage, nor is it necessary to lube door hinges or the power steering system, except for the outer tie-rod ends.

Ford also mounted the windshield washer pump next to the wiper motor in the engine compartment, reducing the need to remove the instrument panel during servicing.

Thunderbird and Cougar for 1989 also have platinum-tip spark plugs, which Ford said will not need replacing until 60,000 miles.

Inside the Thunderbird and Cougar, Ford has incorporated a vehicle maintenance monitor, a first for Ford.

It is standard on the Super Coupe and XR-7 and optional on the other Thunderbird and Cougar models. It monitors the drive cycle of the car and then recommends, through a gauge on the instrument panel, the proper oil-change interval for the vehicle based on the driving habits of that particular owner.

On another recent entry, the 1989 Ford Probe, service personnel will be instructed to ship the entire anti-lock braking system back to the factory in the event of a failure and replace it with a new system.

Ford said the entire unit will be replaced because it is too difficult to locate a single problem within the system.

"We're working very hard to change that because the way it is now, if one little component goes bad, we still pay for a whole new system," Morgan said.

The anti-lock braking system is covered under Ford's 6-year/60,000-mile powertrain warranty.

Ford fine-tunes computer link to aid dealer repairs

In addition to vehicle design changes, Ford Motor Co.'s approach to improved serviceability in the 1990s includes an emphasis on diagnostics and training dealership technicians.

As part of that approach, Ford will continue to develop its Service Bay Diagnostic System for all its car lines.

The system, currently being tested on the Lincoln Continental at some Lincoln-Mercury dealerships, links the dealership technician to computers at Ford parts and service division in Dearborn, Mich., in order to help diagnose a service problem.

Donald R. Morgan, manager of Ford car and light-truck serviceability, said the Service Bay Diagnostic System is necessary because it is no longer possible for a technician to keep on top of each bit of service information for all car lines.

He said electronics are especially difficult, making proper diagnosis more important than ever. "This will be the biggest challenge in service going into the 1990s," Morgan said.

Servicing will be particularly difficult for the independent technician, he said. "It costs $10,000 just to buy the shop manuals for all of the models," he said.

"Even if he could afford them, he'd spend all of his time reading, not working."

Ford hopes to have the new system, developed in conjunction with Hewlett-Packard, on-line by the early 1990s.

Ford has a separate training program for dealership technicians who handle electronic diagnostics. They are pre-tested, trained to diagnose Ford's electronic engine control (EEC-IV) system and then are retested.

Ford also is training dealership technicians to handle all repairs on the Yamaha-built, 24-valve, 3-liter V-6, despite earlier reports that the entire engine would be pulled from the vehicle and sent to Yamaha for service. The Yamaha engine powers Ford's new Taurus SHO.

Ford parts and service leaving old home
The former Ford Motor Co. headquarters building on Schaefer Road in Dearborn, Mich., will lose its current tenants. Ford's parts and service division, in about 18 months. The division is scheduled to move across town to offices currently occupied by Ford Motor Credit Co., adjacent to world headquarters. Ford Credit will move to new offices under construction in Dearborn. The old headquarters, which overlooks Ford's Rouge industrial complex, opened in 1928 and served as the company's administrative building until 1956. Its future hasn't been decided, but it could be remodeled to house Ford and other tenants.

Dealers report increase in shop volume

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts volume at new-car dealerships soared in May and June, compared with the year-earlier months.

In May, shop volume at new-car dealerships was 9.0 percent above business in May 1987, according to the Automotive News Service Index. Shop volume in June was 8.7 percent above that of the year-earlier month.

Service volume during the first half of 1988 outpaced the first six months of 1987 by 6.5 percent. Volume was up sharply in every month except April, when the Service Index registered only a 0.5 percent increase over April 1987.

An Eastern Chevrolet dealer said service volume increased in May because of a strong local economy. In June, he said, "extremely hot weather may have had an effect," on the outlet's service volume increase.

A Midwestern Ford dealer attributed strong May and June service volume to customers bringing cars in for service checks before leaving on vacation.

A Northeastern Chevrolet dealer said his May increase was due to a "customer satisfaction program that is working very well in creating customer loyalty."

SERVICE INDEX
109.0*

	May, '88 vs. May, '87	5 mos., '88 vs. 5 mos., '87
Gross Profit on All Labor and P&A Sales	+11.1%	+7.7%
Repair Orders Written	+4.2%	+2.0%
Total Labor Sales (Customer & Warranty)	+11.2%	+6.8%
Shop Parts Sales (Customer & Warranty)	+6.2%	+5.7%
Sales of All P&A	+12.3%	+7.7%

* Survey by Automotive News shows that dealers' service and parts business in May 1988 was 109.0 percent of business in May 1987. Service business in the first 5 months of 1988 was 106.5 percent of business in the corresponding period in 1987.

SERVICE INDEX
108.7*

	June, '88 vs. June, '87	6 mos., '88 vs. 6 mos., '87
Gross Profit on All Labor and P&A Sales	+9.7%	+8.0%
Repair Orders Written	+4.8%	+2.4%
Total Labor Sales (Customer & Warranty)	+9.6%	+7.3%
Shop Parts Sales (Customer & Warranty)	+10.5%	+6.6%
Sales of All P&A	+9.0%	+8.0%

* Survey by Automotive News shows that dealers' service and parts business in June 1988 was 108.7 percent of business in June 1987. Service business in the first 6 months of 1988 was 106.5 percent of business in the corresponding period in 1987.

That dealership, however, recorded a decline in shop volume in June as a result of an expansion and remodeling of its service department area.

All service volume indicators in May and June were positive.

Sales of all parts and accessories — on and off premises — led May indicators with an increase of 12.3 percent over the year-earlier month. Shop parts sales (customer-paid and warranty) were up only 6.2 percent, but off-premises parts and accessory sales climbed 16.7 percent.

In June, sales of parts for on-premises repairs and sales to off-premises customers were more evenly balanced. Shop parts sales (customer-paid and warranty) led all June indicators with an increase of 10.5 percent. Sales of all parts and accessories in June were up 9.0 percent, and off-premises sales were up 8.0 percent.

During the first half of 1988, off-premises parts and accessories sales increased 9.1 percent.

Mr. Transmission links dealers in repair center

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Car dealers who have trouble controlling costs on service operations may have a new solution to their problems.

A Nashville franchising company has begun marketing off-site transmission and engine servicing centers to dealers as investments. The concept unites three or four dealers in various markets as partners in a center, where they can direct their more labor-intensive service orders, including warranty work.

Joseph R. Dockery, president of Automotive Franchise Corp., said the concept is already in operation at one location in South Carolina, where three competing dealers have jointly operated a service facility for the past year.

A second facility in South Carolina is under construction and a third is scheduled to be built later this year in Stockton, Calif.

Automotive Franchise is the publicly traded franchisor of Mr. Transmission, PetroSystems, U.S. TransParts and TuneOmize, all automotive aftermarket operations.

Automotive Franchise suffered a $4.6 million loss last year on revenues of $8.9 million. Dockery said the losses were the result of failed Mr. Transmission franchises in depressed oil-patch markets, chiefly Houston and Baton Rouge, La.

The new program offer dealers a joint-partnership agreement through the company's Mr. Transmission division, a franchise chain of automotive service centers with 150 locations nationally.

The 32-year-old chain historically has drawn its business from retail used-car servicing, but Dockery said dealers were increasingly using the centers to job out engine and transmission work on cars under warranty for faster turnaround.

Dockery, who also is a Pontiac-Isuzu dealer with operations in North and South Carolina, estimated that approximately half of Automotive Franchise's revenue comes from dealer business. He said the trend toward longer warranty coverage has been the chief factor.

"A five-year warranty presents a problem to most dealers," he said. "They have to fix it, and yet there's no profit in it. Ideally, they want to take care of the job and move it out as fast as possible, but a major transmission problem can tie you up for days."

Dealers are currently transporting vehicles from their service departments to a Mr. Transmission center where the work is performed. The cars are then returned for customer pickup, with dealers taking a markup on the cost of the job.

Under the program, a center requires an investment of about $125,000, including building and equipment costs, Dockery said. "Most of that would be leased, meaning start-up costs of about $10,000 to $15,000 per partner," he said. The remaining portion is paid under terms of the lease agreement.

The partners guarantee the center 40 to 45 jobs a month, which makes the center profitable independently of any retail business that comes in, Dockery said.

"Most dealers don't want to deal with engine or transmission work," Dockery said. "It ties up a bay for a week, and the typical bay ought to be doing about $1,200 a day in business.

"The idea of developing a center off site is to free up the shop for higher profit jobs, while still making money on the heavier work at a lower-overhead facility," he said.

"The average transmission rebuilder makes between $650 and $800 a week. The typical dealership doesn't take in enough jobs to afford to keep him," Dockery added. "By combining three or four dealerships, it becomes a profitable operation."

Domestic truck sales set record in Canada

By Bill Vance
SPECIAL CORRESPONDENT

Although cars retained their sales strength in Canada during August, domestic trucks really soared.

Each of the Big 3 set a truck sales record in August. Ford sales rose 16.48 percent over a year ago; General Motors was up 12.09 percent; and Chrysler, with a 9.56 percent gain, chalked up its 18th consecutive month of record-breaking truck sales, thanks to its minivans and Jeeps.

Overall domestic truck sales of 35,206 were up 13.03 percent over the year-ago month, and year-to-date truck sales were ahead by a healthy 11.04 percent.

Among imported trucks, Mazda sold almost twice as many units as it did last August, rising to 1,007 from 519, and GM sold 320 imported trucks, five times as many as the 60 it sold in August 1987.

Toyota was down 6.71 percent; Nissan was off 12.45; and Suzuki lost 19.10 percent.

August car sales held up well, too, thanks to year-end clear-out incentives. Four of the five companies that build cars in Canada showed year-to-year increases in sales of their domestically built cars, ranging from Honda's 52.34 percent gain to GM's 1.28 percent.

Ford was up 15.31 percent, while Chrysler fell off 6.15 percent from last August. Volvo sales rose to 301 from 210.

For the year, domestic sales were 2.86 percent ahead of the first eight months of 1987.

Almost half of the car importers showed sales gains in August, led by Suzuki, which was up by 250.40 percent, followed by Honda, up 49.24 percent; Mazda, up 19.84 percent; and Toyota, up 14.39 percent.

Overall, 1988 Canadian car sales managed to keep ahead of the first eight months of 1987, albeit by a slim 0.37 percent. The totals were 731,390 this year, compared with 728,726 last year.

Canadian goal

Big 3 aim at higher shares

By Alex Law
SPECIAL CORRESPONDENT

TORONTO — Each of the domestic automakers is forecasting the same thing for the 1989 model year in Canada: a stagnant total market, but increased penetration for themselves.

In separate press conferences, General Motors of Canada, Chrysler Canada and Ford Motor Co. of Canada estimated sales at just over one million cars (for the sixth consecutive year) and just under half a million trucks.

And each predicted an increased share of both markets.

GM of Canada President George Peapples forecast a passenger-car market of 1,070,000 units for the 1989 model year, with GM selling 400,000, including domestic and imported cars. That would "further improve our market share by 1.2 percentage points to 37.7," Peapples said. "That's more than two full points better than we did in 1987."

Maurice J. Closs, Chrysler Canada president, told his dealers that he wants their target to be "one in five" sales, but he was somewhat more restrained when talking to the media about Chrysler's share of the one-million-plus market.

Closs said he wants Chrysler's car market share to rise to 17 percent. For the first eight months of 1988, Chrysler had 14.83 percent.

Kenneth W. Harrigan, Ford of Canada president, is projecting about 1,060,000 cars for the 1989 model year, and thinks Ford will get about 21 percent of that market. For the first eight months of calendar 1988, Ford took 19.49 percent.

In truck sales, the consensus forecast is for about 500,000 units. GM said it wants about 37 percent; Ford's target is 31 percent; and Chrysler has its eye on 23 percent.

Lawsuit filed in U.S. court on Ford van fires

By Helen Kahn
SENIOR CORRESPONDENT

Several businesses and individuals have filed suit in U.S. District Court in Denver, charging Ford Motor Co. with negligence in the design and manufacture of vans.

Plaintiffs charge they were victims of fires in Ford Econoline vans or motor homes built on Ford van chassis.

A similar, companion lawsuit was filed in Colorado state court. The plaintiffs hope to have the federal lawsuit certified as a class action, charging breach of expressed and implied warranties.

The suit was filed in U.S. District Court by ABC Carriers Inc., Vanex Inc., Albatross Adventures Inc. (doing business as Adventures to Vail), William Michael Arnold, Massachusetts-based Orange Trading Co., Richard and Mary Ogles and Bernard and Helen Cowsert.

The suit says that around Sept. 9, 1987, Ford issued a recall on the vans but dealers weren't notified until early 1988 and van owners weren't told until March 1988. All the Ford vehicles burned suddenly and catastrophically, whether or not the Ford recall work had been done, the suit claims.

The suit also was filed on behalf of buyers and/or owners and lessees of 1983-87 Ford E-350 vans and motor homes built on Ford chassis with dual fuel tanks.

Plaintiffs seek unspecified damages and want Ford to buy back the vehicles. They also want the court to force Ford to take all possible action to notify buyers — including buyers of used vehicles — of the problems.

A Ford spokesman said, "We have complete confidence in the (E-350) recall and its effectiveness and we are urging those who have not had the work done to have it completed."

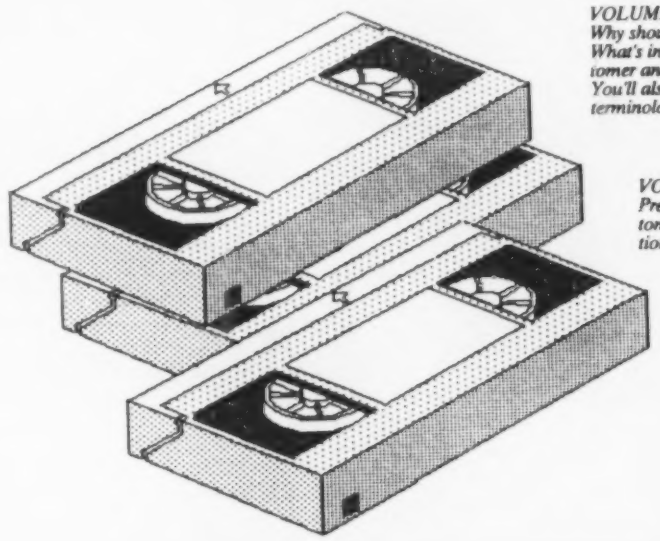
SHOWROOM LEASING

How many times have you lost a sale because you couldn't quite meet a customer's payment needs? How many potential customers have walked out your door because they didn't have enough cash down? It happens every day in dealerships across the country. And yet, the answer to converting many of these lost sales has been around for years. The answer is LEASING—one of the most powerful and innovative financing tools to come along in decades! Whether you're an old hand at leasing or a newcomer, THE FUTURE BELONGS TO LEASING will take you step by step through the process of introducing, explaining, and overcoming objections to leasing.



VOLUME 1
Why should you lease? What's in it for you, the customer and the dealership? You'll also learn basic lease terminology.

VOLUME 2
Presenting a lease to your customers and overcoming objections.

VOLUME 3
A managerial discussion of lease implementation. What to expect from your sales staff, your management and your lending sources.

Paris, Frankfurt, Tokyo, Geneva . . . Detroit?

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

At the Paris Auto Show, a delegation of Detroit businessmen looks with enthusiasm at the latest in automotive technology. But their interest is in more than just the four-wheeled Paris exhibits.

They are watching the show management itself.

They are members of the Detroit Automobile Dealers Association and the visit is to prepare them in their charge to take the Detroit auto show to the big leagues.

If successful, this dealer-backed show will achieve world-class status and become the North American equivalent of the major factory-sponsored shows in Tokyo, Paris and Frankfurt.

If the extensive pre-show planning is an indication of their commitment to succeed, then the Detroit show — newly renamed the North American International Auto Show — might well become not just the premier auto show in the United States, but one of the top exhibitions worldwide.

The reason for their enthusiasm is growth — in the number of exhibitors, and in usable floorspace for the Detroit-based show, which is scheduled Jan. 7-15.

Consider: Next year, the number of exhibitors will nearly double to 42 from 24 the year previous. Display space at Cobo Hall's exhibition area will increase from some 270,000 square feet to nearly 420,000 — with 100,000 square feet more slated to be ready for the 1990 show.

Add to this equation the world premiers of the up-market Toyota Lexus and Nissan Infiniti sedans, the first U.S. peek at a half-dozen European models, as well a first-time viewing of Chevrolet's Lumina and Pontiac's Transport minivans, and the North American International Auto Show already begins to take on increasing importance.

The call to have a world-class auto exhibition in Detroit has been one that has rung loudly in years past. But scheduling, show display area constraints, and a dearth of international journalists, has always relegated Detroit to second string status behind mid-February's Chicago Auto Show.

All of those problems have been addressed for the 1989 show, and no one is more pleased than the manufacturers themselves.

"We would agree that Detroit is the appropriate place for the premier show in America," said a Lexus spokesman. He said the scheduling change was a primary reason for choosing Detroit as the venue at which to debut the high-line Toyota.

"Detroit gives us a chance to debut a car that we think will be attractive to the market," he said. "We are encouraged by the fact that the show's name change increases its scope to include journalists from other countries.

"If we didn't debut the car at Detroit, we would have wanted to wait for Chicago — the traditional site."

Organizers of the other traditionally early show, Los Angeles, said Detroit's move to achieve world-class show status no way threatens their show's success. "Anyone can be called an international show, but Detroit doesn't have the No. 1 market, the status, the position of L.A. that determines a show's popularity," said Ben Orloff, general manager of the L.A. auto show.

A Detroit Automobile Dealers Association spokesman said "we have received tremendous support from the manufacturers. We're having some of the manufacturers tell us they're going to introduce product, but won't tell us what."

Believed to be on the secret Detroit agenda are the redesigned 1990 Lincoln Town Car as well as the Mazda MX05 "sports light" — a production version of the firm's MX04 Tokyo Show car. The spokesman also predicted some dozen concept and show cars will debut.

He said while some of the international auto shows have a bias toward the host industry when it comes to assigning prime floor space, that will not be the case in Detroit. He said domestic manufacturers will be housed in the current Cobo Hall space, while the European and Asian automakers will be located in the new wing.

A dealer association spokesman said that because of this show's international scope, a strong push is under way to invite foreign press members, with two days set aside specifically for their review.

It is a plan that is not without its symbiotic purpose: A greater influx of international press would inspire manufacturers to look upon Detroit as an important venue at which to show new product.

Michelin Tire Corp. — doing its part — recently announced it would sponsor a media center with telephones, telecopiers, translation services, a hospitality center and a public relations staff to assist the media and show sponsors.

One mainstay of the show — a black-tie charity reception — will be held on the evening of Jan. 6. Some 6,000 partygoers are expected to attend.

The dealer association spokesman said moving the show dates closer to the New Year reflects a commitment to elevating the show's status. In making the move, organizers can call it the first show of the year — previously the bragging rights of the Los Angeles show.

"It was a strategic decision to move up the date and go head-to-head with Los Angeles," he said. But he added, "We're not doing this to one-up Chicago or one-up L.A. We want the Detroit show to be the best in the U.S."

AUCTIONS

FROM PAGE 1

Anglo American Auto Auctions and GE Capital Auto Auctions — say 1988 is shaping up to be another stellar year as the National Auto Auction Association gears up for its annual convention in Atlanta this week.

Eight of the top 10 auctions are affiliated with those three companies, while the other two are independents.

The Big 3 expect registrations of about one million vehicles each with a conversion rate of 60 percent. Consignments of another three million vehicles among the rest of the NAAA members is a reasonable estimate, industry sources say.

Although they agree 1988 volumes will surpass 1987 totals, actual numbers are difficult to estimate because the NAAA's nearly 200 members lack a central reporting system.

But the top auction in the nation — Manheim's Florida Auto Auction of Orlando — reported its volume of cars sold in the first nine months of this year surpassed last year's 12-month total.

"We are already over 70,000 vehicles for 1988 mainly because we handle later models," said Joe Greco, manager of the auction. A location in central Florida with huge numbers of daily rental companies serving thousands of vacationers contributes to its success.

The average price for vehicles sold at the Orlando operation was $9,200 last year up $100 over 1986. About 40 percent of its business is from daily rental companies and manufacturer program vehicles. Last year, Orlando had sales of $643 million on 70,000 vehicles.

Program vehicles sold to daily rental companies by the manufacturers are repurchased at a predetermined residual value and resold as used cars through auctions. The average price for those cars nationally in 1987 was $9,200, while the average price for dealer consignment vehicles hovers at $5,200.

According to industry officials, factory program cars have a 98 percent conversion rate (the percentage of cars sold compared to the number consigned). Fleet and lease vehicles, on the other hand, are at 68 percent and dealer-consigned used cars are between 45 and 50 percent.

Michael J. Richardson, president and chief executive of Nashville-based Anglo American, said manufacturers will continue repurchase programs with daily rent-a-car agencies through 1990.

"Program cars are increasing in volume but it is cyclical," he said. "As the basic economic environment improves, the manufacturers step up production and become involved in the program vehicles. But when the market declines the first thing cut will be the program cars."

Darryl E. Ceccoli, vice president of operations for Atlanta-based Manheim, said auctions are seeing more repossessions from financial institutions because owners who have purchased vehicles with long-term financing are unhappy that they are worth less than they owe on them.

As the business grows, the majors are on the prowl for new locations. Manheim, the nation's largest chain has grown this year from 17 to 23 auctions. That compares with Anglo American's 21 locations and GE's 17 auctions. GE is based in Barrington, Ill.

"It has been the biggest single acquisition year in the company's history," said Manheim's Ceccoli.

The second largest volume auction is another Manheim operation, National Auto Dealers Exchange in Bordentown, N.J., with sales of $408 million in 1987 on 79,000 vehicles, up from $395 million on a unit volume of 77,000 in 1986.

Anglo American's Dallas Auto Auction in Grand Prairie, Texas, moved from 10th to third on sales of $399.4 million for 52,864 vehicles at an average selling price of $7,557 last year. It had sales of $262.8 million on 36,000 units in 1986.

Richardson attributed the strong performance to a new management tack at the operation.

"We split the top responsibilities of the general manager, creating two positions at the same level," he explained. "There is a general manager for promotion and marketing, and another for administration. Dallas is now far and away our top earner."

Of the 10 biggest auctions only two are independent — Auto Dealers Exchange of Indianapolis, and Southern Auto Auction in East Windsor, Conn., which ranked seventh and 10th, respectively.

Auto Dealers Exchange sales rose dramatically to $357.5 million in 1987 from $279.0 million a year earlier while volume climbed only 3,000 units to 65,000. But average price rose by $1,000 to $5,500 per vehicle.

Larry Tribble, owner of Southern Auto Auction, said the auction experienced 5 percent growth in 1987 over the prior year with sales of $315 million for 59,000 vehicles at an average selling price of about $5,300.

California Auto Dealers Exchange in Anaheim, Calif. showed modest growth in 1987 with sales of $395 million on 79,000 vehicles, up from $385 million on 78,000 units a year earlier. Price per vehicle has remained steady at roughly $5,000.

Southern California Auto Auction in Fontana, Calif., had sales of $367 million on 72,158 vehicles in 1987, up from $302 million on 52,000 units a year earlier. Average sales price was $5,100.

Clanton's Auto Auction in Darlington, S.C., slipped to $367 million in 1987 from $387 million in 1986. Yet unit volume rose to 56,350 from 51,500 in 1986. The average sale price per vehicle dipped to $6,500 from $7,500.

Aptco Auto Auction in Taylor, Mich., had sales of $353.9 million on a unit volume of 47,874 in 1987 up from $274 million on 36,500 the prior year.

GM buys 40 Cincinnati Milacron robots

GREENWOOD, S.C. — General Motors has awarded a $3-million order for 40 robots to Cincinnati Milacron's industrial robot division.

The robots will be installed at GM's assembly plant in Baltimore, where Chevrolet Astro and GMC Safari minivans are built.

EPA sounds a warning

Asks immediate ban on air-cooling agent

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — In a change of position, the EPA is asking for an immediate worldwide end to the use of chlorofluorocarbons — used in automotive air conditioners — because it says the danger to the protective stratospheric ozone layer is far greater than first suspected.

The auto industry and E.I. du Pont de Nemours & Co., automotive supplier of Freon, a brand-named chlorofluorocarbon, already are searching for a replacement.

Last March, DuPont said it had started to phase out all of its chlorofluorocarbon production, including Freon, and would complete the phase-out by the year 2000.

EPA Chief Lee M. Thomas testified on the subject of chlorofluorocarbons before a House subcommittee.

He said a new analysis of recent studies showed that the 50 percent phase-out by 1999, earlier endorsed by EPA, was not enough to stabilize ozone levels.

Less than a year ago in Montreal, 46 countries signed an international treaty that called for a production freeze at 1986 levels and a 50 percent phased reduction of use of chlorofluorocarbons (used in auto air conditioning and in foam upholstery) and of halons (used in fire extinguishers).

The United States and seven other countries have ratified the Montreal treaty but three more ratifications by developed countries are needed for it to become effective.

Now, EPA is warning Congress that even if all countries agree to start phasing out chlorofluorocarbons and halons, it will not be enough.

EPA said that concentration of ozone-eating chemicals in the upper atmosphere will double in the next 87 years.

Half that projected amount, aggregated over the last 25 years, has already resulted in a 3 percent depletion of upper ozone.

The CFC Alliance, a group of producers and users, endorsed EPA's change in position even before Thomas testified.

The Natural Resources Defense Council wants the United States to start its own rapid phase-out and not wait for other countries.

Scientists believe chlorofluorocarbons live 100 years or more in the upper atmosphere. They report there already is a sizable hole in the upper ozone layer over Antarctica.

The primary dangers seem to be increases in skin cancer and eye cataracts in humans as well as damage to wildlife and plants.

BRANSON, Mo. — Charles Carter Brown, 71, retired St. Louis zone manager for Chevrolet, died recently.

George Burt

WINDSOR, Ontario — George Burt, 85, who helped found the Canadian region of the UAW, died Sept. 6. He served as regional director — a post equivalent to the presidency of the present Canadian Auto Workers union — from 1939 to 1968, when he retired. He worked on the assembly line at General Motors' Oshawa assembly plant in the 1930s and became the local union's first treasurer in 1938.

Charles E. Eckhardt

OKLAHOMA CITY — Charles E. Eckhardt, 68, former owner of Eckhardt Motors (Volkswagen), died Sept. 16. He sold the dealership in 1981. He had been executive director of the Oklahoma Motor Vehicle Commission since 1985 and was president of the Oklahoma Automobile Dealers Association in 1979.

Car output edges ahead to 148,876

By Karen Dietkowski
SPECIAL CORRESPONDENT

Last week's targeted domestic auto production of 148,876 units increased slightly (0.94 percent) over the prior week's 147,496 and was 4.68 above the year-ago week's 142,216.

Last week's output was shared as follows: General Motors, 51.45 percent; Ford Motor Co., 23.75 percent; Chrysler Motors, 14.61 percent; Honda of America Manufacturing Inc., 5.00 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.19 percent; Nissan Motor Manufacturing Co., U.S.A., 1.93 percent; and New United Motor Manufacturing Inc., 0.07 percent.

Truck output was estimated at 83,857 units last week, 5.49 percent below the previous week's 88,732, but 8.17 percent above the year-ago week's 77,526.

NUMMI's Fremont, Calif., plant resumed output last week after being down for model changeover. The plant is building the 1989 Toyota Corolla sedan and will begin assembling the new Chevrolet Geo Prizm in November.

Ford Motor Co. will add a second shift at its Edison, N.J., assembly plant in March to offset lost Escort production when the Wayne, Mich., plant goes down in November 1989 for retooling. Wayne will build the new Escort to be introduced in early 1990.

Bronco II assembly was halted for model changeover last week at Ford's Louisville, Ky., plant. The plant also builds the Ford Ranger.

Daily overtime is scheduled this week at all Ford plants except Lorain, Ohio; Wixom, Mich; and Atlanta.

Ford's Kansas City, Mo.; Norfolk, Va.; Lorain; and Michigan truck plants were scheduled for overtime last Saturday.

GM slated overtime last Saturday at its Linden, N.J.; Oklahoma City; Buick City (Flint, Mich.); and Lordstown, Ohio, car assembly plants.

Also slated for Saturday overtime were GM's Flint; Moraine, Ohio; and Pontiac West, Mich., truck assembly plants. The Pontiac Central truck plant was closed last week for schedule adjustment.

Chrysler's St. Louis (No. 2) and Toledo, Ohio, plants were slated for overtime last Saturday. As previously reported, Chrysler's Newark, Del., plant is down for model changeover.

Week's build rises in Canada

Canadian carmakers scheduled production of 21,263 units last week, 2.63 percent above the previous week's 20,719 and 30.28 percent above the year-ago week's 16,321.

Truck output was slated at 21,555 units last week, slightly above the prior week's 21,461 and 17.52 percent above the year-ago week's 18,342.

General Motors scheduled overtime last Saturday at its Oshawa, Ontario, and Scarborough, Ontario, truck assembly plants.

Volvo's car plant in Halifax, Nova Scotia, remains on strike. Negotiations are continuing.

GM, UAW tap talent of all workers

Quality Network keyed to customer

By Michelle Krebs and Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTERS

In its drive to improve customer satisfaction, quality and productivity, General Motors has launched an across-the-board program aimed at something missing from its past efforts — people.

The so-called Quality Network is a blueprint for GM to better focus on customer satisfaction at all levels of the corporation and with suppliers, dealers and car buyers.

The emphasis on quality and customer satisfaction is expected to be a key issue this week as GM's top 900 executives meet in Traverse City, Mich., for their annual planning-strategy session.

Under GM's new approach, quality is equated with customer satisfaction, and both are to be achieved by tapping into the talents of every person working for and with GM.

Meanwhile, in a three-year-old phase that became part of the larger program, an 80-member assembly strategy group, under the guidance of a Detroit-based consulting firm, has been developing sweeping plans to increase quality and productivity at 11 Buick-Oldsmobile-Cadillac Group plants.

The group's goals also include an overhaul of GM corporate culture, management style and people processes, according to Lee Sage, a partner at Arthur Young &. Co. and the lead consultant in the program.

At its own speed — but with data and ideas from all the other plants available to it — each B-O-C plant is following a "planning process model" developed by Arthur Young. The assembly strat-

Shake-up at Chrysler

3 departments turned into subsidiaries

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors told about 200 employees at its headquarters last Wednesday that their departments became wholly owned subsidiaries of the company, effective Oct. 1.

Chrysler created three new companies from three departments in the administrative services area. But local UAW officials said units in those departments with UAW members are not included in the new companies.

Workers expressed concern last week about whether the move will reduce their wages, benefits or job security.

The separate companies created last week were: F.M. Group Inc.,

Chrysler, Fiat test joint deals in Alfa venture

By Mary Connelly and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS
Copyright, 1988, Automotive News

Chrysler Corp.'s joint venture with Fiat to distribute Alfa Romeo in the United States is being viewed as a test that could lead to future cooperative projects.

The announcement came one week after Chrysler Motors Chairman Gerald Greenwald and Fiat Auto President Vittorio Ghidella signed a letter of intent at a private meeting during the Paris Auto Show (Automotive News, Oct. 3).

The two companies had been negotiating the deal for six months, Greenwald said.

Asked if the new venture could lead to a production agreement with Fiat in Europe, Greenwald said the possibilities are "wide open." He said the distribution agreement is a test of how well the Chrysler-Fiat relationship will work.

Fiat had previously been named by a Chrysler executive as one of the companies that could produce vehicles for the American maker in Europe.

However, Fiat officials in Italy say the recent talks with Chrysler have not included equity exchanges, co-production or distribution of Chrysler products in Italy.

"There were no other subjects, just this agreement," said a Fiat representative.

While the joint-venture operation will retain Alfa Romeo's 160 dealers and will add about 140 Chrysler-Plymouth dealers for 300 in all, Fiat's Alfa Romeo unit in Englewood Cliffs, N.J., will apparently be absorbed by the new combine, which will be the sole importer of Alfa Romeo product. The cars will be badged and sold as Alfas by all the dealers.

Sources say the venture will be directed by a six-member board, three representatives each from Chrysler and Alfa Romeo, but the company will be headed by a Chrysler executive. Indications last week pointed to Darrell L. Davis, Chrysler Division's general sales manager, as being named to head the new venture.

Serge Dermanian, chairman of the Alfa Romeo dealer council, and owner of High Performance Cars Inc. in Waltham, Mass., said he was told during a conference call to the dealer council last week that the new venture's president will replace Guiseppe Greco, current Alfa Romeo, Inc. president in the United States. It is not clear if Greco will be named a board member.

A Fiat spokesman said there should be no impact on Alfa's U.S. dealer body. "We will try to avoid overlaps," the spokesman said, adding that "the joint venture will decide where and how to integrate."

Greenwald said the yet unnamed venture will be a distribution company, "but day-to-day direction of the joint venture will be handled by Chrysler."

Chrysler-Plymouth dealers will be appointed, starting this spring,

Maugh's task is meshing Ford worldwide operations

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

As job assignments go, Roger Maugh's latest in his 31-year career could be the one that helps reshape Ford Motor Co. in a way never imagined by the company's founder.

Since June, Maugh's assignment has been to make sure Ford's pieces fit together as the company links worldwide operations. It's a new position — and one that's been described as pivotal in Ford's unfolding global strategy.

"We have run into some pretty tough competitors in both Europe and Japan who come from a different heritage and are essentially competing worldwide

U.S. Proton delayed as problems mount

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Job One for export to the United States was to have rolled out the door of the Proton plant in Malaysia today, but the project has been put on hold until at least 1989, and perhaps indefinitely.

Technical and financial problems have contributed to the delay, but the Proton is also beset by bureaucratic wrangling over what direction the effort to export the car should take.

A Mitsubishi management team, which recently replaced the plant's original Malaysian managers, is reportedly in disagreement with the project's remaining Malaysian bosses and with New Jersey-based Global Motors, the would-be U.S. importer and distributor of the Proton.

"We're having a lot of communication problems with the factory," said Dan Prior, who heads the Proton project for Global Motors.

"Mitsubishi has always kind of looked down on this project and the progress we're making," he said.

GM divisions advance, save work

Hoglund praises parts quality, cost

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors has not outsourced as many components as it had expected to because labor and management efforts have turned unprofitable operations into money makers.

William Hoglund, GM executive vice president in charge of the automotive components groups, said that GM was "incredibly surprised" by the cooperation of people working on products that were in trouble.

More than a year ago, GM began to evaluate every product line within its components groups. Each was graded on competitiveness, with the most weight given to quality and cost. They then were ranked by assigning a red, yellow or green light.

Forty percent were in the green category — world-class competitive. Ten percent were in the red category, with little chance of becoming competitive. Fifty percent were yellow, with a good chance of becoming competitive.

GM said the red operations would be closed or sold. It already has closed a Fisher Guide plant in Elyria, Ohio, and has targeted the Fisher Guide Fort Street plant in Detroit to close by the end of the 1989 model year.

Hoglund said many operations with products classified as yellow have come up with plans to become competitive, chiefly by eliminating waste.

Workers and management at a GM metal fabricating plant in Pittsburgh, which had been categorized as red, even devised a plan to take on a different kind of work, producing sheet-metal parts for past-model GM vehicles.

At a seating plant, the time from receiving raw material to shipping the finished part was reduced by 90 percent by reorganizing the way the seats are made and materials are delivered.

Hoglund said the traffic light process forced components operations to compare themselves to the best suppliers in the world.

RICK LIEDER

Hoglund: "We'd much rather give the people a chance to get competitive so we can capitalize on those assets rather than just willy-nilly throw them out"

"When we started the red, yellow, green process, we really were not certain what opportunities we had," he said.

"Some of the improvement programs have just been astounding," he said. "Have we made all of them yet? No. But the key is, the people have to have the opportunity to make them."

Hoglund said there is no management mandate that GM components operations automatically get business from GM's vehicle divisions. Sourcing decisions will continue to be based on quality, cost and other competitive factors.

GM's components operations will continue to be reviewed for competitiveness. None of the red, green and yellow ratings are in concrete, Hoglund said.

"Green will never stay constantly green, because there's going to be someone coming out with a better mousetrap," he said. "The challenge is to make sure that your organization has that mousetrap."

He also said there continue to be parts operations that fall into the red category, though he calls them a "very minor chunk of the business." Further resources are not likely to be put into them.

"There will always be reds," he said. "Reds exist today and will always exist but they will be given an opportunity. And at this very moment, there are opportunities for more greens."

Where there is a chance to turn an uncompetitive product around, the division will be given the opportunity to do so, he said.

"We'd much rather give the people a chance to get competitive so we can capitalize on those assets rather than just willy-nilly throw them out without giving them a chance," he said.

Hoglund took over as head of components operations, which employ about 200,000 people and have annual sales of about $30 billion, in July after serving as group executive of the Buick-Oldsmobile-Cadillac Group.

His first priority is to oversee the turnaround or the elimination of non-competitive operations. Once that is done, the groups will look for new businesses.

"If we can compete effectively in any segment of the market where we feel we can gain a strategic advantage for our vehicle divisions, that's something we have to look at," he said. "But the first thing we have to do is get competitive in the basic businesses we have now."

He said the components groups as a whole are profitable. However, he said the current status of the operations is less important then what is down the road.

"The explosion of the competition in the components arena is just like we're seeing on the car side," he said.

He said he is trying to instill a new attitude within the components groups.

"We're trying to get across to our people that change is healthy, change is important and it is the lack of change that makes us complacent," he said. "If we don't continuously change — look for opportunities and test ourselves against outside competition — the list of red parts will grow bigger and bigger and bigger."

"If we are aggressive and are competitively driven, the number of green parts will grow bigger."

Iacocca to suppliers: Cut prices 1% for '89

DETROIT — Chairman Lee A. Iacocca has written to Chrysler's original-equipment suppliers requesting an "across-the-board price reduction of 1 percent" effective at the start of the 1989 model year.

The letter, dated Aug. 18, and addressed to chief executive officers of supplier companies, said the cost cuts were necessary to keep Chrysler and the suppliers competitive.

Many Chrysler suppliers contacted by Automotive News said they did not intend to comply with the request. Some said they might offer token price reductions. None expressed an obligation to comply with Iacocca's 1-percent request.

The suppliers based their reluctance on the fact that they have held the price line at Chrysler — as well as at Ford Motor Co. and General Motors — for two to three years and in some cases have reduced prices even as material costs have skyrocketed.

But the tone of Iacocca's letter was strong. It read, in part:

"For 1989 models, our price increases once again are modest and do not fully recover the higher costs we are incurring both in material and in keeping our products competitive in the market.

"We made a conscious decision to sacrifice profits in favor of higher sales. That's paid off for us, and for you. We've increased our share of market, and you've sold us more parts and materials. It's been a win-win proposition.

"But it has also been expensive, and we can't keep it up without your help. We've both shared in the benefits of Chrysler's incentives and aggressive pricing. Now I'm asking you to share part of the cost.

"I am asking you and our other suppliers for an across-the-board price reduction of 1 percent effective Job No. 1, 1989.

"One of our procurement and supply people will be contacting you in the next few days to ask for your commitment to this program, and I'm confident that you'll give it. It's absolutely vital if we're going to continue the progress we've made together through good times and bad. These are good times, and we need your commitment to keep them going.

"You don't like getting this letter, and I don't like writing it. But I've asked you to help share the sacrifices with us in the past; you've come through, and we're all healthier today because we shared the burden. That's how we'll stay healthy in the future, too."

Many supplier firms last week said they have yet to meet with Chrysler's procurement and supply staff concerning Iacocca's request.

Some suppliers said the last time they had heard from Iacocca was when he asked them for help in the form of price concessions and bond purchases during the auto company's government-bailout days of the late 1970s.

In 1987, Ford Motor Co. launched a program asking suppliers to strive for a 5 percent annual "productivity improvement" over a five-year period.

Exact percentages vary with products and materials, but generally are believed to be running in the 2 to 5 percent yearly range. The results in a number of cases have been price cuts for Ford and long-term production security for vendors.

Over the past year alone, suppliers say, prices of some materials have climbed as much as 30 percent.

Chrysler Mo. minivan plant on strike

FENTON, Mo. — Workers at Chrysler Motors' St. Louis No. 2 plant, which makes extended Caravan/Voyager minivans, went on strike Oct. 5 after negotiators for the company and UAW Local 110 failed to reach agreement on a local contract.

Local 110 President George Burr late last week predicted a short strike, and a Chrysler spokesman said management was "trying to get resolution as quickly as possible."

The strike deadline had been extended from Sept. 30; the local contract had expired Sept. 14.

Incentives stoke flames in Big 3 lease battle

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The incentive wars in retail leasing are heating up again, with emphasis on shorter-term leases that dramatically shorten the customer trade-in cycle as well as minimize finance losses.

Chrysler Motors has begun to roll out the Frequent Buyer Plan, a new 24-month lease program for Jeep-Eagle dealers while Ford Motor Credit Co. has cut short-term lease interest rates on some car and truck lines in its Red Carpet Lease AutumnFest program.

Just two weeks ago, General Motors launched its SmartLease by GMAC program that offers reduced interest rates and other incentives for open-end 48-month leases on certain models.

The Frequent Buyer Plan will be offered initially to the top 400 Jeep-Eagle dealers, said Robert Williams, Jeep-Eagle dealer marketing manager, although it is likely to be extended to Chrysler-Plymouth and Dodge dealers later.

The Frequent Buyer Plan is a lease where at the end of two years the customer can return the car and walk away, purchase the car or trade it for a new model, Williams said.

There will be no national campaign on the program and dealers are responsible for local advertising.

"It's a program where the factory, the dealer and customer benefit," said Williams. "Dealer grosses go up, customer satisfaction goes up and salesman turnover reduces by one half."

The Frequent Buyer Program uses 24-month leases — with or without a downpayment — to get customers into new vehicles twice as fast as conventional 48-month lease contracts.

The new Chrysler plan is similar to one Ford Motor Credit Co. has offered since 1982 when current Jeep-Eagle Group Vice President Joseph E. Cappy — then Lincoln-Mercury general marketing manager — tested the program at a large L-M dealership.

Ford's current two-year Red Carpet lease is simply called The Plan. It was developed in conjunction with Half-A-Car Inc., which has provided sales training for personnel at a number of Ford and Lincoln-Mercury dealerships, and also will train Jeep-Eagle dealer personnel in a similar effort.

Ted Ings, plan sales manager at Fette Ford, Clifton, N.J., said that dealership does nearly 100 of the short-term leases a month.

"You get your customer back in two years, he can't shop the trade anywhere else and the dealer gets a good supply of two-year-old used cars," Ings said.

Ings said that because he believes popularity of the two-year lease will spread, he has developed a new two-year lease sales training program called "Shorter is Better" in conjunction with retired Lincoln-Mercury dealer Bud Fette.

The Ford Credit AutumnFest program began late last week and runs through the end of the year. It includes 1989 Escort, Tempo, Taurus, Tracer, Topaz, Sable, Lincoln Mark VII, and Ranger, F-150, F-250 and F-350 models plus and 1988 and 1989 Scorpio models.

The reduced interest rates are 6 percent on leases up to 36-months and 8 percent on leases from 37 to 48 months, although Scorpio can go as long as 60 months at 8 percent. Vehicles in the program are not eligible for dealer reserve.

In conjunction, Ford started a cash-draw incentive with payoffs ranging from $150 to $1,000 for salespersons and from $30 to $250 for sales managers for every 36-month or shorter lease written on any 1987-89 model, excluding Probe and F-Super Duty models.

Ford Credit said that if dealers pass along the interest rate savings, consumers could save from $15 a month on a $9,000 Escort to as much as $50 a month on Lincoln Mark VII.

Car sales rebound in Europe

August up 12% after dip in July

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — After a slight decline in July, European new-car sales rebounded sharply in August and remain on target to eclipse Europe's record 1987 volume of 12.4 million units.

Fiat Group clings to the No. 1 spot in Europe, but second-place Volkswagen Group is narrowing the gap. VW has been Europe's sales leader for the past three years.

Industrywide sales rose in August rose 12.6 percent over the year-earlier month following a 2.7 percent decline in July, according to a 17-nation industry estimate compiled by Automotive News.

All four major markets registered gains during the month. Sales in West Germany, Europe's largest national market, improved 2.1 percent in August even though year-to-date numbers lag behind 1987's record pace.

Sales in the United Kingdom climbed 17.2 percent in August, while Italy increased 16.1 percent and the French market gained 8.2 percent compared with August 1987.

Overall sales for August totaled 1,150,600 units. Europe posted year-to-date sales of 9,010,800 units, 5.4 percent ahead of last year's 8,552,200.

At the recent Paris Auto Show, most industry executives forecast another record year in 1988 and showed new signs of optimism about 1989. Most had been predicting a slight downturn next year.

Fiat Group, including Lancia and Alfa Romeo, held first place with a 14.9 percent slice of the European pie for the January-August period. Group sales were 1,342,300 units through August, a 7.8 percent improvement over 1987.

Alfa Romeo, which is introducing its new 164 sedan in European markets outside Italy, has achieved the group's biggest gains. Eight-month sales were 150,500 units, 14 percent ahead of 1987.

Fiat's European share was 9.4 percent in August, while VW Group claimed 11.9 percent. The German manufacturer narrowed the gap between first and second place, outselling Fiat by nearly 30,000 units during the month.

VW, including Audi and Seat, held 14.4 percent of total European sales through August and has increased volume 2.6 percent in the eight-month period.

Peugeot SA, including Peugeot, Citroen and Talbot, continued to run a strong third with a 12.7 percent market share and year-to-date sales of 1,144,300 units. The company's 14.2 percent improvement this year is the best of Europe's six volume manufacturers.

Ford's sales inched up 1.5 percent for the January-August period on sales of 1,047,400 cars. The performance gave Ford fourth place and a 11.6 percent market share for the year.

August sales were up 19.5 percent for fourth-place General Motors. GM, which is preparing to launch its new Opel Vectra/Vauxhall Cavalier compact, is benefiting from the addition of a third shift at its Corsa/Nova small-car plant in Zaragoza, Spain.

Eight-month sales for GM were 964,100 units, good for a 10.7 percent market share. That was an increase of 3.7 percent over the same period last year.

Renault, which introduces its new R-19 subcompact this fall, holds 10 percent of the European market. Renault's sales were flat in August in the midst of product changeover and were up only 1.6 percent for the first eight months, to 901,300.

Among specialist makers, BMW continues to make waves with its new 5 series. BMW sales in August rose 38.3 percent compared with the same month in 1987. Full-year volume was up 17.7 percent to 242,300 — a 2.7 percent market share. Earlier in the summer, BMW sneaked past Toyota into 10th position in the European rankings.

Combined Japanese sales continued to reflect overall market growth. Sales were up 5.5 percent and market share was 11.2 percent, unchanged from the first eight months of 1987. Nissan remained No. 1 among Japanese brands in Europe with an 8.3 percent share and sales of 269,400.

Overall new-car sales in West Germany totaled 1,900,700 units for the January-August period, down 2.6 percent despite gains across most of Europe in August. Few analysts expect Germany to duplicate last year's record 2.9 million sales but a stronger-than-expected autumn could make it close.

The United Kingdom traditionally booms in August, when the new-car registration year changes. Sales rose 17.2 percent for the month and pulled the United Kingdom's year-to-date figure to 1,635,600 sales, a 12.1 percent increase over 1987.

The Italian market remains buoyant, with sales rising 16.1 percent in August. Year-to-date volume was up 8.4 percent to 1,517,500. France was 6.1 percent ahead of 1987 through August with sales totaling 1,418,500.

The Iberian Peninsula continues to be Europe's fastest-growing new-car sales region. Spain's two-year-old boom continued unabated as August volume rose 18.1 percent. With sales for the year up 15.1 percent at 723,400, the country is well on the way to its first 1-million-plus sales year.

Meanwhile, Portuguese sales jumped 109.4 percent to 17,900 units in August. Sales in Portugal increased to 136,900 units during the first eight months, a 61.7 percent improvement over the year-earlier period.

DeTomaso minimizes divorce from Chrysler

By Luca Ciferri
STAFF CORRESPONDENT

TURIN, Italy — While Maserati's unions fear layoffs because of the recent divorce from Chrysler, Chairman Alejando DeTomaso downplays the significance of the move.

"First of all, I don't accept the word 'divorce'," he said. "It was a separation of mutual consent. This separation came from decisions that both companies made in their best interest.

"I also want to make clear that this separation didn't happen suddenly. We started to rediscuss our contract with Chrysler in March 1988 and what was announced at the end of August was the result of several options.

"This separation isn't absolutely dramatic for Maserati. I don't see the need of layoffs. And I am not looking for other partners."

While DeTomaso admitted the company lost 26 billion lira ($18.7 million) in 1987 and that 1988 will also see a loss, he predicted Maserati will make money next year although he declined to give a number.

Production of Chrysler's TC coupe began Aug. 29 at a rate of 30 per day, DeTomaso said, adding, "Production figures for the TC coupe are 1,200 units in 1988, from 5,000 to 6,000 in 1989 and from 4,000 to 6,000 per year in 1990-92 for a grand total of 19,000 to 25,000. I give flexible numbers because production will be related to market demand. The new agreement with Chrysler obliges them to buy a total of 7,300 units."

DeTomaso said Maserati plans to build about 25 of its own cars per day with the goal of producing about 5,000 per year.

"Orders for 1987 were about 600 to 700 units more than our production of 4,300 to 4,400, so we already have room for more than 5,000 Maseratis per year," he said. "The problem is only to produce them, and I am sure we will reach this level in 1989."

While the United States is important in Maserati's future plans, DeTomaso said Italy is the company's top market.

"The Italian market remains the most important," he said. "Orders are 3,000 to 3,200 per year. The United States is second with 1,000 to 1,500 per year. As the third market, I consider the 'rest of the world' where we sell 1,250 to 1,300 units annually.

"The main market in the rest of the world is Switzerland, but Japan is growing very fast. We sold 220 units there in 1987, and I think we will reach 250 cars this year. In Japan, I see a good growth also for 1989."

DeTomaso said the issue of passive restraints in the United States is behind the company now. "This year, we also had problems delivering all the cars ordered in North America because of passive restraints," he said. "But all the 1989-model Maseratis will be OK, so our sales in the U.S. will be able to follow orders."

DeTomaso said he doesn't expect the new Karif to be exported to the United States.

He also said that no successor is being planned for the Royale — an updated version of what used to be the flagship Quattroporte. "This year, we will produce about 100 units (mainly destined for Japan), a level we never reached in the past," he said.

DeTomaso said the company is working on a new mid-engine coupe, and if it goes into production, it will receive a new engine "with more than six cylinders."

The company is also developing for the near term four-valve-per-cylinder technology for its current V-6s, he said.

Around 75 percent of Maserati sales are in Europe, and DeTomaso expects the 1992 open market within the European Community to help the company.

"With the European homologation, we will save money," he said. "Now, we have to make national homologations for every European country, and that is very expensive for the limited numbers we export."

Domestic sales rise in S. Korea, but they won't reach 1988 goal

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — The dollar value of 1988 domestic auto sales in South Korea is expected to surpass the 1987 total by 30 percent, although labor disputes have reduced the industry's sales forecast.

The value of domestic auto sales is expected to reach 6.8 trillion won ($9.5 billion) this year, a 30 percent increase over 1987's total of 5,212.6 trillion won. Domestic automobile production is expected to reach 1,231,000 units, an increase of 27 percent over last year's 967,500.

The estimated growth rates are considerably below the 50 percent increase originally targeted for 1988 by the industry. Automakers have scaled back production and sales targets for 1988, largely because of labor disputes that have hampered production.

However, sales of passenger cars remained brisk through July.

During the first seven months of the year, automobile sales totaled 186,893 units, an increase of 21 percent over the corresponding period last year, according to statistics compiled by the Office of National Tax Administration.

Details of the 1988 revised targets by the five automakers are as follows:

Company	1988 Output (1,000 units)	1988 Sales (1 bil. won)	1987 Output (1,000 units)	1987 Sales (1 bil. won)
Hyundai Motor	700	3,500	580.0	2,630.0
Kia Motors	300	1,500	192.0	1,026.0
Daewoo Motor	170	1,200	160.0	971.0
Ssangyong Motor	25	150	5.5	100.6
Asia Motor	36	450	20.0	285.0
TOTAL	1,231	6,800	967.5	5,212.6

NO TARIFF: *Australia, New Zealand adopt free-trade pact on cars, parts*

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — While the United States and Canada are on the brink of a new free-trade agreement, Australia and New Zealand are set to begin a similar pact for their auto industries on Jan. 1.

On that date, all duties on imported car components between the two will be removed, with tariffs on built-up cars disappearing a year later. Complete cars sent from Australia to New Zealand currently are subject to a 20-percent duty.

The exact effects of the change have not yet been measured but it is believed that Australian cars will be priced more competitively in New Zealand, while that country's component manufacturers will have unrestricted access to an industry building many more cars than their own.

Under the new arrangements, both countries are free to reduce or remove its third-country tariff on complete knockdown kits.

New Zealand has also agreed to remove import licensing fees on automotive goods beginning January 1990.

Australian automakers also will be able to use an unlimited amount of New Zealand motor vehicle components that will count towards local content requirements. Australia requires 85 percent local content to be considered a domestic vehicle.

Safari wagon, big Mercury earn top ratings for crash protection

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — By analyzing insurance claims data for 207 automobiles, the Highway Loss Data Institute has ranked the relative crash protection each model offers in terms of injury claims and repair expense.

The institute rated injury claims for 1985-1987 models and collision claims for 1986-1987 models.

The two cars with the best results in the study for both injuries and crash damage were the full-sized Pontiac Safari station wagon and the Mercury Grand Marquis two-door. The models with the worst results were the Ford EXP, Nissan Pulsar, Mitsubishi Cordia and Mitsubishi Mirage.

The Mercedes-Benz 300-SDL and 560-SEL offered the lowest injury claims. The cars have an air bag as standard equipment.

The cars with the worst injury results in dollar terms were the Chevrolet Spectrum four-door, Chevrolet Sprint four-door, Hyundai Excel four-door, Ford EXP and Isuzu I-Mark four-door.

The Highway Loss Data Institute, which is affiliated with the Insurance Institute for Highway Safety, said injury and vehicle damage losses vary widely among car models, even among those of the same size and type. Generally, large domestic cars tend to have the fewest injury claims and damage results.

Exceptions to the general trend for injury protection among smaller cars were the Porsche 944 coupe, Saab 900 four-door and Volkswagen Vanagon.

[1] Injury results based on 1985-87 models with manual safety belts; 1988 models of the same cars have either automatic belts or air bags as standard equipment and may, therefore, have better injury claims experience than the earlier models. Collision results can be expected to remain about the same.

[2] Injury results based on models equipped with air bags. Current models of these cars also have automatic restraints, so the injury results should be consistent among model years. Many additional 1988-89 models — and all 1990 models — will be equipped with air bags or automatic safety belts.

[3] Injury results based on models equipped with automatic belts. Current models of these cars also have automatic restraints, so the injury results should be consistent among model years. Many additional 1988-89 models — and all 1990 models — will be equipped with air bags or automatic safety belts.

NOTE: Injury results are stated in terms of the frequency of insurance claims filed under Personal Injury Protection Coverages for 1985-87 models. Collision results are presented in terms of the average loss payment per insured vehicle year for 1986 and 1987 models. All results are stated in relative terms, with 100 representing the average for all cars. Less than 70, substantially better than average; 70-79, better than average; 80-120, average; 121-130, worse than average; and greater than 130, substantially worse than average.

Training site for Infiniti rises in Ariz.

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — Nissan's Infiniti Division has started construction of a $5 million National Training Center in Scottsdale, Ariz.

The two-story, 27,000-square-foot building, which will also house a model dealership when completed in April 1989, will serve as headquarters for Infiniti's comprehensive, first-phase dealer training program. The facility will incorporate all dealer sales, service and management functions, said William R. Bruce, Infiniti vice president and general manager.

As a model for all future Infiniti dealerships across the United States, Bruce said the Scottsdale facility will be used to test and fine-tune dealership design, materials and operating systems.

Approximately 65 to 75 Infiniti dealerships will be built prior to the new division's sales launch in late 1989, Bruce said. Each dealership will be based on the National Training Center's concept and design.

Bruce acknowledged that second-phase dealers will be the chief beneficiaries from the research in fine-tuning dealership design, "although there will be first-phase dealers whose facilities will still be in the building process next April."

"When we do learn things," he said, "we will immediately pass them along to the other dealers as they build their facilities."

When the facility is completed, key Infiniti dealership personnel will be invited to attend training sessions, which are designed to build a uniform approach to customer satisfaction throughout the Infiniti dealership network, said Richard R. Lueders, Infiniti national parts and service manager.

"Our goal is to have every dealership incorporate the same high-quality systems and procedures," Lueders said. "This uniform approach will help dealers reduce operating costs, increase efficiency and improve profitability."

Shortly before the introduction of the new Infiniti cars, Bruce said the training facility will be converted into a functional dealership and sold to Herbert C. Pell III and Michael J. Heims, who will operate it as an Infiniti dealership in Scottsdale.

Personnel from second-phase Infiniti dealerships will be trained in another training facility that will be built in the Los Angeles area.

"We're already looking at a site in Los Angeles," Bruce said. "In fact, we initially looked at Los Angeles and due to several things, such as timing and what we call the perfect setting and location, we ended up here (Scottsdale) because we thought this had all the criteria, especially the timing criteria.

"But now that we have more time, we have been looking in the greater metropolitan Los Angeles area," Bruce said.

"We may do something similar there in terms of either building the full-scale facility, or we might go into a commercial park and duplicate something like the Universal Studio stage for the facility and use that," he said. "But we will have a national training capability in Los Angeles."

Trucks pull sales to 3rd-best year

By Philly Murtha and Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTERS

Led by the record-breaking pace of light trucks, industrywide vehicle sales in the United States in the 1988 model year outpaced 1987.

The 1988 model-year total was the industry's third best, behind 1986 and 1985.

There were 15,606,041 cars and trucks sold in the United States during the 1988 model year. That was up 1.14 percent from 15,430,053 in the 1987 model year.

The model year began around the stock market nosedive on Oct. 19, 1987. But it turned out to be better than expected because the crash didn't create any serious problems with the economy.

"Consumer confidence did fall sharply in November and December, but then it snapped back very sharply in the early part of this year," said Michael Luckey, a consultant based in Cresskill, N.J. "There was a tremendous amount of incentive activity in the first four months. Then they pulled back some."

Car sales fell a fraction short of 1987 model year numbers; both domestic and import car sales lagged by less than a point behind 1987. For the first time in a non-strike year since 1957, Ford Division sold more cars than Chevrolet, and it again beat Chevy on trucks.

Truck sales broke the 5 million barrier for the first time, growing about 5.04 percent. It was the fourth consecutive year of record truck sales. Sales of light, medium and heavy trucks were estimated to be 5,146,538, up from 4,899,587 in the previous model year.

Light-duty truck sales climbed 4.78 percent to 3,725,834 from 1987's record 3,555,740.

In spite of buoyant car sales in the first nine months of the 1988 calendar year, import and domestic car sales from Oct. 1, 1987 through Sept. 30, 1988 — the industry's defined 1988 model year — slipped 70,963 units, to 10,459,503, compared with 10,530,466 in model year 1987.

Car market shares, including captives, were rearranged only slightly in 1988. General Motors' share dropped a point, to 36 percent, while Ford Motor Co. gained

SALES

a point, rising to 21 percent. Chrysler's share remained at 14 percent in both years.

Honda and Toyota traded car market-share figures: Honda took 6 percent in 1988 versus 7 percent in 1987, while Toyota's share in 1988 rose to 7 percent from 6. Nissan's car share remained at 5 percent. Other foreign manufacturers took 14 percent of the car market in both model years.

The big news for Chrysler Motors was that it sold almost as many light-duty trucks as it did cars in the 1988 model year. Its Chrysler and Jeep light-truck sales totaled 1,006,523, while car sales totaled 1,050,551.

Domestic-car sales were off by a fraction of a percentage point, and imports fell 1.88 percent. Four of the six U.S. manufacturers posted gains in their domestic sales for the model year. Ford and Chrysler shared small percentage gains, 3.20 and 3.76, respectively, while sales of Hondas and Toyotas built in the United States surged, 13.64 and 75.63, respectively.

Ford Division produced four of the top 10 domestic cars.

GM domestic sales declined 4.63 percent. Although all car divisions reported declines, five of the 10 best-selling domestic cars last year belonged to GM.

Nissan was the only Japanese transplant to sell fewer cars in the model year. Sales of its Tennessee-built cars dropped 10.23 percent. Volkswagen, which stopped making cars at its Westmoreland, Pa., plant in July, sold 40 percent fewer U.S.-produced cars.

It was a great model year for light-duty truck sales. A new sales record was set, with domestic manufacturers on a big upswing and importers largely on the retreat.

The domestics retailed 3,175,492 light trucks, up 10.49 percent from 2,873,901 in the 1987 model year. They captured 85.23 percent of the light-truck market compared with an 80.82 percent share in 1987.

Conversely, foreign-based manufacturers retailed 550,342 light trucks, off 19.29 percent from 681,839 in the 1987 model year. Their market share dropped to 14.77 percent from 19.18 percent.

A number of truck manufacturers, including Ford, Chrysler, Jeep and GMC, set model-year light-duty truck sales records.

Ford retailed 1,123,502 light trucks, up 6.17 percent from 1,058,230 in the 1987 model year. Chevrolet retailed 1,005,421 percent light duties, up 12.35 percent from 894,929.

Chrysler, including Plymouth and Dodge nameplates, retailed 591,179, up 9.91 percent from 537,877 in 1987. GMC retailed 268,711, up 15.41 percent from 232,841, and Jeep retailed 186,674 trucks, up 24.43 percent from 150,024.

Among the truck importers, only Range Rover recorded a gain, with 2,527 sales, up from 1,549 in 1987.

In the month of September, sales of domestic and imported cars fell 8.30 percent to 825,262 from 899,944 a year ago when there was a dramatic infusion of incentives. U.S.-built car sales fell 5.98 percent to 576,535, compared with 613,208 in September 1987.

Inventories of U.S.-built cars grew to 1,385,938, an ideal 60-day supply on Sept. 30. The domestic stockpile was 5.32 percent higher than Aug. 31's 1,315,919 stock of unsold cars in dealer and factory lots and in transit, the equivalent of a 59-day supply.

Import-car deliveries fell 13.26 percent in September, declining to 248,727 from 286,736 in September 1987. Imports took 30.14 percent of the month's car market.

The Big 3 reported modest domestic car sales losses for the month, while the major three transplant companies, Honda, Nissan and Toyota, reported major gains in sales of U.S.-built cars.

Nissan showed the biggest gains for the month by selling 44.18 percent more U.S.-built cars than it did a year ago. Honda U.S.-built deliveries were up 28.65 percent.

Chrysler's domestic-car deliveries dropped 1.42 percent; Ford sold 8.89 percent fewer U.S.-built cars; and GM's U.S.-made car sales dropped 10.16 percent.

U.S.-built car sales slumped in the final 10-day period of September. They fell 9.09 percent to 250,416 compared with 275,461 in last year's comparable period.

PRODUCTION

Truck build sets a pair of records

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truck production for the third quarter totaled 936,140 and was the highest ever for that period. The previous record was 903,622 in 1987.

Third-quarter output was 13.77 percent below the second quarter's 1,085,676 which was also a record quarter.

Truckmakers set a September record with production of 362,011, surpassing the former peak of 328,604 in 1987.

Last month's truck output was 8.30 percent more than August's 334,266.

Targeted output of 85,370 trucks last week was 2.75 percent more than the previous week's 83,086 and 8.24 percent more than the year-ago week's 78,870.

Car production for the third quarter totaled 1,488,090, 26.80 percent below the second quarter's 2,032,772 but 6.30 percent more than the year-ago quarter's 1,399,859.

September car output of 622,616 was 25.01 percent more than August's 498,043 and 8.89 percent more than the year-ago month's 571,768.

Carmakers scheduled 151,038 units last week, 3.46 percent below the prior week's 156,445 but 2.77 percent more than the year-ago week's 146,972.

Companies split last week's estimated output as follows: General Motors, 52.51 percent; Ford Motor Co., 23.01 percent; Chrysler Motors, 13.84 percent; Honda of America Manufacturing Inc., 4.77 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.81 percent; Nissan Motor Manufacturing (USA) Corp., 1.90 percent; and New United Motor Manufacturing Inc., 0.16 percent.

Trucks at peak in Canada, too

Like the U.S. truckmakers, Canadian truckmakers set a third-quarter production record. Output of 192,399 surpassed the prior peak of 179,894 built in 1985's third quarter.

September truck output was also a record. At 85,723, it topped the former standard of 71,920 set in September 1985.

Last month's truck production was 19.01 percent more than August's 72,029 and was 46.12 percent above the year-ago month's 58,667.

Car output for the third quarter of 185,957 dipped 43.22 percent from the second quarter's 327,486 but rose 44.16 percent over the year-ago quarter's 128,991.

September car production of 85,038 was the highest for that month since 1985 when 92,463 cars were built.

Last month's car output was 30.84 percent more than the August total of 64,996 and 30.32 percent more than the year-ago month's 65,253.

The strike that began Aug. 24 against Volvo in Halifax, Nova Scotia, was settled last Monday, however the company issued no car production schedule for the week.

Pepe deals auctioned at $30 million

10 N.J. outlets sold in 2 hours

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

CAMDEN, N.J. — Bidders snapped up all 10 of megadealer Richard T. Pepe's dealerships at a standing-room-only auction in U.S. Bankruptcy Court. They offered a total of more than $30 million in less than two hours.

"He (Pepe) oughta do this every month," New Jersey dealer William Pirretti joked after looking at the packed courtroom. "He's gonna make money on this."

Actually, last week's auction will probably just cover Pepe's debts, said attorney Robert Baime, who represented the court-appointed trustee Sanford Feld, who has been running the dealerships.

Pepe and his wife, Virginia, who owned four of the dealerships, were tense and unsmiling throughout the proceeding, as the auction dismantled their family career piece by piece.

"I couldn't stand this every month," Mrs. Pepe replied quietly when someone repeated Pirretti's remark.

In filing for protection from creditors, the Pepe dealerships cited more than $50 million in liabilities against $54 million in assets.

Most of the liabilities were floor-

HAULING: *Truck sales roll to record, propelled by full-size pickups*

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck sales in the United States set their fourth straight record in the 1988 model year, buoyed by the resurgence of full-sized pickups and the continuing growth of compact vans.

Compact pickup truck sales were depressed by a slide on the import side. Compact sport-utilities have plateaued — at least for the time being. That segment is awaiting a new batch of four-door domestic models to rev it up.

Other segments, like full-sized vans and sport-utilities, stayed pretty much on a par with recent years.

Industrywide, manufacturers retailed 5,146,360 trucks in the 1988 model year, including light, medium and heavy-duty models. That was up 4.81 percent from 4,910,364 in the 1987 model year.

The 1988 figures include 4,838,538 light duties, up 4.51 percent from 4,629,587 in 1987, and 307,322 medium and heavy trucks, up 9.45 percent from 280,777.

Truck manufacturers are looking for another strong — though not necessarily record — 5.1 million to 5.2 million sales in the 1989 model year, barring unforeseen circumstances such as another stock market plunge.

As a major spark plug in the industry's performance in 1988, compact vans chalked up 812,182 sales, up 22.06 percent from the 1987 model year. Of those, 85.30 percent were sold as passenger models and the balance as cargo vans.

2 of 9 dump Saturn pact, cite expense

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER
Copyright, 1988, Automotive News

Two of Saturn Corp.'s first nine dealers backed out of handling the new, cutting-edge General Motors franchise in Southern California, blaming the huge financial and facilities requirements.

A 10th dealer, who traveled to Detroit with the original nine and was offered a franchise, declined to sign after taking the agreement home for further study.

The super-heated Southern California real estate market and other expensive requirements — including stringent facilities demands and fixed-fee service contracts — were apparently at the core of their decisions.

Dealers Joe D. MacPherson and Kenneth M. Nieman have canceled their previously announced agreements with Saturn, which is scheduled to deliver its first cars in June 1990.

San Diego dealer Bob Baker said he decided to pass after looking the agreement over carefully following the summer meeting in Detroit.

"I predict many of the first wave of dealers will drop out once their accountants figure out what kind of costs are really involved in it," said Baker, principal of the Bob Baker Enterprises chain in San Diego, which had been offered three Saturn locations. "I love the car and I think their mission is correct, but the numbers just didn't work."

Baker owns 10 stores, including two Chevrolet, two Ford, two Chrysler-Plymouth and one each Jeep/Eagle, Isuzu, Volkswagen and Acura.

"They were unwilling to be flexible on site locations, on design and a number of other points. I believe they're mistaken to think that dealers will be willing to work with them on that basis," he said.

More dealers, more repos in auction boom

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The number of franchised dealers attending closed factory-sale auctions has risen dramatically as the number of low-mileage, current-model program vehicles has increased, but the auction boom has brought with it some trouble spots, including cross-line buying by dealers at auctions.

Meanwhile, automakers say they will get tougher in 1989 with the daily rental companies, insisting that they buy more "at-risk" vehicles in relation to program vehicles.

Automakers also report that the number of repossessions is on the rise, helping increase auction sales.

Vehicle resale departments at Ford Motor Credit Corp., General Motors and Chrysler Motors will send more than 900,000 program vehicles, company cars, leased and

Minivan strike tab mounts for Chrysler

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Last Friday, the strike at Chrysler Motors' St. Louis minivan plant logged its ninth profit-draining day, with no end in sight.

The strike at the St. Louis No. 2 plant had cost the company 6,300 vehicles by last Friday — vehicles the company will be unable to recoup because its minivan plants have been running flat-out to fill back orders.

The daily drain on profits amounts to $4 million a day, according to Wall Street analysts.

Late Friday afternoon, Chrysler was still assessing possible courses of action. The company was considering holding a meeting at the plant to explain the impact of lost profits on the workers' next bonus payment.

Last Wednesday, members of UAW Local 110 for the second time turned down a local agreement that had been reached between Chrysler and the local bargaining committee.

Workers first rejected the contract on Oct. 9, but that vote was thrown out because of voting irregularities.

So far, the ripple effects of the strike on other Chrysler plants have been felt only by 246 Chrysler workers at a stamping plant in Warren, Mich., who were laid off Oct. 10. Since Chrysler workers do not

Chrysler tech center
The steel profile of Chrysler's technology center is emerging in Auburn Hills, Mich. The center, on a 500-acre site in the northern Detroit suburb, represents Chrysler's largest investment in a non-manufacturing facility. Chrysler and its suppliers are investing $800 million in the development. Of the total, $675 million will be for Chrysler's 2.6-million-square-foot center and a product evaluation road. The remainder is earmarked for an adjacent supplier park. Chrysler's technology center, scheduled to open in 1990 or 1991, eventually will employ 6,000.

No uproar due as NADA picks leaders

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Little real controversy appears to be brewing for the National Automobile Dealers Association board of directors meeting in Pebble Beach, Calif., next week.

The 58 directors are expected to ratify the next generation of leadership for the 20,000-member organization and discuss issues related to the growth and unification of the national dealer movement.

"I don't expect any surprises or problems," NADA President Jimmy C. Payton said last week. "I think it will be a quiet meeting — but then that's always when I'm caught by surprise."

Other directors contacted last week foresaw no problems, controversy, or difficulties likely to arise.

The final agenda will be mailed to NADA directors this week. In addition to regular business, Payton said last week he hopes that after Congress recesses, NADA will be able to put "a great deal of emphasis" on ethics in advertising by new-car dealers.

"It is getting more attention from state and local governments," Payton said, "and we need to address it."

One of the items on the agenda at the directors' meeting will be the election of officers who will take office at the NADA national convention in New Orleans Jan. 28-31, 1989.

Ron Tonkin, nine-franchise dealer in Portland, Ore., who was elected first vice president last October, will almost certainly be elected 1989 president.

Unlike last year when there were four candidates for 1988 first vice president, next week's election features a single candidate nominated by the board's nominating committee — Ray Green, the NADA director from Illinois.

Green, 60, is president of the nine-franchise Green Holding Co. in Jacksonville, Ill. He has been a new-car dealer since 1958 and an NADA director since 1980. His past NADA offices include secretary and Region III vice president plus trustee and fund-raising chairman of the Dealers Election Action Committee, NADA's political arm.

It is not likely a candidate will be nominated from the floor or offered as a write-in candidate, most directors said. That means Green is virtually assured of becoming first vice president in 1989 and — almost as certainly — president in 1990.

"He is very popular and no one wants to run against him," said James T. Caplinger, NADA immediate past president and chairman of the nominating committee. "I tried to get other candidates to run because it's good to have more than one candidate," Caplinger said, "but there is no opposition."

However, there is a horserace for the position of secretary. There are three candidates: William S. Dodge, 45, a six-franchise dealer from Falmouth, Maine; Robert E. Moody, 62, a Chevrolet-Buick-Pontiac-Oldsmobile dealer from River Falls, Wis.; and Syl J. Schumacher, 61, NADA Region III vice president and a Ford-Lincoln-Mercury-Dodge-Chrysler-Plymouth dealer from Linton, N.D.

The candidates have been campaigning since they were nominated in June.

In addition, the directors also will elect new members to the enlarged finance committee, plus a treasurer, insurance fund trustees and retirement fund trustees.

Another matter likely to be discussed at the Pebble Beach meeting is the status of merger talks between NADA and the American International Automobile Dealers Association.

High-ranking officials from NADA and AIADA — including NADA's Payton and Tonkin and AIADA Chairman Lee Seidman — held preliminary talks in July, just after the last NADA directors' meeting.

Payton said last week that he has no meetings scheduled with AIADA before the directors meet next week.

There is likely to be discussion about mandatory dealer ad association membership and "taxation" imposed by some manufacturers, as well as the status of the NADA professional staff, which has been hit with a number of departures and changes this year, including the resignation of John J. Ferron. Ferron, an NADA vice president, was the second-ranking professional staff member. He has not been replaced.

"I don't think anyone anticipated the (staffing) upheaval," Payton said, "but I think in every instance the restructuring strengthened our organization."

Payton said the executive committee has kept the directors abreast of developments.

There also will be reports by standing committees, with some special attention to the success of NADA's current image-development initiative — fostered by Payton — that includes an ad campaign and the NADA president's show on the Automotive Satellite Television Network.

Ford on watch to buy firms, but won't rush

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

WHITE SULPHUR SPRINGS, W. Va. — Ford Motor Co. is in no rush to spend the $10.2 billion cash balance it had on hand as of mid-year 1988. But diversification into non-automotive businesses is high on the list of spending possibilities.

"We believe it would be desirable if we can find ways to moderate the automotive (market) cycle by diversification, adding businesses that would have a different pattern as far as financial results are concerned — and, ideally, with more growth or growth potential," Ford Chairman Donald E. Petersen said last week. His remarks came during an informal conversation following his speech at the fall meeting of SAE's Detroit section.

"The area in which we've had real success so far has been financial services, and we've been quite pleased with the progress we've made there," Petersen said.

"Whether and when we would take additional steps, I wouldn't want to conjecture. But it is conceptually, I think, a good thing for the company and our shareholders to find a way to broaden our base.

"But that by no means would indicate we'd do anything other than visualize Ford as having a core business that is automotive."

Ford's interest in a financial services purchase helped fuel speculation last week that the company could be ready to acquire Dean Witter Reynolds, the stock brokerage division of Sears Roebuck & Co. Sears shares rose $2.125 Thursday on the rumors. Spokespersons at Ford and Dean Witter would neither confirm nor deny the reports.

The Ford chairman also is mindful of vehicle manufacturing capacity — his own company's and that of Japanese transplants in the United States.

"There's no question we could have sold more trucks in the North American market this year," Petersen said. "In trucks, we need (more) capacity. We have plans. We've announced some of them that will help us as far as capacity is concerned."

They include the addition of a second shift at the company's Wayne, Mich., truck plant and expansion of a light-truck transmission plant in Sharonville, Ohio.

"And we've now come to an agreement with Nissan, which will add to our capability," he said. In September, Ford and Nissan announced plans to build minivans at Ford's truck plant in Avon Lake, Ohio.

Petersen said he believes Ford's passenger-car production capability is in good shape.

"I think we have tracked quite well as far as cars are concerned, in terms of trying to judge just what capacity we need in relation to our demand," he said. "We went up strongly in our (market) share from '86 to '87, and again from '87 to '88. That says to us that with cars, overall, we're still in pretty good balance."

Asked whether he is concerned about additional Japanese transplant operations coming on stream during the next 18 months, compounding what industry observers see as a glut of vehicle-manufacturing capacity in the United States, Petersen said, "It's one more cranking up of several notches of competitive intensity. But excess capacity is a problem only for the companies that have it."

TRY AGAIN: *GM to scrap salaried-pay experiment; opponents claim idea has not worked*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors plans to scrap the salaried compensation plan put into place only last year that based raises on performance.

It is not known how GM will replace the performance-based pay system. A GM spokesperson would say only that the salaried compensation structure is reviewed annually, and GM's 114,000 U.S. white-collar employees would be notified by year-end if any changes are to be made for 1989.

However, high-ranking sources within the company said the change is in the works.

Some GM executives complain the performance pay structure hasn't worked. It has not fostered the teamwork spirit that GM has tried to instill in salaried workers, they said.

A group of salaried workers has threatened to sue GM because, they say, older employees are discriminated against on raises.

Thomas Williamson, a salaried GM worker who filed a complaint with the U.S. Equal Employment Opportunity Commission in June over the system, advertised a meeting for disgruntled salaried workers. About 100 people attended last week's meeting to discuss the possibility of a class-action suit. No decision has been made on filing such a suit.

Key proponents of the performanced-based pay structure are no longer employed by GM. Roy S. Roberts, former vice president in charge of the personnel administration and development staff, and his mentor, Elmer Johnson, former executive vice president, have departed.

Johnson, reportedly frustrated with the slow pace of change at GM, last spring returned to the Chicago law firm he worked for before joining GM in the early 1980s. Roberts, who skipped several rungs of the GM corporate ladder upon Johnson's recommendation, took a top management job at Navistar International.

The performance-based pay system was put into effect for 1988. It was designed to force GM's white-collar workers to "carry their own weight," Roberts said in a January interview.

Under it, some employees received no raises — weak performers, those without great potential and strong performers who were already at the top of their pay range.

In a study by GM of other large companies, GM said it found it was overpaying employees in the lowest five levels by 15 to 25 percent. That meant fewer employees in the lower salaried ranks received raises.

The study found that employees at levels 6 to 8 were paid slightly above the competition.

The salaried pay package for 1988 also contains profit sharing based on GM's U.S. profits and sales. It also includes recognition awards, which can be cash or be a non-cash item like tickets to a sporting event or gift certificates for dinner.

For 1988, GM set aside 2.5 percent of its salaried payroll for merit increases plus 3.5 percent for recognition awards. That compares with 3.5 percent for all performance pay allocated in previous years. GM does not reveal the size of its payroll.

GM, Ford fire up incentives on big batch of '89s

By Laura Clark
and Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors and Ford Motor Co. wasted little time in following Chrysler Motors with incentives on 1989 cars and trucks last week. Both placed consumer rebates on selected models.

Every GM vehicle division except Cadillac announced rebates for selected vehicles. Ford, meanwhile, revised its week-old rebate program and added 1989 trucks. Its program for 1988 cars is unchanged.

Mitsubishi Motor Sales of America also has launched a series of regional incentives for dealers. They offer cash for 1988 cars and for 1988 and 1989 pickups and vans.

BUICK: The division is offering $750 on 1988 Electra/Park Avenue and 1988 Regal. In place of the rebate, Regal buyers may select loans with 3.9 percent interest for 24 months; 5.9 percent, 36 months; 8.9 percent, 48 months; or 9.9 percent, 60 months.

Buick is offering $500 rebates on 1989 Centurys and Skylarks. That is in addition to option package discounts of as much as $1,200 on Skylark and $1,000 on Century.

No dealer financial participation is required. Customers may order cars or purchase from dealer stock, but cars must be delivered by Dec. 31.

CHEVROLET: In a revised national program and new regional programs, Chevy is offering $750 rebates nationwide on 1989 Caprice models until Dec. 25. It is also giving buyers $500 on 1989 S-10 pickups (including EL models) and cab chassis.

The 1989 S-10 Blazer has a $400 rebate on two-wheel-drive models and a $600 rebate for 4wd units. The 1989 C/K full-sized pickup and cab chassis have a $300 rebate.

The truck incentive runs until Nov. 30 and requires no dealer financial participation.

Chevrolet's new national program includes option-package discounts on a variety of 1989 cars and trucks. Included are: $200-$300 savings on Cavalier Value Leader; $500-$800 on Cavalier RS coupe, sedan and wagon; $400-$800 on Cavalier wagon; $700-$800 on Cavalier Z-24 coupe; $700-$1,000 on Cavalier Z-24 convertible; $900-$1,300 on Corsica LTZ; and $600-$1,300 on Corsica hatchback and sedan.

Also: $1,100-$1,500 on Beretta GT; $600-$1,500 on Beretta; $1,100-$1,500 on Beretta GTU; $1,500-$1,900 on all Camaros; $675-$1,100 on Celebrity; $500 on Caprice Classic Brougham, including the LS; and $1,300-$1,900 on C/K 1500 pickups equipped with manual transmission.

Also: $1,100-$1,400 on C/K 1500 equipped with manual transmission and extended cab; $1,000-$1,700, on C/K 2500 equipped with manual transmission; $900-$1,400 on C/K 2500 equipped with manual transmission and extended cab; $1,000-$1,500 on C/K 3500 equipped with manual transmission; and $900-$1,400 on C/K 3500 equipped with manual transmission and extended cab.

Buyers in Maine, Massachusetts, New Hampshire, Vermont, Rhode Island, Connecticut, New York and New Jersey receive a $300 rebate or free automatic transmission on 1988 and 1989 Cavaliers. There is no dealer financial participation.

Buyers in California, Texas and Florida receive a $500 rebate on 1988 and 1989 Camaro RS and 1988 Camaro sport coupes. The program includes both retail and lease vehicles.

Buyers in Texas, Oklahoma and Louisiana can receive option-package discounts ranging from $1,700 to $1,900 on C/K pickups equipped with manual transmission. No dealer financial participation is required, and the program includes both retail and lease vehicles.

The regional programs run from Oct. 1 to Dec. 31.

FORD: Ford added 1989 trucks to its one-week-old incentive program. Ford placed a $300 rebate on 1989 F-series trucks equipped with manual transmission. A $300 rebate is also available on 1988 F-series trucks. The F-series incentive ends Dec. 5.

Ford also increased the rebate on the Ranger S from $300 to $500. All 1988 Rangers now have a $500 rebate until Nov. 24.

Consumers must purchase eligible vehicles from dealer stock. There is no dealer financial participation in the new Ford program.

GMC TRUCK: GMC Truck is offering rebates on 1989 models through Nov. 30. It is offering $600 on 2wd and 4wd S-15 Jimmys; $500 on S-15 compact trucks including commercial cabs and chassis models; $300 on Sierra C/K full-sized pickups including commercial cab and chassis; and $300 on R/V series full-sized pickups including four-door and commercial cab and chassis.

No dealer financial participation is required. Vehicles must be purchased from dealer stock.

OLDSMOBILE: Oldsmobile is offering rebates on selected 1988 and 1989 models. Included are: $500 on 1989 Cutlass Calais, Cutlass Ciera and Cutlass Supreme; $600 on 1988-89 88 Royale; $750 on 1988-89 98; $1,000 on 1989 Touring Sedan and Toronado; and $1,000 on 1989 Trofeo.

The rebates are for cars purchased from dealer stock or ordered and delivered by Nov. 30.

In addition to those rebates, Olds is offering buyers of its 1988 Cutlass Supreme $1,000 or GMAC financing of 3.9 percent for 24 months; 5.9 percent, 36 months; 8.9 percent, 48 months; or 9.9 percent, 60 months.

PONTIAC: Pontiac launched "Excitement Kickoff '89," which offers rebates on selected 1989 models until Jan. 3.

The rebates are offered on purchased and leased vehicles: $600 on Bonneville; $500 on Pontiac 6000, Grand Prix (except SE models), Grand Am and LeMans (except Value Leader models); and $350 on Firebird. Customers may order a car, but they must take delivery by Jan. 3. No dealer financial participation is required.

MITSUBISHI: A dealer program offers cash for 1988 cars and 1988-89 pickups and vans.

Dealers in the Northeast and Southwest regions receive $1,000 for each Cordia and Starion sold, and $500 for each Sigma.

Dealers get $250 per unit if they sell two or more three-door Precis models, and $500 per unit if they sell two or more five-door models.

They receive no money for the first five pickups and vans; however, the payment is $500 each for 6-25 units; $750 each for 26-50; and $1,000 each for 51 and above.

The program also pays a $2,000 bonus for each wagon, $1,000 per Montero and $1,500 for each Montero Sport model.

The program for dealers in the Western Region is the same with one exception — the bonus on the 1988 wagon is $1,000.

The program for dealers in the Southeast Region offers the same payments for Precis but lumps Cordia, Starion and Sigma sales for volume-attainment payments.

Dealers receive $750 per unit for the first 25 combined Cordia-Starion-Sigma sales; $1,000 per unit for 26-50; and $1,500 per unit for 51 and above.

The program also lumps sales of 1988-89 pickups and vans and 1988 wagons and Monteros. Mitsubishi said wagon and Montero sales will count toward volume attainment, but no payments will be made. Dealers will be paid nothing for the first five combined sales; $500 per pickup or van for 6-25 combined sales; $750 for 26-50 units; and $1,000 for 51 and above.

Western region dealers also will receive a $2,000 bonus per wagon sold, $1,000 per Montero and $1,500 for each Montero Sport.

Sales of U.S.-built cars jump 21.6%

By Philip Martin
AUTOMOTIVE NEWS STAFF REPORTER

Early-October sales of U.S.-built cars surged 21.60 percent ahead of the year-ago period because of an infusion of incentives.

U.S.-built car and light-truck deliveries for Oct. 1-10 were 279,112, up 16.93 percent from 238,707 a year ago.

Ford's domestic car and truck total rose 32.91, and GM's total was up 16.38 percent. Chrysler Motors' car and light-truck total slipped 1.17 percent, and Nissan's transplant car and truck sales dropped 36.33 percent.

There were 183,652 domestically produced cars sold in the first 10 days of October vs. 151,043 a year ago. The daily selling rate was 22,957, up 36.79 percent from last year's 16,783. This year's period had eight selling days; last year's, nine.

In the first 10 days, Ford sold 51.07 percent more U.S.-built cars than it did last year; Honda transplant car sales rose 27.21 percent; GM climbed 17.07 percent. Chrysler dipped 0.60 percent.

Toyota's transplant car sales fell 46.81 percent, and Nissan's were off 53.32 percent from last year's comparable period.

U.S.-built light-truck sales rose 8.89 percent in early October — 95,460 vs 87,664. GM and Ford were up; Chrysler sales declined.

Toyota woos Midwest

It's important in quest for million sales

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Toyota will continue to increase its presence in the United States, thanks largely to a booming Midwest economy, a greater number of U.S.-built Toyotas and a growing acceptance of Japanese-nameplated vehicles throughout the heartland.

AUTOMOTIVE NEWS: JOE WILSENS

McCurry expects "a shoot-out year"

Also aiding Toyota in its quest for more sales are new products for 1989, chief among them the flagship Cressida sedan and a redesigned pickup truck family.

"We anticipate this will be a shoot-out year," said Robert McCurry, Toyota Motor Sales U.S.A. executive vice president. "But we're looking forward to a very good year."

For the 1989 calendar year, Toyota executives are predicting industry car sales will reach 10.2 million units, while light-truck sales will add another 5 million.

He also said that by 1995, Toyota plans to sell 1.5 million cars and trucks annually in the United States, including some 130,000 Lexus cars from its upmarket division.

Traditionally, Toyota has enjoyed strong sales along each of the nation's seaboards. It has captured 11 percent of the car and truck market on the West Coast (12 percent in California) and 8 percent on the East Coast.

McCurry said the time is ripe to move into the Midwest, as the region's economy has surged, due in part to foreign investment.

McCurry credited competitor Honda with helping pave the way with its job-producing plant in Marysville, Ohio, and its more than 10-year history there.

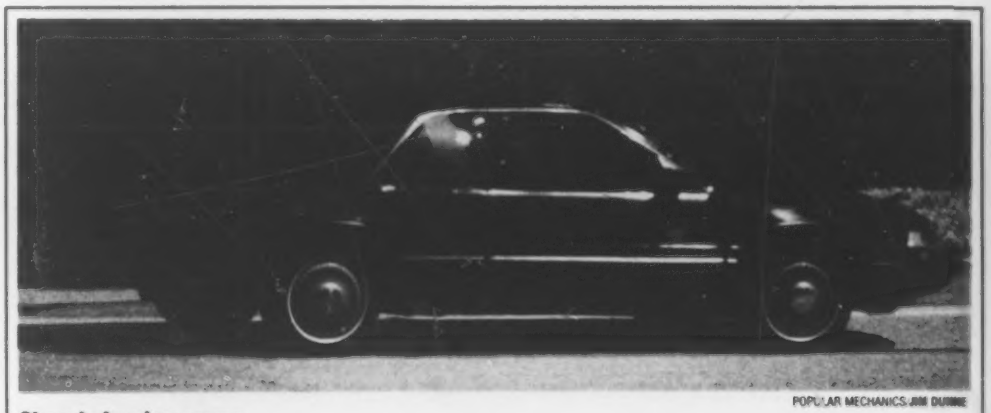
Toyota expects to sell 935,000 cars and trucks in calendar 1988 and predicts sales will rise to slightly more than 1 million in calendar 1989 aided by the addition of North American manufacturing plants producing Toyota vehicles, McCurry said.

He said the company hopes to gain a significant portion of the import-car market during the short and long terms.

The new Georgetown, Ky., manufacturing plant will be able to produce about 200,000 Camry sedans. Add to that the production at the joint-venture facility with General Motors in Fremont, Calif. — 100,000 Corolla sedans — and a new Canadian plant scheduled to come on line next year in Cambridge, Ontario, and Toyota is poised to make its market assault.

For the company to achieve its 1.5 million sales forecast in 1995, a new U.S. truck plant would have to produce 250,000 to 300,000 vehicles, McCurry said. He said the parent company should announce the plant's location by year's end.

With [illegible] that expansion, Toyota has been signing new dealers — a first since the export quotas hit in 1981. The company, now with some 1,100 dealers, expects to reach 1,175 by year-end 1989.



POPULAR MECHANICS: JIM DUNNE

Chevy's Lumina coupe

Chevrolet's 1990 Lumina coupe pick ups a few styling cues from the Beretta and Buick's Reatta. Note the sloping hood and fender lines, a la Beretta, and the high, wraparound rear-light treatment, a Reatta highlight. A four-door sedan bows next spring while the coupe is aimed for a fall 1989 intro. The car replaces the aging Celebrity.

RVs continue hot pace; July's shipments inch up

RV wholesale shipments increased slightly in July from their year-earlier levels, and 1988 as a whole is on track to turn in the best calendar-year performance of the decade.

The van-conversion segment continued to score stronger gains in July and for the first seven months of the year than the industry as a whole.

RV manufacturers wholesaled 32,700 units in July, a 0.93 percent increase over the 32,400 reported in like 1987.

For the first seven months of the calendar year, the industry shipped 260,500 units, 5.38 percent more than the 247,200 reported a year earlier, according to the Recreation Vehicle Industry Association.

Year-to-date through July, the industry maintained a seasonally adjusted rate of 425,000 shipments, the highest level during the 1980s.

Wholesale shipments of customized-van conversions totaled 16,100 in July, up 8.78 percent from 14,800 a year earlier.

Year-to-date through July, 120,700 van-conversion shipments were reported, up 6.91 percent from 112,900 a year ago.

Chassis availability, as measured by RVIA's seat-delete option survey, was slightly ahead for the month but remained slightly behind on a year-to-date basis.

Detroit manufacturers shipped 15,400 van chassis to converters in July, up from 15,000 in the year-earlier period.

They also shipped 126,500 chassis to converters during the January-July period, off 0.39 percent from the 127,000 moved a year earlier. Full-sized van chassis accounted for most of the shipments.

Manufacturers shipped 11,800 full-sized van chassis to converters in July, slightly off the pace of 12,000 a year earlier. For the seven-month period, they shipped 97,300 full-sized chassis, down 5.63 percent from 103,100 a year earlier.

Ford 'to get closer' to converters

Chevy winds up picking consignment-pool firms this month

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet is close to finalizing its new van chassis distribution program, while Ford is studying possible changes of its own.

Ford Motor Credit Co. may adopt the financing portion of the Chevrolet program by next April, according to industry sources.

Ford officials recently visited some dealers and van converters in the Elkhart, Ind., area to assess the new Chevrolet program, said James Ludlow, Ford Division light-truck sales promotion manager.

But Ludlow denied reports that Ford Credit would become more heavily involved in the van-conversion business, saying the company had reached no conclusions about what it might do and was, in fact, still studying and researching the whole issue of whether any changes should be made.

"To my knowledge, there are no plans to make any changes at this point in time," Ludlow said, adding that if there were, he would likely know about them.

Ford does, however, plan to "get closer" to van converters, though in what manner hasn't been determined, Ludlow added.

"As a general rule, we looked at the issue of whether to get closer to converters or farther away from them. And we decided that since the customer views us (as a chassis manufacturer) almost interchangeably with the final conversion product, we'd better get closer," Ludlow said.

"But it doesn't follow that you'd have to do something different with (chassis) distribution. There are lots of ways to get closer to converters without authorizing some — and not others — to do conversions."

Some industry sources have said that, during the next couple years, all chassis manufacturers will have to exert tighter controls over the way van conversions are put together because of more stringent federal regulations in the offing.

Meanwhile, Chevrolet has already approved more than 70 new companies for its consignment pool system under its new program, giving it a total of 123 factory-approved van converters as of early October.

Thomas Pfingst, assistant director of fleet and RV sales, estimated the division might end up with 150 to 175 converters by the time its selection process is completed at the end of this month.

As part of the selection process, Chevrolet and General Motors Acceptance Corp. inspected the plant operations and premises of 165 applicants and reviewed their financial qualifications.

It was, as Pfingst noted, "a yeoman's job" to bring the program on line during a short time period, considering the "constraints and pressures" on the various GM personnel involved. GMAC became integrated into the selection process — making it essentially a twofold program — because it will become involved in both wholesale and retail financing for converters and dealers.

Chevrolet has retained an open mind, and it has left open the possibility of exploring an idea presented by the Van Industry Alliance. The proposal calls for Chevrolet to set up a cooperative vehicle pool upon which small converters could draw for chassis.

Chevrolet officials haven't made up their minds on adopting that modification to their program, although they didn't rule it out. They were adamant, however, about retaining their original program guidelines, regardless of any possible modification.

Meanwhile, the flow of van chassis to converters — which had been slow — has been accelerating rapidly, Elkhart-area companies confirmed.

Chevrolet got off to a slow start in filling the van chassis pipeline because of its extremely low level of carryover 1988 model chassis, Pfingst said. It is now running 50 percent ahead of last year's production level, and "people should begin to really see a surge" in availability, he added.

Larry LaGuardia, vice president and general manager of Aviator Conversions, Elkhart, was one of the converters who confirmed the recent increase of chassis shipments into Elkhart.

Meanwhile, Chevrolet has created a pool of about 1,800 to 2,000 chassis for recently appointed new members of its pool system to draw on until their own orders begin arriving. The pool is intended to help newcomers survive during the six-week wait normally required to get chassis orders filled.

Winnebago aims 2nd van plant at East

RV TRENDS

JOSEPH BOHN

Winnebago Industries is gearing up to become a major player in the van-conversion market.

The company recently opened a new van-conversion production facility in Bear, Del., increasing its access to the New England and mid- and south-Atlantic states, according to Rex Shorten, general sales manager of Winnebago's van division.

The company previously had van-conversion production facilities only at its Forest City, Iowa, headquarters, thus its sales potential was limited.

As Shorten noted, "It becomes prohibitive from a cost/freight standpoint to ship van conversions to the East Coast markets" out of a Western facility.

Now, Winnebago has some ambitious sales targets.

After wholesaling about 1,800 van conversions in its 1988 fiscal year that ended Aug. 17 — an increase of nearly 60 percent over the previous year — Winnebago is sighting 3,000 sales for fiscal 1989.

That includes about 2,000 shipments out of Forest City and about 1,000 out of its new Delaware facility.

The company also has been signing new dealers and expects to have 35 to 40 "strong" new dealers by the end of fiscal 1989.

Winnebago has bailment pool agreements with Ford, Chevrolet and Dodge at its Forest City facility. It has received approval on additional agreements from Ford and Chevrolet covering its new Delaware operation and is in the process of being approved by Dodge, Shorten added.

The company provides a complete range of mini- and full-sized van conversions, he added.

The new Delaware plant is just starting to get up to "a line rate conducive to popping out some real numbers. We've been running minimum volume there up to now, as part of a learning curve," Shorten said.

The company's new-dealer efforts will be pretty well spread among Ford, Chevrolet and Dodge outlets, he said, noting that the Winnebago models have been "well accepted in the East."

Starcraft boats

Starcraft Corp. of Topeka, Ind., signed a definitive agreement to sell its Starcraft Power Boats Corp., a wholly owned subsidiary, to Brunswick Corp.

Terms were not disclosed.

The acquisition is expected to be completed this month.

Starcraft Power Boats Corp. has its major manufacturing facilities in Topeka and Delhi, La.

Starcraft intends to use the proceeds from the sale to reduce debt resulting from the company's management-led buyout, which was completed in July 1987, and focus its efforts on its van-conversion and RV products businesses, according to its Chief Executive Officer Don Cuzzocrea.

Ford, Conrail team up

Consolidated Rail Corp. opened a new automotive terminal in Elkhart, Ind., to facilitate delivery of Econoline vans from Ford's van assembly plant in Lorain, Ohio, to Elkhart van converters.

Conrail is coordinating the entire transportation package — from Ford's assembly plant to the van converters, including forwarding of the vans from the new terminal by truck. That enables Ford to deal with only one party.

Shipment time from Lorain, Ohio, to Elkhart is 24 hours.

Cruise seeks dealers

Cruise America, one of the nation's largest retailers and renters of RVs, has undertaken a program to expand its rental dealer network.

The company is encouraging qualified potential dealers to contact the firm for information.

The Miami-based firm operates a fleet of 3,000 vehicles.

TraTech's 1989 Diamond Edition
TraTech, Fort Worth, Texas, features a top-of-the-line Centennial, along with Regatta and Diamond Edition models, in its 1989 lineup. The Diamond Edition shown here was redesigned with a crisp, uncluttered look, with economy in mind.

Yoder elected RVIA chairman

RESTON, Va. — The Recreation Vehicle Industry Association has elected officers for 1989.

Allen Yoder Jr., president of Jayco Inc., Middlebury, Ind., was elected RVIA chairman.

Melvin L. Adams, vice president and general manager — RV group of Coleman Co., Wichita, Kan., was elected first vice chairman. Wayne Dahl, senior vice president and chief financial officer of Holiday Rambler Corp., Wakarusa, Ind., was elected second vice chairman.

John Casey Jr., president of Shurflo, Santa Ana, Calif., is secretary. Stephen T. Decker, president of Skamper Corp., Bristol, Ind., is treasurer.

Six persons were elected to the 21-member board of directors. Robert B. Lee, president of Country Coach Inc., Junction City, Ore., was elected Western motor home representative. Don R. Pletcher, chairman of Damon Corp., Elkhart, Ind., was elected Eastern travel trailer representative.

Four at-large directors were elected: Gerald E. Boman, senior vice president of Winnebago Industries, Forest City, Iowa; Michael S. Mitchell, president of Nu Wa Industries, Chanute, Kan.; RVIA immediate past chairman Don Cuzzocrea of Starcraft Corp.; and Yoder.

RVIA has formed a new committee to address unique supplier issues because suppliers felt their concerns had not been addressed by the association.

Import stocks hit 11-month low

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Imported-car and light-truck stocks on Oct. 1 were whittled down to the leanest levels in 11 months, although September's slower sales pace kept the days' supply up.

Each of the last two months opened with a 58-day supply. On Oct. 1 a year ago, imported-car and truck stocks equaled a slimmer 49-day supply.

On Oct. 1, there were 723,482 imported cars and light trucks in stock at U.S. ports, in transit to dealerships and in stores. That was 5.58 percent below last month's combined total of 766,262. A year ago, October opened with 714,897 unsold imported cars and light trucks.

Imported-car stocks shrank 4.02 percent to 582,350 on Oct. 1, compared with 606,740 a month earlier. Although stocks dipped, they represented a 59-day supply vs. a 58-day supply on Sept. 1 because of weaker September deliveries. A year ago, there was a fatter stockpile, 647,966 unsold imported cars, but a leaner days' supply of 48.

The domestic-car stockpile on Oct. 1 totaled 1,385,938, equal to a 60-day supply (Automotive News, Oct. 10). That was 5.32 percent greater than on Sept. 1 when 1,315,919 cars, representing a 59-day supply, were reported.

A year ago, domestic-car stocks totaled 1,396,454, equal to a 57-day supply.

October also opened with 11.53 percent fewer unsold imported light trucks than on Sept. 1. The total was 141,132, equal to a 55-day supply compared with last month's 159,522, representing a 56-day supply. The total was 15.45 percent below the year-ago figure of 166,931, representing a 53-day supply.

Over the last two months, the German automakers' share of unsold cars in this country dropped two percentage points. The Japanese share declined slightly during September.

Three major Japanese firms with U.S.-transplant operations — Toyota, Nissan and Honda — began October with an 8.23 percent share of combined domestic and import car stocks compared with a 10.15 percent share on Sept. 1.

On Oct. 1, the Big 3's combined car stocks — domestic and captive import — grew to 76.1 percent, up from 73.35 percent on Sept. 1.

Of the three transplants, the leanest combined car stocks were Toyota's, which equaled a 15-day supply.

Honda's combined stocks edged up slightly to equal 16 days' worth. Nissan cut its combined car stocks to a 51-day supply from 74 a month earlier.

A few Japanese makes had high stock levels. General Motors' captive Chevrolet stocks equaled a 113-day supply, and Chrysler Motors' captive Mitsubishi stocks reported a 125-day supply.

ALLANTE

Italian group cites Cadillac, Ferrari

NEW YORK — Executives of General Motors and Industrie Pininfarina S.p.A. have received an award citing their joint production of the Cadillac Allante as a contribution to stronger ties between Italy and the United States.

The award is sponsored by Gruppo Esponenti Italiani, a group representing major Italian organizations in the United States. Recipients of the 1988 award are John O. Grettenberger, Cadillac general manager, and Sergio Pininfarina, chairman of Industrie Pininfarina.

The Allante, designed by Pininfarina in Italy, is produced and assembled jointly by Pininfarina plants in Italy and Cadillac facilities in the United States.

The award, a sculpture by Italian artist Arnaldo Pomodoro, has been given in the past to Sen. Edward M. Kennedy, D-Mass.; Giovanni Agnelli, chairman of Fiat; David Rockefeller, chairman of Chase Manhattan Bank; and New York Gov. Mario Cuomo.

EPA rebuffed on used-oil labels

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A federal appeals court has overturned EPA's 1986 ruling that used oil collected by car dealers and gas stations for recycling need not be labeled a "hazardous waste."

The agency, in response to complaints filed mainly by gasoline stations, said the "stigma" of the label might make firms reluctant to collect and recycle oil, resulting in stations dumping oil on the ground or into sewers.

However, a three-judge panel of the U.S. Court of Appeals for the District of Columbia said that basing a decision on the "stigmatic effects" was not possible under the Clean Air Act. Instead, said the court, EPA should make the decision based on "technical criteria."

The challenge was brought by the Natural Resources Defense Council.

EPA, which had originally proposed listing used oil from vehicle oil changes as "hazardous," will now take another look and make its decision based on the ingredients of the waste oil.

The EPA has estimated that as much as 1.2 billion gallons generated annually is reusable. The Natural Resources Defense Council said only about half that amount is collected and reused, mostly for heating oil. Toxic chemicals that may be present are benzene and heavy metals such as lead, cadmium and chromium.

Museum piece: hot Buick GNX

FLINT, Mich. — Buick General Manager Edward H. Mertz presented the Sloan Museum with a GNX, a higher-performance edition of the 1987 Buick Regal Grand National. Mertz also announced Buick will donate $5,000 to help the museum develop its new "Flint and the Automobile" display.

The limited-edition GNX has been highly prized on the collector market. The suggested retail price of the GNX was $29,290, but prices on the collector market have often been much higher.

ASC Inc. of Southgate, Mich., a maker of limited-edition vehicles, announced in February 1987, that it would offer 547 GNX models, based on the Regal Grand National, in cooperation with McLaren Engines of Livonia, Mich. The GNX presented to the Sloan Museum is No. 500.

The GNX features modifications of the turbocharged and intercooled 3.8-liter V-6 engine used in the Grand National, as well as special wheels and tires, suspension and exhaust system modifications.

HYUNDAI

FROM PAGE 2

year, a Hyundai spokesman said.

In 1987, Hyundai's global exports of the rear-wheel-drive 1.6-liter Stellar and a 2-liter derivative (confusingly enough, also named Sonata) totaled 33,765 units. Only 6,776 were exported in the first half of this year.

"For Hyundai, the importance of the Sonata is something like the second stage booster for the space shuttle. If it fires, Hyundai sails into orbit. If it misfires . . . it'll take a long time to put all the pieces back together," said a Ford executive in Seoul.

The Sonata's development and launch have received all the care of a space shot. Hyundai has poured 30 billion won ($42 million) and five years of development into the project.

More than 90 percent of Sonata is Korean-produced, leading the local press to tout the car as an indigenous product.

However, an auto industry analyst with the Korean Institute for Economics and Technology said that underneath the Sonata beats the heart of a Mitsubishi Galant. Although both engine and transmission are produced by Hyundai, the drivetrain is being built under license from Mitsubishi, which designed it.

Both Daewoo Motor and Kia Motors acknowledge Hyundai's superior degree of engineering self-reliance, leaving some question about the need for foreign equity partners when the required automotive technology can be obtained off the shelf and engineered into products in-house. In that regard, Hyundai is the envy of Korean industry.

Meanwhile, domestic reception of the Sonata has been enthusiastic. A Hyundai spokesman said 12,617 units have been delivered since the car was introduced July 4, and another 11,000 are on back order with customers having to wait eight weeks for delivery.

Initial concerns about finish and trim installation have largely dissipated during the last two months as production has been fine-tuned.

"Domestic car buyers have been reacting very favorably. It looks as if the car will do well, at least domestically," said Jardine's Lim. "Daewoo is the car company that will be hurt most (by the Sonata). Their Royale Salon has been going on forever. It's a very tired presentation."

Despite the warm reception at home, Yoon Ik-Soo, a senior industry research with Ssangyong Economic Research Institute (a securities analyst firm that is part of the Ssangyong Group, a Hyundai rival), predicts Hyundai will find the going tougher the second time around North America.

With the Excel subcompact, Hyundai managed a brilliant performance largely due to the vacuum created by the Big 3 and even some Japanese companies who abandoned the subcompact segment, Yoon said.

"But the Sonata is a compact, and it's going to be up against the U.S. Big 3 compacts as well as the Japanese. There's much more at stake here," he said.

Ironically, Yoon said, it may be tough for Hyundai to compete but, at the same time, danger lurks in being too successful.

"I believe that if exports of the Sonata exceed 100,000 units per year, we're going to see some kind of 'voluntary restraint' agreements imposed by the U.S. government," Yoon said.

Anything over 100,000 units annually is "voluminous," according to Yoon, and overstepping that mark may invoke the wrath of U.S. makers and even Japanese transplants. He maintains that both have their fingers ready on the trigger for a trade action against Hyundai.

While Hyundai denies having set the Sonata's price at this stage, industry sources here are predicting that the 2-liter model will carry a sticker price of $10,000 in the United States, with the price climbing as high as $13,000 depending on the option package.

SONATA

FROM PAGE 2

Park said 20,000 to 30,000 Sonatas will be built in 1989. Production is scheduled to increase to 70,000 in 1990 and to reach full capacity, 100,000 cars on a two-shift basis, in 1991.

The plant eventually will employ 1,200 people, although there are only 200 full-time employees at Bromont now, including 50 Korean nationals. The plant will have 600 employees when commercial production begins in January.

In addition to a million-square-foot plant consisting of a body shop, paint shop, final trim shop and office space, the 413-acre site has a container storage yard, a car storage compound and a 1.4-kilometer (0.9-mile) test track.

Most of the 120 robots used in the welding shop are of Hyundai's own design and manufacture.

Total investment in the plant will be $325 million Canadian ($269 million).

All body stampings, assembled engines and transmissions will be shipped from Korea. Canadian-sourced parts include seats; trim pieces; tires from Michelin's plant in Bridgewater, Nova Scotia; and aluminum wheels from Hyundai's parts plant in Newmarket, Ontario.

Park estimated that "Canadian value added" of Bromont-built cars will be around 20 percent at Job One.

Sonata is the first car to use a General Electric Xenoy fasica front- and rear-bumper system combined with a Xenoy blow-molded beam. Three air-filled bladders collapse progressively under impact. Following a minor collision, air is re-aspirated automatically and the bumper resumes its original shape.

The car is powered by a 2.4-liter port-injected four-cylinder engine that develops 110 horsepower at 5,600 rpm and 138 pounds-feet of torque at 3,500 rpm. A 3-liter V-6 will bow in 1989.

A five-speed manual transmission is standard and an electronically controlled four-speed automatic transmission with overdrive is optional.

MODEL YEAR TRUCK SALES

By segment

	Model year 1988	Model year 1987	Percent Change
Compact pickups	1,326,177	1,439,426	– 7.87

TRUCKS

FROM PAGE 1

Automotive News' sales tabulation includes only the compact vans that importers report as trucks. The truck industry figure for small vans would be higher if some Japanese van sales, which are reported as car sales, were included in the truck total.

Small van sales benefited from a full year of additional production capacity at Chrysler's St. Louis No. 2 plant and smaller production boosts at Ford Motor Co. and General Motors.

Ford will boost Aerostar production again in the 1989 model year by about 20 percent to accommodate its new stretched model. However, all manufacturers continue to be pretty much capacity-constrained on these vehicles. There won't be any big jump until GM introduces its new front-drive small vans next year.

Full-sized pickups staged an historic turnaround in 1988 by reversing a long-standing downward trend and scoring a 12.89 percent gain for the year.

Big pickup sales should, if the industry continues strong, see the biggest gain of any segment this year because of boosts in production capacity by the domestic makers. Ford recently added a second shift at its Wayne, Mich., truck plant. GM added a second shift in Pontiac, Mich., and Chrysler Motors boosted production in Warren, Mich.

Both Ford and GM were tapped on full-sized pickups in 1988 — Ford more so than GM — and could have sold additional models if they had been available.

Meanwhile, full-sized sport-utility sales were up 7.70 percent, while compact sales in that segment were off slightly, primarily due to a sharp drop at Suzuki. That segment would be larger if some models that importers report as car sales were included.

The class is expected to benefit this year from the introduction of some new models, such as the Chevrolet Tracker and Suzuki Sidekick, initially being imported from Japan but going into production in Canada by spring.

Full-sized cargo van sales increased and passenger vans declined, after manufacturers adjusted the mix to accommodate the van converters.

Additional sales are expected in this segment this year, with overtime at GM's Lordstown, Ohio, and Scarborough, Ontario, plants. Chrysler also boosted big van production sharply at its Pillete Road plant in Windsor, Ontario.

In direct contrast to minivans, 85.53 percent of full-sized vans were sold as cargo or commercial models last year.

Full-sized passenger van sales of 70,424 were off 4.51 percent from 73,753 in 1987.

Compact pickups had, of course, a big slide, due to soft import sales, triggered by higher prices resulting from the strong yen.

Compact pickup sales of 1,326,177 were off 7.87 percent from 1,439,426 in the previous year.

Nissan rewrites dealer agreement

More emphasis on customer satisfaction, handling complaints

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has revised its dealer sales and service agreement and will begin replacing the current agreement with its 1,100 Nissan Division dealers in the United States.

The new agreements are being mailed to all dealers for their signature today.

The new agreement replaces one in existence since 1979 and addresses "changes in business practices and needs over the past 10 years," according to Nissan Division General Manager Robert J. Thomas.

"The agreement does not represent any revolutionary changes, such as mandatory arbitration, or the right of first refusal in the case of proposed dealership sales," Thomas said. "We feel the new form of agreement maintains the same basic operating philosophy between Nissan and its dealers as the existing agreement."

Nissan will continue to offer a perpetual agreement, however, a provision that gave the dealer's named successor in event of death a two-year agreement has been amended to automatically include the dealer's heirs.

The new agreement also continues a provision for a policy review to handle certain issues that cannot be resolved through usual communication channels, Thomas said.

Nissan said the agreement also calls for updated performance measurements on customer satisfaction, primarily in service and parts areas of the dealership. But he did not elaborate what measurements would be used, who would do the survey and what consumer satisfaction levels would be acceptable.

A spokesman said the new agreement requires that dealers appoint a staff member in charge of customer complaints.

The new agreement also places a greater focus on the importance of the executive manager of the dealership, the person authorized under the agreement to run the dealership on a day-to-day basis.

Nissan had final approval of the executive manager under the old agreement, but now specific requirements and performance review procedures are addressed in the new franchise agreement.

Another new provision requires Nissan to respond to a dealer's proposed buy-sell offer within 60 days of receipt of all required documentation. There was no timing provision in the old agreement.

The changes incorporated in new agreement were reviewed by the Nissan Dealer Advisory Board and the National Automobile Dealers Association, Thomas said.

He said the modifications were based on their input.

"It will better serve the needs of both Nissan and its dealers," Thomas said of the new pact.

STRIKE

FROM PAGE 1

produce the vans' engines or trim, no further layoffs are anticipated, a Chrysler spokesman said.

Besides health and safety matters, the St. Louis strikers are also reportedly upset about what they believe to be Chrysler's plans to increase outsourcing, including the outsourcing of subassembly components. But both the national and local agreements address the problem of outsourcing, a UAW spokesman said.

Outsourcing is not an issue in local bargaining, the Chrysler spokesman said. Local officials could not be reached for comment.

Workers walked off the job at Chrysler plants in St. Louis this summer because of excessive heat. The new contract provides for air-conditioned break areas and other relief measures.

Other factors have been suggested as contributing to the rejection of the contract.

Voting on the new local agreement took place against the background of the recent bitterly fought Region 5 election, in which Jerry Tucker defeated longtime director Ken Worley.

Heavy overtime might also have taken its toll. Workers have been putting in nine-hour shifts and many Saturdays to keep up with the demand for the popular vans.

"They could just be resting up," said an observer, who noted that Chrysler workers recently received a healthy performance bonus check that could tide them over during the shutdown. The minivan plant workers received about $1,150 apiece on Oct. 7.

The politics of a local election, which will be held soon, reportedly also figured in the "no" votes.

The extended-wheelbase Plymouth Grand Voyager, Dodge Grand Caravan and Mini Ram van built in St. Louis and the shorter versions built in Windsor, Ontario, rank with Jeep Cherokee as Chrysler's most profitable products.

"If you look at our bottom line, a disproportionate share of it really is contributed by minivans and Cherokees," said Bennett E. Bidwell, Chrysler Motors president of product and marketing in July.

Last January, Chrysler Corp. Vice Chairman Robert S. Miller Jr. said that truck sales represented 45 percent of the company's volume and accounted for 60 percent of the company's gross profit.

The St. Louis plant produces 700 minivans a day.

The first vote was 792-50 against the contract. The second vote was 1,197 to 1,156.

PRODUCTION

Car output moves up; trucks dip

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. truckmakers scheduled 80,151 units last week, 3.10 percent less than the prior week's 82,712 and 0.71 percent below the year-ago week's 80,723.

Year-to-date, 3,262,065 trucks have been assembled, 6.94 percent more than the 3,050,347 completed last year at this point.

Car output was estimated at 155,136 units last week, 2.11 percent above the previous week's 151,932 and 1.94 percent more than the year-ago week's 152,177.

So far this year, 5,535,903 cars have been built, 1.94 percent fewer than the 5,645,538 assembled last year at this time.

Companies split last week's production as follows: General Motors, 51.99 percent; Ford Motor Co., 22.47 percent; Chrysler Motors, 13.75 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 4.99 percent; Honda of America Manufacturing Inc., 4.52 percent; Nissan Motor Manufacturing Co. U.S.A., 1.81 percent; and New United Motor Manufacturing Inc., 0.47 percent.

GM's Lansing, Mich., plant, which assembles the Buick Skylark and Oldsmobile Cutlass Calais, resumed output last week. A parts shortage had idled 4,000 workers on Oct. 3.

Ford's Lorain, Ohio, plant reopened last week after being down since Aug. 1 for changeover to the 1989 Ford Thunderbird and Mercury Cougar.

GM slated Saturday overtime last week at its Oklahoma City; Arlington, Texas; and Linden, N.J., car assembly plants. Friday overtime was scheduled at the Janesville, Wis., plant which is on a 10-hour/4-day work schedule.

Daily overtime is scheduled at all Ford plants except the Lorain car plant and the Twin Cities, Minn., truck plant.

Saturday overtime was scheduled last week at Ford's Wayne, Mich.; Kansas City, Mo.; Norfolk, Va.; and Lorain, Ohio, truck assembly plants.

Workers at Chrysler's St. Louis (No. 2) plant, which builds Dodge and Plymouth minivans, continued their strike last week over their local agreement. The strike began Oct. 5, and about 6,300 units have been lost.

Cars, trucks slip in Canada

Canadian auto production was scheduled at 17,036 last week, 16.78 percent below the previous week's 20,471 but 11.40 percent above the year-ago week's 15,292.

So far this year, Canadian carmakers have built 838,959 units, 39.29 percent above the 602,299 completed last year at this time.

Truck output was scheduled at 17,831 last week, 4.23 percent below the prior week's 18,619 but 20.62 percent above the year-ago week's 14,783.

Total year-to-date truck production is 724,282, 12.23 percent above the 645,360 built at this point last year.

Canadian auto workers worked only four days last week; Thanksgiving was observed Oct. 10.

Saturn loss no surprise

Economy, land cost prompt dealer caution

By Michelle Krebs and Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTERS

Another Saturn dealer said last week that he no longer is interested in the Southern California area he was assigned, although he remains extremely interested in obtaining a Saturn franchise elsewhere.

Two of Saturn's nine initial dealers previously confirmed they had withdrawn their letters of intent to carry the forthcoming General Motors car.

GM isn't panic-stricken; instead, Saturn executives and dealers said they expected some defections and predicted there could be more.

GM President Robert Stempel called Saturn "a helluva gamble" that will require dealers who are firmly committed to Saturn for the long term. Saturn is GM's newest division whose mission is to take a clean sheet of paper approach to every aspect of the automobile business, from manufacturing to retailing.

"When we launch a new product," Stempel said, "we've got to have a dealer who is fully committed to making it go. It can't be 'Well, if it goes, I like it' . . . We don't want them worrying about having too much money in the franchise or whether the return is too slow."

Stempel's remarks came after it was reported that two of Saturn's first nine dealers selected for Southern California backed out of the deal (Automotive News, Oct. 17).

Joe MacPherson, a Santa Ana, Calif., dealer, withdrew, saying Saturn did not fit his development plans.

Kenneth Nieman, principal of City Chevrolet in San Diego, retracted his letter of intent for the San Diego area. He said he is not considering being a Saturn dealer and has no commitment to Saturn, but he said last week that he told Saturn he would be willing to look at another region.

After studying Saturn's plan for San Diego, Nieman concluded it was not viable because he could not predict when he would see a profit on the required investment.

Dalip Singh Sethi, a GM minority dealer and the smallest-volume dealer of the Southern California group, said he wants a Saturn franchise in California but in an area other than the one he had been assigned. He said that the cost of property in his assigned area, which he did not reveal, was triple what Saturn had projected, making it unfeasible.

Saturn is looking for another area for him. Singh has a dealership in Delano, Calif., with Pontiac, Buick, Cadillac and GMC franchises.

Six of the original nine dealers in Saturn's first wave, meanwhile, have said they will go ahead with the franchise as planned. At least one has signed a franchise agreement, has purchased a piece of land and is negotiating to buy a second plot for his Saturn outlets.

Saturn executives and dealers who have taken on the franchise or have applied for it said the defections did not surprise them, and they would expect there will be more dealers opting not to go with Saturn as time goes on. Nevertheless, they remain convinced the Saturn approach is the right one.

"It's a big undertaking," Stempel said at

Jaguar unveiled its XJ-220 supercar at Birmingham, but production is uncertain.

MARK PRESTON

BIRMINGHAM: *New cars star; Ford plant to U.K.*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BIRMINGHAM, England — As Aston Martin launched its new flagship at the Birmingham Auto Show, it was close to finalizing plans with its Ford parent to produce a new higher-volume model in a brand new plant.

And Ford Motor Co., the market leader in the United Kingdom, used the show to announce plans to erect a £725 million ($1.27 billion) engine plant employing 3,000 workers at Bridgend, South Wales, rather than in Spain as had been speculated. Ford called it the largest single investment in an auto engine plant anywhere in the world.

The decision was a victory for the United Kingdom over Valencia, Spain, where Ford has major car and engine assembly facilities. It also helped assuage feelings left over from Ford's recent cancellation of plans for a £100 million ($175 million) electronics plant in Dundee, Scotland, that was instead put in Spain.

The engine plant will build up to 850,000 units annually of the company's new Zeta engine family, which will displace 1.4 to 2 liters for passenger cars and light-commercial vehicles. Sixty percent are slated for export to Ford plants in Europe.

Audi's Coupe also bowed, but with less fanfare.

Meanwhile, Jaguar is studying whether to put the XJ-220 supercar it displayed last week at the Birmingham show into production. The project has been turned over to the new JaguarSport Ltd. joint-venture company.

Aston vied with Jaguar for show-stopping honors. Jaguar wowed the press-day throng with the XJ-220, but 90 minutes later, Aston attracted the biggest single floor crowd of any recent European auto show when it took the wraps off its Virage replacement for the V-8 Saloon.

Journalists overflowed the Aston stand and spilled onto the walkways and adjacent stands. The upper level of the Morgan Motor

Makers win N.Y. lemon challenge

By Helen Kahn
SENIOR CORRESPONDENT

In a major victory for the auto industry, a federal judge in New York struck down six provisions in the state's lemon law dealing with manufacturers' arbitration programs.

The provisions were 1986 amendments to the 1983 lemon law.

The court threw out the six separate mandatory provisions involving the programs that were challenged by the auto industry on grounds they were pre-empted by the 1975 U.S. Magnuson-Moss Act and by the Federal Trade Commission rule (known as 703) covering the makers' informal dispute settlement mechanisms.

The provisions are:

- A requirement that an automaker's informal dispute settlement mechanism allow an oral hearing if the consumer asks for it. FTC Rule 703, which pre-empts state law, allows an oral hearing only if both the consumer and the automaker agree.
- A requirement making the arbitrator's decision binding on the maker but not on the consumer. Rule 703 says the mechanisms are non-binding and require only that the warrantor act in good faith in deciding whether or to what extent it will abide by the decision.
- A requirement that arbitrators be trained in arbitration and be familiar with the provisions of the lemon law. Rule 703 requires only that the informal dispute settlement mechanism be competently staffed to ensure a fair and expeditious resolution.
- Additional recordkeeping requirements beyond those in the Magnuson-Moss Act and Rule 703.

Export push is on at GM

Goal is 100,000 in '89 and double that in '91

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' aggressive campaign to sell more of its North American-made vehicles in foreign markets has it confidently predicting export sales of 100,000 units this model year and 200,000 by 1991 — nearly enough to keep one full plant running full-speed.

GM's export sales jumped from 47,000 in the 1987 model year to 72,830 in the 1988 model year. By the time the 1988 calendar year closes, GM will have sold 80,000 North American exports, predicted Robert White, executive in charge of GM's international export sales division.

By the 1991 model and calendar years, White projects that export sales will hit 200,000, exceeding the record of 170,000, set in 1979.

Soviets ask Fiat for huge plant

1 million cars per year

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Fiat S.p.A., which built the Soviet Union's largest auto assembly facility in the late 1960s, has been approached by the Soviets about a new joint venture for production of a million 1-liter cars per year.

The plan would involve construction of a huge facility estimated at more than $5 billion and would nearly double the Soviets' annual output of autos, which currently stands at 1.3 million units.

During a trade fair for Italian products in Moscow, Fiat Chairman Giovanni Agnelli told a news conference that he has been approached by Soviet Prime Minister Nikolai Ryzhknov about collaborating on a new car production venture.

Agnelli said his company is open to possible cooperation and said he believes Fiat is the preferred candidate for the Soviets'

New valve timing, turbo boost engine torque, power

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Honda Motor Co. of Japan has developed a new valve-train system and a new turbocharger, both of which are designed to widen engine power ranges.

In the design of internal combustion engines, engineers traditionally have had to make a trade-off between low-speed and high-speed power and efficiency. The horsepower output of engines producing a great deal of torque at low speeds often tails off as the speed increases. Likewise, engines that produce high horsepower at high speed often are weak at low speeds. Optimum fuel economy and emissions control also are tied into speed ranges. Honda's systems are designed to allow engines to produce a wider range of horsepower and torque.

The profile of a camshaft lobe determines the length of time and distance a valve opens. As a result, it can largely control the power curve of the engine.

In the Honda "variable valve timing and lift mechanism" (when applied to a double-overhead-cam, four-valve-per cylinder engine), there are three cam lobes for the intake side and three lobes for the exhaust side of the engine. When operating at low speed, sets of two low-speed cam lobes open and close the intake and exhaust valves.

When engine speed increases, a computer control sends a signal to rocker arm mechanicals under the camshafts, activating the high-speed cam profile. At that time, the third lobe controls valve lift and duration. In an experimental 1.6-liter DOHC engine, Honda was able to boost horsepower from 130 to 160. Production plans have yet to be announced.

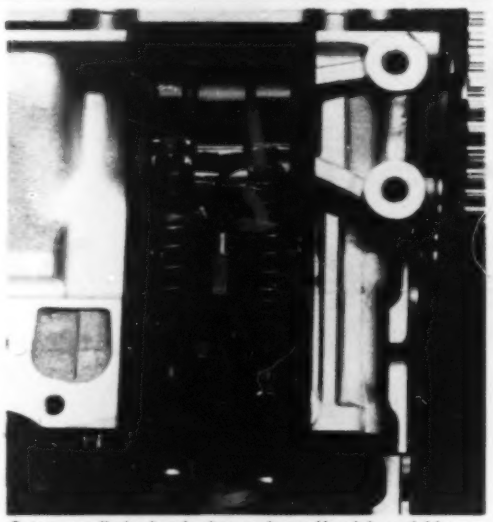
There is a trend in the auto industry to develop valve and induction systems that provide a wide range of power and offer good fuel economy. In those systems, electronic engine controls work with mechanical components to change intake system configurations to best suit operating conditions.

One of the first such systems was introduced by Alfa Romeo in 1980 in its two-liter DOHC Spider powerplant. The first-generation Alfa arrangement was a hydraulically and mechanically operated variable valve timing system designed so the engine could meet U.S. emissions standards while maintaining high power output. That system was integrated with electronic engine controls in 1985; a further refined system now is in production.

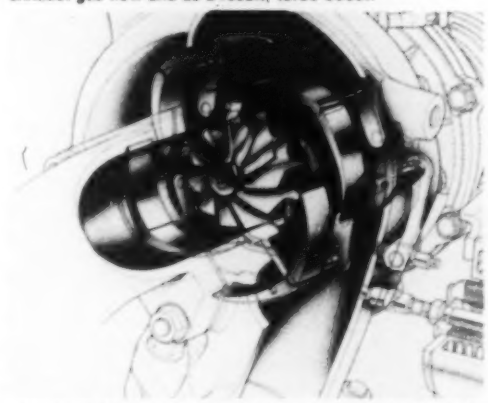
Another example of electronically controlled induction systems is in the new Ford Taurus SHO. The 3-liter, Yamaha-built V-6 in that car uses two sets of intake runners to widen the power band. At low speeds, the engine is fed a fuel-air mixture through intake runners tuned for low speed. As engine speed increases, electronics activate a set of intake runners tuned for high speeds.

The Corvette LT5, a four-valve-per-cylinder V-8, has two sets of intake valve cam profiles. When more power is needed, throttles in a second set of intake runners open to allow fuel-air mixture to reach the intake valves operated by the high-speed cam.

Honda calls its new turbocharger a "variable wing turbo system" and describes it as a major advancement in turbo technology. The system already is available in 2-liter V-6-powered Japanese versions of the Acura Legend and boosts horsepower from 145 to 190.



Cutaway cylinder head, above, shows Honda's variable valve timing and lift mechanism. The outboard camshaft lobes operate valves at low engine speeds, and the center lobe controls high-speed operation when its rocker arm is activated by computer. Below, computer-controlled hinged wings around the turbocharger's exhaust turbine open and close to control exhaust gas flow and as a result, turbo boost.



The system adjusts the angles of four wings around the exhaust turbine to control the speed of the exhaust flow and the pressure of the turbo charge. When the driver accelerates from low speed, the wings close instantly and contribute to the elimination of turbo lag, according to Honda. The variable wings are computer controlled in conjunction with the fuel injection.

Such variable geometry turbochargers are not new, but are relatively rare on production vehicles.

Garrett Automotive Group is developing variable vane turbochargers — Garrett calls them variable nozzle turbochargers. Like the Honda turbochargers, they have multiple vanes activated by an engine control computer to adjust the velocity of the exhaust past the turbine wheel. When used in conjunction with fuel injection and electronic engine controls, variable nozzle turbines allow air flow to the engine to be controlled from low to high speeds, and they increase power throughout the speed range of the engine.

Ephlin to step down as UAW's GM chief

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Donald Ephlin, head of the UAW's General Motors department and pioneer of cooperative policies that changed the union's relationship with the automakers is stepping down.

Ephlin, 63, said last week he will not seek re-election as a union vice president at the UAW's convention in June, but will continue in his job until then.

Stephen Yokich, UAW vice president and head of the union's Ford Department, is most often mentioned as Ephlin's likely successor, though the choice rests with UAW President Owen Bieber. The head of the GM Department, the UAW's largest, has often moved to union president.

Ephlin said he is stepping down now because the joint programs with GM are yielding results and both UAW staff and local leaders are prepared to carry them on. He said that wasn't the case three years ago when he first thought of stepping down.

Though he did not detail his plans, Ephlin said he will continue to be involved in labor-management work.

Paying tribute to Ephlin's "leadership and insight" at a press conference last Friday, Bieber said that Ephlin helped spearhead "the difficult transitions that had to be made and should have been made" to deal with GM's market share loss.

Bieber's comments last week indicate that the UAW is committed to the philosophy of cooperation.

"Ephlin is the person who has done the most in bringing the union to work together with company management for competitiveness. He is the person who pioneered joint programs," said James Whitey Hale, president of Local 326 at the GM Fisher Guide plant in Flint, Mich.

Ephlin's genial style and his mediating stance in advocating the benefits of employee participation both to workers and management have drawn fire from critics who believe he has not been tough enough with the corporation.

UAW dissidents said Ephlin's move to not seek re-election, coupled with this year's retirement of Marc Stepp, UAW vice president in charge of the Chrysler Department, will trigger a reshuffling on the union's executive board and through the ranks of regional posts.

They feel the reshuffling will create the opportunity for them to gain more influential posts and greater say in union affairs.

But no one sees any major changes in the joint programs at GM for now. And though Yokich's outward style is radically different from Ephlin's, he oversees identical joint programs at Ford.

One local GM president said that GM locals could work with Yokich because he is a strong leader. "I would expect Steve to take a tougher line than Don," said one local union president.

Besides Yokich, Bieber's administrative assistant, Richard Shoemaker, has been mentioned as a possible replacement for Ephlin.

Automotive News Staff Reporters Mary Connelly and Michelle Krebs contributed to this report.

Right number, but wrong Pepe

WHITE PLAINS, N.Y. — The phone was ringing off the hook at Pepe Motor Corp., a Mercedes-Benz dealership here, with concerned callers asking if it was true the dealership was going out of business.

Sal Pepe, vice president and son of owner Eugene Pepe, said it wasn't so. Pepe is not related to Richard T. Pepe, nor is he involved in the Pepe megadealer chain that was auctioned this month in a U.S. Bankruptcy Court in Camden, N.J.

"We got calls from people all over the country asking what happened to us," Pepe said. "I really wasn't aware of the Pepe chain until I went to Atlantic City and the girl at a checkout counter said she bought all her cars from me. I later realized that she wasn't driving all the way to New York City to buy."

Richard T. Pepe's dealerships, located in central and southern New Jersey, were auctioned for more than $30 million. Pepe had filed for bankruptcy, listing debts of $50 million against assets, which included the dealerships, of $54 million.

Dingell — intimidator, import foe, Hill giant

By Jayne O'Donnell
SPECIAL CORRESPONDENT

WASHINGTON — Standing 6 feet 3 inches, Rep. John D. Dingell Jr., D-Mich., carries himself with the imposing stature of a bear. "Big John," as he is often referred to, "can initimidate you just by putting that big arm around you," says one Capitol Hill regular.

Most likely, however, he will use his position as chairman of the powerful House Energy and Commerce Committee and its oversight and investigations subcommittee to get his way.

In his position, Dingell has tremendous impact on legislation affecting the auto industry, ranging from safety and emissions to trade policy.

He's been variously described as a front-man for the auto industry when he has blocked clean-air legislation and a power-grabbing bully when he has intimidated the heads of executive-branch agencies.

"If John Dingell had his way, every human endeavor would have to go through his committee," says one House leadership aide.

"It's got to be a bureaucrat's worst nightmare to go before his panel," says a trade lobbyist.

MARC BIEGAL

Tough-guy Dingell flashes a friendly smile

"We ask them questions, and sometimes they are less than nice. I don't ever remember browbeating anyone," Dingell says with a laugh.

But the 62-year-old chairman claims he's only carrying out his committee's mandate.

"I was not the fellow who wrote the rules that defined the responsibilities of this committee," Dingell said in an interview. "Some very, very wise men did that 200 years ago."

And that was long before the invention of the automobile.

With a twinkle in his eye, Dingell admits, "I guess you could say I have been an activist chairman."

While at the wheel of the committee, Dingell has gone after government officials like EPA Administrator Anne Burford and former presidential aide Michael Deaver. His committee has stalled Clean Air Act amendments and NHTSA authorization measures and has investigated U.S. Customs treatment of imported sport-utility vehicles. He's promised similar investigation of "sudden-acceleration" problems.

It is that combination of legislative control and oversight of executive-branch agencies through his committee that has made Dingell so formidable. And he's not shy in exercising his powers.

Dingell, an avid hunter, thrives on a good legislative battle. But he hates to miss his target — and seldom does.

Tom Greene, executive director of legislative

Volvo GM is bullish

1st-year sales strong; new products bow

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Volvo GM Heavy Truck got off to a good start its first year in business and is continuing to invest heavily in new products.

At the Michigan Truck and Trailer Show, it introduced new models, including regional/vocational trucks and tractors and high-cabover tractors.

Volvo GM officials are "extremely bullish" about the Class 8 market. Larry Oliphant, vice president of sales and marketing, looks for calendar 1988 Class 8 sales in the United States to be the third best ever, coming in at between 140,000 and 145,000.

The record is 173,543 in 1979, followed by 161,608 in 1978 and 137,693 in 1984, according to the Motor Vehicle Manufacturers Association. Last year, the industry retailed 131,156 Class 8 units.

Oliphant added that the first quarter of calendar 1989 looks "very encouraging," based on current dealer orders. He said the first half looks strong, and he said he feels the whole year will, at worst, be within 10 percent of 1988.

Volvo GM expects to retail 18,500 to 19,000 Class 7 and 8 trucks in the United States this year, up from Volvo White's best year year of 12,600 in 1986. The 1988 figure includes 4,500 to 4,600 GMC-built Brigadiers, which will be phased out Dec. 16 at Pontiac, Mich.

Meanwhile, Volvo GM expects to be building 95 trucks a day by next fall. It is currently building 60 a day at Dublin, Va., and 13 a day at Odgen, Utah. A new plant at Orrville, Ohio, which begins production Jan. 2, is expected to add 20 units a day, and the Odgen plant can be expanded to 15 a day.

"Market conditions will dictate how fast we get there (to 95 units a day)," added Thage Berggren, Volvo GM president and chief executive officer.

Volvo GM now has about 200 dealers, covering most major points. It's goal is 225 to 250 dealers, Oliphant said.

He said that "to the best of my knowledge," Volvo GM also has cleared up most of its legal problem involving lawsuits by dealers who lost their franchises.

Meanwhile, all the recent new entries into the so-called "Baby 8" truck segment haven't done much to expand the segment beyond 7,500 sales annually, officials said.

Their new WhiteGMC WG models, aimed at regional and vocational hauiers, feature more horsepower than competitive "Baby 8" models, along with more competitive pricing and economical operation.

The WG is available in tandem-axle tractor and truck models. It is geared to better economy and low life-cycle operating costs, as well as greater comfort and durability, according to Berggren.

The WG features the "family" cab and frame of the Autocar and Aero series, along with a new cab suspension, a 50-inch front-axle setback for improved weight distribution and maneuverability, a spacious cab, a standard low-back air-suspension driver's seat, a medium-length hood with a 10-degree slope and a curved windshield for better aerodynamics and visibility.

It combines a setback front axle with a 112-inch bumper-to-back-of-cab measurement. It has a maximum wheel cut of 48 degrees for a short turning radius in tight areas.

A Cummins L10 PT-240 with 240 hp at 2,100 rpm and a peak torque of 900 pounds-feet at 1,300 rpm is standard on the WG truck, and a Cummins L10 F-240, with 240 hp at 1,900 rpm and 860 pounds-feet of torque at 1,300 rpm, is standard on tractor models.

A new cross-flow radiator with cooling capacity up to 320 hp is standard.

A variety of Cummins, Detroit Diesel and Volvo engines, ranging from 240 to 320 hp are optional.

Standard on both truck and tractor models is the Spicer PS-125-7 transmission with seven forward speeds. Also standard are the Rockwell FF961 Easy Steer front axle with a 12,000-pound capacity and the Rockwell RS23-160 or RT40-145 rear axles with a 23,000-pound or 40,000-pound capability, respectively.

The cab is 84 inches wide and has a new instrument panel.

A new high-cabover tractor with a 63-inch bumper-to-back-of-cab measurement has 10 more inches of room than the current high-cabover non-sleeper, which will be discontinued in December.

It has four to six inches more seat travel and extra behind-seat storage room.

Options include tilt/telescoping steering wheel, high-back driver's seat, pop-out front vents to ventilate the footwell, air rear suspension and cab air suspension.

The new high cabover is available in 4x2 and 6x4 tractors with a 131-inch wheelbase.

It has a standard Cummins F-315 88 Big Cam IV engine, a Fuller RT-11609A nine-speed transmission, a Rockwell FF961 Easy Steer front axle and Rockwell RS23-160 or RT40-145 rear axles.

Volvo GM Heavy Truck's new WG series features aerodynamic lines

Opel tries U.S. ideas in ads for new Vectra

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — General Motors-Europe is using American marketing and advertising concepts to polish the image of its Opel subsidiary in Europe and to launch its new Opel Vectra in the highly competitive intermediate segment.

The new campaign, entitled "Look at Opel now," uses image advertising rather than traditional European car advertising, which is more product-specific.

The new themeline and image advertising are designed to shake off Opel's image as a traditional, working-class man's car and attract young, affluent and upwardly mobile consumers.

The campaign is a joint effort between the Detroit and Milan, Italy, offices of McCann-Erickson, which handles the GM-Europe account in 14 European countries in addition to U.S. advertising for Buick, GMC Truck and Lotus.

Advertising Age estimates the first-year ad budget for the Opel Vectra and Vauxhall Cavalier at $50 million to $60 million.

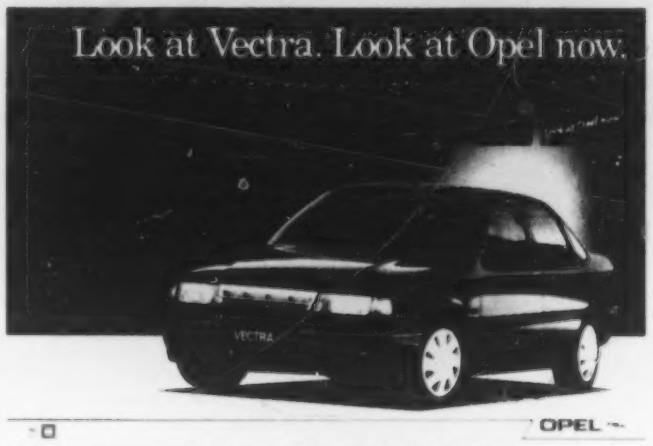
The campaign will run in Austria, Belguim, Denmark, Finland, Sweden, Norway, Netherlands, Italy, Spain, France, Switzerland, Greece, Portugal and Ireland.

Several McCann offices proposed creative approaches for the Opel campaign in a workshop held in Milan last January. The Detroit office's proposal was chosen and was later implemented by the Milan office.

According to Jim Moore, McCann vice president and group account supervisor on the GM-Europe account, the campaign represents the first time a European carmaker has attempted image advertising.

"The campaign does not hammer away at product," said Moore, who worked on Buick before being named to his current post. "We wanted it to stand out. We wanted people to have a reason to watch it repeatedly. It makes a statement about Opel."

In the campaign, a beautiful woman (New York model Rosemary McGrath) is shown driving a red Opel Vectra through the streets of Paris at night. Her boyfriend watches her on several television screens in what looks like a television studio. The camera flashes on several scenes of Paris nightlife, and background music has a rock beat.



Print ads are more product-specific than the television spots

McCann's Detroit office was responsible for the lyrics and music. The overall art direction was a joint effort between Milan and Detroit.

Moore said the launch advertising will concentrate heavily on television at first. Ten-second teaser ads begin today and two-minute image ads using the Paris nightlife scenes will air Oct. 30.

GM-Europe will air those ads on four satellite television networks, Sky Channel, Super Channel, Music Television (MTV) and Scansat (Scandinavian television).

Magazines will be the secondary medium for the new campaign. Print ads are more product-specific than the television spots and show the Vectra with large, bright spotlights in the background.

A direct-mail campaign was launched in late September to current Ascona owners. Since the Vectra replaces the Ascona, Opel is trying to allay any fears that the car has been radically changed, Moore said. The direct-mail piece includes a "pop-up" of the Vectra. No rebates are being offered in connection with the direct-mail campaign.

Calif. enacts law to regulate brokers' ads

By Tom Lankard
SPECIAL CORRESPONDENT

SACRAMENTO, Calif. — A compromise fashioned by new-car dealers and brokers ended a three-year battle in California over the brokers' advertising practices.

The bill, which was signed into law by Gov. George Deukmejian, goes into effect Jan. 1. It allows brokers to advertise cars for sale that they do not own or have available on their business premises. Brokers must disclose in brochures that the cars they sell are not legally new cars because they may have been registered in the course of the brokering transaction.

Brokers may, however, say the cars are "current model" cars or use the car's official model year in their advertising. More important, a broker spokesman said, the cars may be financed as new cars, which usually means better terms than are available on used cars.

Brokers also must keep any deposits taken on cars in a separate account and disclose that deposits on cars not delivered are fully refundable.

Media Records, projected to 125 markets

Makers hike spending in newspapers

First-half total up 11% for car ads

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The nation's automakers and importers spent 11 percent more on newspaper advertising for cars in the first half of 1988 year than they did in the year-earlier period.

The Newspaper Advertising Bureau said the auto industry, including factories, dealer associations and dealers, disbursed $347.8 million for newspaper ads for cars in the January-June period. That compares with $314.6 million during the same period in 1987. The spending numbers are projected for 125 markets and are collected by Media Records.

Domestic automakers showed a 15.61 percent increase in spending on newspaper advertising for cars during the first half while importers showed a 6.26 percent decline.

"The increases were generally attributed to new-car introductions, particularly the introduction of the new "W" cars at GM (Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal) and incentive activity," said William Tausch, vice president of automotive marketing for the Newspaper Advertising Bureau.

Newspaper advertising by multi-franchise dealers grew 37.37 percent, compared with the six-month period in 1987, the bureau said.

General Motors outspent all other automakers in newspaper advertising for cars during the January-June period this year. GM disbursed $91.4 million for newspaper ads, up 36 percent from $67.2 million in the year-ago period. Chevrolet used the highest proportion of GM's newspaper spending during the first six months of this year. The division spent $34 million.

Oldsmobile's Cutlass Supreme, with about $9.2 million, had the highest budget for newspaper advertising of any U.S. car line during the January-June period. GM contributed $6.7 million of that amount and the balance was paid by dealers and dealer groups. Olds launched its redesigned Cutlass Supreme in February with a heavy promotional campaign that included a joint promotion with McDonald's hamburger chain from April until June.

Ford Motor Co. had the second highest newspaper advertising expenditure of the automakers. Ford spent $58.3 million on newspaper ads during January-June this year, up 20.45 percent from $48.4 million in the first half of 1987.

Ford Division received the largest portion of the corporation's newspaper budget: $43.4 million. That was the largest newspaper advertising expenditure by any car division in the United States. Ford launched its new Probe in May.

Chrysler Motors was third among automakers in newspaper advertising spending. Chrysler spent $23.6 million on newspaper ads during the first six months of this year, down 31.40 percent from $34.4 million in the 1987 period. Chrysler relaunched the Eagle Medallion (formerly the Renault Medallion) in May.

Chrysler-Plymouth Division used the greatest portion of the newspaper budget, spending $8.7 million.

Among the imports, Nissan was the largest spender for newspaper advertising in the January-June period. Nissan spent $14.5 million on newspaper ads, up 38.2 percent from $10.5 million in the year-earlier period.

Mercedes-Benz was the second highest purchaser of newspaper advertising among importers. The luxury carmaker spent $14.04 million on newspaper advertising in the first half of 1988, up 21.2 percent from $11.58 million in the year-earlier period.

Makers and importers of light trucks spent $13.1 million on newspaper advertising during the first half of the year, down 32.47 percent from $19.4 million in the 1987 period.

Chevrolet outspent all light-truck makers for newspaper ads, allocating $5.1 million during the period. During the first six months of 1987, Chevy spent $7.3 million in newspapers.

Auto trade deficit falls 20% for July; export jump helps

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive-trade deficit in passenger cars and light trucks fell by a dramatic 20.7 percent in July compared with a year ago, due largely to a 25.9 percent surge in exports.

Imports actually declined 0.8 percent in value.

July's drop in the automotive trade deficit followed an 8.8 percent drop in June.

A comparison of the 12-month period ended July 31 vs. a year earlier shows the automotive-trade deficit narrowing 5.3 percent.

As of July 31, the United States had run up a trade deficit of $43.445 billion in cars and trucks, down from $45.855 billion a year earliere.

The figures reflect a 5.8 percent decline in the number of vehicles imported to the United States during the year ended July 31, while exports jumped 16.2 percent.

Trade numbers from the U.S. Commerce Department show a trade deficit for passenger cars and light trucks of $3.177 billion for July. Total car and truck exports had a value of $562.1 million during the month. Monthly car and truck imports were valued at $3.739 billion. The auto-trade deficit for June was $4.005 billion.

Exports of passenger cars reached 45,441 vehicles, with an estimated value of $456.0 million in July. Light-truck exports for the month were 9,637 vehicles with an estimated value of $106.1 million.

Car exports were up 63.7 percent to Canada, 343.7 percent to Japan and 101.1 percent to nations lumped in the category of "other" by the Commerce Department.

On the import side in July, Japan recorded another in a string of downturns for the year in both the quantity and value of car and truck shipments. Canada, Brazil and France showed import growth in July, as did shipments from countries classified as "others." Passenger-car shipments declined from West Germany, South Korea, Sweden, Yugoslavia, Mexico, United Kingdom and Italy.

Total car and truck imports had a value of $3.739 billion in July, down 15.2 percent from the $4.409 billion shipped in July 1987. There were 362,944 finished vehicles imported to the United States in July, compared with 463,221 a year earlier.

Passenger-car imports reached 304,719 units for the month, with a value of $3.267 billion. Light-truck imports totaled 58,225 units, with a value of $471.7 million. The value of imported trucks increased 9.6 percent in July, although shipments fell 17.0 percent.

That same phenomenon occurred in June, indicating that the lower volume of imported trucks is having little affect on the overall trade deficit because of higher prices.

Japanese-car imports dropped 23.1 percent for the month and the value of the shipments fell 17.2 percent. Japanese-truck imports were off 35.2 percent and their value was down 31.8 percent. Japan shipped 169,714 cars to the United States in July, down from 220,825 one-year earlier. Truck shipments totaled 38,880 units, down from 60,034 a year earlier.

Shipments from South Korea in July continued to show big declines from the year-earlier period, falling 49.5 percent. Although the months-long decline in imports has been attributed to labor strife, continuing softness in shipments could indicate other troubles.

West German shipments continued to be off, falling 36.9 percent from July 1987. Sweden saw imports drop 8.2 percent, while Mexico's shipments were down 14.3 percent. Yugoslavia shipped only one vehicle for the month, according to the Commerce Department, compared with 5,336 a year ago.

Shipments from the United Kingdom were down 66.7 percent, and Italian imports slipped 37.4 percent. The British shipped 1,990 passenger cars to the United States in July, while the Italians sent 414 cars to this country in July.

Older drivers termed a problem

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The number of car accidents involving older drivers will escalate as America grays and could reach dangerously high levels unless cars, highways, signs and licensing procedures are changed.

A new report on transportation in an aging society says elderly people are involved in a higher percentage of accidents than any other age group outside of young people.

They have unique problems behind the wheel, said James L. Malfetti, a Columbia University professor who headed the two-year study by the National Research Council. Rather then recommend license restrictions at a certain age, the study panel faulted the transportation industry for failing to address a problem that has been well documented.

"While automobiles and highways have improved dramatically during this century, many design and professional practices used today are based on the performance characteristics of a younger population," the committee said.

The dummies used in federal crash tests were developed decades ago and only simulate what would happen in an accident to a healthy young driver. An elderly driver is more than three times as likely to die in a crash as a 20-year-old, Malfetti said.

Even the standard for the height of highway signs was established in the 1940s when the overall population was considerably younger and had better vision. Malfetti said 7 percent of the population was 65 years old then, compared with 12 percent today.

Despite the growing number of elderly drivers, little has been done to protect the aging population, he said. Because of diminished eyesight and physical strength, older drivers simply have more difficulty reading traffic signs, turning their heads while backing a car and reaching for safety belts.

Because of these physical problems, older drivers cause accidents merging in high-speed traffic and making left-hand turns at an intersection without a signal light, he said.

The solutions to some of these problems are simple and could benefit all drivers but admittedly may be costly, the panel said. Among the panel's recommendations are for automakers to install seat belts that are easier to fasten, provide rear-view mirrors with wider fields of vision, and urge older buyers to select cars with air bags and anti-lock brakes, despite the higher cost. The panel said these costs will decline if senior citizens demand the features and campaign for affordability.

On the regulatory side, the group said federal and state highway authorities need to make signs larger and brighter, install better roadway markings and increase the use of special left-turn lanes and signals.

The panel also noted automotive innovations may in the future improve visibility at night through infrared cameras and help avoid crashes with radar braking.

But encouraging as they may be, these technologies are decades away, the panel said. The committee concluded that cars and highways will not be radically different for years to come, again underscoring the reason for immediate concern, Malfetti said.

"Given the long lead time required to develop and phase-in changes in the standards used for highway design and operation, driver licensing and vehicle design, now is the time to begin preparing for the transportation needs of an aging society," the study said.

Malfetti said 1985 statistics show that drivers over 75 years of age are involved in more fatal crashes per mile than any other age group other than teenagers. Although the elderly account for only 3 percent of all fatal crashes vs. 34 percent for drivers aged 15 to 24, concern is mounting because of changing demographics, Malfetti said.

By the year 2020, 17 percent of the population will be over 65 and more than 90 percent of those senior citizens are likely to have a driver's license. Currently, 12 percent of the population is over 65 and only 65 percent of that group have a license.

Despite these statistics, the study found no justification for imposing driving restrictions at a certain age. Instead, the committee recommended that states require in-person license renewals and follow the example of Oregon and Washington. Those states issue special licenses that allow only daytime driving or driving to the grocery store.

PRODUCTION

Cars, trucks show gains for week

By Karen Detkowski
SPECIAL CORRESPONDENT

Last week's targeted domestic auto production of 160,424 units increased 2.45 percent over the prior week's 156,591 and was 1.66 percent above the year-ago week's 157,798.

So far this year, 5,697,782 cars have been assembled, 1.72 percent below the 5,797,770 completed last year at this time.

Last week's output was split as follows: General Motors, 52.68 percent; Ford Motor Co., 23.71 percent; Chrysler Motors, 13.87 percent; Honda of America Manufacturing Inc., 4.67 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.59 percent; Nissan Motor Manufacturing Co., U.S.A., 1.01 percent; and New United Motor Manufacturing Inc., 0.47 percent.

Truck output was estimated at 81,495 units last week, 1.45 percent above the previous week's 80,332 and 2.83 percent above the year-ago week's 79,255.

Year-to-date, 3,343,741 trucks have been built, 6.82 percent more than last year's 3,130,158.

Nissan slowed car output last week as it changed the production mix of cars and trucks.

Saturday overtime was scheduled last week at Ford's Edison, N.J., and Wayne, Mich., car plants and the Lorain, Ohio, and St. Louis truck plants.

Ford has scheduled daily overtime this week at all its plants except the Lorain car plant and the St. Paul, Minn., truck plant.

GM scheduled Saturday overtime last week at its Willow Run, Mich.; Lansing, Mich. (Grand Am); and Lordstown, Ohio, car facilities. The Janesville, Wis., car plant was slated for Friday overtime.

Also slated to work Saturday were GM's Baltimore; Fort Wayne, Ind.; Shreveport, La.; Pontiac (West), Mich.; and Flint, Mich., truck assembly plants.

Chrysler's Jeep plant in Toledo, Ohio, also was scheduled for Saturday work.

The strike at Chrysler's St. Louis (No. 2) plant continued last Friday while workers voted on a new contract. The walkout has cost Chrysler about 12,600 Dodge and Plymouth stretched minivans.

Canada surges after holiday

Canadian car production was targeted at 21,559 units last week, 27.83 percent above the prior week's 16,866 and 23.12 percent above the year-ago week's 17,511.

So far this year, 860,348 cars have been assembled, 38.08 percent above last year's 623,090.

Truckmakers estimated last week's output at 21,555 units, 16.98 percent more than the prior week's 18,427 and 20.70 percent above the year-ago week's 17,859.

Year-to-date truck production totals 746,433, 12.44 percent above the 663,851 built a year ago.

Canada's Thanksgiving Day holiday reduced car and truck production in the week ended Oct. 15.

Saturday overtime was scheduled last week at GM's Oshawa and Scarborough, Ontario, truck plants.

Transplants falling short of U.S. goal

Suppliers lose out on Big 3 contracts

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Many of the Japanese auto suppliers now invading the U.S. market are having a tougher time than they expected.

A new study claims a high percentage of transplants are failing to meet either profit or sales goals in the United States and that many are rethinking their American strategies. The greatest area of dissatisfaction is the suppliers' failure to crack the domestic original-equipment market.

According to an unpublished study conducted by the international management consulting firm A.T. Kearney, 40 percent of the Japanese auto parts suppliers now manufacturing in the United States are disappointed in their results. Although many entered the market with low initial profit expectations, respondents admitted sales goals are not being met.

The study, commissioned by Japanese automotive producers, found that the transplants' greatest source of disappointment has been their failure to penetrate the domestic OEM market.

As a result, some of the transplants are late in reaching scheduled production volume, further reducing sales performance, according to the study.

"In most cases, they came here primarily to supply the Japanese OEMs in the United States," said Earl Landesman, a Kearney principal who worked on the study. "They knew those sales wouldn't be adequate to support them, and they counted on supplying the Big 3 to make up the difference. But it

LIDO'S DECADE: *He saved Chrysler, but heads rolled*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Lee Iacocca celebrates his 10th anniversary at Chrysler Corp. this week, but few officers on the company payroll today can join him in reminiscing about that fateful Thursday, Nov. 2, 1978.

Of the 29 officers heading Chrysler Corp. and Chrysler Motors today, only one was a corporate officer the day Iacocca walked into the company's Highland Park headquarters as president and chief operating officer.

Glenn E. White, Chrysler Corp. vice president — personnel and organization, is the sole member of today's executive team who was an officer then. White joined Chrysler in 1953 and was named a vice president in 1968.

"Over a three-year period, I had to fire 33 out of 35 vice presidents," Iacocca said in his best-selling autobiography. "That's one a month. In a few cases, I tried to resurrect some of the executives, but it didn't work — they just couldn't cut it."

In fact, among the 29 officers leading Chrysler today, only eight — including White — were even working at Chrysler Nov. 2, 1978.

Of the remaining 21, nine joined Iacocca in 1979 and 1980 and helped him resuscitate the dying company and breathe into it the financial fitness it is now enjoying. Chrysler Motors Chairman Gerald Greenwald and Chrysler Corp. Vice Chairman Robert S. Miller Jr. — both members of the corporate executive committee — are among those nine.

As Iacocca became the front man, pleading with a Congress unsympathetic to the domestic industry — builder of gas-guzzlers

Import group nixes NADA merger plan

By Edward Lapham and Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTERS

The retail industry's two most influential trade groups — the National Automobile Dealers Association and the American International Automobile Dealers Association — forged plans for independent futures last week.

While NADA's board met in Pebble Beach, Calif., to ratify its election of new officers, AIADA officials met in Washington and decided not to proceed with proposed merger talks with NADA.

Directors voted unanimously for "no change in the independence or autonomy of the American International Automobile Dealers Association," climaxing discussions by the two groups that began last spring.

Portland, Ore., megadealer Ron Tonkin, whose election as next year's NADA president was sealed at the Pebble Beach meeting, said the AIADA decision would not affect NADA or his agenda.

"The time of the dealer has come — it has arrived," Tonkin said last week in an interview following his uncontested election. "The movement will go forward — whether the cause of the dealer is advanced by one organization or by two."

Tonkin, who is a member of both NADA and AIADA, was instrumental in arranging preliminary talks between the two organizations.

Although AIADA decided to abandon the talks, the AIADA directors did approve a resolution stating: "We will continue the existing working relationship between NADA and AIADA."

AIADA Chairman Lee G. Seidman said, "Our decision was based on recognition of the fact that the interests of all automobile dealers will be best served if the associations remain independent and autonomous. While, in many ways, the differences that distinguish domestic dealers from international dealers have been blurred, the international dealers feel that their special interests still require the efforts of an association dedicated solely to their concerns."

Membership in the group has grown in recent years, as has AIADA's lobbying efforts on trade legislation.

AIADA President Robert E. McElwaine said the merger discussions "had nothing to do with my decision to retire on Oct. 31 of next year. I will definitely retire from the presidency of AIADA at that time, al-

Victor Potamkin remains powerful force

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Two distinguished men get up from the table and start toward the door of the comfortable and proper dining room at the 21 Club.

On the way, one of them stops at the table where car dealer Victor Potamkin is lunching with his sons Robert and Alan and guests.

"Hello, Vic, how are you?" one says to Potamkin.

Potamkin rises quickly, as do his sons.

"Robert, you remember Cy Vance don't you?" Potamkin asks, introducing Cyrus R. Vance, U.S. secretary of state during the Carter administration, to his sons and his guests.

It is not the only time this lunch is interrupted by rich and powerful friends. Everyone, it seems, knows Victor Potamkin.

At 77, Potamkin is healthy and, he claims, still the biggest car dealer in Manhattan. In the year since he sold his two New York City Cadillac stores to former race driver Roger Penske, Potamkin has remained the most visible car dealer in America's largest metropolis despite being in self-proclaimed semi-retirement.

The publicity generated by the transaction and attendant pledges by the Penske organization to improve sales and service performance, customer satisfaction and even the dealership facilities have rankled the Po-

Sleek Soviet minivan gets N.Y. unveiling

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The Soviet auto industry plans to unveil the Debut, a minivan that may someday be exported to the United States, at a trade show here next month.

"We hope it will please you," said Bagrat Aroutiounov, a member of the Presidium and chief of Soviet Exhibitions Abroad for the U.S.S.R. Chamber of Commerce and Industry.

"It's a new prototype. We haven't shown it before," Aroutiounov said at a press conference last week. He referred to the Debut

Mexico to build VW Jetta for U.S.

GL due next summer; Mexican Golf, GTI arrive early in '89

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Volkswagen of America will import the Jetta GL from Mexico next summer, the second line to be sourced from that country since the closing of the company's U.S. assembly plant earlier this year.

Production of the 1990 Jetta GL will begin next summer at Volkswagen de Mexico's plant in Puebla. The car will join the Golf/GTI, which begin arriving from Mexico as 1989 models in January.

The change will establish a clear sourcing pattern for the Volkswagen United States franchise. VW's volume cars — the subcompact Fox and compact-sized Golf/GTI and Jetta GL — will all come from low-wage countries south of the border. More complex versions of those cars and VW's specialty models will be built in Europe.

A VWoA spokesman said that there is some concern about importing VW's best sellers solely from Brazil and Mexico, where economic conditions have been less than ideal. But both countries have become more stable, he said. And in a worse-case situation, VW could turn to Europe for Golfs, Jettas and GTIs. The Fox is built only in Brazil.

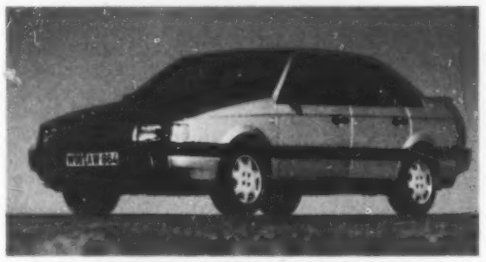
The sourcing is just one of many changes taking place within VW as it continues on a five-step strategy aimed at rebuilding the franchise.

The division's sales, on the decline for the third straight year, are expected to come in at about 180,000 in 1988, about 17 percent below 1985 levels, said James Fuller, vice president in charge of Volkswagen United States.

And while the company is looking ahead to three new products that will push the marque into new upscale territory next year, its bread-and-butter models are showing signs of age.

Even with the new arrivals, Fuller predicted sales again will be in the 180,000 range next year. The projections are deliberately cautious, Fuller said. But the conservatism also reflects a need to keep dealers off a business roller coaster.

"What we have to do is find that balance between a realistic sales projection for coming years and support that with production capacity," said Fuller.



VW sees Passat annual volume at 25,000

He added: "We are trying to follow a basic theory here at VW U.S.: Promise less and deliver more."

As a result, VW will again attempt to stay out of the industry incentive battle, especially on its higher-volume products. Fuller views incentives as distress marketing — a practice that may boost sales in the short run but erodes dealer margins and makes planning difficult.

The projections also reflect some other challenges. The Jetta and Golf/GTI, already six years in the U.S. market, aren't scheduled to be replaced until the 1992 model year.

The Fox, meanwhile, a crucial entry-level product, has absorbed a 17 percent price increase in the last year alone, Fuller said, primarily because of economic troubles in Brazil. Its price will go up another 4 percent as 1989 models arrive this month.

Though three new products aren't expected to bring large additional volumes, they will help mark a change in direction for the franchise — both in terms of styling and in market coverage.

The first, Corrado will probably account for about 5,000 sales next year, Fuller said. Annual volume should be about 8,000 after that. The Corrado launch has been delayed by about six weeks, and the car is now expected to arrive in May. Fuller said the delay will ensure adequate volumes are on hand when the car comes out.

The $20,000-plus sports coupe fills the void left by the Scirocco in VW's lineup and will be billed as a serious German sports car.

NHTSA changing truck, van classes

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has proposed two options, either of which would reclassify cars, trucks and vans. Each would eliminate the Multi-Purpose Vehicle category for sport-utility vehicles.

In announcing the proposed rulemaking with both options, the safety agency said the change would take effect Nov. 1, 1990. The comment period extends until Jan. 17.

NHTSA announced its interest in redefining vehicle types in an advanced notice of proposed rulemaking published last year, and this latest announcement makes it clear the agency will go ahead with the reclassification plan.

NHTSA's reclassification rulemaking was proposed by the Insurance Institute for Highway Safety. The group argued that new and emerging vehicle types, such as minivans, sport trucks and sport-utility vehicles, have made NHTSA's current classification system obsolete. That is because many new vehicles are not being classified as passenger cars, thus avoiding some safety requirements, the insurers said.

The reclassification rulemaking, however, will not immediately change rules for minivans, sport trucks and sport-utility vehicles. Industry lawyers say NHTSA must go through a separate rulemaking each time it broadens an existing safety standard.

The multiple rulemakings are required, the lawyers say, to give vehicle manufacturers enough lead-time to meet the new standards.

The first reclassification option under consideration by NHTSA, called "Option A," would eliminate the current classification of MPV, which now covers most sport-utility vehicles.

In its place, NHTSA would create two new categories. The first new category would be for vans and would cover light-duty vehicles intended to haul cargo. The other new category would be for special-purpose vehicles, which would include recreational vehicles and vehicles intended for on/off-road use.

Sport-utility vehicles and vans designed for passenger transportation would be classified as passenger cars. Pickups would continue to be classified as trucks.

NHTSA said, "Option A represents an attempt to update the existing vehicle classification system by eliminating the MPV category. It attempts to group vehicles in classes primarily according to physical characteristics and to be consistent with current groupings used by the industry and many states."

Option B would also eliminate the MPV category, but it would not establish a van category.

Vehicles now considered MPVs would be reclassified according to whether they are likely to be used primarily for carrying passengers, for carrying cargo or for recreational purposes, NHTSA said.

"Under option B, vehicles designed to transport people would be classed as passenger cars; vehicles designed primarily to transport cargo would be classed as trucks, and vehicles designed for recreational (or) on/off-road use would be classed as special purpose vehicles," according to NHTSA.

In asking for comment on the two classification proposals, NHTSA said it would like each manufacturer to list how its current vehicles would fit under both classification plans. The agency is also seeking suggestions on how it should write technical specifications for the new vehicle categories.

The auto industry is expected to have plenty to say on the reclassification plan because of the agency's past practice of exempting some classes of vehicles from new safety standards.

Under NHTSA's current rules, trucks are not required to meet the side-door-strength safety standard, the rollover protection standard and head-restraint rules required for passenger cars. Trucks are also not required to meet the passive-restraint requirement or the high-mounted center stoplamp rule. MPVs are treated like cars under some safety standards, like trucks under others.

Chrysler's popular minivans are an example of the tough questions the rulemaking poses for some manufacturers. Under current NHTSA definitions, the minivans are trucks. That means Chrysler does not have to meet all the federal safety requirements that apply to passenger cars, even though Chrysler sells most of those vehicles as "family wagons," intended to transport people.

Chrysler also sells its minivans to businesses for commercial use. Those vehicles often are equipped with only the front seats and could easily be described as trucks.

Chrysler must now decide whether it should favor the creation of a van category and whether that category should include both its passenger and commercial minivans, or whether it should support a classification system that might list some minivans as passenger cars and others as trucks.

The Center for Auto Safety and other groups contend that NHTSA is stalling the application of passenger-car safety standards to light trucks and minivans by engaging in unnecessary rulemaking.

The center has called the reclassification rulemaking a "meaningless semantic goosechase."

NHTSA said it disagrees with that description because the rulemaking will help the agency take account of changes in vehicle design and use.

Chrysler strike ends; jobless fear lingers

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Workers at Chrysler Motors' St. Louis minivan plant are back on the job after ratifying a local contract, following two earlier rejection votes.

But the settlement, which followed a 15-day strike, has not dispelled workers' anxiety over outsourcing and the resulting job loss. Though outsourcing is a matter for the national bargaining table, the issue figured in two earlier rejection votes. The 70 percent "yes" vote on Oct. 21 by members of UAW Local 110 ended a strike that cost Chrysler 11,250 vehicles and an estimated $3 million a day in profits.

According to George Burr, local president, the pact's main feature is a $1.5 million commitment for facility improvements including air-conditioned break areas. Workers walked off the job during last summer's heat wave, complaining of intolerable heat.

After Chrysler filed suit for an injunction to halt the strike, and after the inclusion of several more items, the contract passed.

"For the most part, everybody's happy," Burr said. "But they have an honest, legitimate concern about outsourcing."

Burr said that the national agreement provides for ways for locals to try to source work inside the company. "But there's not much teeth to that," he said.

UAW international officials have said that outsourcing and subcontracting deterrents and productivity improvement provisions in Big 3 national agreements are beginning to bring work back into General Motors plants. But they have said that the automakers' tendency to outsource and subcontract work continue to pose a challenge.

GM and Ford Motor Co. workers have been covered by the new pact since the fall of 1987, but Chrysler workers ratified the pattern agreement only last May.

Burr said that he planned to work through the union's subcouncils to make outsourcing the No. 1 issue in the national contract talks in 1990.

He said items in the new local contract at St. Louis help secure jobs and may even create more.

Those are: an absentee pool provision to cut the number of temporary workers in the plant; more assignments for UAW janitors; and more vacation allotments per department.

In the final version of the local pact, an excused advance program was expanded.

AUTOCROSS: *Olds prospects race clock in dealer's Quad 4 test runs*

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

SOUTHFIELD, Mich. — As Jim Muir stands in a parking lot and tries to control his enthusiasm, W. N. "Bill" Bleau, armed with a videocam recorder, aims to save the moment for posterity.

The "moment" is the first-ever Oldsmobile Quad 4 Autocross Challenge, in which a half-dozen Quad 4-equipped Cutlass Calais sedans cut through a pylon course, one at a time, in a race against time.

The event was sponsored earlier this fall by Muir, president of Jim Muir Oldsmobile-GMC Truck of Sterling Heights, Mich., who is also a member of the Detroit region of the Sports Car Club of America, a racing sanctioning body.

As the dealership's incentives manager, Bleau is doing more than chronicling the autocross as if it were a home movie. His interest lies in using grass-roots motorsports, like this SCCA Solo I autocross, to educate potential customers to the Olds Calais with the Quad 4 engine.

"We are the quiet winners of GM," said Bleau, referring to some of Olds' motorsports participation in SCCA and drag-racing events. Bleau said autocrossing might be one way to increase the quiet winners' sales volume.

With this sanctioned and supervised motorsports event, Muir has pre-registered and qualified some 160 potential Olds owners. This autocross will allow those potential customers a one-of-a-kind test drive.

General Motors and motorsports are not new to each other. But when consumers think of Oldsmobile, racing is not the first thing that comes to mind. Muir and Bleau think that should change.

With Olds' recent advertising strategy change — including the "It's Not Your Father's Oldsmobile" tagline as well as the "The New Generation of Oldsmobile" advertising theme — autocrossing might prove to be one way to reach younger buyers.

Muir said "it would be gravy" to sell a Calais based on this autocross test drive.

"The guys with the Honda CRXs and Alfa Romeo Spyders and Porsches are going to see this Calais with the Quad 4 be competitive. That's when they or their wives might just take a more serious look at owning one," he said.

Where will the Oldsmobile Quad 4 Autocross Challenge lead? Muir would like to see it become a nationwide, dealer-sponsored event — similar to the annual Oldsmobile Dealer Golf Scramble.

U.S. car sales move up 27% in mid-October

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

An extra selling day and a flurry of incentives helped boost mid-October's sales of U.S.-built cars 27.38 percent over last year's.

U.S.-built car and light-truck deliveries for Oct. 11-20 climbed 28.84 percent to 320,266 vs. 248,573 a year ago.

General Motors' car and light-truck sales jumped 42.68 percent; Chrysler's car-truck total rose 38.94 percent; Ford Motor Co. sold 16.35 percent more vehicles; and Nissan's transplant car-and-truck total rose 9.65 percent.

Mid-month deliveries of U.S.-built cars outpaced last year's 10-day figure by 27.38 percent. Sales totaled 196,196, up from 154,026.

The daily selling rate for cars was 21,800, up 13.23 percent from 19,253. This year's period had nine selling days; last year's had eight.

Chrysler's rebates and cut-rate financing helped raise car sales 47.01 percent. And Ford's allowances of $300 to $1,000 on some 1988s contributed to a 28.66 percent gain.

Although most incentives on 1988 models ended Oct. 10, GM's mid-month sales climbed 21.67 percent above last year's.

Toyota's transplant car deliveries were up 50.68 percent and Honda's rose 47.71 percent. Nissan, however, sold 18.53 percent fewer U.S.-made cars.

Sales of U.S.-built light-trucks topped last year's mid-October period by 31.23 percent.

We'll Match a Bedliner Line with Your Business.

LRV-Easco offers three distinct Truck Bedliner lines. One is right for you.

Some distributors service mass merchandisers and traditional automotive chains. Some distributors service the specialty market. Others sell auto dealers. Some RV dealers. Some do retail business. And others provide conversions.

The fact is, it's your business. And you run the business a little differently than the guy down the street. The product that's right for him may not be right for you.

LRV-Easco can help.

We'll set you up with a truck bedliner line that fits your business. We manufacture three well-known bedliner brands...Line-A-Bed® ProTecta® Liner and Rubber Queen® Bedliner. All three lines are constructed of super-tough high-density polyethylene. We have both over-the-rail and under-the-rail models designed for long-lasting, durable protection and easy installation. And the quality of the lines is backed by excellent warranties.

Not only that, you're backed by LRV-Easco's commitment to service.

Call us today and we'll schedule an LRV-Easco representative to talk with you and explain the difference that LRV-Easco's lines can make for your business. Call toll-free, 1-800-356-0712. In Ohio call toll-free, 1-800-356-0715 or (419) 738-8536. Or write: LRV-Easco, 700 Lunar Drive, Wapakoneta, Ohio 45895.

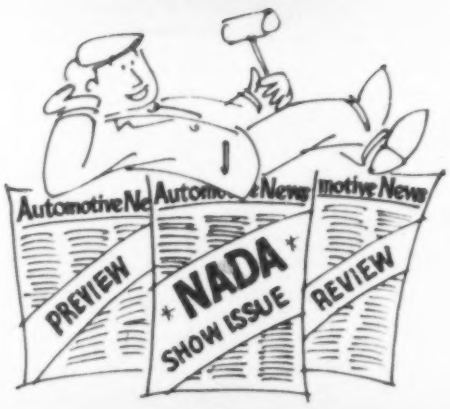
ATTENTION AUTO AUCTION OWNERS:



THREE BIG NADA ISSUES PUT YOU IN TOUCH WITH THE DEALERS YOU WANT TO DO BUSINESS WITH

Automotive News

The Automotive News NADA Preview, Show and Review issues. For high dealer readership, here's your best opportunity for Auction Directory advertising.

Your auction directory ad reaches the dealers at the show as well as those who stayed behind. Because Automotive News goes to virtually every dealer in the country. Dealers who ranked Automotive News "most useful" in their business.

And at NADA, your auction ad gets bonus exposure. We'll be distributing extra copies of the Preview and Show issues right at the convention. Of course, dealers unable to attend will rely on Automotive News for complete NADA coverage — the next best thing to being there.

So, catch the NADA excitement . . . and the business. Place your auction directory ad in all three big NADA issues. Call Marie Hingst at (313) 446-6065.

Big 3 post record sales and profits for 3rd quarter

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

This year's third quarter proved to be the most profitable third quarter ever for the Big 3 automakers. They also racked up record sales for the period.

Ford Motor Co. came within a hair of beating General Motors for the highest profits for the quarter — Ford's were $856.3 million and GM's $859.2 million — though Ford's sales were $7.3 billion lower than GM's.

For the first time, both GM's and Ford's financial subsidiaries claimed that high credit losses on auto loans cut into profits.

Combined earnings for Chrysler Corp., Ford and GM for the third quarter were $1.83 billion, 3 percent more than the record $1.77 billion earned in the third quarter of 1987.

Combined sales for the quarter were $49.8 billion, 14 percent higher than the $44 million posted a year ago. Each of the three automakers reported higher sales.

Earnings improved at Ford and GM, but Chrysler's were off 54 percent, on record sales for the quarter. Chrysler said a number of factors, including cost of materials, eroded its profit.

For the first nine months of 1988, combined profits were $8.2 billion, up 11 percent from $7.4 billion a year ago.

Sales for the nine months totaled $165.4 billion, up 13 percent from $146.9 billion in the year-ago period.

CHRYSLER: Ironically, Chrysler, whose profits sagged in the third quarter, said its financial subsidiary, Chrysler Financial Corp., posted record third-quarter and nine-month earnings.

On the other hand, Ford Motor Credit and General Motors Acceptance Corp. reported lower earnings, based on narrower interest margins and higher credit losses.

Chrysler Corp. blamed its 54 percent decrease in earnings for the third quarter on the cost of sales incentives, a heavier mix of fleet sales and increasing cost of raw materials, labor and employee benefits.

In addition, Chrysler's Newark, Del., assembly plant was down for the entire third quarter, preparing to launch the new Dodge Spirit and Plymouth Acclaim.

Third-quarter profits of $112.5 million fell from last year's $246.0 million for the period.

Third-quarter sales of $7.01 billion, which were 24 percent above last year's $6.17 billion, set a company record for the quarter.

For the first nine months of the year, Chrysler earned $616.6 million, down 34 percent from $939.5 million. Chrysler said this year's earnings were $709.7 million before a $93.1 million provision for plant closings in its Acustar parts subsidiary.

Sales for the nine-month period were up 24.5 percent to $23.17 billion, from $18.6 billion in 1987.

CHRYSLER FINANCIAL: Chrysler Financial Corp. reported its highest-ever third-quarter and nine-month earnings. It attributed the increases to growth in non-automotive operations and lower U.S. income tax rates.

Unlike Ford Credit and GMAC, Chrysler Financial did not report higher credit losses.

Chrysler Financial's third-quarter earnings were $59 million, 21 percent higher than the $49 million earned in the year-ago quarter. Nine-month earnings were $185 million, 12 percent more than the $166 million earned a year ago.

The company said this is the fifth consecutive year in which it has set third-quarter and nine-month earning records.

During the third quarter, Chrysler Credit financed or leased 136,916 new cars and light trucks — 27 percent of the new vehicles sold by Chrysler Motors dealers.

FORD MOTOR CO.: Buoyed by its overseas results, Ford reported third-quarter profits increased 22 percent over a year ago on a 16 percent sales gain, setting Ford records in each category. The profit was a third-quarter industry record for one day — until GM issued its earnings statement.

Ford's profit margin on U.S. sales for the quarter slipped to 4.2 percent from 5.9 percent a year ago, said David N. McCammon, Ford vice president — finance and treasurer.

Companywide profits of $4.1 billion for the first nine months were $483 million shy of Ford's earnings for all of 1987.

Third-quarter profits rose to $856.3 million from $703.2 million in the year-ago quarter.

Worldwide dollar sales were $17.7 billion, $2.5 billion higher than in the third quarter of 1987. Sales for the first nine months totaled $60.9 billion, up 15 percent from $52.9 billion.

In the United States, Ford earned $472 million in the third quarter, down $121 million, or 20 percent, from a year ago. Ford said the decline resulted in part from lower production of high-profit cars due to plant changeover to build the 1989 Ford Thunderbird and Mercury Cougar.

Lower earnings from the company's financial services group also contributed to sagging domestic profits. Though much of the decrease in profitability resulted from the high cost of borrowing, higher credit losses have prompted Ford Credit to re-evaluate the basis on which loans are granted, McCammon said.

Also contributing to the earnings decline in the United States were steady prices for the 1988 model year, higher marketing and product costs, higher materials costs and higher labor costs, McCammon said.

He said the profit-sharing payout to workers will be down somewhat for 1988, though it will be the second-highest payout. The average payment was $3,700 in 1987.

Outside the United States, Ford earned $384 million in the third quarter, more than triple the $110 million earned last year. Overseas sales contribute about 36 percent of the total but 45 percent of the profits, McCammon said.

Europe was Ford's strongest profit center outside the United States, but the most dramatic improvements were made in Latin America, where in 1987, substantial losses were recorded by Autolatina, Ford's joint venture with Volkswagen.

FORD CREDIT: Ford Motor Credit Co. reported net income for the third quarter of $134.4 million, down 22 percent from $172.3 million in the year-ago quarter. Lower interest margins and higher credit losses were only partially offset by a higher volume of finance receivables, higher insurance income and a lower U.S. income tax rate.

During the third quarter, Ford Credit financed 441,000 vehicles in the United States, up from 575,000 in the year-ago quarter when low-rate financing programs were offered. It financed 31 percent of all new cars and trucks sold by Ford dealers in the United States — the same as in the second quarter.

Nine-month profits were $505.4 million, down from the record $560.7 million for the same period in 1987.

GENERAL MOTORS: GM reported a record third-quarter profit of $859 million, a 6 percent increase over the $812.3 million reported for the year-ago quarter.

Sales for the quarter totaled $25.0 billion, 11 percent higher than the $22.6 billion reported for the year-ago quarter.

GM said that, on a comparable basis, before accounting changes in amortization that resulted in boosting net profit in the year-ago quarter, earnings for that period were $421 million.

GM said that increased unit volume and operating performance improvements in North America contributed to the earnings increase. As part of its four-year cost-reduction program, the company cut $3.8 billion in the first nine months of 1988, compared with $3.7 billion for all of 1987.

Overseas sales and earnings are exceeding 1987's record levels, GM said. Vehicle sales overseas were 13.6 percent above 1987 in the third quarter, outpacing the growth in U.S. retail sales, which were up 3.5 percent.

For the nine months, retail sales of cars in the United States were slightly ahead of 1987, while truck sales were 12 percent greater. Overseas, the gain was 6.9 percent over the year-ago period.

Analyst Maryann Keller, vice president at Furman Selz Mager Dietz & Birney, said that though GM was once only marginally profitable in Europe, it will make about $2 billion there this year.

"There's a very simple explanation for GM's success in Europe," she said. "They brought their costs down and they have great cars."

GM-Europe last year accounted for 35 percent of GM's profits.

For the first nine months, GM earnings were $3.46 billion, up 27 percent from $2.72 billion in the year-ago period.

Sales for the nine months totaled $81.4 billion, up 8 percent from last year's $75.4 billion.

GMAC: GMAC's third-quarter earnings of $241.9 million were 26 percent below the $325 million for the year-ago period.

The company reported the decrease was due primarily to the higher cost of borrowing money vs. the lower cost to its customers of medium- and long-term debt. But it also said higher losses and loss provisions contributed to the decline.

It also reported a decrease in the number of vehicles financed and a decrease in the dollar volume of installment loans and leases.

GMAC financed or leased 496,000 new vehicles in the United States in the third quarter, down 42 percent from the year-ago quarter, which included a factory incentive program.

GMAC financed 137,000 new vehicles outside the United States during the quarter, compared with 132,000 a year ago.

The subsidiary did $10.6 billion in financing in the third quarter, down 30 percent from the $15.2 billion last year.

GMAC earned $930.2 million in the first nine months of 1988. The company said those profits were second only to the record $1.22 billion earned in the year-earlier period.

HUGHES ELECTRONICS: GM Hughes Electronics Corp., GM's subsidiary including Hughes Aircraft Co. and Delco Electronics Corp., achieved record earnings in the third quarter and first nine months on a slight increase in sales.

The company earned $180 million during the third quarter, up 5 percent from $171 million a year ago. Sales for the third quarter were $2.6 billion, up 4 percent from $2.5 billion.

In the third quarter, sales to GM were $780 million, up from $664 million a year ago. Sales to outside customers also rose — to $1.83 billion from $1.81 billion in last year's third quarter.

For the first nine months, the subsidiary reported earnings of $633 million, 21 percent more than $524 million last year.

Sales for the first nine months were $8.2 billion, 5 percent above $7.8 billion last year.

EDS: Electronic Data Systems Corp., GM's computer and communications services subsidiary, earned $95.9 million in the third quarter, up 17 percent from $82.3 million a year ago.

Sales for the quarter were up 9 percent to $1.22 billion from $1.13 billion last year.

Earnings for the first nine months were $280.7 million, up 28 percent from $218.9 million.

For the first nine months, sales were $3.54 billion, up 9 percent from $3.24 billion in 1987.

Sales to GM and its subsidiaries in the third quarter were down 2 percent to $709.5 million from $720.5 million in the comparable quarter a year ago. Sales to GM were also down 2 percent for the first nine months, to $2.12 billion from $2.16 billion.

BIG 3 RESULTS

Nissan operating profit increases 35%

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Riding on a 15 percent increase in domestic sales, Nissan Motor Co. reported an operating profit of 31.6 billion yen ($243 million) for the first half of its fiscal year, ended Sept. 30, an increase of 34.9 percent over the previous year.

Net income was up 27.7 percent to 28.3 billion yen ($217.6 million). In addition to rising sales, Atsushi Muramatsu, Nissan's executive managing director, finance, said the numbers reflect the move toward higher-priced models in the Japanese market. It also marked Nissan's change in emphasis toward its home market for profits rather than relying on exports.

Domestic sales accounted for 60.6 percent of revenue, up from 46.3 percent the previous year.

Muramatsu said the 60 percent ratio was more than expected, because domestic sales were higher than expected. But he said it also reflects Nissan's intention to put more emphasis on the domestic market, so that it would represent more than 50 percent of output. A smaller emphasis on exports would reduce the company's vulnerability to exchange-rate losses.

He said exports have declined over the past year from 620,000 units to 487,000. Part of that decline was offset by local production in transplant operations.

Muramatsu said the company lost 25 billion yen ($192 million) on the exchange rates, part of the 72 billion yen total loss on exports, which included increased marketing costs. Those losses were offset by savings of 80 billion yen ($615 million) from reduced supplier costs.

The second half of the fiscal year should indicate a substantial increase in exports to the United States, according to Muramatsu. He said the decline last year reflected the lack of new models available. He said, as of this September, the inventory in the United States had been reduced to 50 days' supply, and the new models, Maxima and 240-SX, are receiving a favorable response, leading to company expectations of a significant increase.

Nissan's domestic market share increased from 23.1 percent to 23.4 percent in the first half of the fiscal year. Muramatsu said the company is now confident the decline in share that started in 1982 has been checked.

Forecasts for the full fiscal year call for net income of 60 billion yen ($461.5 million), and an operating profit of 100 billion yen ($769 million), Muramatsu said.

Correction

General Tire supplies Nissan's Smyrna, Tenn., plant with passenger car tires for the Sentra (Automotive News, Oct. 24, 1988). Bridgestone tires are being considered as a replacement for Firestone tires on Nissan's pickup trucks produced at that plant.

Secret-warranty letter a fraud, Toyota says

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Toyota Motor Sales U.S.A. is claiming that a letter purporting to describe secret warranty policies on as many as 41 different defects on Toyota automobiles is a fraud, and that other documents now under investigation by NHTSA are not what they appear to be.

NHTSA is investigating a 12-page document leaked to the Detroit News that purportedly describes secret warranties for 41 components on a variety of 1981-1986 Toyotas. The Washington-based Center for Auto Safety has petitioned the Federal Trade Commission to examine the documents, but the FTC has yet to respond to the center's request.

Michael Brownlee, NHTSA director of defect investigation enforcement, wrote Toyota asking if the documents constitute a secret warranty and if so, why that data has not been filed with the agency.

"We have several concerns about the document if it has been characterized correctly to us," Brownlee wrote Oct. 12. "First, we are concerned that the documents included may be required to be submitted to this office under the terms of 49CFR. 573.8 (a federal law requiring the disclosure to NHTSA of any warranty changes related to abnormal wear of vehicle parts). We are also concerned that many of the repairs cited in the documents may deal with safety-related issues."

Brownlee's office asked Toyota to explain why the documents were not filed with NHTSA as required by law, and why each repair cited in the documents might be necessary. NHTSA also wants an explanation of a document titled Japan Appeal Claim Guidelines, dated September 1987.

Contacted about the NHTSA letter, a Toyota spokesman said "we have received NHTSA's letter and are evaluating how we will respond." Referring to a letter included in the 12 documents that describes the list of vehicles and components as a "secret warranty" listing, the spokesman said "we do not know the source of that letter, but we do know the letter is fraudulent. It was not written as an official document of Toyota to anyone at Toyota. We have no secret warranties."

He said the list of components described as warranty items for Toyota automobiles is for use under Toyota's Intercorporate Transfer Policy. He said this was a way for Toyota Motor Sales to seek reimbursement from Toyota Motor Corp. for repair claims filed by dealers. The spokesman said it is common for dealers to make case by case decisions on customer complaints, in consultation with Toyota's regional office. He said the list NHTSA has reflects decisions made at the local level and not a companywide policy.

"It all goes back to consumer satisfaction. We allow dealers to cover some items to keep the customer happy," the spokesman said.

SUPPLIERS

FROM PAGE 1

simply hasn't happened."

Landesman said the transplants have typically assumed they would draw domestic sales away from U.S. competitors by producing better-quality parts at lower prices. But an evolution in Detroit's supplier philosophy during the past five years has put less emphasis on low pricing and more on technology transfer and long-term supplier relationships, he said.

"They came into the market perceiving the U.S. competition as fat and old," Landesman said. "To their surprise, the industry has moved very aggressively into world-class cost and quality. It's a much stronger domestic industry today than five years ago, with new focus on marketing, cost control and modernization.

"At the same time, Detroit is restructuring and consolidating its supplier base. The selection process is changing. Domestic companies are realizing that there's more benefit to a long-term supplier relationship than previously met the eye. The cost of dumping a supplier to save a penny on a part can be greater than the financial savings.

"In short, they just haven't been able to crack the domestic supply market as they thought they would," he said.

Kearney estimates there are now 132 Japanese-based parts suppliers manufacturing in the United States. The survey is based on information from 93 of them.

The study concludes that the transplants faring best are those that have altered their strategy by either entering joint ventures with U.S. firms or broadening their sales plans to include the automotive aftermarket. Although half of the 93 suppliers in the survey had considered entering the aftermarket segment, only 15 had made the move and 11 of those said they've been successful.

The traditional difficulty that Japanese suppliers have had in penetrating the U.S. aftermarket further underscores the importance of joint-venture arrangements, according to Landesman.

The study found that more than half of the 94 Japanese suppliers that entered the U.S. market since 1985 did so by way of a joint-venture with a domestic company. Prior to 1985, only 14 joint ventures had been recorded.

The study also advises Japanese firms viewing U.S. operations to include exports to Japan and Europe as part of sales projections, to expand transplant-directed product lines into areas not traditionally supplied to OEMs in Japan and to target sourcing opportunities where the Japanese have desirable technology that is not available from existing domestic suppliers.

"The Japanese companies have faced a rude awakening. U.S. firms aren't going to replace their existing suppliers any more unless there's a very good reason," Landesman said.

"One very strong reason now is technology transfer. If one company can offer another access to a market or a technology it was missing out on, joint ventures can be the way to go. Both sides can win. The Japanese supplier gains access to the Big 3; the U.S. supplier gains access to the transplants.

"Without that, Japanese suppliers are probably going to have as much trouble penetrating this market as American producers have had penetrating Japan."

[illegible] Passenger models.

Model-year car output is 5-year low

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers built 6,903,518 cars during the 1988 model year, the lowest total since 1983, when 5,768,893 units were assembled as the industry was recovering from the recession.

But in 1983, foreign-based companies accounted for only 1.85 percent of U.S. car output; last year, the transplants' share rose to 10.24 percent.

The 1988-model-year build was 6.40 percent below 1987's 7,375,359. Only Ford Motor Co. and Honda of America Manufacturing showed gains.

Ford's output of 1,911,007 cars was 19.34 percent more than the 1,601,288 built in the previous model year.

Part of its increase was due to the success of the new front-wheel-drive Lincoln Continental and increased output of Escort and Mustang. Another contributor was a longer model run in 1988 for some Lincolns. Government-mandated corporate average fuel economy standards also figured into the shortened season for the big cars in 1987.

Honda posted a year-to-year increase of 15.75 percent, building 358,274 in the 1988 model year vs. 309,534 in 1987.

General Motors reported output of 3,181,657 cars in 1988, 14.26 percent below the year-earlier total of 3,710,654, despite the addition of 181,080 of its new mid-sized GM10 cars, Pontiac Grand Prix and Cutlass Supreme. GM had another newcomer in the 1988 model year, the low-volume Buick Reatta.

The only GM model lines showing drastic declines were the A-body Oldsmobile Cutlass Ciera, with an output loss of about 149,000 units, and Chevrolet Celebrity, down approximately 94,000.

Both lines were built at the Framingham, Mass., plant, which was shut down for about six months because of slow sales. Also, more of the Celebrity and Cutlass Ciera output was switched to Canada.

Nissan Motor Manufacturing Co. U.S.A. reported model-year assembly of 91,281 cars, down 33.58 percent from 1987's 137,427. Nissan slowed car output at its Smyrna, Tenn., plant several times to increase its truck output.

New United Motor Manufacturing Inc., the GM-Toyota joint venture in Fremont, Calif., assembled 112,034 cars in the model year, 43.24 percent below the 197,375 built in the 1987 model year. NUMMI cut production of the Chevrolet Nova due to slow sales.

Volkswagen of America first slowed its Jetta and Golf output during 1988, then closed its U.S. operations in July due to slow sales. VW reported production of 39,647 cars in the 1988 model year, 48.11 percent below the prior year's 76,400.

Mazda Motor Manufacturing (U.S.A.) began production during the 1988 model year at Flat Rock, Mich. It built 105,616 Mazda MX-6 and Ford Probe models in its first year.

Although the industry defines the model year as Oct. 1 through Sept. 30 for sales purposes, assembly plants start and end model-year production at varying times. The figures reported by Automotive News are the actual number of 1988 models built, no matter when they came off the line.

PRODUCTION

Car output holds steady at 160,036

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled production of 160,036 units last week, 1.33 percent below the previous week's 162,190 and slightly below (0.14 percent) the year-ago week's 160,254.

So far this year, 5,859,584 cars have been built, 1.67 percent fewer than the 5,959,401 completed last year at this point.

Companies split last week's targeted output as follows: General Motors, 53.73 percent; Ford Motor Co., 23.01 percent; Chrysler Motors, 13.68 percent; Honda of America Manufacturing Inc., 4.62 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.06 percent; Nissan Motor Manufacturing Co. U.S.A., 1.28 percent; and New United Motor Manufacturing Inc., 0.62 percent.

Last week's estimated truck output totaled 87,749 units, 7.15 percent more than the prior week's 81,892 and 12.00 percent more than the year-ago week's 78,350.

Year-to-date, 3,431,887 trucks have been assembled, 6.99 percent more than the 3,207,761 built last year at this time.

Chrysler's Newark, Del., plant resumed output Oct. 18 after a 16-week shutdown for model changeover. About 2,000 hourly workers were called back to assemble the new Plymouth Acclaim and Dodge Spirit models.

Previously, Newark built Chrysler Town and Country station wagons and Chrysler LeBaron four-door sedans.

The strike at Chrysler's St. Louis truck plant was settled Oct. 21 and workers returned to work last Monday. The company lost output of approximately 11,250 Dodge and Plymouth stretch minivans during the 15-day walkout.

Overtime was slated last Saturday at the following GM plants: Lansing, Mich.; Lordstown, Ohio; Wentzville, Mo.; Linden, N.J.; Wilmington, Del.; Fort Wayne, Ind.; Moraine, Ohio; and Pontiac West in Pontiac, Mich.

Ford has scheduled daily overtime this week at all of its plants except the St. Louis truck facility.

Last Saturday, Ford slated overtime at its Kansas City, Mo.; Norfolk, Va.; and Lorain, Ohio, plants.

Canada also on even keel

Last week's targeted Canadian auto production of 21,959 was a few units below the previous week's 21,978 but was 4.78 percent more than the year-ago week's 20,957.

Year-to-date, 882,726 cars have been assembled, 37.69 percent more than the 641,084 built last year at this point.

Truckmakers scheduled output of 21,555 units last week, a bit (0.96 percent) above the prior week's 21,351 and 16.99 percent more than the year-ago week's 18,424.

So far this year, 767,784 trucks have been completed, 12.72 percent more than the 681,113 built last year at this time.
